It may be of interest, by the way, to record the figures which Lord Ashfield, of the Underground Group (tubes and omnibuses) gave the other day of the number of passengers carried in London by his group of undertakings. He said that they amount to 2,273 millions—60 per cent. of the total local passenger traffic. That represents 483 separate journeys in the year for every member of the population of London. Where on earth will the process end?

The Use of Letters.

A recent law-suit in London gave rise to a most amusing discussion upon the correct use of letters after a name. It was proved in Court—what to very many people must have been an eye-opener—that the right to use certain letters, such as, say, pertains to the fellowship of certain Societies, was obtained merely through the payment of an annual subscription.

To the initiated it is, of course, a simple matter to spot whether a man uses letters signifying his fellowship of a learned Society legitimately or only for "swank," but the number of initiated in these matters is very small.

On the whole, this recent exposure of the pretentious use of letters is most salutary; it will hurt none of those really worthy of bearing such letters, and it may frighten off those who, though legally entitled to their use, have actually done nothing to merit the affix. Self-advertisement in England is not a national characteristic.

The O.M.

Among the few indisputable letters which are recognised by learned and ignorant alike as an honourable award is the O.M., discussion upon which has followed upon the death of Hardy. It is thought that another literary man will be chosen to fill the vacancy, although, as the *Manchester Guardian* points out, there is, strictly speaking, no vacancy, for the Order is limited to twenty-four members and there are now eleven civil members and four military members.

Mr. Bernard Shaw and Mr. George Moore have been chosen as possible candidates in some circles, though one would have thought that the Order would sit with strange unease on either of these two distinguished theologians. Others have suggested Sir Edmund Gosse and Mr. John Galsworthy. What the decoration, when it is made to literary men, is awarded for, I do not know; but if it be for creative genius, why not A. E. Housman, or Belloc, or Wells? The last two, perhaps, might be officially "impossible"; but in the cultural life of this country there is no figure more distinguished than the author of "The Shropshire Lad" and of "Last Poems."

ALTER EGO.

THE ARAB HORSE SOCIETY.

The annual show of the Arab Horse Society (in conjunction with the National Pony Society) will be held at the Royal Agricultural Hall, N., on March 2 and 3, beginning at 9 a.m.

PRIMARY EDUCATION IN INDIA.

It is to be regretted that the Government of Bengal should have decided not to introduce their Primary Education Bill in the Provincial Legislature this coming session. The Bill has now been framed for some time, and indeed about eighteen months must have elapsed since the scheme which is embodied in it was explained to the public in an official resolution. Primary education is indisputably backward in Bengal; and there is no question as to the urgency of the need for the prompt introduction of a compulsory system. As regards higher and secondary education Bengal cannot be considered to be behind other provinces at any rate so far as expenditure is concerned. But such is not the case with primary education. Bengal has a population of about 46 millions. During the year 1925-26 the amount spent on higher and secondary education was Rs. 235 lakhs. On primary education, on the other hand, the expenditure was only Rs. 62 lakhs. This contrasts unfavourably with, for example, Bombay where with a population of only about 19 millions a sum of no less than Rs. 181 lakhs was spent in 1925-26 on primary education. On the higher and secondary branches Bombay spent Rs. 127 lakhs. Similarly, Madras and the United Provinces with populations of 42 millions and 45 millions, respectively, spent considerably more on primary education than is expended in Bengal. To remedy this state of affairs a comprehensive scheme is clearly necessary. And the object of the contemplated legislation is, in the first place, to establish a central authority for each district to control primary educaion; secondly, to raise the funds necessary to go a long way, if not the whole way, towards universal primary education; and, thirdly, to provide for compulsory attendance at the schools. The scheme will apply to the rural districts only. The municipalities will be excluded from it. The reason is that the system of taxation and control in municipalities differs from that which obtains in the rural districts; and that the municipalities are already empowered to extend primary education within their areas under the provisions of the Bengal Primary Education Act of 1919.

The first of the three objects defined above is to be attained by the establishment of district school boards. It will be recalled that in England universal primary education was controlled at first by elective local authorities styled School Boards. Later their powers and functions were transferred to the County Councils by which bodies elementary education is still supervised and controlled. Whether with the development of local self-governing institutions in Bengal a similar transfer will eventually take place is, of course, a matter for conjecture. But the Bill contemplates the introduction of the elective principle in respect of the School Boards, as three members are to be elected by the District Board. Other members are to be appointed by the Local Government from what are known as the Union Boards or panchayets; and there are also to be certain official members. Extensive powers will be conferred on the Boards; and they will be made responsible for, among other things, the primary education cess. And this brings us to the second of the three objects which the legislation is designed to achieve, namely, the provision of the required revenue. It is here that the difficulties and dangers of the scheme may be expected to be encountered. We do not think that the postponement of the Bill is due to these; but that they exist is undeniable. It is estimated that the cost will be anything from 1½ to 2 crores of rupees yearly. So large a sum cannot, of course, be provided by the Bengal Government from its existing resources. Additional taxation is, therefore, unavoidable; and the particular tax proposed by the Government is a primary education cess to be levied on the lines upon which, under the Cess Act of 1880, roads and public works cesses are now imposed in the province. All immovable property on which these existing cesses are charged is to be made subject to this further cess of five pice (1¼ annas) in each rupee of the annual value of land and of the annual net profits of mines, quarries, tramways, railways, etc. The landlord will be made responsible for the collection of this new cess, just as he is now responsible for the collection of the other cesses. And the proposal is that he should himself pay one pice of the five, and that the remaining four should be paid by the cultivator for whose benefit the scheme is intended. Judged by European standards the cultivator in India is decidedly a poor man, and to require him to pay four pice in the rupee on the yearly value of his land is to impose an appreciable burden upon him. Critics of the Bill have recognised this, and some of them have suggested that the full amount of five pice should not be levied at first. There is reason in this suggestion, for obviously it would be difficult in each of the first few years to spend with advantage so large a sum as Rs. 2 crores. It is also said that the zemindar or landlord is not disposed to take up an encouraging attitude as regards his share of the cess. Perhaps, therefore, it would be prudent to introduce the scheme gradually, as the burden of it would then be less severely felt. It should be added here that those persons in the rural areas who derive their income from sources other than the land, that is from trade, business, or the professions, will be assessed by the District Magistrate so that they may bear their just share of the new taxation.

The third object which the Government have in view is, as we have mentioned, to provide for compulsory attendance at the schools. This is the most important of the three objects as, without compulsion, any money which might be expended would be largely wasted, although the people of Bengal are certainly not slow to take advantage of educational opportunities. But even so compulsion will be required, and there seems to us to be no sufficient reason why it should not be enforced. It is now generally agreed that the State is justified in compelling its citizens to educate their children; and we do not think that there is likely to be stronger opposition

Digitized by Google

to compulsion in rural Bengal than elsewhere. It is, as we have indicated, with reference to the financial aspects of the Bill that the difficulties will arise, and have in fact arisen. A cess is not an ideal system of raising revenue, and the Government of Bengal are, of course, perfectly well aware of that fact. But they have proposed it because the circumstances and conditions of the province are such that they cannot raise the money in any other way. It is all very well to say, as has been said, that the Government must find the money. But obviously they can only find it by taxing the people, and it would be difficult to devise any tax which would not be objected to by those who have to pay it. On the other hand, the need for the introduction of a comprehensive system of primary instruction is urgent, and it must tend to become more and more urgent with the advance towards democratic institutions. For manifestly the success of these institutions will be imperilled if the electorate is not to receive sufficient elementary education to enable it to understand the rights that it will be required to exercise. We regret, therefore, as we said at the beginning, that the Bill should have been postponed, and we hope that it is to be only temporarily delayed, and that before long the Provincial Legislature will pass it into law.

CURRENT TOPICS.

The Defence of India.

The attitude of the educated classes in India towards the problems of the country's defence has undergone a considerable change of recent years. They have for long admitted, at least in theory, that their political aspirations ultimately depend for fulfilment upon the capacity of the country to defend itself, but there was until recently little demand upon the part of those classes for a military career. Latterly, in addition to the many signs of awakening interest in the strictly military aspect of the question, there have also been indications that the importance of the corresponding naval problems is being gradually appreciated in the same quarter. As far back as 1924 the Mercantile Marine Committee referred to "the almost unanimous desire of all Indian witnesses that the creation of an Indian Navy capable of defending the coasts, harbours and commerce of India should proceed hand in hand with the development of an Indian Mercantile Marine." The Committee accordingly concluded their report with a strong recommendation to the Government "that the reorganisation of the Royal Indian Marine into such a service should be undertaken with the least possible delay." Until the enactment by the Imperial Parliament last year of the Government of India (Indian Navy) Act naval defence found no place within the framework of the Indian Constitution. The Government of India had no voice in it and there was no opening, such as existed in the Army, for Indians themselves to be trained as combatant officers in an Indian naval force. By the passing of the Act of 1927 both these anomalies have now been removed and India has been given the opportunity of taking her place among those overseas members of the Empire who maintain local navies which, while primarily designed for the protection of their own shores, are also capable of co-operating in a combined policy of Imperial defence.

One would hardly have imagined that the principle of such a measure could have been converted into a bone of political contention, even in the present confused state of Indian politics. As the Delhi Correspondent of *The Times* pertinently remarks the political parties have not taken the slightest interest in the scheme adumbrated by the Committee presided over by the late Lord Rawlinson in 1925 from that day to this, and there is no reason to believe that they would have done so now but for the opportunity it provided for raising the constitutional question. Be that as it may, the fact remains that as the Act does not become operative until the passing by the Indian Legislature of the complementary legislation, which the Assembly last week so summarily rejected, the politicians have again effectually blocked the way towards the attainment of the ideal of a self-contained and self-governing India to which they are never tired of rendering such eloquent lip-service.

The Railway Budget.

The monsoon has had many crimes laid at its door, but it must have had a very grateful friend in Sir George Rainy when he rose last week to introduce for the first time the annual Budget of the Indian State Railways in the Legislative Assembly. And Sir Austen Hadow, deputising for Sir Clement Hindley in the Upper House, must also have felt that the traditional vagaries of the Indian climate were happily not always of a hostile nature. Even allowing for the fact that the estimates had been very conservatively framed, in view of the unhappy experience of the preceding year, the results disclosed were certainly remarkable. Both passenger and goods traffic, following a satisfactory monsoon and good crops, have shown a progressive expansion, and receipts from the commercial lines in 1927-28 are expected to reach the record total of 103½ crores of rupees, or nearly five crores more than in the previous twelve months. But although this new found prosperity is largely the result of circumstances beyond human control, it must in fairness be added that in part at least it reflects the cumulative effect of the many far-reaching reforms—both financial and technical—introduced during the last few years in the administration of railways in India. We doubt whether there is any other railway system in the whole world which as an entirety can show such a notable record of achievement as that which it was the new Commerce Member's good fortune to disclose in the Indian Railway Budget for 1928-9, for the substantial concessions in both third-class fares and rates to be introduced during the coming year show that the improvement is regarded as of a permanent character.

The real Swarajist, Sir Basil Blackett is reported to have remarked in the adjourned debate on the "No Confidence" resolution, were not those on the benches opposite who had merely obstructed every measure of advance, but those like Sir B. N. Mitra, who had endeavoured to secure the fabric of Indianisation of the services, who had really worked for Swaraj. "Why," declared the Finance Member, "I am a better Swarajist than any gentleman opposite. The veriest die-hard could not have wished a better production than that staged by the political leaders in the past few weeks." We are forcibly reminded of the substratum of truth underlying Sir Basil Blackett's good-humoured gibe by the Assembly's reception of Sir George Rainy's statement. Not only were the benches occupied by the Congress, Nationalists and Independent parties almost empty while it was being made, but on the day allotted for the general discussion of the Budget the House was actually counted out. As if to make up for the lack of interest displayed on the earlier occasion the Congress party, on the motion for the demand for grants, proceeded to provide yet another instance of that particularly futile form of "non-co-operation" which seeks to ensure the elimination of the whole Budget instead of emphasising a point, or ventilating a legitimate grievance, by a token cut of a single rupee. As the grant for the Railway Board is clearly "essential to the discharge of the Governor-General's responsibilities," its restoration, if Mr. Jamnadas Mehta's motion had been carried, was a foregone conclusion, but to seek to compel Lord Irwin to use his emergency powers in such circumstances is another example of the childish irresponsibility which does so much to alienate the sympathies of all well-wishers of India, and of her peoples.

A Good Example.

Madras has the unenviable distinction of being the only place in India where the attempted *hartal* on the occasion of the Commission's arrival resulted in serious rioting,

Digitized by Google

with the inevitable fatalities. The recent session of the Congress had left behind an undercurrent of excitement which was bound to find an outlet when opportunity offered. Such an opportunity, of course, was ready to hand in the activities of the hartal organisers. Although the actual attacks on Europeans were obviously the work of hooligans, and possibly not directly inspired by the *hartal* mongers, the latter must have known that they were releasing forces which, as past experience has only too clearly shown, they could not be certain of being able to control. In such circumstances the orders issued by the authorities prohibiting the local boycott committee from organising another demonstration for a period of a month were abundantly justified. Incitement which leads to lawlessness must be suppressed and those who wantonly endanger the lives of their fellow citizens must be restrained from their misguided activities. How far the authorities' resolute action was responsible for the warmth of the welcome extended to Sir John Simon and his colleagues on their arrival at Madras last Sunday we cannot, at this distance, say. The favourite weapons of the anti-British agitator in India are mendacity and intimidation and there can be little doubt that the readiness of the police to provide protection for all law-abiding Indians who desire to keep open their shops and the ban on inflammatory speeches must have contributed very largely to the abandonment of the threatened *hartal*. Southern India as a whole is not keenly interested in the boycott movement, on its merits, and the Muhammadans and the Depressed Classes are only too anxious to secure a hearing. Except therefore at places where the Congress party is strongly organised, or the Brahmin interests are strongly entrenched, the Commission's reception will certainly be friendly throughout the Presidency and, in some parts, as cordial as it appears to have been in the Presidency town.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 9.

The Royal Commission.

The principal political events of the week have been the arrival of the members of the Royal Commission in Delhi, the political *hartal* of the 3rd, the plan outlined for co-operation between the seven commissioners and the members of the committees of the Central and Provincial Legislatures, and the manner of its reception by the various groups of Indian politicians. The plan, to deal with it first, was outlined in a letter addressed by Sir John Simon to the Viceroy, published in New Delhi on the 7th. The text of the letter will no doubt have been cabled to your side in full. It is hardly worth repeating here, even in a summary. What will be of interest in London three weeks hence will be to know, first, whether the moderate men here of all parties agree that the procedure suggested by the Royal Commission is as fair and liberal to India as it could have been made; secondly, how much weight to attach to the fact that certain Indian political chiefs still declare themselves unsatisfied. The moderate men of all parties (there are a few parties, of course, in which there are no moderate men) are agreed. How much weight to attach is a more difficult thing to decide. The men who will not be charmed by Sir John Simon, charm he never so smoothly, include Dr. Ansari , Mr. Srinivasa Iyengar, Maulana Mahomed Ali (Congressmen), Lala Lajpat Rai, Pandit Madan Mohan Malaviya, Mr. Jayakar and Mr. Kelkar (Nationalists), Mr. Jinnah, Sir Purshottamdas Thakurdas, Moulvi Mahomed Yakub, and Jaja Ghaznafarali Khan (Independents). The Congressmen were so deeply committed to the boycott that they cannot but persevere with it to the end. They will persevere, even when they are left alone to do so. The others, seeing they committed themselves to the boycott when nothing that Sir John Simon's letter made known was not already as good as known; for who doubted that the facilities given to India to participate in the inquiry would only be made to stop short of the Commission's being barred from embodying their opinions in a report of their own?—seeing they did that, and that their alliance with the Swarajists is still in the green leaf, it was not to be expected that there should be an early change in their line of policy. What made Mr. Jayakar think it worth while to table the resolution that was the chief topic of my letter of the week in which its text was published, it is impossible for anyone but himself to say. The incident cannot have added to his reputation. Memories here are short: the incident will soon be forgotten. Some pressure must have been put upon him.

The Hartal.

One may doubt if the permanent effect of there having been a *hartal* on the 3rd will be much more than to drive it a little deeper into our memories that *hartal* is the Indian name for the thing. The principal news of it will have been cabled to you. What will be of most interest to you will be to know what we all thought of it, and especially what the lower classes of Indians did. I made up an errand that would take me to the New Market a day or so before the 3rd, and another that would take me there that evening. I took a girl with me each time; one who gets her stores there. The New Market shopkeepers are those who are most under the influence of the Corporation, which is a strongly Swarajist body; that is, the members of that party have great weight in its counsels. We asked the keeper of a stall where you buy mustard and such-like things, if he was to observe the *hartal*. He had no option, he exclaimed, but his stall would be open in the evening. All was said with a grin. He grinned even more good-humouredly on the second evening. A great deal of good humour was no doubt lost in College Square and round about Presidency College, but the fire there was not heaped with political coal alone, and the Bengali student catches any enthusiasm, however passing it may be, just as certainly as umbrellas get wet when it rains. The umbrellas dry, and the students, knowing that they must keep their terms, or suffer for it, see good reason to forget quickly.

Reserve Bank Bill.

Leave to introduce the new Reserve Bank Bill having been ruled out by the President of the Assembly, the old Bill was proceeded with. On the motion that Clause 8, the clause dealing with the directorate, stand part of the Bill the voting was even. The decision was not, however, by the President's casting vote, for a member had been in the lobby, but had not voted. He was allowed to vote on the floor of the House, and voted with the Noes. If the project is abandoned, it will no doubt be revived at some better time, and it may be hoped in a better form. While one may recognise that in a matter of such far-reaching importance an Assembly that at the best cannot possess any very deep knowledge of principles must be controlled, there is unquestionably something unsatisfactory in the Legislative Assembly being controlled by an official in London. When the Assembly contains some member to whose judgment the majority of the House would be prepared to submit the question, then will be the time for a Bill. If the Bill were introduced by a Sir Robert Peel it would pass.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, February 11.

Sir John Simon's Appeal.

Strange as it may seem Sir John Simon's statement on landing in Bombay raised hopes in the hearts of those who still believe that the procedure of the Royal Commission would provide for an adequate share in its deliberations for Indians. Even those who had declared for the boycott did so with reservation; for they too believed that there

Digitized by Google

was a grave misunderstanding which would be cleared. Now Sir John Simon has made his statement and it has removed the misunderstanding; but not in the manner expected. It is now clear that Mr. Baldwin meant what he said when he declared in the House of Commons that Indians were excluded from the Commission on principle. The position therefore remains the same as before Sir John Simon made his statement; those who did not think that the terms of the inquiry were humiliating to Indians accept it and those who feel that it is an affront to India refuse to have anything to do with it. I would not suggest for a moment that the decision to boycott has been arrived at lightheartedly by any section of political thought in the country because it would not be true. Some have rushed into it rather precipitately, others have accepted it hesitatingly and yet others have waited in the belief that such a step was premature; but all of them are fully alive to the possible consequences of the step they have finally adopted. What Indians asked for was, briefly, the right to examine all documents and evidence tendered before the Commission and a hand in the shaping of the report. As regards the extent of the latter opinion is divided, the extreme section asking for a larger share than the moderates who seem to be willing to be content with the very least. Now let us turn to Sir John Simon's statement.

A Joint Free Conference.

Sir John Simon in his statement, which takes the form of a letter to Lord Irwin, declares that speeches are being made and resolutions passed which are based on a complete, though doubtless genuine, misconception of the Commission's intentions and forthwith sets out to define the true position. Neither in respect to the procedure laid down for the hearing of evidence nor in the method suggested for the presentation of the conclusions are, it is contended, either of the above claims conceded. And in particular the fear is expressed that to participate in an inquiry in the findings of which they will have no hand would ultimately end in the loss of the confidence of the people. The fatal step has therefore been taken and although everybody recognises that it is very serious in its implications, it is difficult to foreshadow the consequences. Of course it is recognised on all hands that the Commission will proceed with the inquiry with the material placed at its disposal.

Party Leaders Reply.

Immediately after the circulation of the letter defining the procedure of the Commission, party leaders met in conference at Delhi and issued the following statement: "We have considered the line of procedure indicated in the statement of Sir John Simon issued to-day, but our objection to the Commission as constituted and the scheme as announced are based on principles which remain unaffected by it. In the circumstances we must adhere to our decision that we cannot have anything to do with the Commission at any stage or in any form." It may be mentioned that Mr. Jayakar and Mr. Kelkar, the responsive co-operators from Bombay, have signed this statement as also Sir Purshottamdas Thakurdas, an Independent who has hitherto trodden the path of co-operation. The Congress party in the Assembly have also issued a statement declaring that the attitude of the party remains unaffected by the statement. Sir Tej Bahadur Sapru, Mrs. Annie Besant and Sir Phiroze Sethna reiterate their position in the clearest terms.

Those in Favour.

On the other hand, Sir Muhammad Shafi congratulates Sir John Simon "on the far-sighted statesmanship which has guided your decisions regarding the procedure and status of the Indian Committee. Your wise action is generally appreciated here and I hope will promote Indo-British co-operation." Dewan Bahadur Krishnan Nair of the Madras Justice party (Non-Brahmin) declares that the best interests of the country would be served by co-operation. The Parliamentary Party in the Council of State have proffered conditional co-operation but it is premature to say whether it will materalise. It claims the right to examine all witnesses in all places and access to all records. I would conclude therefore that those who were for the boycott are still for it, while those who were willing to co-operate are still willing to do so, which means that Sir John's statement is essentially a reiteration of Lord Birkenhead's pronouncement. Even the *Pioneer* of Allahabad, which can hardly be accused of an Indian bias, declares the present proposals to be a mere *rechauffé* of those contained in the statements of Lord Birkenhead and Lord Irwin. Replying to a letter from a member of the Indian Legislature, Sir John Simon makes a statement which crystallises the position. "There must be no question," he writes, "that the discretion will rest with me to decide to what extent separate sittings of the Commission should take place . I can only say at this stage that I hope the occasions will be few and certainly should regard them as exceptions to the main scheme." There is no room for doubt any longer that the right of examining all documents will not be conceded to the Indian wing.

The Reserve Bank Bill.

Another bone of contention of almost as great importance as the Reforms Inquiry is the Reserve Bank Bill debate which has ended in the Bill being dropped altogether. The first indication that the Bill was not assured a safe passage in the Assembly was the decision of the President who refused to call upon the Finance Member to move the Bill on the ground that the old Bill had not been withdrawn. That it was contingency for which Government had not provided was evident from the fact that the decision to adopt the laborious procedure of amending the old Bill was announced only on the following day. Sir Basil Blackett alone then gave notice of 33 amendments and the non-official list brought the figure up to almost a hundred. At the outset Government were successful carrying the first few amendments and even the decision to exclude members of the Legislatures from the directorate was carried. There were two amendments to this clause which were both severally carried by Government but when the clause as a whole came up for consideration, Government by a narrow majority of one suffered a defeat. Government were therefore on the horns of a dilemma. The new Bill could not be proceeded with so long as the old Bill was there and the old Bill could not be withdrawn. Sir Basil Blackett therefore announced that Government had decided that it was not desirable to proceed with the measure at present. The new Bill will be taken up when the old one lapses after six months.

WILLS.

The will of Mr. Charles Allen, of Norton House, Tenby, M.P. for Pembroke and Haverfordwest, 1892-95; formerly a lecturer of Presidency College, India, Judge in the Calcutta Court of Small Causes, and Recorder of Rangoon (net personalty £8,260), has been proved at £8,354.

Mr. James Murray Beattie, of Heathfield, Sussex, late a partner in Messrs. Ker, Bolton, and Co., East India merchants, Glasgow, and East India Avenue, E.C., left £98,852, with net personalty £93,717.

Sir Mackenzie Dalzell Chalmers, Lauriston Road, Wimbledon, Counsel to the Board of Trade, 1882, then a county-court judge, afterward Chief Justice of Gibraltar, and a law member of the Viceroy's Council in India, and from 1903-1908 Under-Secretary of the Home Office, who served on many Royal Commissions and departmental commissions, and who died in December last, aged 80 years, left estate of the value of £106,432, with net personalty £103,089. He gave:

£3,500 to the London Fever Hospital.

£500 each to the Athenæum Club, Pall Mall, the Order of St. John of Jerusalem, and the Royal Aeronautical Society.

£500 to his faithful servant Elizabeth B. Long. £100 and £100 a year for life to Bertha South. £85 a year for life to Edith South.

And after other bequests the residue of the property to Trinity College, Oxford, suggesting "that the library, and assistance towards endowing a law fellowship, may be beneficial objects."

INDIA IN PARLIAMENT.

By Sir Frank Nelson, M.P.

Those who, while not underrating the strength and dimensions of the boycott movement, none the less believed that with the arrival of the Commission in India the appreciation of hard facts would deepen and extend can point to a considerable degree of justification in the events of the past week. There can be no doubt that confidence is spreading that Sir John Simon, by personal contact even more than by formal procedure, will be able to smooth away many of the difficulties which, perhaps, to those who know India only from a distance may appear formidable, if not insuperable.

By the patient exercise of his personal influence, by his actual presence embodying the true spirit of the British Parliament and the people of this country, of all classes and creeds, and by his generous interpretation of Britain's real intentions and hopes in regard to India's future the Chairman of the Commission is certainly doing a very great deal to penetrate the curtain of hostility which is even now far from solid and complete.

As I have previously emphasised in these columns, apart from the formal examination of the existing machinery of Government, by far the most important part of the Commission's task, especially in the initial stages, is the establishing of personal relations with representative Indians, gaining their confidence and goodwill, removing genuine misapprehensions and generally in dissolving hostility in whatever quarter it exists.

And here I think Sir John Simon, equally with the authorities both at home and in India, is to be congratulated on the happy blend of firmness and conciliation which has marked his few public utterances. That the Commission will go on with its task, with or without the co-operation of the Legislative Assembly, was made plain in its letter to the Viceroy; and I was glad to see the point again emphasised, in the light of the Assembly's adverse vote, on its arrival last week at Calcutta. Some such warning was undoubtedly needed, for those most competent to assess organised movements and vocal opinion in India will agree that there are very many public men, and private individuals, only waiting for a definite lead, and an assurance that their position will not be prejudiced subsequently by an eleventh-hour concession to the opposition, to come down on the side of co-operation. The comment of *The Times'* Delhi correspondent upon the debate in the Council of State last week admirably illustrates my meaning "The demand to keep the door open," he writes, "was so frequently reiterated from opposition quarters as to induce the suspicion that the boycott leaders were alarmed at the complacency with which Sir John Simon, in his Calcutta interview, showed that he was prepared to accept their non-co-operation instead of anxiously striving to devise means of persuading them to relent."

The usual Monday list of questions on Indian affairs was distinguished last week rather by its infinite variety than for the interest or importance of the individual interrogations. Major W. Graham-Pole will, no doubt, derive some measure of satisfaction from the fact that even if they did not approach in number the figure mentioned in this column last week, the written questions and answers alone take up nearly seven columns of Hansard. Personally, when I think of the time, labour and expense involved in the preparation of replies which in practically every case were readily accessible to anybody sufficiently interested in India to consult a blue book or the annual administration reports, I can only reiterate the somewhat forceful observations which I have made on this subject on several previous occaslons. From this criticism I should perhaps exempt the requests which elicited the news that work on the new India House has begun, and that the Government of India do not propose to take any action upon the Todhunter Committee's proposal for an export cess on oilseeds, bones and other manures pending the issue of the report of the Royal Commission on Agriculture in India, which is, I understand, now in the course of preparation. I await this Report with great interest and I trust due credit will be given to the members of the Commission for the time and energy they have devoted to a stupendous task.

To examine and report upon agriculture in a continent consisting of about 2,000,000 square miles—populated by numbers representing approximately one-fifth of mankind, and speaking between them something like 150 languages, is an undertaking which should satisfy the veriest glutton for work. And when to this must be added the fact that about 70 per cent. of this vast population live on and by the land and that the year's crops are largely dependent on the amount of rain which falls between June and December, the degree of public-spiritedness shown by members of the Commission cannot be too highly praised.

I am led—in natural sequence of thought—to wonder what comments and questions we shall have in the House of Commons when the Report is available? Will questions be inspired by Swarajist politicians in India, who themselves have seldom left the teeming purlieus of big Indian cities? Shall we have to listen to devastating and destructive criticism during the India Office Estimates Debate from M.P.'s who, by means of P. and O. steamers and the Calcutta and Punjab trains-de-luxe, once spent six weeks in a cold-weather trip to India? I fear the worst, whilst hoping for the best.

By the time that this is in print, Sir Basil Blackett will have presented his last Indian Budget, and I shall be surprised if it does not indicate the long overdue demise of the Provincial Contributions.

India owes a lot to Sir Basil, and I hope that the outward demonstration of his services will take the form of some outstanding honour in the Birthday list, although this is a form of tribute to which he himself, I know, pays little heed.

I was privileged to have a considerable amount to do with him in the days of acute Exchange troubles in India, and when I reflect that in less than 18 months I saw the rupee move between 1s. 3d. and 2s. 11d., it will be seen that his achievement in stabilising Exchange is no mean one; for although Currency Commissions, etc., are announced with the voice of the India Office, the hand all through has been Sir Basil Blackett's. One of the first lessons I learnt in the hard school of House of Common's politics was cheerfully to swallow my disappointment at not being able to see the end of the chapter in Indian Exchange as a member of the last Currency Commission: I frankly confess I asked for a place and quite rightly, no doubt, was refused!

I can only hope that the genius and driving force and, what is more important, the colossal store of Indian knowledge which must have been amassed by Sir Basil will not be lost to those who can make so much use of it. That he has a great future is certain—but where will his destiny be worked out? America, the Treasury again, or the House of Commons?

ARMY APPOINTMENTS.

The following appointments have been approved in India:—

Bt.-Lieut.-Col. H. Archer, D.S.O., Instructor, Senior Officers' School, Belgaum.

Major W. R. Ames, O.B.E., Commandant, 4th Bn. 7th Rajput Regt.

Lieut.-Col. G. P. Knott, O.B.E., Assistant Director of Veterinary Services, Naini Tal.

Major R. A. S. Mansel, M.C., Staff Officer in the Chief Engineers' Branch, Delhi.

Major N. L. St. P. Bunbury, Brigade Major, Bannu Brigade.

Earl Winterton, Parliamentary Under-Secretary of State for India, has appointed Mr. Geoffrey K. Peto, C.B.E., M.P., to be his Parliamentary Private Secretary in succession to Sir Victor Warrender, Bt., M.C., M.P., who has been appointed an Assistant Whip.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

The Fair.

We give this week the concluding part of our review of the British Industries Fair, which seems likely this time to merit the adjective "Great" in front of it. Certainly developments so far have been all that could be desired. Substantial orders have been forthcoming from many countries, notably the Sudan, while Cyprus has been able to conclude a profitable transaction in tobacco. The Cyprus deal is of special interest as showing that the Fair is gradually tending to become a real Empire market and not merely a mart for the display of English industries. In that sense it promises to be the successor of the British Empire Exhibition. As has been already indicated in these columns, the Empire section of the Fair is as yet only at its commencement, and a much more pretentious exhibit will be looked for in future years. Nothing succeeds like success, and the fortunes of this year's event will no doubt have their due influence on the 1929 Fair.

Ottoman Debt Settlement.

After all the rumours of a settlement in regard to the Ottoman Debt it comes quite in the nature of a surprise that at long last an agreement should really have been reached in view of the nature of the stumbling-block which has been holding up the negotiations. As long ago as last summer an agreement was reached on the financial details of the settlement, but a deadlock subsequently supervened owing to proposals brought forward by the French and German representatives of the bondholders who desired the establishment of a new committee whose powers would have affected the position of the Ottoman Debt Council. The settlement which has now been reached is in the nature of a compromise. A new committee is to be formed, but it will not be able to affect the jurisdiction of the Debt Council, and will only have to deal with cases referring to both types of loans. It now remains for the draft agreement to be signed in Paris, and it will then have to be confirmed by the Turkish Government and by the bondholders' syndicates. There is no reason, however, to anticipate any further hitch in the negotiations, and it may now be assumed that this long-standing legacy of the War is at length settled.

Living in the Sudan.

There is perhaps not unnaturally a tendency to associate conditions in the Gezira with those in the whole of the Sudan and to assume that because the Gezira, or rather that part of it which is cultivated, is prosperous the country as a whole is benefiting by cotton growing. That is, of course, not the case, though, given a sufficient period of time, the prosperity now enjoyed by the Gezira will doubtless gradually permeate the whole country. The present position of the country from the point of view of the standard of living is touched on in an article in the current issue of the Monthly Journal of the Sudan Chamber of Commerce, in which it is stated that apart from the cultivated area in the Gezira "it would be hard to find evidence of any great improvement in the well-being of the people over the conditions with which we have all become accustomed during the past two seasons of bad rains and consequent hardship." It is urged that the most obvious way of cheapening the cost of the necessities of life which have to be imported so as to help to raise the standard of living is by reducing transport costs, and it is pointed out that as a result of a consideration of the position by members of the Chamber the following proposals were formulated:—(1) That the existing 40 per cent. surtax be abolished on flour, tea, and rice; (2) that part, or all, of the existing railway surtax be abolished on cotton piece-goods and washing soap. The view is taken that these proposals would have a beneficial effect on the whole trade of the country, for the nation would have more ready money for the purchase of other commodities, and it is stated "it is conceivable that by making the reductions there would be no ultimate loss in railway revenue." If it be granted that these proposals would have the anticipated results, is it not clear that any resultant change in the standard of living must be of a wholly artificial variety? A real increase in the standard of living can only arise from new sources of wealth and that in the case of the Sudan is bound to be a slow process, for it is impossible to have intensive cotton growing all over the country, and the discovery of alternative sources of industry is not the affairs of a moment.

The Bulgarian Loan.

Negotiations with regard to the projected Bulgarian loans have been held up, as is known, by the unwillingness of the Bulgarian Government to agree to the changes desired by the League of Nations in regard to the status of the National Bank of Bulgaria. In view of Bulgaria's imperative need for a loan it was to be expected that every effort would be made to find some way out of the *impasse* which would be acceptable to the League, and the news is now forthcoming that the League Commissioner in Bulgaria for refugee settlement, M. Charron, who recently left for Geneva to present his half-yearly report, is to submit to the League Finance Committee a scheme approved by the Bulgarian Government for the reform of the National Bank. Under this scheme the Government admits the need for the transformation of the bank into a private company, but the date of this alteration would remain to be fixed by subsequent negotiations. The Government is prepared meanwhile to ensure the independence of the bank, and will further agree to the appointment of a technical adviser with general control over the institution whose tenure of office would continue until the completion of the reform of the bank. If, as seems, probable, these proposals meet with the approval of the League, it will not be long before the loan makes its appearance.

BANK OF ROUMANIA LIMITED
(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET, LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors:
E. W. H. BARRY. Esq.
C. De CERJAT, Esq.
SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers:
BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

The Value of Publicity.

It is not only at the British Industries Fair that one can find Empire industries. As recorded in another column, Cyprus is also exhibiting at the *Daily Mail* Ideal Home Exhibition, and this is only one example of many of the advantages now being taken of the various Fairs and Exhibitions for the development of Empire trade. Before the War such a departure would not have been thought of, and apart from that the number of such events held then was far smaller than is the case to-day. This extension of Empire activities is the natural sequel to the British Empire Exhibition, participation in which, I pointed out at the time, must be followed up if the fullest hopes of the Exhibition are to be realised, and it is emphatically most satisfactory to know that the value of this country as an Empire shop window is becoming steadily more apparent.

The Rubber Crisis.

Another week has come and gone, leaving matters much as they were with rubber. There has been the usual reduction in the London stocks, bringing the total down to just over 63,000 tons, and for once in a way this development imparted some semblance of firmness to the market, spot rising to 1s. 2d., or roughly 5d. below the figure at which it stood before the announcement of an inquiry. I cannot help feeling that three or four more weekly reductions in the neighbourhood of 1,000 tons will make an immense difference to market sentiment. As to when the inquiry is likely to be concluded there is no knowing, but in view of the urgency of the situation it may be supposed that it will be speeded up as much as possible. An interesting development is the possibility that the Dutch may join us in a restriction scheme. If that happened the difficulties of the industry would soon be at an end, for it has been the non-participation of the Dutch as much as any other factor which has placed the success of the restriction scheme in doubt.

COMMENTATOR.

An order for a complete X-ray equipment for a big hospital in Addis-Ababa, the capital of Abyssinia, which was given to the Jaernh Electrical Company (a Swedish firm), has just been completed.

It is announced that a centre has been formed in Alexandria for the holding annually, in June, of London University examinations for Matriculation, Intermediate Arts or Sciences, and certain degrees. British subjects only are eligible as candidates for examination at this centre. Fuller details may be obtained from the headmasters of Victoria College, Alexandria, and the English School, Cairo.

Estimated yields of the sesame crop in Kassala Province, Sudan, are as follows (in ardebs):—Gedaref, 11,500; Mafaza, 4,600; Gallabat, 750; total, 16,850.

ROUMANIA'S ROADS.

The road mileage of Roumania aggregates 88,000 kilometres, of which 36,000 are of earth, sand-clay, and gravel, and 52,000 kilometres are of macadam; the mileage of asphalt and other bituminous substances is negligible (says an American Consular Report). A French Company recently constructed some 15 or 20 kilometres of gravel and tar road between Bucharest and Polesti. The experiment was a failure, and the road is now being repaired with macadam. No brick or concrete roads exist. Granite blocks are used extensively in city paving, but not for road construction. Beginning at the city limits, some of the cities and towns have paved highways for a few kilometres with natural rolled stone. Paving of this kind has been discontinued and this character of road construction is now included in the macadam mileage.

Road Budgets for the year 1927 provided as follows: National Government, 217,500,000 lei, of which 60,000,000 were for new roads, 90,000,000 lei for maintenance of roads, 59,000,000 lei for new bridges, and 8,000,000 lei for bridge maintenance; departmental or district, 548,000,000 lei; private firms and corporations, only a negligible amount and principally by petroleum companies for roads used by them.

Mileage of roads constructed in 1924 (the latest year for which official figures are available aggregated 245 kilometres, as follows: National, 5 kilometres; departmental, 68 kilometres; local, 3 kilometres; and communal, 148 kilometres.

NEW COMPANIES.

MACEDONIAN PROPRIETARY GOLDFIELDS.

Macedonian Proprietary Goldfields has been registered as a private company, with a capital of £1,000 in 1s. shares. The objects are to acquire the business of exploring and prospecting for gold carried on by Major J. D. Henry, D.S.O., and Col. G. M. Edwards, D.S.O., in Macedonia, Republic of Greece. The permanent directors are: J. G. Bennett, 39, Academy Street, Athens, Greece (manager Valideh Trust), Chairman; J. D. Henry, Mediterranean Palace Hotel, Salonika, Greece, mining engineer; G. M. Edwards, address not stated. The registered office is at 49, Wellington Street, Strand, W.C.

EASTERN AND OVERSEAS PRODUCTS.

Eastern and Overseas Products has been registered as a public company with a capital of £400,000 in £1 shares (390,000 ordinary and 10,000 deferred). The objects are to carry on business as agents, shippers, shipowners, etc. The registered office is at 130, Fenchurch Street, E.C.

JAFFA ORANGE EXPORTS.

The Empire Marketing Board reports that the total shipments to United Kingdom ports up to February 18 amounted to 1,038,000 boxes, as compared with 1,112,000 boxes at the corresponding date last year. Shipments to all destinations amounted to 1,085,000 boxes, as compared with 1,121,000 boxes last year. Including transhipments, however, the total shipped this season probably exceeds 1,200,000 boxes, or within 200,000 boxes of the estimated total for the whole season.

The traffic receipts of the South Indian Railway Company for the week ended January 28 amounted to Rs.12,91,722, making the total from April 1 Rs.5,12,68,861.

At Cap Martin on February 21 Herr Stresemann gave a luncheon in honour of M. and Mme. Titulescu. Lord D'Abernon, late British Ambassador in Berlin, was among the guests. M. Titulescu arrived at San Remo on February 24 and had a long interview the following day with Herr Stresemann.

Engineering Topics.

By G. B. B.

Should it become, generally speaking, commercially possible, as seems likely, to be able to obtain power gas from sewage on a large scale, not only will a great advance have been made in engineering work, but the minds of a large number of local bodies, who find it increasingly difficult each year to cope with the sewage disposal problem, will be relieved. Further a cheap and practically inexhaustible source of power will be available in almost unlimited quantity.

There is in operation at the present moment a large power plant working on gas obtained from sewage sludge and at this works over 400,000 tons of crude sewage is dealt with per annum. The separate digestion process is used, and Eastern engineers will be interested to hear that during the digestion process from one-quarter to one-third of the solid matter is converted into a gas which is explosive when mixed with air in proper proportions. The gas is about two-thirds methane and one-third carbon dioxide, with a slight percentage of nitrogen. The calorific value of the gas is about 630 British thermal units per cubic foot. Most of this gas is derived from the primary digestion tanks, and it was estimated at first about 1,100 horse-power could be obtained per hour, on a 24-hour day basis, valued at about £11,000 per annum on a 1s. 6d. per 1,000 cubic ft. scale.

The plant in question is that of the Birmingham, Tame and Rea District Drainage Board, who are certainly operating most successfully and the engineer to the Board, Mr. H. C. Whitehead, put down, when the proposal was first made, a gas engine of 150 brake horse power, driving a 4,000-volt alternator of 100 kilowatts capacity. The plant, which was started up about six months ago, has been running continuously on full load, and it is estimated that the electrical energy generated costs less than one-halfpenny per unit. The cost of producing the gas, taking all charges into consideration, is about 7.5d. per 1,000 cu. ft.

A Stainless Steel Chain.

Messrs. Firth and Sons, of Sheffield, whose stainless steel, Firth-Staybrite, has already been largely used in structural steel work, including the restoration work at St. Paul's Cathedral, have received the order for the huge new chain which is to be embedded in concrete, round the outside of the bottom of the dome to take up the strain of the girders. The chain will be of stainless steel and will weigh 30 tons, with a working load factor of 1,000 tons. The chain, which will be 450 feet in length will be of links measuring 15.3 feet in length and 3.3 inches in width, the links being laid in parallel, four deep, and it is claimed that this will be the largest stainless steel chain in the world. A large number of the tie-bars used in the new work at St. Paul's, for bracing purposes, are also of this alloy of stainless steel.

The building of the new bridge over the Ribble at Preston, should the proposal be carried through, will be one of the biggest works of its kind in the North of England, and it will embody many new and interesting engineering features. It will be steel built, on the well-known cantilever principle and will be 600 feet in length and 85 feet above the level of the river at high water. There are to be two levels, the upper for ordinary road transport and the lower for electric passenger cars, each holding 50 people. The work would find employment for a large number and the estimated cost is £750,000.

Whilst on this subject a large steel bridge is to be built over the Clarence River. This is to have a total length of 1,484 feet and will contain over 4,000 tons of steel. The contract provides for five truss spans each 240 feet in length, two approach spans 100 feet long and a bascule or lifting span electrically operated. The bridge will carry a roadway 22 ft. 6 in. wide and a double railway track. The piers will be on concrete foundations and to receive this concrete steel caissons are to be sunk. Each of these will be 20 by 55 ft. in width and length respectively, with a height or depth of 27 ft., and altogether the contract price is about £180,000.

An Interesting Motor Installation.

Whether for pleasure or commercial purposes, the question of having some form of auxiliary power for boats is now being universally considered. A very interesting motor installation has recently been carried out in Malta by the Malta Import and Export Agency, who handle the interests of Messrs. J. W. Brooke and Co., Ltd., of Lowestoft, the well-known motor boating firm. The engine, a Brooke 45 h.p. four cylinder heavy duty motor, has been fitted into the Gozo Malta Service Boat, San Pietro and Paulo, which is now the fastest boat on the service. The boat, which is 40 ft. long, has a cargo-carrying capacity of 18 tons. So as to occupy the smallest possible space in the hold, the engine has been installed right aft, which, owing to the sudden closing in of the boat's shape at each end, presented some difficulties in fitting the motor. These, however, were successfully overcome, and since launching it is said to have given general satisfaction. This well-known British engine, by the way, is an exactly similar model to that fitted to the schooner Vera, which made such an eventful voyage to the Arctic and back from England in 1919, its running during the whole voyage being an unqualified success. This same type too is fitted to one of the most famous British auxiliary yachts, the Braemar, winner of the London to Cowes race on five out of six occasions.

Vickers Steel.

Captain Malcolm Campbell in achieving a speed of 206.95602 miles an hour in his Napier-Campbell "Blue Bird" motor car has established a world's record. In this, as in most of the recent record-breaking achievements on land and in the air, Vickers steels have played

their part. The frame, axles, gears, the steel forgings in the gear box, and the crankshaft and connecting rod drop forgings were of Vickers steel and manufacture, being products of the River Don Works of Messrs. Vickers-Armstrongs Limited. It is interesting to note that Vickers steels were also used in Major Segraves's famous Sunbeam car, with which he achieved a speed of 203.841 m.p.h.. and in the victorious Bentley car, in the 24 hours Grand Prix d'Endurance at Le Mans. The crankshaft and connecting rod drop forgings of the "Lion" engine fitted to the Supermarine Napier S.5 which won the Schneider Trophy Race for Great Britain were likewise of Vickers steel and manufacture, as was also the crankshaft of the A.C. car, with which the Hon. Victor and Mrs. Bruce averaged over 68 m.p.h. for 15,000 miles on the Montlhery course at Paris.

THE TURKISH MOTOR MARKET.

General business conditions in Turkey during the fourth quarter of 1927 continued (says an American Consular report) dull. Automotive sales, however, held up quite well, with dealers generally satisfied with their volume of business, in both Constantinople and the interior of the country. Imports and sales of passenger cars held up well during the last quarter, considering the fact that this period was the beginning of the winter season. In the small coast villages of Anatolia, American cars were overwhelmingly in the majority. In Constantinople, where a considerable part of the driving is over city streets, the situation is somewhat different and one sees a relatively larger number of foreign cars.

Light lorries continued to be the only type demanded in Turkey, on account of the rough and mountainous roads. The first attempt at the use of buses in connexion with the street railway service in Constantinople was made recently by the local tramway company. The limited demand for motor cycles in Turkey is generally supplied by French and British manufacturers of light-weight machines. The local demand for parts and accessories in general kept pace with the activity in the automotive market. There is a fairly consistent demand for accessories, and the demand for replacement parts is probably above the average.

It is anticipated that the local automotive market will remain quiet during the greater part of the first quarter of 1928, when roads in the interior are in poor condition as a result of the winter snow and rain.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended January 31 amounted to £E9,816, making the total from April 1 £E259,765. The figures for the corresponding periods of the previous twelve months were £E9,902 and £E282,844.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

The Egyptian Quarantine Board, Alexandria, invites tenders for the supply c.i.f Alexandria of 200 iron bedsteads. March 15. (D.O.T.)

Stores.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of consumable stores required for 1928-1929, such as ropes, oils, paints, leather, ironware and buildings material. April 10.

Terminal Strips.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 2,000 terminal strips for cast iron terminal boxes, 7, 14, and 28 pair to drawing for telephones. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

Cotton Waste.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 140 metrical tons coloured cotton waste. April 10.

Galvanised Iron Drums.—The Government Petroleum Refinery, Suez, invites tenders for the supply of 400 galvanised iron drums, various sizes, as per specification. March 15.

Sheets, Etc.—The Ministry of the Interior, Egypt, invites tenders for the supply of sheets, napkins, blankets, towels, socks, etc., required by the Department of Public Health during the year commencing May 1, 1928, and ending April 30, 1929. April 5. (D.O.T.)

Paper and Stationery.—The Egyptian Ministry of Finance invites tenders for the supply of paper and stationery required during the year 1928-1929. April 12. (D.O.T.)

Pumping Equipment for Mex.—Tenders are invited by the Ministry of Public Works, Egyptian Government, for the supply and erection at Mex Pumping Station of pumping equipment. The contract includes two complete Diesel pumping units, the engines being of the vertical four stroke air injection type driving pumping of the horizontal, centrifugal, or turbine type and the supply of two 60 K.W. 110 volts Diesel electric generating auxiliary sets. April 14. (D.O.T.)

Brown Boots.—The Egyptian Postal Administration at Alexandria invites tenders for the supply of 2,400 pairs of brown leather lace-up boots. April 9. (D.O.T.)

INDIA.

Steel Bridges.—Tenders are invited by the Indian Stores Department for 35 steel road bridges in connexion with the Lloyd Barrage Canals Construction. March 31. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, March 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, March 6).

Bibby Line.—S.s. Yorkshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 7).

British India Line.—S.s. Margha for Colombo, Madras, and Calcutta (London, March 10); s.s. Domala for Bombay and Karachi (London, March 17).

Cunard Line.—S.s. Tyria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Gruz, Venice, Trieste, and Fiume (Liverpool March 3, and Swansea March 6); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, March 24).

Johnston Line.—S.s. Quernmore for Galatz and Braila only (Liverpool, March 10); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 24).

P. and O. Line.—S.s. Ranchi for Bombay (London, March 2); s.s. Padua for Colombo, Madras, and Calcutta (London, March 3).

Prince Line.—S.s. Korean Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (London, March 17).

Ellerman and Papayanni Lines.—S.s. Dido for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 3); s.s. Algerian for Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 3, Swansea March 3); s.s. Lesbian for Oran*, Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 17, Swansea* March 17); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 17); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume* (Liverpool March 17, Swansea March 22); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, March 20). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to :—Algerian ports via Algiers; Moroccan ports, via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 28.

The outstanding feature of the Stock Exchange has been the feverish activity of the shares of Courtaulds Ltd., following the declaration of a 100 per cent. share bonus, to which further reference is made below. The speculative fever which this aroused extended to other shares in the artificial silk group and also to the "talking machine" section. Oil shares have also provided some excitement, after a prolonged period of lethargy, as a result of circumstantial reports of arrangements to end the price cutting war. The price of rubber, on the other hand, has continued to crumble and share prices have given way a little. The uncertainty of the present situation is producing an abnormal state of affairs in the rubber share market, and a very little selling is sufficient to depress prices. Holders of shares in the good class companies will be well advised to await further developments with patience. The publication of the reports of the four railway companies has not stimulated any fresh activity in the home railway market, although the figures show that the companies have made a very satisfactory recovery. The fortnightly settlement which proved to be of fairly heavy dimensions, passed off comfortably.

Courtaulds Results.

The issue of Courtauld's report has been followed by the most spectacular developments which have been seen in the world of finance for some time past. Excited dealings in the Stock Exchange, late "street" markets and the making of fortunes have been freely reported. The results, it is true, leave nothing to be desired from the shareholder's point of view. The profits for 1927 have advanced from £3,840,791 to £4,585,921. But this does not fully disclose the improvement, since this year the sum of £250,000 is allocated to a special reserve before arriving at profits. The ordinary dividend is restored to 25 per cent. free of income-tax, last year's distribution having been 22½ per cent. free of income-tax. But the greatest piece of good fortune is, of course, the share bonus of 100 per cent.—that is to say, one share for each existing share. The company's capital will be increased to £32,000,000. The report must be read as indicating a substantial measure of confidence in the outlook, though the directors state that it "does not necessarily imply any increase in the total amount of profit to be distribued in the future." The shares have since fluctuated considerably, the current quotation being £8⅝; in 1921 the price was as low as £¼. The growth of Courtaulds is in fact one of the romances of British industry. But it is most important for the investor to remember that this does not indicate an equal—or anything approaching an equal—degree of prosperity for other artificial silk producers.

Protecting the Investor.

The debate on the second reading of the Companies Bill in the House of Commons this week contained many points of interest to the investor and is indeed of great importance to him. On the whole, the temper of the debate was admirable, for there seemed to be general anxiety to give the investor the utmost protection. The statement of the President of the Board of Trade relating to share-hawking is especially welcome. The clause dealing with share-hawking, which prohibits the offering of shares from door to door, will come into operation immediately the Bill is passed; but the rest of the measure will not come into force until after consolidation by an Order in Council. Points of detail remain for discussion in Committee and it is to be hoped that full advantage will be taken of the opportunity to remedy the serious defects of our company law. Meanwhile, we must emphasise an important point made in the debate—namely, that no amount of legislation can make investing foolproof. The investor himself must continue to exercise the greatest care and vigilance even when the New Bill is on the Statute Book.

The Shipping Outlook.

Sir William Seager, in his presidential address before the Chamber of Shipping, sounded a note of remarkable optimism regarding the shipping outlook. Indeed, it has been a long time since such an optimistic view has been expressed in responsible quarters and it will not be surprising if there is a tendency to accept it with some reserve. "I hesitate to prophesy," he said, "but my years of experience in the shipping industry help me to believe that the demand for employment will soon equal the supply, and with that will come freights which will enable us once more to pay our way." He added that, "I am certain that our fleet is to-day better than it ever has been." It is to be hoped that Sir William Seager's optimism will be justified by events, for in recent years shipowners have been passing through a lean time. Meanwhile, it is noteworthy that, though the outlook has lately shown a somewhat improving tendency, shipping shares are on the whole standing below the highest prices touched this year. In fact, in some cases the difference between the highest and the present quotation is substantial. The ordinary shares of some of the leading companies, however, still considerably discount the future, but those of Manchester Liners, returning £5 10s. per cent. free of income-tax, equivalent to £6 17s. 6d. less tax, seem moderately valued.

INDIAN AFRICAN SERVICE

LONDON—ANDREW WEIR & CO., 21, Bury Street, E.C.

A report from Opari District, Mongalla Province, Sudan, states that only a small crop of wild coffee will be obtained this year.

Mr. Robert Robertson, at present on the teaching staff of the Egyptian Ministry of Education, has accepted the post of Reader in Law and Politics at Hong Kong University.

The death took place recently of Mr. James Padgett Cooper, late Secretary to the Council of Foreign Bondholders, at the age of 76. He first became associated with the Council when quite a young man, and was persuaded to join the Council as its secretary, a work he carried out with great success for many years.

Sir Alfred Mond, who is on a visit to Palestine, gave an interview (says a Reuter message from Jerusalem) in which he declared that economic conditions were improving and gave promise of still further improvement. The success of the Rutenberg electricity scheme, he said, had surpassed all expectations, and it had now proved unable to cope with the demand for electric power.

COMPANY NOTES AND REPORTS.

SOUTHERN PUNJAB RAILWAY.

The report of the Southern Punjab Railway Company, Ltd., for the year ended September 30, 1927, states that the net revenue for the year, after deducting £180,292 10s. 3d. payable to the Secretary of State for India as a share of surplus net receipts due to the Government, and allowing for administration expenses, Indian taxes and interest on debenture stock, is £268,949 3s. 9d., to which must be added £57,794 2s. 8d., brought forward from September 30, 1926, making a total of £326,743 6s. 5d. The dividend on the Preference Stock paid in respect of the six months to March 31, 1927, together with the interim dividend on the ordinary stock, reduce the balance available to £220,743 6s. 5d. The dividend of £46,000 on the preference stock for the six months to September 30, 1927, was paid on December 1 last, leaving £174,743 6s. 5d. Out of this sum the directors have set aside £25,000 for the purpose of compensating the office staff in London and the staff in India for loss of office in the event of the Secretary of State for India exercising his option to acquire the company's lines in 1929. The directors recommend the payment of a final dividend on the ordinary stock of £6 per cent. together with a bonus of £2 per cent. (making, with the interim dividend of £6 per cent. paid in September last, a total distribution of £14 per cent. for the year ended September 30, 1927), from which income tax will be deducted at the rate of 2s. in the £—i.e., 4s. less Dominion relief at 2s. The final dividend and bonus will absorb £80,000, and leave £69,743 6s. 5d. to be carried forward.

Exports and Imports

For the guidance of its customers the Westminster Bank issues a booklet dealing with the many ways the man of commerce may utilize the Bank's services in the development of his business; how he may avail himself of documentary credits, whether he is interested in exports or imports; and how he may take the fullest advantage of rates of exchange, rebate, or discount, and may best collect his bills with a maximum of safety and a minimum of delay

The Secretary will be pleased to send a copy on application to him at the Head Office

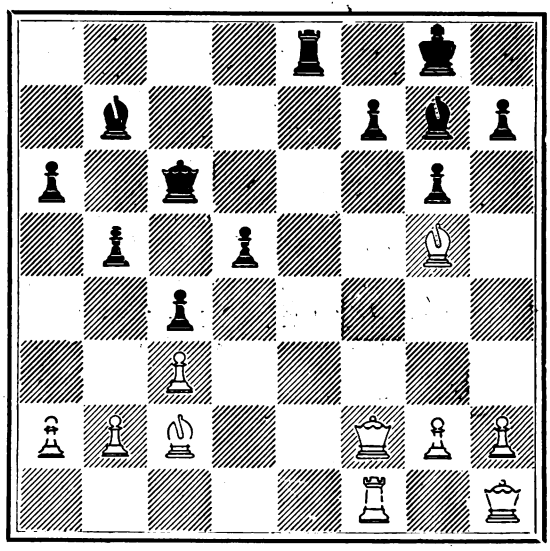
WESTMINSTER BANK
LIMITED
41 LOTHBURY, LONDON, E.C.2

DELHI ELECTRIC TRAMWAYS.

The directors of the Delhi Electric Tramways and Lighting Company propose to issue 20,000 preferred and participating shares and to consolidate the capital. At present the capital consists of £100,000 six per cent. preferred and participating shares and £30,000 ordinary. After the issue has been made the capital will amount to £150,000, divided between preferred and ordinary shares in the proportions of four-fifths and one-fifth. It is proposed that the 20,000 shares to be issued should be offered to preferred shareholders in the proportion of one in five.

CHESS.

By "CARO-KANN."



It is an axiom that a game is never lost until it is over, and it is certainly true that many an apparently hopeless game has been saved by the losing player persevering to the end. In the position given above Black had an easy win with two pawns to the good, but took the wrong continuation and had to concede a draw. Play ran as follows:—1 . . . P—Q5; 2, PxP BxP; 3, QxP (ch), K—R; 4, B—K4, QxB; 5, B—B6 (ch), BxB; 6, QxB drawing by perpetual check.

The solution to last week's end game is as follows:—1, K—B7, P—Kt4; 2, P—R4, K—R2; 3, K—K6, P—Kt3; 4, PxP, KxP; 5, K—K5, K—Kt2; 6, K—B5, K—R3; 7, K—B6, K—R2; 8, KxP, K—Kt2; 9, K—B5, K—B2; 10, P—Kt5, K—Kt; 11, K—B6, K—B; 12, P—Kt6 and win.

Barclays Bank (Dominion, Colonial and Overseas) have received the following cable from their Alexandria office:—"The Statistical Department of the Ministry of Finance announces that the total imports for Egypt during the month ended January 31 were £E4,287,567, against £E3,688,870 for the corresponding month last year. The total exports were £E4,849,681, against £E3,678,655 for the corresponding month last year. Cotton exports amounted to £E3,955,163, against £E2,998,271 for January, 1927.

The amount of Sakellaridis cotton picked in the Gezira to date this season (says a Reuter message from Khartoum dated February 23) has reached the total of 154,000 kantars, as compared with 202,000 kantars last year. The daily pickings to date have been 4,200 bags, as compared with 3,900 bags last year. The quality so far is below that of last season, but it must be remembered that the last two years there have been bumper crops. The results this year have thus far been considered satisfactory.

The Roumanian Government has issued an order "valorising" all the export duties, which are henceforth to be paid in terms of English currency. The main items include:—Wheat, rye, maize, barley, and oats, £3 10s. per wagon of 10 tons; peas, beans, linseed, £5; bran, 15s.; buckwheat, 15s.; biscuits, £4; industrial seeds (race, hemp, linseed, mustard, sunflower, marrow, acorns), £5; heavy and light benzine, 10s.; petroleum, light and heavy, 6s.; lubricating oil, £2; paraffin, £22; timber for fuel, 6s.; nuts in shell, 4s. 6d. per 100 kilos; shelled nuts, 9s. per 100 kilos; eggs (May to September), 1s. 3d per hundred, (October to April), 2s. 6d. per hundred.

The British Industries Fair

WHITE CITY EXHIBITS.

(*Continued from page 250.*)

It is not too much to say that the first week's results at both sections of the British Industries Fair have amply fulfilled expectations. The foreign buyers have been present in numbers, and from all parts of the Fair has come the same story of good contracts booked. There is not a shadow of doubt now that when the Fair puts up its shutter on March 2 it will have been by far the most successful event since the series was inaugurated. A particularly satisfactory feature is the success which has attended the Empire Marketing Board exhibit, one of the countries which have benefited considerably by participation in the Fair being Cyprus. As was pointed out last week, there are some noticeable gaps in the Empire section; but no doubt these will gradually be filled as the utility of the Fair becomes better realised.

Returning to the exhibits, there is, as usual, a wonderful display of sports goods and games; indeed, the exhibits of the former constitute probably one of the most comprehensive sections of the Fair. That is only as it should be, for if there is one thing for which this country is particularly well known throughout the world it is in association with sports and pastimes. At one time, of course, we led the world in practically every form of athletics, but it was clear that we could not continue always to do so once other countries began to take up our games seriously. But the fact that championships go elsewhere is no reason why we should not endeavour to develop the trade in sporting requisites to the utmost, and the excellent display by our leading manufacturers of these things at the White City encourages the hope that a more determined effort is to be made in the future to obtain a solid footing in the foreign markets. Games like tennis are now world-wide pursuits, and racquets are required for the Balkans and Turkey just as they are for a remote English hamlet.

The leather section is always one of the most interesting features of the Fair, for the very good reason that it very largely represents commodities which have come to be manufactured in this country as a result of the War. To-day the British manufacturer produces all kinds of leather goods, and as the Fair bears evidence produces them exceedingly well. Looking at the varied array of hand bags, cases of all descriptions, and fancy leather ware it is difficult to believe that there was a time when it was impossible for us to compete with the foreigner in these lines. Now the boot is on the other leg, and our traders are carrying their business operations with success into the foreign markets.

As usual, the stationery exhibits make a very fine showing. The title of the section is a comprehensive one, for besides the commodities usually regarded as coming under the word stationery are such articles as photogravures, picture prints, maps and plans, office appliances, and typewriters. The display of typewriters is specially interesting. Three firms are exhibiting—Barlock (1925) Co., British Typewriters Ltd., and Imperial Typewriter Co., Ltd.,—and they show examples of remarkably high standard British workmanship, and the quality combined with the competitive prices of the typewriters should enable these firms easily to withstand foreign competition not only in this country but in the overseas markets.

While the Birmingham section is the place for machinery there are some exhibits of this type at the White City, notably printing and paper-folding machines. Then Bartlett and Son Ltd., show their patent tea sifting milling and blending machinery. Tea drinkers throughout the world who are unacquainted with the technicalities of the tea trade little realise the number of handling and preparing processes through which the leaf has to pass after its arrival in London from overseas before it can be retailed to the public. On arrival at the warehouse from Bond the tea is of an uneven length and shape, and is not suitable for blending or for retail sale. The chests are opened out and the tea fed into feed hoppers of Bartlett sifting and cutting machine from which it passes along the feed plate and under the electrc magnetic nail extractors, which are arranged to extract all nails or pieces of metal before entering the top shaker sieve drum of the sifting mechanism. Here all the small tea which does not require to be cut is separated from the large and passes directly into the intermediate storage hopper. The large tea passes over the shaker and is eventually fed into the top set of cutting mills through which it passes on to the lower sifting mechanism. Here again the small tea which does not require to be cut a second time passes direct to the intermediate storage-hopper. Tea required to be again cut passes through the lower set of mills and on to the storage-hopper.

Any rubbish such as wood or paper is separated from the tea by the upper discharge sieves and is received in a box at the end of the shakers. This rubbish box can be easily withdrawn and emptied at any time. All the tea being now both cut and sieved to the desired size is collected in the intermediate storage-hopper ready to be discharged into the Bartlett Blender when the full capacity of 2,000 lb. has been sieved and cut. The tea is discharged from the hopper into the blender by opening first the feed-door of the drum, and then the valve at the bottom of the intermediate storage hopper. Both doors are then closed and the blender is ready to begin the blend. This is done by raising a handle working in conjunction with the timing gear. The blender revolves at a slow speed of three to four revolutions a minute and continues to revolve for a pre-determined number of revolutions, after which the drum automatically stops and the blend is completed. Experience proves that the best results are obtained by causing the drum to revolve from twelve to twenty times. The discharge of the tea into sacks, chest or hopper-chutes is commenced by the simple operation of a discharge handle which opens the central discharge door of the blender and allows the tea to flow out automatically making the drum revolve. When the required quantity has been withdrawn the discharge valve is closed and the revolving drum is simultaneously and automatically stopped, thereby cutting off the flow of tea. This operation is repeated until the drum has been completely emptied to the last ounce. The blender is then ready for making a further blend of the tea which has been accumulating in the intermediate storage-hopper above.

ADVERTISING IN

"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

Write for advertisement rates to:
The Manager, "The Near East and India," 170 Strand, London, W.C.2

Digitized by Google

Reference must also be made to the musical instruments section which is one of the many sections which is larger than last year. It speaks volumes for the growing realisation of the value of the Fair to find as is the case in this section old exhibitors coming back again after being absent for a year or two. There are, besides, many new exhibitors, and the section is now a worthy representation of one of the important British industries. There are serried rows of pianofortes and a large and varied selection of other musical instruments, and judging from the stands this branch of our trade is fully prepared to play its part in the devolpment of commerce overseas.

Fancy goods is the title of another section which covers a vast variety of exhibits, including such articles as toilet and fancy goods made from non-inflammable celluloid, brassware—a fine display this which includes some choice Indian ware—pulpware, photograph frames and similar commodities. But enough has been said to show the range of this section, which covers a wealth of the smaller industries of England which yet bulk so largely in the export trade.

ORANGE GROWING IN PALESTINE.

The report of the Commission appointed by the High Commissioner for Palestine to make recommendations for the better preparation and marketing of local citrus and other fruits contains the following with regard to orange growing.

The quality of export fruit must depend ultimately on the scientific standard of cultivation in the grove. The orange growers of Palestine include some of the most enlightened agriculturists of the country. They would welcome Government direction through the medium of travelling instructors and educative literature on the various problems of orange cultivation. Some of the most urgent of these problems are:—(a) How far apart trees should be planted; (b) What are the best stocks on which to graft; (c) What is the best bud-wood to use; (d) How much irrigation is required and by what method; (e) What are the best manures and fertilisers to use and what quantities are required; (f) What precautions are necessary against the most destructive diseases and pests, such as gummosis, Mediterranean fruit-fly and black scale.

The problems enumerated are not merely academic. They vitally affect the future of the industry. Until the good season of 1923-24, there was little new plantation, and improved export until recent years, due to gradual recovery from the effects of the War. During the last four years, however, the area of land under orange cultivation has increased rapidly.

Bearing commences from six to eight years after plantation, so that mistakes made in 1927 in the methods of planting new groves will only begin to affect the standard of fruit for export in 1933. The devastation produced by black scale in Syria and in the northern district of Palestine is only too evident. The same pest has now appeared in the Jaffa groves. Gummosis throws thousands of trees out of bearing every year. The influence of incorrect fertilisation in the grove on the keeping qualities of the fruit is believed to account for a large part of the loss sustained during transit.

The Commission is strongly of opinion that the Government should undertake citrus research without delay. The following measures appear to be the most urgent:—(a) The establisment of a fruit research station to conduct experiments, to distribute information, to co-ordinate results collected from other sources, and to prepare selected stock and bud-wood for dissemination. (b) Organisation and control of Government experiments in private groves by co-operation with the owners. Experience has shown, however, that the results of such partially controlled observation are never conclusive. This measure is only recommended, therefore, in order to supply much-needed information during the years which must elapse before a fruit research station can yield results. (c) An organised scheme of economic research, designed to investigate the true causes of deterioration during transit, and the most profitable means of distribution.

Growers have experienced a yearly loss estimated at about 20 per cent. of the total crop from the effects of storms and dry winds. Selection of the best types of shelter is admittedly important; but some doubt appears to exist among experts as to the relative merits of planting cyprus or bitter orange trees round groves, or of erecting enclosing mud-brick-walls, as adopted in Cyprus.

The actual cost of cultivation show that the average total expenditure, excluding the cost of the land, necessary to produce a bearing grove is about £P75 per dunum spread over about 5 to 6 years. The average annual cost after bearing commences is from £P15 per dunum. The normal yield per dunum will then average 100 cases per season. By improved methods of irrigation and mechanical cultivation it is probable that cost might be substantially reduced.

Large sums are now advanced each season by merchants in order to secure the produce of the growers so accommodated. The credit of the individual grower is often impaired by the long wait required for his first returns. Reparation after the War and the heavy costs of cultivation have driven many growers into debt at high rates of interest. To purchase fuel for irrigation he is often forced to sell his crop before the fruit appears. With estate encumbered and produce sold, the grower has no inducement to joint a cooperative group or to market his own produce. The first requisite is clearly an Agricultural Bank. The commission urges the Government to arrange for the issue of advances by one of the leading banks on reasonable terms, long term loans on mortgages of estates, and short term loans on the security of produce. This will not only relieve the grower from unduly high rates of interest and allow him to sell his crop in the best market, but will encourage co-operation, since better terms of credit will be offered to co-operative groups.

A number of problems connected with irrigation still require research. They include irrigation costs, the proper quantity, methods and time of irrigation, and the best means of drainage. The relative economy and efficiency of wind-pumps, oil engine-pumps, and electric pumps are also matters requiring further investigation.

The Palestine orange grower has to pick his fruit some four weeks before it can be sold to the consumer in England. The whole industry depneds on the peculiar lasting qualities of the Jaffa orange. In spite of these fruit sent in the same consignments exhibit every variety of condition on arrival in England.

In Palestine the fruits are usually carried from the trees in baskets to a packing house within the grove, where they are selected and graded by the packers. In California fruit are transported in specially constructed boxes to a central packing house, where the fruit of a whole district are cleaned, selected, graded and packed under co-operative supervision. Most of these operations are carried out mechanically, and the cases are then placed in a refrigerator car on the railway to the market. In Spain chemical treatment is now being tested as one of the operations of the packing-house with a view to increasing the lasting qualities of the fruit.

PERSIAN REPORT ON PERSIAN FINANCES.

The Nineteenth Quarterly Report of the Administrator-General of the Finances of Persia, for the three months Farvardin, Ordibehesht, and Khordad, 1306 (March 22—June 22, 1927), is of particular interest in that it was compiled, not by Dr. Millspaugh, the American Adviser who served Persia for five years, but by the Persian who succeeded him as Administrator-General of the Finances, Mehdi-Ghuli Hedayat.

The Report, which has been translated from the Persian, begins by explaining the delay in publication as due to the changes in the financial administration. It briefly reviews Dr. Millspaugh's refusal (over the clauses in his new contract relating to suppression of arbitration in case of disagreement of views, and to the limitation of unlimited powers in connexion with financial obligations) to accept the Persian Government's conditions, and the consequent ending of his services.

The Administrator-General claims that, during the period under review, "financial administrations have worked in perfect order and the course of affairs has been smooth. Important economies have been made in the Budget. A great number of contracted employees, who had been engaged for translation and typewriting, and whose services were no more required, were dismissed. The contracts of a number of others, who, contrary to the provisions of the law, were appointed to official duties, were likewise cancelled."

In 1305, as compared with 1304, there was a decrease in Persia's exports of 6,505,100 tomans, owing mainly to the fact that commercial relations with the Soviet Republics were not normal. It is pointed out, however, that Persian merchants should not rely solely on treaties to increase exports: they themselves must find new foreign markets. The Administrator-General believes that a favourable trade balance will result from tariff independence—"the foundation of which has been laid in consequence of the last treaty signed between the Persian and Soviet Governments."

Certain reforms in taxation are foreshadowed. It is proposed to substitute an Income-tax for the present Land-tax, but first must come a Survey Law, for the basis of the present tax cannot be weakened until an Income Tax is actually in being. Moreover, if the Majlis approve of the project for monopolising opium and tobacco, excess revenue for the Treasury will result. The execution of this Monopoly Law should precede the Income Tax.

It is stated that arrangements are being made for the engagement of a specialist in connexion with the establishment of a National Bank, which, it is claimed, would be of great help to the agriculture of Persia.

Pride is recorded in the fact that the League of Nations showed itself so friendly to Persia's point of view in regard to opium.

In the section devoted to Customs, it is remarked that on account of the increasing quantity of Russian sugar imported (which is sold in the central, western and even south-eastern provinces), the Treasury, owing to the application of the old tariff of 1903 to goods of Russian origin, instead of the new tariff of 1920, sustains great loss. Exports in 1305 showed an increase over 1304 of 44,611,000 krans; but imports fell in 1305 by 94,225,000 krans. The collections made by the administration of Customs during March—June, 1927, showed a falling off of 3,284,264,50 krans on the corresponding quarter of 1926.

Two items of quite general interest are derived from the section upon Treasury-General. The first concerns the coins which the Persian Government have had minted at the Leningrad Mint, and the second concerns postage stamps. It is stated that progress in the manufacture of the new air mail stamps has not been as rapid as was hoped. There was difficulty in the execution of the design of the representation of the Shah.

The remaining sections deal with the Internal Revenue Administration and the Civil Service Administration.

CYPRUS AND THE IDEAL HOME EXHIBITION.

The Office of the Trade Commissioner for Cyprus established by the Government last summer has been taking full advantage of the opportunities afforded by the various Fairs and Exhibitions for the display of the Island's products. Following an attractive exhibit in the Empire Marketing Board's Section at the British Industries Fair there is now at the *Daily Mail* Ideal Home Exhibition another display of the Island's products: oranges, silk, tobacco and brandy among them. Naturally participation in two exhibitions concurrently imposes some strain on the resources of the London office which has become a popular centre of trade intelligence and tourist information.

Bulgaria's foreign trade in 1927 shows a favourable balance of 548 million leva, the exports amounting to 6,678 million leva, while the imports totalled 6,130 millions.

The annual international trade fair at Salonika will be held this year from September 16 to October 1. The Greek Government is giving increased assistance to the fair.

Silk cocoon production in Yugoslavia in 1927 totalled 970,000 kilos as compared with 938,000 kilos in 1926 and 950,000 kilos in 1925. The number of silk growers was 44,000 in 1927 as against 42,000 in 1925.

Commenting upon Captain Malcolm Campbell's success on Daytona beach in his Blue Bird, which was equipped with Dunlop tyres, Sir George Beharrell, managing director of the Dunlop Rubber Company, Ltd., said: "It is a great tribute to the mechanism of the car and the skill of the driver. It is a wonder that the tyres could be made to stand so great a strain."

Yugoslavia's exports for 1927 were as follows:—exports, 4,251,000 tons of the value of 6,400.2 million dinars, as compared with 4,885,000 tons of the value of 7,818.2 million dinars for 1926; imports for the first ten months of 1927 totalled 1,071,000 tons of the value of 5,912.2 million dinars, as compared with 1,020,000 tons of the value of 6,323.5 million dinars for the corresponding months of 1926.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 22 :—

Egyptian Futures.—Sakel Contract.—The improved undertone commented upon in our last circular has continued in evidence throughout recent sessions, and with local and Continental buying a daily feature values have advanced steadily. The movement has been helped to a certain extent by the firmer tone displayed in the American markets, but the real impetus has been supplied by Alexandria, where considerable strength has been displayed mainly on adverse reports concerning the Sudan Sakel crop; these rumours which lack any official confirmation persist that both the yield and quality compare unfavourably with last season's. Considerable selling of new crops, principally Novembers, has been encountered here during the latter part of the rise and straddlers have taken advantage of the resulting wider Liverpool/Alexandria difference to add to their holding. At a discount of 30 to 34 points with the Alexandria market we certainly consider local new crop options are undervalued and for those who are prepared to run the operation until the end of the present season the venture should prove profitable. A further hardening in the lower tenderable grades has to be recorded and this has again reacted on the near contract deliveries, March closing up to 13 points under May; the difference may tighten still more.

More trade support has been in evidence during the past few days, as, apart from fixings, increased business has been done both in spot and forward cotton. Some of the improvement is, no doubt, due to the Sudan crop rumours, but on the whole we would say that conditions generally are more favourable. The market continues to have a healthier appearance, and whilst no doubt the most has been made of the recent "Bull" points by the speculative interests in Alexandria, it must be admitted that the statistical position is beginning to improve; on the whole we would advise working conservatively on the long side.

Upper Contract.—A further hardening in values has again occurred in this market during the past week, the improvement being due to better Alexandria reports, firmer American markets and increasing trade support. The levelling up of the February position in Egypt must have found a rather weak short interest, as this option advanced over 1 dollar yesterday and finally went out nearly level with April. Cotton grading below Fully Good Fair is beginning to be scarce, and premiums are continually hardening, the higher grades, however, are plentiful, and at the moment attracting little business. For the immediate future we do not look for any material alteration in the level, but should prices ease, we would advise moderate purchases.

Egyptian Spot.—A further slight improvement has again occurred under this heading, but spinners, as a whole, still distrust the current level of values, and still adhere to a policy of not buying a bale more than is absolutely necessary. At the back of this policy is a very natural desire to obtain an idea of the quality, quantity, and price of the coming Sudan Sakel crop, which is approximately three weeks later than had been anticipated. However, the recent rise in futures (which are now over 1d. per lb. up from the low level touched at the commencement of the month) must have caused some of them seriously to think. Two or three days ago rumours from Egypt were received to the effect that the Sudan crop was not so large as had been previously estimated, and also that the quality had deteriorated somewhat owing to excessive heat. No official statement has yet been issued either by way of confirmation or denial, and in view of past experience these rumours, in our opinion, should be received with a considerable amount of reserve. Nevertheless, as a result of these rumours, strong markets resulted both in Alexandria and Liverpool; an immediate improvement in the demand for Sakel took place, and certain spinners, who had been offering parcels of Sudan Sakel for resale on our market, at once withdrew their offers. From this it will be seen that much depends on the early arrivals from Port Sudan.

In the local inquiry there has been a distinct improvement in the offtake for Sakel between 18d. and 20d., whilst the lower qualities have also benefited to a certain extent. The Continent has been showing signs of renewed interest in this connexion. A quietly steady demand for low Sakel at from 9d. to 12d. has continued. Uppers have been freely inquired for, and the cotton, grading from Fully Fair and Strictly Good Fair, has been difficult to find at times at anything like a reasonable price. This quality looks as if it might become very scarce later in the season, with the result that the better grades will probably benefit.

Pilion at from 13⅜d. to 14⅛d. has been in fair request again, whilst White Sudan has been asked for up to "500 on" American. C.i.f. business has been quiet to moderate, but advices from Manchester have latterly been more optimistic and forwardings to the trade for last week were given as 7,495 bales Egyptian and 1,195 bales Sudan. Estimated sales 1,800 bales Egyptian and 1,150 bales Sudan. Quotations of Sakel have been advanced 50 points, those of Upper Pilion 35 points. F.G.F. Sakel to-day, 17.90d. F.G.F. Upper to-day, 13.45d. F.G.F. Pilion to-day, 13.85d.

The American House of Representatives has ratified the funding settlement of Yugoslavia's 62,850,000 dollar debt to the United States Government.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 16, state :—

Since our last report the futures market has continued on the quiet side and fluctuations have been negligible. The week's summary of price movements is as follows :—Sakellaridis: March, 33.34 dollars, 0.14 dollars down; May, 33.73 dollars, 0.12 dollars down; July, 34.05 dollars, 0.10 dollars down; November, 34.60 dollars, 0.04 dollars down. Ashmouni: February, 24.29 dollars, 0.12 dollars up; April, 24.60 dollars, 0.08 dollars up; June, 24.88 dollars, 0.06 dollars up; October, 25.07 dollars, 0.06 dollars down.

Sakel.—The week has been a series of very quiet markets, the bulk of the business consisting of professional jobbing. Some of the local speculators have tried to bear the market, basing themselves on the dispute between the English master spinners and their workmen, but their efforts have not met with much success, the commercial houses being buyers on every decline.

The demand from abroad has been moderate, but the pretentions of holders of actual cotton do not encourage business. It has recently been extremely difficult to work on the spot market, holders either asking extravagant prices or withdrawing their cotton from the market. This attitude is due, to a certain extent, to the persistent reports from up-country to the effect that stocks in the interior are small; the fact that the Sudan crop is arriving on the Liverpool market is completely ignored.

We do not look for any big fluctuations in the near future. To have any serious rise, the demand from spinners must improve considerably and that, with the present conditions of things in the textile trade, does not seem probable; on the other hand, with stocks mostly in strong hands, a heavy fall is unlikely, for we do not think that the local speculation alone is strong enough to bring it about.

Uppers.—This market has been slightly better than the Sakel market, influenced by the improved tone in New York and by the fact that the dockets issued at the second tender were considerably less than anticipated. Tenderable grades from about Good Fair to Strict Fully Good Fair are scarce on the spot and this also tends to maintain the futures market.

At the second February tender, 2,500 kantars dockets were issued, making a total for the month to date of 16,750 kantars.

The week's receipts amount to 102,076 kantars, against exports

140,950 kantars; the stock in Alexandria stands at 3,046,967 kantars.

Spot: Minet el Bassal has been a dull affair during the past week and business continues on very quiet lines. Spinners have taken only a moderate interest in our cottons and the week's turnover is a very poor one. Sales amount to about 11,850 bales, of which we estimate 6,000 bales Sakellaridis, 4,950 bales Ashmouni and Zagora, 600 bales Pilion, and 300 bales other varieties. The spot situation shows no new technical feature of interest.

Sakellaridis: A moderate business has been done covering all grades, with quite a good demand for very low grades, which are not, however, very easy to find. Spot differences are without quotable change, but all cottons below Fully Good Fair are very hard to buy and holders are very hard to deal with.

Ashmouni and Zagora: Have been in much less demand and a greatly reduced turnover has resulted. In spite of this fact, all grades are very hard to buy, especially the medium qualities, and offerings are scanty, holders for some reason preferring not to sell at present. Spot differences are generally rather stiffer.

Pilion: A fair business has been done in all qualities. Spot differences are generally rather dearer.

Other Varieties: A very fair business has been done in White at last week's rates. Brown is neglected and no business is reported. In Nahda a small business has been done and some small lots of Maarad have changed hands.

Up-country: Spot business has been very small during the week. In Upper Egypt some of the ginning factories have already shut down for the season.

New Crop: Unfavourable weather conditions have interrupted ploughing in the North Delta and have also caused some delay in planting in some districts of the South Delta and Upper Egypt. The Nile gauges show some improvement, but the river is everywhere lower than at the same time last year.

NEWS FROM ALL SOURCES.

The Indian Store Department, London, has given a contract for the supply of a wheel lathe to Alfred Herbert, Ltd., Coventry.

As from March 1 the Ionian Bank will discontinue paying the transfer stamp duty on transfers of its shares.

To commemorate the tenth anniversary of the Balfour Declaration, and also to perpetuate the name of Lord Balfour, the Balfour Forest was inaugurated at Ginegar (Junjar), on the slope of the hill to the south-west of Nazareth, overlooking the Plain of Esdraelon, on February 23.

It is officially announced that owing to the success of this year's British Industries Fair, the Government has granted for the third year in succession the sum of £25,000 for advertising the Fair of 1929. Already individual exhibitors and firms are being asked to book provisional accommodation for next year's Fair.

The movement at Al Azhar University, Cairo, in favour of European dress for students is reported to have advanced a stage, the Students' Executive Committee having passed a resolution declaring that "students will present themselves after the Fast of Ramadhan in European dress, like the students of all Government schools."

M. Michalakopoulos, Greek Minister for Foreign Affairs, is due to leave Athens to-morrow for Geneva in order to attend the meeting of the Council of the League, and the Chamber, which has decided that it is unnecessary for the Tripartite Loan Convention to be ratified by a special law, as it was concluded under its specific authority, adjourned on February 24 for a week.

Notes of the Week.

The Negotiations with Egypt.

At the bidding of the Wafd the draft of an Anglo-Egyptian Treaty to regulate the relationship between the two countries, that was the outcome of protracted conversations between Sarwat Pasha and the British Government, has been rejected by the Egyptian Government, and Sarwat Pasha has handed his resignation to King Fuad. To the merits of the draft Treaty and to the position created by the rejection, reference is made on another page. At this stage it is only necessary to express the hope that Sarwat Pasha, who could not well have taken any other course, will be induced to resume office. His premiership was the outcome of the considered judgment of the Wafd, and it has clearly been an invaluable asset to Anglo-Egyptian relations. The rejection of the draft Treaty leaves those relations where they have been at any time during the past year or so, and does not necessarily introduce any sinister development. The Wafd had, perhaps, pinned its hopes too much on the unattainable; if it accepts the situation philosophically and settles down to further consideration of the matters at issue, in a conscientious attempt to understand the British point of view and to review its own, a treaty of alliance may yet be concluded. There is much in the draft treaty that goes towards meeting Egypt's aspirations. Any further modifications, it cannot be too strongly urged, must necessarily be dependent on the degree of self-restraint now shown by Egypt and on the manner in which the door is left open for future negotiations. A compromise over the defence of British Imperial communications should be possible, but it cannot be reached through the negation of Great Britain's right to safeguard her interests in this respect.

Roumania and Hungary.

The Geneva stage will be set this week for two questions of special interest to the Near East—the controversy between Roumania and Hungary over the Magyar "optants" in Transylvania, and the smuggling of machine-gun parts into Hungary. Whether the two subjects merit the grave importance for Europe as a whole with which it is sought to invest them is another matter. They have, however, been submitted to the League of Nations, and to this extent its *amour propre*, if not its reputation, is involved. Attempts to persuade the parties to the Transylvanian dispute to settle their differences out of court have not succeeded. At the last moment the Roumanian Government has made an offer to Hungary, but, as it hardly sets foot on the road which leads to the substantial Hungarian demands, its rejection is a foregone conclusion, and the League Council will be once again thrown on its own resources to avoid a decision in the matter. In regard to the second question the League Council has two delicate points to decide—whether it will gloss over or make a test case of an incident which must involve Italy, the exporter of the arms, as an accomplice in the crime of Hungary, the importer; and whether it will regard Hungary's subsequent action in the matter as a deliberate affront to the League. The latter point may be difficult to sustain, in view of the Government's action in requiring the broken-up arms, after the auction, to be kept where sold, until the League had concluded its inquiry. It is to be hoped that the Council will adopt the course which will redound to its reputation for being above petty spite and will strengthen it in the eyes of the world.

The Bulgarian Loan Question.

The loan for which the Bulgarian Government applied last September to the League of Nations is being made a political question of the first order in Bulgaria. To the condition laid down by the Financial Committee of the League that the National Bank of Bulgaria, which is a State institution, should be converted into a private bank of issue, independent of Government control, the Sofia

Digitized by Google

Government pointed out that the circumstances of the country would prevent the shares of such a bank from being taken up in the country itself and that they would inevitably fall into the hands of foreign capitalists. A compromise which would place the issue of notes by the State Bank under the control of foreign officials was not accepted by the Financial Committee; but in the face of Bulgaria's need the Government has had no other alternative than to explore fresh avenues of agreement with the League. A further offer has been submitted, and is now being considered in Geneva. An independent bank of issue is to be created at an opportune moment and in the meantime the National Bank will engage a technical adviser and submit to the right of veto of a representative of the League. The Opposition in the Sobranye has become restive over the secrecy observed in the loan negotiations, and the difficulties of the Government threaten to revive the differences that arose a short time ago in the Coalition group—the Democratic Entente—between Dr. Tsankoff and the Prime Minister. On the ground that M. Liaptcheff made his last offer to the League without previous consultation with his colleagues and secured their approval only after the proposal had been conveyed to Geneva, the Minister of Railways has resigned, after failing to persuade M. Liaptcheff to reconstruct his Ministry. Realisation of the seriousness of the position, if Bulgaria does not obtain the loan, may postpone a crisis until a decision is reached by the League; but it is evident that the party coalition which has been in power since June, 1923, with a change of Prime Ministers in January, 1926, has nearly exhausted its capacity for holding together.

A New Broom in Belgrade.

Although Dr. Koroshetz, the leader of the Slovene Clericals in Yugoslavia, owes his post as Minister of the Interior to the fact that it was not convenient to allow so coveted a Ministry to be in the hands of either the Radicals or the Democrats, and in spite of the provisional character that is supposed to attach to the new Government, he has lost no time in showing that he intends to break new ground in the government of the country. He would seem to endorse much of the criticism that has been levelled against Serbian administration, and consequently his programme of reform is a long one. Starting with the axiom that law and order must be maintained and the security of person and property guaranteed, he is to turn his attention first to the Civil Service. Officials who lack the necessary qualifications for their posts are to be dismissed; it is to be pressed home on the whole Service that the laws are to be administered without respect of parties or politics; outside their offices officials are to regard themselves not as adherents of this or that party, but as men of culture; in their offices they are to act as the best friends of the people. In regard to the police Dr. Koroshetz is not going to lose sight of the exacting and dangerous nature of their profession, and he will allow no one to belittle the honour of the force or to treat it with contempt. On the other hand he will have nothing to do with a régime of police brutality or terrorism; but the police force is not going to be reformed by those who are now attacking it. What is required in this direction he hopes to be able to carry through himself. Finally Dr. Koroshetz promises that the situation in South Serbia (Macedonia) will have his special attention. There can be no doubt that, if the new Minister of the Interior can count on the support of his ministerial colleagues, the carrying out of his programme will help to strength the Government, as the internal administration of the Kingdom is responsible for most of the bitterness in Yugoslav politics.

The Wahhabi Raids.

It is unquestionably fortunate that the recognised raiding season in Arabia is nearing its end, for the reports concerning Wahhabi activities near the borders of Iraq and of Kuwait, whether they be wholly or only in part accurate, denote a most unsatisfactory state of affairs. The Mutair, under Shaikh Faisal al Dawish, have in the last few weeks come to know what sort of weapon of defence and offence the R.A.F. is, but whether this knowledge is sufficient to dissuade them from further designs upon the "infidels" of Iraq and Kuwait is not yet proved. Nor is that all. For fears are entertained—they were publicly expressed at the beginning of these activities of Faisal al Dawish—that the large tribes of the Ajman and the Ataibah, under Shaikh Ibn Hathlain and Shaikh Ibn Hamid, who may or may not relish subordination to King Ibn Saoud, are inclined to follow the example of the Mutair. If these three tribes were to unite in an attempt to create disorder in Iraq and Kuwait, the effects upon the loyalty of certain other tribes both in Iraq and in other parts of Arabia might be disastrous. Quite obviously the British, who are convinced that the Wahhabis have no case against Iraq and Kuwait to justify the recent raids, are taking no chances, and the co-operation of the Navy with the Royal Air Force should ensure the circumscribing of the activities of the discontented Wahhabis. But what one most wishes to see is tangible proof that King Ibn Saoud's word is still law among the Ajman, the Ataibah and the Mutair, for if the tribes, for whatever reason, have in fact rebelled or are ready to rebel against their sovereign overlord, the hopes which are reposed by every well-wisher of the Wahhabis in some kind of Arab renaissance may have to be modified or postponed.

The "Ikhwan" and Their King.

It has been widely suggested that these raids and threats of further raids have been prompted by religious fanatics who, in view of the statesmanship and far-sightedness with which King Ibn Saoud finds a *modus vivendi* with the West and is willing to take from it that, and no more, which is useful to his essentially Islamic purposes, have persuaded themselves that the true Wahhabi faith has become forgotten by the great Wahhabi leader. This, however, is a plausible and convenient explanation which would seem to require very much more evidence than is available to sustain its accuracy. If it is true that the Ataibah and the Ajman are looking askance at the authority of the King of the Hijaz and of Najd—we are in no position to confirm the report—the explanation is far more likely to be found in the past attitude of these tribes towards the Saoud family than in any religious argument. For the present the whole matter must be one of surmise, and observers should be chary

of assuming that the *Ikhwan* movement, or part of it, is irreconcilably opposed to its leader. On the other hand, it is possible that tribes like the Ajman and the Ataibah in Najd, or the Harb in the Hijaz, may consider the present a fit time to attempt to pay off old scores or in some measure to reassert the chaotic privileges which they claimed in past years. The separatist tendency of Arab tribes is, of course, a factor which cannot be gainsaid; but, as we have stated, considerably more evidence is necessary before one is justified in assuming—what indeed would be a calamity for Arabia—that King Ibn Saoud's authority is seriously on the decline among his *Ikhwan*.

Briquettes from Basrah.

Englishmen will remember with some distaste the briquettes which were manufactured during the Coal Strike in order to keep our Home fires burning. They were a substitute for the real thing; their smell was unsavoury; they were unreliable; and they were expensive. Once more, but in a different sphere, they are having foisted on them briquettes of "information," in the shape of hectic telegrams from Basrah. These briquettes are largely "bunk"; they are a substitute for the real thing, whether they tell of Persia, of Najd, or even of Iraq itself; they are unreliable, and, unless more care is exercised, they may prove to be expensive. Twenty thousand men, says Basrah, are about to attack Kuwait: the attack has not yet come. A battalion of the Gurkhas, says Basrah, is on its way from India to fight the Wahhabis: and official denial comes promptly. The last and most serious attempt of the correspondents, or correspondent, at Basrah to scare Great Britain on the subject of British-Wahhabi relations, is made just as we go to press, in the form of documentary evidence that King Ibn Saoud has definitely thrown in his hand with the Mutair, the Ajman, and the Ataibah, and intends actively to support them in their alleged designs upon Iraq, Kuwait, and Trans-Jordan. On the face of it this "document," said to have been issued by King Ibn Saoud from Riyadh, appears unconvincing; for the Wahhabi leader, whose loyalty to the British is an indisputable feature of his amazing career, knows well that no violent proselytising in the Mandated States has in existing circumstances any hope of success. We hope to return to this subject next week: suffice it for the moment to warn readers against the "jumpiness" which is unfortunately being displayed in unofficial quarters in the three Mandated States.

The Persian Claim to Bahrain.

No item of surprise is contained in the reply, published last week, of the British Government to the Persian Government upon the latter's recent Note on the ownership of Bahrain. It will be remembered that the British Government, in its recent treaty with the King of the Hijaz and Najd, implied the independence and sovereignty of Bahrain, an attitude which it has consistently adopted for over a hundred years. This implication has never been accepted by Persia, who has made perhaps ten protests of its right to the ownership of Bahrain. These protests are, however, fatuous, as any impartial observer may judge for himself. The whole basis of British agreements with Bahrain in the past has been that the Shaikh of the islands was an independent ruler. To upset the usage of over a century is manifestly impossible. If, as apparently the Persians suggest, conditions prevailing in the reign of George III. were to be restored, the United States of America would be put under British dominion! Neither the Persian nor the Turkish claim (and Turkey's claim has something to recommend it which is not possessed by Persia's claim) to the possession of Bahrain can be entertained by the British Government, the object of which is, demonstrably, "the peaceful development of the islands and the welfare of the Arab inhabitants." It should be pointed out, however, that this dismissal of Persia's claim to Bahrain is by no means of a piece with other prominent matters of difference between Great Britain and Persia. Those differences belong to another category, and are, we are convinced, susceptible of solution, provided that goodwill, which this affair of Bahrain is not likely to destroy, be preserved on both sides.

Jewish Immigration into Palestine.

Not long ago, Colonel Kisch, of the Zionist Executive in Palestine, expressed the opinion that possibly the number of Jewish colonists in Palestine at the time of his death would not differ greatly from the present figure. Obviously estimate of the potential numerical proportions of the Jewish National Home must depend upon a variety of unknown factors, including such things as the extent of the financial support by Jewry of the Palestinian experiment, the working out of the Dead Sea Salts concession, and the development of the vast hinterland of Palestine, namely Trans-Jordan, Syria, and Iraq. For the present, however, there are certain signs that Colonel Kisch's estimate may not be a hopelessly pessimistic one. (Colonel Kisch is, of course, no pessimist: his point, in the statement to which we have referred, was mainly to demonstrate that the value of the Jewish National Home did not lie in its present numbers.) For the emigration of Jewish colonists (as well as other inhabitants of Palestine) which began to assume serious dimensions in 1926, continued in strength in 1927. Last December 170 Jews entered Palestine, but 262 Jews left the country. In January of this year 176 Jews entered Palestine, but 186 Jews left it. Does all this signify that the ebb-tide has set in, and that the waves of colonists will no more flow to the Holy Land? Hardly. The balance of emigrants is small, and will in all probability become smaller in the near future. The period given as that by the end of which Zionist anxieties on this matter of emigration from Palestine will be dissipated varies from a few months to a year. It will be time enough to assert the collapse of the Zionist movement if at the end, say, of a year from the present time, Jewish emigrants from Palestine still outnumber Jewish immigrants into it.

Dr. Weizmann and American Jewry.

It is, however, sufficiently clear that the Zionists have come to a parting of the ways, and their future in Palestine will depend to a considerable extent upon the success which attends Dr. Weizmann's visit to America, whither he is sailing in a few days. The Zionist leader will go to plead before American Jewry, equipped, as of old, with his brilliant eloquence in support of the ideal in Palestine, but reinforced this time with the optimism of a practical man, Sir Alfred Mond. During the past few years it has been the steady contention of the eminent Jewish industrialist that Palestine is a fit place not only for sentiment but also for business, that private investment therein is a "sound proposition" and should complement the acts of charity on the part of Jews. It may be expected that Dr. Weizmann, fortified by this view, will find unusual sympathy among American Jewry, both Zionist and non-Zionist, for the furthering of the "Jewish National Home." The results of this forthcoming visit will throw considerable light upon the future of one of the most interesting movements in the world.

THE JUGOSLAV SOCIETY.

The Inaugural Dinner of the Jugoslav Society of Great Britain is to be held at the May Fair Hotel on Thursday, March 15. Sir Charles Oman will preside, and the principal speakers will include Lord Hugh Cecil and the Bishop of Gloucester.

All those interested in Yugoslavia are invited to attend the Dinner. Application may be made to the Hon. Secretary, 1, Buckingham Street, Buckingham Gate, London, S.W.1.

THURSDAY, MARCH 8, 1928.

EGYPT AND GREAT BRITAIN.

Disappointment, we are convinced, will be the dominant feeling in both countries over the failure of the conversations that have been in progress for so many months between the Egyptian Prime Minister and the British Government to lead to a definite treaty. There is, however, no need for any more tragic note to be sounded yet, either in Egypt or in Great Britain. Both peoples are entitled to their own opinions, and both may be credited with having attempted, through their appointed representatives, to reconcile the two points of view or to bring them together near enough to allow of a treaty of alliance which would have for each advantages over the rather indeterminate relationship that exists at present. For Great Britain that relationship has, perhaps, fewer disadvantages than it has for the Egyptians. It was inevitable in the circumstances, therefore, that there should be a reluctance on the one side to go far in the granting of concessions, and on the other side an eagerness to win as much ground as possible. Both parties can unite in a tribute to Sarwat Pasha for the patience and the thoroughness with which he has conducted the negotiations. He had a difficult part to play, as, unlike most Prime Ministers, he had no following in Parliament which could be relied upon to endorse the line of policy that he might ultimately adopt. When he started the conversations, the attitude of the Wafd and that of the British Government were poles apart. From the nature of his task he could but hope by friendly discussion to remove misunderstandings or misgivings on the part of the British Government; he was debarred from trying *pari passu* to persuade the Wafd to adjust its own views with the idea of bringing them nearer to those of Great Britain. It was essentially a handicap to him that it should be recognised that ultimate authority in Egypt rested with a party which had never shown itself to be as friendly towards the British as Sarwat Pasha himself had. If Egypt could speak with his voice, the negotiations might well have taken a different course. In the end a stage was reached beyond which in the light of actual facts the British Government was not inclined to go. It would be idle to suppose that Sarwat Pasha was satisfied with what he had achieved, to the extent of believing that the terms he had been finally offered would satisfy the Wafd. There was, however, no other course open to him than to pass them on to the Wafd for acceptance or rejection. They have, as is known, been rejected. The leaders of the Wafd have had no opportunity of imbibing the worldly wisdom that is Sarwat Pasha's as the result of a wide international experience and prolonged conversations with the British authorities. The statesmanship of the extremists of the Party, who are still a power in its councils, is of a still lower standard. It would have been far more remarkable, if the Wafd had accepted the proposed treaty at once, than that it should almost hurriedly reject it.

The attitude of the British Government may be summed up in a few words, as follows: "We dare not run any further risks in Egypt. In 1922 we made a generous gesture in the unilateral grant of independence and waited for the Egyptians to respond with their *quid pro quo*. They never did. Instead they asked for more, and when it was not forthcoming resorted to violence and murder. Before, therefore, the final stages of Egyptian independence are reached, we must be certain that there is a complete change in the outlook and intentions of the Egyptian people in regard to their special relationship with Great Britain." Of this British attitude the Wafd, it is to be feared, knows nothing and cares less. Its whole horizon is bounded by Egypt and itself, and it will not allow itself to be convinced that Great Britain, on the strength of nearly fifty years of service in Egypt and of her imperial responsibilities, has any right to stand between Egypt and her unrestricted independence to-morrow. Nor does it stop to reflect that this independence, if Great Britain were to stand wholly on one side, would be at once filched from Egypt. This untenable attitude, it need hardly be said, is not shared by all Egyptians. All desire an independence that shall be as unfettered as it possibly can be, but many know that a special position reserved for Great Britain in Egypt must always bring with it special advantages with which the Egyptians cannot afford to dispense. What the few realise to-day there is always hope that the many will come to appreciate later. The Wafd rejects the proposed treaty, because it does not approximate to its own views on the subject of Anglo-Egyptian relations. It may be that, when more time has been given for the adjustment of those views to the realities of the situation, a further approach to common ground may be possible from both sides in the light of developments in the interval.

Whatever other objection may be raised to the clauses of the proposed treaty, it is clear that the crux of the matter lies in the future of the British Army of Occupation. If Great Britain wishes the Egyptians to approach the subject from her point of view, she must also attempt to look at it from the Egyptian side. The effect of the Treaty as drafted would be to keep British troops in the Cairo citadel for the next ten years. That is a prospect to which no patriotic Egyptian can look forward with enthusiasm. From the British military aspect it may be conceded that the precaution appears absolutely essential to-day; but the mere fact that the possibility is contemplated of a time arriving when the precaution will not be necessary suggests that this hypothetical date may just as well be reached in five or eight years as in ten. The determining factor is the attitude of the Egyptian people. Judgment on this point cannot be absolute. In the conduct of Cairo students during the last few days the worst British misgivings can find confirmation, and those onlookers who believe that a change to political sanity and an aversion from violence are to be noted as recent developments in Egypt have no countering argument. Unfortunately the appeal for a wider outlook has to be made just to those Egyptians who are the least likely to be affected by it—the extremists, to whose power, if not numbers, the moderates find themselves obliged to yield. Great Britain, on the other hand, must recognise that it does represent at least the beginning of a new order that the Wafd should have left Sarwat Pasha a free hand in the negotiations for so long, and it is in British interests, as well as in Egypt's, that nothing should be done to weaken the hands of the moderates as against the extremists. With the knowledge that it would be comparatively easy to reimpose British military authority with the help of aircraft—if ever the regrettable necessity, which remains quite improbable, should arise—we could have desired in the interests of the two countries to see an adjustable time limit in the military provisions of the treaty. Even with the present wording, however, Egypt will be snatching at the shadow and losing the substance by rejection; and we may hope, therefore, that, other counsels may prevail before long.

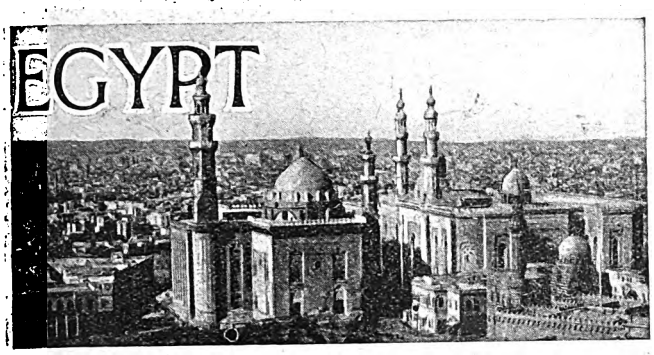
The Near and Middle East*

From Our Own Correspondents.



Cairo, February 25.

The Brussels Legation.

An interesting proposal in the budget for the Ministry of Foreign Affairs is the re-establishment of a Legation at Brussels. This Legation, which was amongst the first batch created when Egypt started her foreign representation after the recognition of her independence in 1922, was suppressed together with several others two years ago, by Parliament, ostensibly for reasons of economy, but in reality to serve as a camouflage for the efforts of some of its members to dislodge Nashat Pasha from Madrid. At the time the suppression of these posts was much commented on, and the countries affected showed no little resentment, particularly as they had hastened to add confirmation to their recognition of Egypt's independence by promoting their Agents and Consuls-General accredited to the Court of Abdin to the rank of Ministers. Holland was indeed so upset at the suppression of The Hague Legation that it recalled its Minister and placed Egypt under its representative in Rome. There is reason to believe that Belgium would have taken similar retaliatory action if it had not been for the good relations between the Belgian and the Egyptian Courts, the influence of certain prominent Belgian residents and the imminence of King Fuad's visit to Brussels as the official guest of King Albert and Queen Elizabeth. The delay then decided upon has borne fruit, and it is very satisfactory, particularly in view of the very close economic and commercial relations between Belgium and Egypt, to find that the error of judgment in the case of Brussels is about to be rectified.

Insurance Legislation.

The question of insurance legislation is at present being considered by an informal sub-committee in the Ministry of Finance. As soon as this sub-committee has been able to draft a memorandum on the subject a special committee will be formed to consider the whole question in all its aspects, and it is this committee which will discuss the matter with the local representatives of the leading Insurance Companies. I am assured that every consideration will be given to the views which these Companies may express on the matter, and that they need not fear that in this connexion any ultra-Protectionist policy will be adopted.

The Oases.

Gaafar Wali Pasha, Minister for Works, accompanied by Aly Shamsy Pasha, Minister for Education, Rashwan Pasha Mahfuz, Under-Secretary of State for Agriculture, and several agricultural and irrigation experts has left for a week's tour of the Oases of Kharga and Dakhla. The latter cultivates a great deal of rice which the inhabitants use for their food, and as a result of the large area of stagnant water malaria is rife in the oasis. The object of this visit is to ascertain whether the people could not grow some other food-crop requiring less water and use the difference for fruits trees, or some other object which would have the double advantage of increasing the revenue of the inhabitants, who at present find difficulty in disposing of any surplus rice, and of reducing, if not eliminating, the ravages which malaria at present makes.

The Fuad Sanatorium.

This week King Fuad motored out to Helwan and inaugurated the new Fuad Sanatorium there. The ceremony, which was attended by the Ministers, the Court and the Diplomatic Corps and a large number of notables, was a short one, and the only speech was that delivered by Gharably Pasha, Minister of Wakfs, the administration which has paid for its equipment and will meet the cost of upkeep of this new institution. This sanatorium is greatly needed among the classes for which the Wakfs Khairy are especially destined. It is installed in what tourists of days before the War and many of the wounded in this area will recollect as the "Al Hayat Hotel," where a wonderful Zander installation did such good among the troops. It has never been re-opened since the War, and was recently acquired by the Government from its Dutch proprietor for the purpose to which it is now being put.

Incidentally, it is interesting to note that Helwan itself is having a record season this winter. It is many years since that resort with its healing air and hot springs has been so full, and it is to be hoped that this means that the travelling public and the medical profession, searching for some winter resort where their patients can combine pleasurable surroundings with a cure for their ailments, have at last realised what a wonderful spot answering to all requirements exists within comparatively a stone's throw of the capital of Egypt.

An Egyptian Press Lunch Club.

A departure, which one sincerely hopes will be successful, has just been decided upon by the representatives of the Press, Egyptians and Europeans. A lunch party given this week by one of the London correspondents brought round the same table the directors of all the principal local papers as well as the representatives of the leading London dailies. All got on so well together that the suggestion was made that other similar meetings should take place, so that those who direct public opinion in Egypt and abroad might get to know one another better. The suggestion was received with acclamation by those present and it was decided to form a lunch-club, and to meet on the first Friday of every month at one of the restaurants or hotels. The understanding was that no politics would be discussed at these luncheons, that the presidency should each time be in the hands of a different

member and that on occasion distinguished members of the profession on a visit to the country should be entertained as guests of honour. For the first lunch fixed for March 2, Dr. Fares Nimr, the doyen of the journalists of Egypt, will be in the Chair. The idea has been so well received by the local Press that there is hope that, unlike so many other projects of similar nature, it will have a long life, and so lead to the creation of an atmosphere of good feeling and understanding among Egyptian journalists and between them and their foreign colleagues, and in time conduce to the disappearance of some of the bitterness which makes itself manifest whenever controversial questions come up for public discussion.

The "Sign on the Door."

A very successful performance of the "Sign on the Door" was given this week in Alexandria at the Alhambra Theatre by the Staff of General Motors (Near East) Company. The whole performance reflected great credit on the cast and particularly on Mr. Horden who produced the play and took one of the principal parts. The "Sign on the Door" was given in aid of the funds for Infant Welfare in Egypt organised by Lady Lloyd, and she went down from Cairo specially to attend the first performance.

Ye Countrye Fayre.

On Tuesday the Diocesan Guild held its annual "Countrye Fayre" in the paddock of the Gezira Racing Club. The opening ceremony was performed by Lady Lloyd who delivered one of those inimitable little speeches for which she is becoming quite famous. The fair, which was arranged to represent a village in the Home Country with its green and quaint shops and relics of olden times, such as the stocks, proved most attractive, and all concerned are heartily to be congratulated on the result of their efforts to raise funds for one of the most deserving objects connected with All Saints Pro-Cathedral.

Constantinople, February 29.

The Trial of Ihsan Bey.

The trial of Ihsan Bey and his associates in the Ministry of Marine irregularities question is now nearing its close, and judgment will possibly be pronounced within the next ten days. As the case has developed, abuse after abuse has been revealed, but the ex-Minister of Marine calmly denies participation in any of them. He yesterday declared that had he cheated the Government of one cent he was ready to hang for it, but he denies even having done so much. While evidence against him certainly appears to be overwhelming, it is extremely improbable that he will be taken at his word; but it appears to be equally probable that the Supreme Court's sentence will be fairly severe.

Hard Weather.

During the last week Turkey has experienced the severest weather for fifteen years. Violent snowstorms and blizzards rivalling those so common in England astonished nearly everybody, as the mild weather, like early spring, which we had enjoyed for some weeks, seemed to indicate that winter was safely past. Constantinople has suffered considerably through this unexpected snow. All the public transport services were dislocated for some time. The cold has even been so intense that parts of the Golden Horn were frozen. Five people have been frozen to death and many others have had narrow escapes. Wolves have made their appearance on the outskirts of the town and one death is also attributed to them. Black Sea shipping has been completely suspended, and until this morning there were over twenty ships anchored at Cavak, the entrance to the Black Sea, awaiting calmer weather.

In some places in the interior of Anatolia the thermometer has registered 17 degrees below zero, and the average depth of snow is reported to be one metre. Many ships from foreign ports are three days overdue, while on the other hand tourists who are arriving in hundreds profess themselves sorry to have arrived to scheduled time. Dressed for mild weather, these passengers of tourist ships have received a severe shock to find Constantinople under snow. A party of Virginians who arrived here last Saturday were forbidden by the captain of their boat to go ashore as he said he did not want his ship turned into a hospital.

Local papers are urging the Prefecture to greater efforts to clean up the streets, and while there is certainly room for improvement, great progress in this direction has been made during the last two years. Snow clearing in Constantinople is, however, still assured exclusively by human beings and mules, but if this weather continues a little effort and enterprise on the part of manufacturers of mechanical snow cleaners would almost surely result in the purchase of three or four machines by the Prefecture.

In Constantinople there is a municipal by-law that forbids snowballing in the streets, but this did not prevent a battle-royal, with snowballs (often charged with stones and ice) for clubs, taking place a few days ago between the scholars of the French college Saint Benoit and those of the Deutsche Oberrealschule. According to this morning's papers a group of scholars of the higher forms of the Saint Benoit College presented themselves before the gates of the Oberrealschule and awaited the termination of classes. As soon as the German scholars appeared they were met with a fusillade of previously prepared snow-

Digitized by Google

balls and were forced to defend themselves by retaliating. In face of the French having good stores of ammunition, however, the Germans were given a bad time and a master of the Oberrealschule, some scholars of which had received wounds near the eyes, in attempting to intervene was hit and seriously injured by a stone. The battle stopped only on the arrival of the police, and the *partie agresseur* was marched off to the police station.

There are two versions of the reasons for this attack by the students of the French school. One is that they were out for revenge for a defeat at football, while the other is attributed to the national animosity, one for the other, inculcated by their respective education. Whatever the reason, the incident is one to be regretted, and it is to be hoped that in future the snowballing by-law will be more strictly enforced, as not only the combatants in such battles but very often passers-by are seriously inconvenienced and injured.

Tourist Traffic.

The Vilayet and Municipal authorities here are devoting great attention to the improvement of facilities for and the safeguard of tourists who are visiting Turkey in increasing numbers. Within the last few weeks passport regulations and control have been simplified, police and municipal agents are being taught English, French, and German, and now attention is at last being paid to the question of guides and interpreters. These men, whose fluency in English, American, French, and German is startling—especially when discussing finance—have for long proved troublesome to tourists in more ways than one. The limit of endurance has now been reached.

It appears that certain of them, not content with showing their clients the famous sights and curiosities of the town, have extended their kindness even to conducting tourists to quarters of unsavoury repute. Henceforth, guides and interpreters resorting to this method of supplementing their already high wages will be summoned and fined Ltqs. 20. The authorities are to be complimented on their efforts to safeguard visitors from the vultures who surround them immediately on arrival, and the time will doubtless come when they will no longer be regarded with impunity as fat geese for the plucking.

The Royal Afghan Visit.

Great preparations are being made at Angora for the visit of the King and Queen of Afghanistan. Wagon loads of furniture have already been dispatched to the capital for the furnishing of the special appartments of the Royal couple in the Evkaf Hotel, which is situated directly opposite the Grand National Assembly building. The Afghan King and Queen are expected to arrive here about the end of April, and rumour has it that Mustapha Kemal Pasha will come to Constantinople to greet his Royal guests.

THE HIJAZ.

Jidda, February 21.

Raids and Counter-raids.

News of actual events on the Iraq question is scarce enough in all conscience, and those who read only Iraq papers or those drawing their information from Iraqi sources might imagine that raiding in the desert is some new and horrible sport invented by the Wahhabis. It is refreshing, therefore, to find the Mecca newspaper entering the field with counter-charges against the tribes of Iraq and of Trans-Jordan on the score of raids committed by them, which it had hitherto scarcely seemed worth while to mention. We are now promised regular reports on such occurrences, and two incidents are cited as earnest of what is to come. About November 10 last (i.e. at the beginning of the usual raiding season, Al Maïq, a Shammar section sojourning with the Amarat Anaza (Iraq), raided the Shararat near Jauf and carried off about 250 camels. A month later Al Atna, a Trans-Jordan tribal section, raided the Shararat at Saqiya. And a number of other raids are at the moment under investigation; they will be reported on in due course. It is suggested somewhat pertinently in a leading article in the previous issue of the *Umm al Qura* that the Mandatory Power might not altogether relish any attempt on the part of the Najd Government to take matters into its own hands for the chastisement of such raiders in their own territory. No resentment is expresed at the action of the British Government in sending out aeroplanes to bomb the denizens of the desert, but there is certainly manifest a feeling of wonderment and regret that the British Government should in the first instance have permitted its ward to take action which should in due course make such action appear to be necessary.

Italy and Arabia.

Italy has not yet joined the ranks of the Powers who have accorded formal recognition to the dual Kingdom of Ibn Saoud. It is, however, understood that this happy event is about to take place in the near future, and is now delayed only by the absence of the King in the recesses of his desert empire. Italy, being the only Power that has recognised, if it did not create, the kingdom of Yaman, seems to be interested in securing some definition of the line which may be regarded as the frontier between Yaman and the territories of King Ibn Saoud. It may not, therefore, be out of place to suggest that that is a domestic question, which it were best to leave to the two Arabian leaders to settle between themselves.

Foreign Officials in the Hijaz Government.

To the three British engineers and one Dutch doctor already in its service the Hijaz Government is now seeking to add one or two Swiss officials for the reorganisation of its Posts and Telegraphs department. I understand, however, that the statement published in THE NEAR EAST AND INDIA to the effect that the Hijaz Government was asking the Swiss authorities to provide a number of officials to reorganise the Finance and Customs departments is incorrect. Dr. Van der Hoog, the Dutch doctor, leaves Jidda to-day for a short period of recuperation from his arduous duties, which have somewhat affected his health for the worse. He hopes, however, to return well before the pilgrimage.

The Pilgrims' Progress.

With the fast of Ramadhan close at hand one can begin

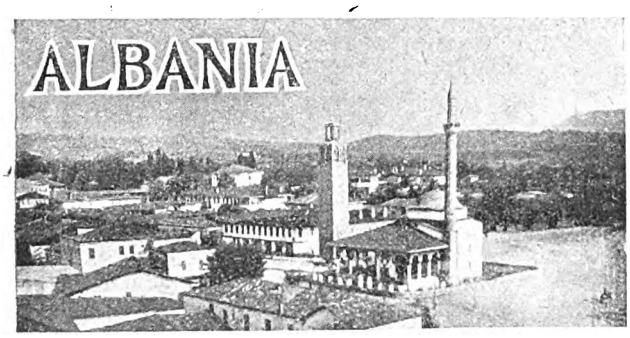
Digitized by Google

to take stock of pilgrimage prospects. The number of pilgrims already in the country is 37,000 and will be fully 40,000 by the first day of the Fast—exactly the same number as at the corresponding date of last year. It looks, therefore, as if the overseas pilgrimage of this year will be well up to last year's record and it may even be hoped that visitors from India and Egypt will be more numerous than on that occasion. In Egypt Shaikh Hafidh Wahba is negotiating the necessary arrangements to this end, while in India the efforts of the malcontents to discourage pilgrims from making the journey are being countered by an official telegram from the Hijaz Government to the effect there is no foundation for the rumours (1) that the Ajman and Mutair tribes are contemplating an attack on the Hasa province and (2) that Faisal al Duwish is instigating the Ahamida section of the Harb tribe to attack Madina after Ramadhan, which is expected to begin on February 22.

Motor Car Restrictions.

The attractive prospect of rapid gains opened up by the motor-transport business has not been altogether without its darker side. I have already referred in a previous message to the price-cutting competition, which was much in evidence a few weeks ago, but has somewhat abated with the progressive realisation of its ill effects on all concerned. Another untoward result of this new opening has been a tendency on the part of many individuals of slender means to sacrifice everything, even to the extent of selling their homes, to obtain the means of buying one or more cars to place on the road. This tendency has been particularly noticeable to the purveyors of piece-goods, who formerly did a good business at this season but now find that motor cars and their accessories absorb all the superfluous cash both of residents and pilgrims. The Government has been compelled to intervene with a timely restriction on the import of cars, for which a permit is now required. This restriction is not intended to operate otherwise than as a brake on progress too rapid for the welfare of the country and, if used with discrimination and discretion, is regarded as likely to have a salutary effect all round. The motor car has undoubtedly come to stay, but it must not be forgotten that other things are at least equally entitled to the attention of the Government and the people. The new metalled road to Mecca is progressing steadily.



Tirana, February 22.

The Bank of Athens and Albania.

It will be remembered that in 1925 the Bank of Athens opened two offices in Albania, one at Koritsa (Kortcha) and another at Durazzo, and did fairly well in competition with the National Bank of Albania. But the National Bank wished to have a monopoly in the country, and it is said that Signor Mussolini told M. Michalakopoulos, during their conversations at Rome, of his desire to see the Bank of Athens leave Albania. The branch at Koritsa has gone already and that at Durazzo will depart shortly. Henceforth, therefore, the National Bank of Albania, which is governed exclusively by Italian capital, will conduct the business of the country.

Journals.

The *Telegraph*, which appears three times a week and is edited by M. Constantin Chekrezi, author of "Albania Past and Present" (New York 1919), has been suspended by order of the Council of Ministers. Its offence was the publication of information from Rome according to which Signor Mussolini and M. Michalakopoulos were alleged to have spoken of the possibility of cancelling the Tittoni-Venizelos Agreement (made in Paris, 1919) according to which the two statesmen came to an agreement upon the division of Albania.

Following the disappearance of the *Telegraph*, two other sheets have seen the light of day at Tirana: the *Kombi Shqiptar* and the *Shqipniya*. It is said in well-informed circles that the first is subsidised by the National Bank of Albania, and the second directly by the Italian Legation.

Decorations.

A hundred Italian decorations have reached Tirana, to be conferred upon deputies and senators who have undertaken to support the Alliance recently concluded between Italy and Albania, as well as upon other persons who have in one way or another shown a favourable opinion towards this Alliance.

Commercial Treaty with Italy.

The Treaty of Commerce concluded between Albania and Italy expires in a few months. A commission has already been appointed to draw up a new Treaty, according to which, while the commercial relations between the two countries are made closer, the interests of Albania will be better safeguarded than they are at present.

Belgrade, March 1.

The New Government.

One of the most severe political crises which this country has known since its unification was ended on February 23, when the second Voukitchevitch Cabinet took the oath of allegiance. Twenty days of wrangling seem to have shown that the only possible Government which can command a majority in Parliament at present is the old Radical Democrat Coalition, and the new Government differs but slightly from the old—the greatest difference being that Father Koroshetz, the Slovenian Clerical leader, occupies the important post of Minister of Interior, which was before occupied by a Radical.

But owing to various proposals made during the crisis, the re-formation of the old Government has acquired considerable significance and has been accepted by a large part of the Yugoslav press as showing the intention of the country to retain in full the forms of parliamentary government and to refuse all experiments leading away from it. When all attempts to form a Concentration Government under a parliamentary leader failed, M. Davidovitch, after an audience with the King, agreed to try to patch up the Radical Democratic Coalition and on February 17 a new Government, substantially the same as that which took the oath on the 23rd, was ready to take office. But M. Davidovitch wanted, if possible, to get the Croats into the Government and insisted that another attempt should be made. M. Raditch was called to the Palace and on leaving announced to the assembled journalists the astounding news that he had proposed to the King that a Concentration Government should be formed under a non-parliamentary leader, if necessary.

Digitized by Google

even a General. He added that the King, while agreeing that a Concentration Government was essential and that it seemed impossible to form one with any of the parliamentary leaders, had stated that he was strongly opposed to bringing the Army into the sphere of party politics. M. Pribitchevitch fully endorsed M. Raditch's proposals and pointed out that there was no non-party, extra-parliamentary leader capable of forming a Government apart from the higher Army officers. In answer to the charge that this was an attack on parliamentarism, M. Pribitchevitch claimed that the present régime is not really parliamentary, that many members of the Government majority would never have been elected had the last elections been perfectly free, and that the Government did not, therefore, represent the nation. He explained that by purifying the civil service and making it non-party, a task which could be performed only by a Concentration Government representing every party and led by a non-party president, such a Government would make possible the election of a Parliament fully representing the people. This would, he said, transform the present mock Parliament into the real thing, and instead of destroying Parliament would strengthen and protect it. But the danger of such an experiment was too great, and much relief was felt in most quarters when the safe though prosaic solution offered by a return to the old Coalition was accepted.

The fact that M. Marinkovitch, although very ill, retains the Ministry of Foreign Affairs is welcomed as a sign that the policy of moderation in foreign affairs will not be changed. Dr. Bogdan Markovitch's retention of the Ministry of Finance is taken to show the desire of the new Government to proceed with negotiations with an Anglo-American group for a large foreign loan, declared to be well advanced already. Finally the inclusion of M. Milan Grol, M. Davidovitch's great friend, as Minister of Education, marks the end of the trouble between M. Davidovitch and M. Marinkovitch and greatly strengthens the Coalition. It is generally accepted, however, that the Government is a temporary arrangement for carrying on the State administration, dealing with such urgent legislation as the feeding of the starving population of the limestone regions of Dalmatia, Montenegro, Bosnia and Herzegovina, where last year's protracted drought has resulted in a terrible famine, carrying on negotiations for the renewal of the Pact of Friendship with Italy, and, finally, arranging for new elections to be held when the season is more favourable, probably in the autumn.

Uproar in the Skupshtina.

The new Government came before Parliament for the first time yesterday, February 29. Discussion at once turned on the police régime in Belgrade and the disgusting state of the local prison which has not been enlarged to cope with the enormously greater number of prisoners due to the rapid enlargement of Belgrade since the War, a subject which always leads to disturbances. Within a short time an uproar began which finally led to the closing of the session—M. Raditch being accused of having used the King's name in a way which implied insult. The evening session was equally stormy, and ended in M. Raditch's being suspended for three sessions. The Peasant-Democrat *bloc* of which he is the leader refused to attend any meetings of the Skupshtina to-day—so that there was virtually no Opposition. M. Raditch was received in audience this evening and came away looking very pleased with himself. He declared that his party would not withdraw from Parliament, as had been suggested, as this would merely prolong the life of the present Government. From this stormy beginning it is obvious that the new Government, despite its considerable majority in Parliament and the greater union of its component parts, will have to face very grave difficulties.

Italy and Yugoslavia.

Within the next five months the pact of friendship with Italy signed in 1922 must be renewed or denounced. It is reported that Great Britain is very keen on its being renewed, and is using all its influence to bring this about. But there are two great difficulties in the way. One is that of securing the ratification of the Nettuno Conventions by the Skupshtina, a condition on which Italy is expected to insist. The second is what is generally regarded here as Italy's policy of attempted domination over the Balkan Peninsula. The motto: "The Balkans for the Balkan peoples" is no empty phrase, and Yugoslavia can never be really friendly with any outside Power which is steadily using all its resources to try to divide and rule the Balkan peoples. Italy has (according to Belgrade) a protectorate over Albania, she has now used pressure in Greece to secure for Bulgaria concessions in Salonika which will tend to make a Yugoslav-Bulgarian *rapprochement* far more remote, she is intervening on behalf of Hungary, to whom she has been supplying arms in contravention to the Peace Treaties and to the danger of Yugoslavia and the other Succession States, and she has quarrelled with Austria for merely mentioning the ruthless ill-treatment of the German minority in the Tyrol, a matter near to Yugoslavia's heart by reason of the similarity of the fate of her half-a-million Slovenes and Croats in Austria. It is interesting to notice that Italy's policy is speeding up the process of the formation of a strong Central European *bloc*. The Little Entente are behind Yugoslavia and in sympathy with Austria, France, is behind the Little Entente, Germany is strongly behind Austria—thus a compact and powerful *bloc* is being forged which may cause Italy to reflect before taking rash action.

The death is announced of Dr. John Storrs, Dean of Rochester. In 1917 Dr. Storrs visited Egypt and Cyprus as Archbishop's Messenger. One of his three sons is Sir Ronald Storrs, formerly Governor of Jerusalem and now Governor of Cyprus.

The death is announced of Miss Emily Jane Robinson, daughter of Sir John Robinson, of the *Daily News*. She was closely associated with the cause of Armenia, founding the Armenian Red Cross and Refugees' Fund, and working very hard to alleviate the misfortunes and to obtain recognition of the rights of Armenians. In 1921 the Catholicos of Etchmiadzin sent Miss Robinson a bull of blessing and gratitude. She had to retire from her work in 1924 owing to medical advice.

On the initiative of Mr. A. S. Merton, correspondent of *The Times* in Cairo, a "Press Lunch Club" has been formed. The object is by means of informal gatherings of Egyptian and European Pressmen in Egypt to soften the bitterness which is occasionally displayed upon controversial matters. It is hoped that social intercourse of this nature and knowledge and comprehension of a point of view other than one's own may help, through the direction of public opinion, to lead to a satisfactory settlement of the problems in Egypt. Dr. Fares Nimr (doyen of journalists in Egypt) has been appointed President of this new Club, and Mtre. Mahmoud About Fath, of the *Ahram*, Secretary.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.
Further particulars may be obtained of
E. H. Keeling, Hon. Sec.
74, Grosvenor Street W.1.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

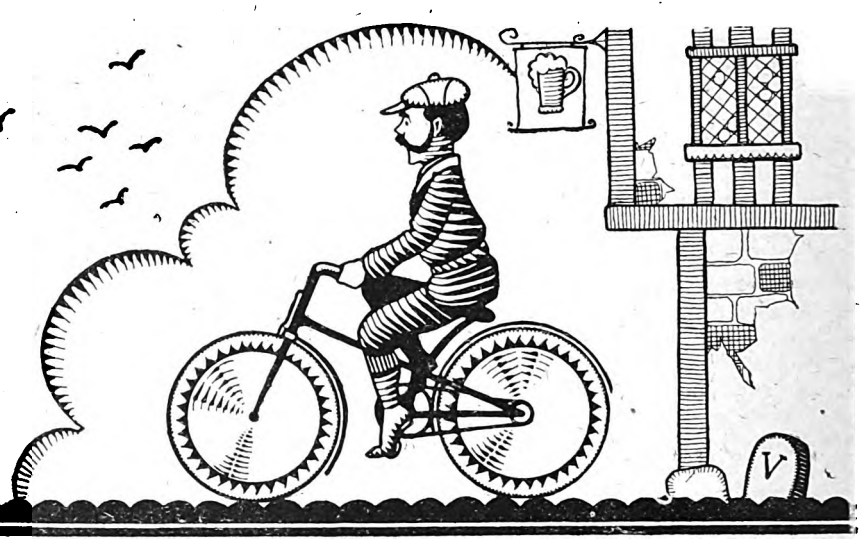
Tyre Makers in Victoria's Reign



THE earliest practical pneumatic and the wonderful tyres of the 206·95 miles per hour Bluebird are the two extremes in tyre building experience —and they both belong to Dunlop. Every stage between these two, every landmark in tyre development, has added to the one and only collective experience that covers the whole history of the pneumatic tyre —Dunlop experience.

THE WEEK AT HOME

London, Tuesday Morning.

The "Francs Case."

The punishment which has swiftly been passed on the Foreign Office officials who were involved in what is now known as the "Francs Case," will probably be interpreted abroad as proving, not the corruptibility but rather the high standard of the British Service. At any rate one hopes so; for that is its true interpretation.

At Home an attempt has been made to connect it, or rather, the principal agent in the case, with the Zinoviev, or Red, Letter—the letter the publication of which was supposed to have so anti-Labour an effect upon the General Election of 1924. Certain numbers of the Labour Party have always regarded that letter as a forgery, and the "conviction" of Mr. J. D. Gregory has seemed to strengthen their attitude.

It will certainly be interesting to see the result of a further investigation into the story of this Red Letter. Quite conceivably it may redound rather to the discredit than to the credit of the Labour Party, or rather, of some of their leaders. For it has just been proved that no Foreign Office official sold information to the *Daily Mail*, the paper which is regarded by many members of the Labour Party as the villain of the piece. Mr. Marlowe, Editor of the *Daily Mail*, wrote a letter in last Sunday's *Observer* recounting the whole story, and it looks as if Mr. MacDonald may not make so much party capital out of the affair as apparently he hopes. But certainly the matter should be thrashed out: I see no justification in the suggestion by some papers that further inquiry is futile and helpful to no one.

Well, Well, Wells!

Mr. H. G. Wells is unquestionably one of our great imaginative writers. He is guilty, possibly, of a larger amount of slip-shod, amorphous, or rubbishy statements than any other considerable author, but of his essential genius no discerning critic is in doubt.

Whether his newest book, "The Way the World is Going," is to be classed satirically among his more imaginative works remains to be seen. Some idea of its quality may be gained by the following sentences. Mr. H. G. Wells believes that if the present Government lasts another five years there will be a smash like that of 1914; for England at present is "the leading force making for reaction." There should, therefore, be established an organisation of voters who "will vote primarily against the Government and only secondarily for either Liberal or Labour."

That diagnosis and advice will not be exactly peptic to all readers, but Mr. Wells has at any rate never been the mere partisan. Listen. Mr. Ramsay MacDonald is "a figure of fantastic variety and secretiveness, equally resolute in keeping the Labour party in bitter antagonism to the Liberals—though the heavens fall"—equally, that is with Sir Herbert Samuel, whom he is "loth to believe as silly as his public proceedings," and of whom he writes, "the typical advocate of the candidature of those 500 Liberal candidates who are everywhere to wage implacable warfare against the Labour party."

Railways and Roads.

The Railway Companies in their effort to obtain rights of road transport have won their preliminary Parliamentary round, for against the second reading of the L.M.S. Bill—the type of the other four railway bills—only 42 votes were cast last week.

The smallness of the minority seems to have surprised everybody, but the voting was greatly influenced by a speech made at the end of the debate by the Minister of Transport. Colonel Ashley detailed the safeguards, designed to make impossible a monopoly for the Railways on the roads, which he intended to ask the Committee to insert in the bills.

It is, of course, too soon yet to say that the Railways have won their case, but it is certain that many reasonable observers think it not so beyond the wit of business men as the Federation of British Industries appears to think to devise adequate safeguards against the Railways' ever getting a monopoly on the roads, although a severe traffic war is generally expected to result if the Railways get their Bills through.

Ethyl.

One of the curses of advertisement is that people are forced to take an interest in something in which, quite possibly, they have no real interest. This is particularly so in the matters of what, I believe, are called "teaser advertisements." For weeks and weeks the British public were wondering what the Mustard Club was, and only recently have they been informed by the psychological advertisers of the identity of "Ethyl, dressed in Red."

But as a matter of fact, Ethyl is of interest to many people other than motorists. This new petrol compound is said by some experts (it is denied by others) to cause lead poisoning. Its sale thus has an international importance, and it was a necessary step which the House of Lords took last week in setting up a Departmental Committee to make a full investigation of the matter.

Female Artifice.

A sidelight upon our changing fashions is provided by the statement that during 1927 English women used 172 tons of German lip-stick. I do not know what the corresponding figure was in 1913, but it must have been very considerably less. For the use of cosmetics has increased enormously in the last half-dozen years or so.

What accounts for it I do not know. There is, of course, the simple but unconvincing explanation that men like it, and, therefore, women do it. But most available evidence goes to prove that the poor, despised man still prefers lips that are ruddy as the cherry, not ruddier than sealing-wax. Nor is he over-fond of raising a dust whenever he kisses a girl.

No; the prevalence of particular female fashion is an insoluble mystery. After all, these subtle artificers have been playing this game of self-adornment, off and on, at least since the time when Ur of the Chaldees was something more than a temporary R.A.F. base, and they will go on playing it, one supposes, until the time when London is become as Ur now is.

THE CAIRO-BAGHDAD AIR MAIL.

[Under the auspices of the Royal Aeronautical Society, Wing Commander R. M. Hill, M.C., A.F.C., lectured on March 1 on "Experiences on the Cairo-Baghdad Air Mail." Colonel the Master of Sempill presided, and introduced the lecturer with a word upon his remarkable record, both in actual flying and in exposition of flying. The lecture was one of unusual brilliance and interest, and we are privileged to produce extracts from it below.—ED.]

The Air Mail route from Cairo to Baghdad is now securely established. Seven years ago the major portion of it, from Trans-Jordan to Iraq, was no more than a project in certain far-seeing minds. The maps of this region between Amman in Trans-Jordan and Ramadi, a little market town on the Euphrates, 65 miles west of Baghdad, were until 1921 painfully reticent. The countries of Egypt, Palestine, and to some extent Trans-Jordan, had been fairly accurately mapped for some time, and were flown over extensively during the War by ourselves and the Germans. The landmarks are generally speaking abundant, and from the navigational point of view they therefore present no outstanding difficulties. Neither is there the same scarcity of water and other amenities which is characteristic of the great sweep of Asian steppe which lies between the Jordan and the Euphrates.

I propose briefly to recall to you the why and wherefore of the Air Mail route. In March, 1921, a conference was held at Cairo, at which were present the Secretary of State for the Colonies, the Chief of the Air Staff and the local Army and Royal Air Force commanders, for discussions prior to the inauguration of the Middle East Department of the Colonial Office. At this conference the momentous decision was taken to open a desert route between Amman and Ramadi. The objects of his route were to forge a link in the Imperial chain of communications between Europe, India, and eventually Australia; to enable aircraft and personnel to proceed direct to Iraq instead of by the enormously more lengthy route *via* the Red Sea and the Persian Gulf; to serve as a form of training in long distance flying; and to evolve a means of rapid communication for service purposes by a regular Service Air Mail. I ask you to note that the primary idea was a Service Air Mail and not an Air Mail Service.

At the same time, after considerable negotiation with the Postmaster-General, civil mails were carried almost from the first. As you know, a letter by sea mail from London to Baghdad travels *via* the Suez Canal, Red Sea, Bombay, Karachi, the Persian Gulf and Basrah, and takes about a month, thus making Iraq far more inaccessible than its geographical position warrants. The Air Mail telescoped the 28 days into nine, and is a signal example of the value of trans-continental air communications in the absence of railways.

In the minds of the inaugurators of the route was never absent the ultimate possibility of a civilian air route, a route that may one day be 14,000 miles long. Far sooner, I fancy, than was originally anticipated, the section of the route between Cairo and Baghdad has been handed over to Imperial Airways, surveyed, constructed, pioneered and made reasonably safe for a non-military organisation to develop. The history of its construction from its actual inception in June, 1921, of the flying organisation painfully but surely adapted to its peculiar hazards and difficulties, of the colossal fund of human energy poured into the work, is something of which we, who flew over it in later days, were very justly proud.

From the beginning the idea was to run a fortnightly mail service, that is to say, aircraft would leave from either end once a fortnight. At the same time, the operation of the route was looked on as training for service personnel, and as a means of gaining experience in the suitability of various types of aircraft and classes of material for hot climates; and the idea of a regular mail service was subordinated to that of training, or to the operational requirements of the various units as dictated by the situation in Egypt or Iraq. The air route between Cairo and Baghdad was opened on June 23, 1921, on which day the three aircraft accompanying the first desert route survey party reached Baghdad from Amman. On June 30 Group Captain Fellowes flew from Baghdad to Cairo in one day, his actual flying time being 11 hours; and on July 11 Air Vice-Marshal Salmond flew from Cairo to Baghdad, also in one day. On July 28 the first consignment of official air mail left Baghdad for London, arriving there on August 9. On August 4 the first bag of official marked mails consigned "London to Iraq. By air, Cairo-Baghdad," left London and was delivered in Baghdad on August 17. On October 8 the service air mail was thrown open to the public at a special fee of 1s. per oz. in addition to the ordinary postal charges. On December 13 the special air fee was reduced to 6d. per oz. It now stands at 3d. As time went on, the regularity and, incidentally, as more experience was gained, the reliability of the service increased, the amount of mail carried in the first sixteen months increased tenfold, and the air mail was timed to fit in as far as possible with European sailings.

During 1921 and early 1922 the D.H.9 A's of No. 47 Squadron at Helwan in Egypt and of No. 30 Squadron at Baghdad did the mail. At Heliopolis, which always seems to me like the Golder's Green of Cairo, No. 216 Squadron also worked the mail with twin-engined D.H.10's. As in those days there were no desert refuelling points, the D.H.9 A's had to strap on as many as twelve 4-gallon petrol tins underneath their planes on the bomb racks, and when the petrol in their tanks was exhausted, they landed and filled up from the tins. They looked like veritable Christmas trees, and the external addition of tins adversely affected their performance. No. 216 Squadron was later re-equipped with Vicker Vimys, the type on which Sir John Alcock flew the Atlantic and on which Sir John Ross Smith flew to Australia; and these then operated on the route.

Late in 1921 No. 70 Squadron formed in Egypt and in November flew across the track and settled in Baghdad, where it still is. In March, 1922, No. 45 Squadron followed it. Both these squadrons were equipped with Vickers Vernons with two Rolls Eagle VIII engines. The Vernon was in effect a Vimy fitted with a saloon hull, capable of carrying up to twelve passengers, instead of with an open fuselage capable of carrying four. During 1922 Nos. 30 and 47 Squadrons gave up the regular service on D.H.9 A's, and No. 216 Squadron in Egypt thereafter shared the fortnightly service with Nos. 45 and 70 Squadrons. The Rolls Vernon with its big saloon hull when heavily loaded in hot weather had a rather disappointing performance, and several mishaps occurred through pilots either failing to get off or being caught in down currents and having insufficient rate of climb to rise through them. To give it a higher performance, the 450 h.p. Napier Lion was therefore installed in the Vernon, and No. 70 Squadron's Eagle Vernons became animated with the fury of Lions. It happened almost inevitably that this squadron with its higher performance aircraft took over the ex-Iraq mail entirely from about September, 1923, until September, 1924. Meanwhile No. 45 Squadron had also captured its big game and took over the mail until early in 1926. No. 70 Squadron, then rapidly being equipped with Vickers Victorias, which had greater carrying capacity, were more lightly loaded, and moreover designed for the Lion engine, finally resumed the mail duties until the beginning of this year. At that time certain powerful and luxurious three-engined aircraft bearing the insignia of Imperial Airways appeared in the sky about the size of a man's hand, and inaugurated a fully-fledged civil air route.

I will now attempt to give you a description of a pilot's experiences on a mail trip in 1924 or 1925.

In order to give you a scale of distances I am going to superimpose on the mail route an imaginary flight from Penzance, *via* Plymouth, Exeter, Bristol, Worcester, Harrogate, Durham, Edinburgh, Inverness, the Orkneys, to the Shetland Islands. When mentioning the principal points on the mail route, I will indicate the corresponding point in the British Isles. Imagine Penzance is Baghdad. We are standing on a great bare mud aerodrome by two Vernons drawn up in line. We are at the opposite end to the hangars, which are so far away that it is hard to make out the details of them, especially as the aerodrome is covered with clouds of dust raised by other aircraft taking off. We climb into our Vernon, run up the engines, test them on each magneto, and ascertain that the petrol pumps are working. The dust clouds are a real nuisance, for if the wind is light they hang about like a grey fog, and we may have to wait a few minutes for the dust to subside. Although we are not going to fill up anything like full of petrol till we get to Ramadi, as it is the afternoon of a summer's day, the aeroplane takes a long run before it is safe to coax it into the air. When we have risen to about 400 feet we try to throttle down a little to take the load off the engines. We turn westwards over the Tigris and fly across a flat plain chequered with yellow and green cultivation in the neighbourhood of the river, which stretches out like a huge crawling snake. It is not long before we see another fringe of cultivation, which borders the Euphrates, on the banks of which lies Ramadi, our immediate destination. Ramadi is 65 miles from Baghdad, and it feels like a gate through which the pilot passes out to new and exciting adventures. Beyond is the open desert with all its mysterious fascination; and few who behold it thus for the first time can fail to experience the slight catch of the breath that comes with the sudden view of the sea from a high place. It seems to be a land with no ending; and it has an unreal atmospheric quality comparable with the sky. Perhaps this is why people call it the "Blue." As we glide down to land on the rather small landing ground at Ramadi we catch a glimpse of grey mud houses in the palm groves by the river bank, and away to the south stretches a pale blue lake called Habaniyah. We taxi up to the little serai where there is a wireless station and a supply of fuel. The mail aircraft had to fill up full with petrol at Ramadi, because the trip from Baghdad to Ziza was just beyond the endurance of a Vernon. After filling up, we shall stay here the night, and wait for the cool air of dawn to take off with our load. As we take off to-morrow morning, carrying two pilots, a fitter, a wireless operator, three passengers, or two and the mail, with petrol for about 6¾ hours, our Vernon will weigh approximately 6 tons. We shall be supported by a wing area equivalent to the floor space of a village hall 70 feet long by 20 feet wide, and we shall be propelled by our two Lion engines, giving together at maximum revolutions somewhere near 1,000 h.p., or the power that an ordinary Atlantic type of locomotive gives.

We sleep outside at the foot of one of the wireless masts, and disengage ourselves as best we can from the attentions of the twin-engined sandfly, who also use Ramadi as an aerodrome. We hope a night breeze will spring up, because the sandfly is very lightly loaded, and he cannot land on you in a wind. A hot whisky before turning in is also a help; for during the first half of the night you do not notice the sandfly, and during the second half he becomes laterally unstable and cannot bite you.

We get up at 3.30 a.m., and those of us who are not too exhausted with dodging sandflies and scorpions snatch a hasty breakfast, for we have a long day ahead. Figuratively speaking, we are now at Plymouth. On leaving Ramadi we climb very slowly, with throttles wide open. Maybe the sun has not yet risen, in which case we can just see the pink flames spouting from the exhausts.

The two revolution indicator needles would be trembling at 2,050 to 2,100 r.p.m., and we would be making sure that we had picked up the track, for there is a fork just after Ramadi which has led

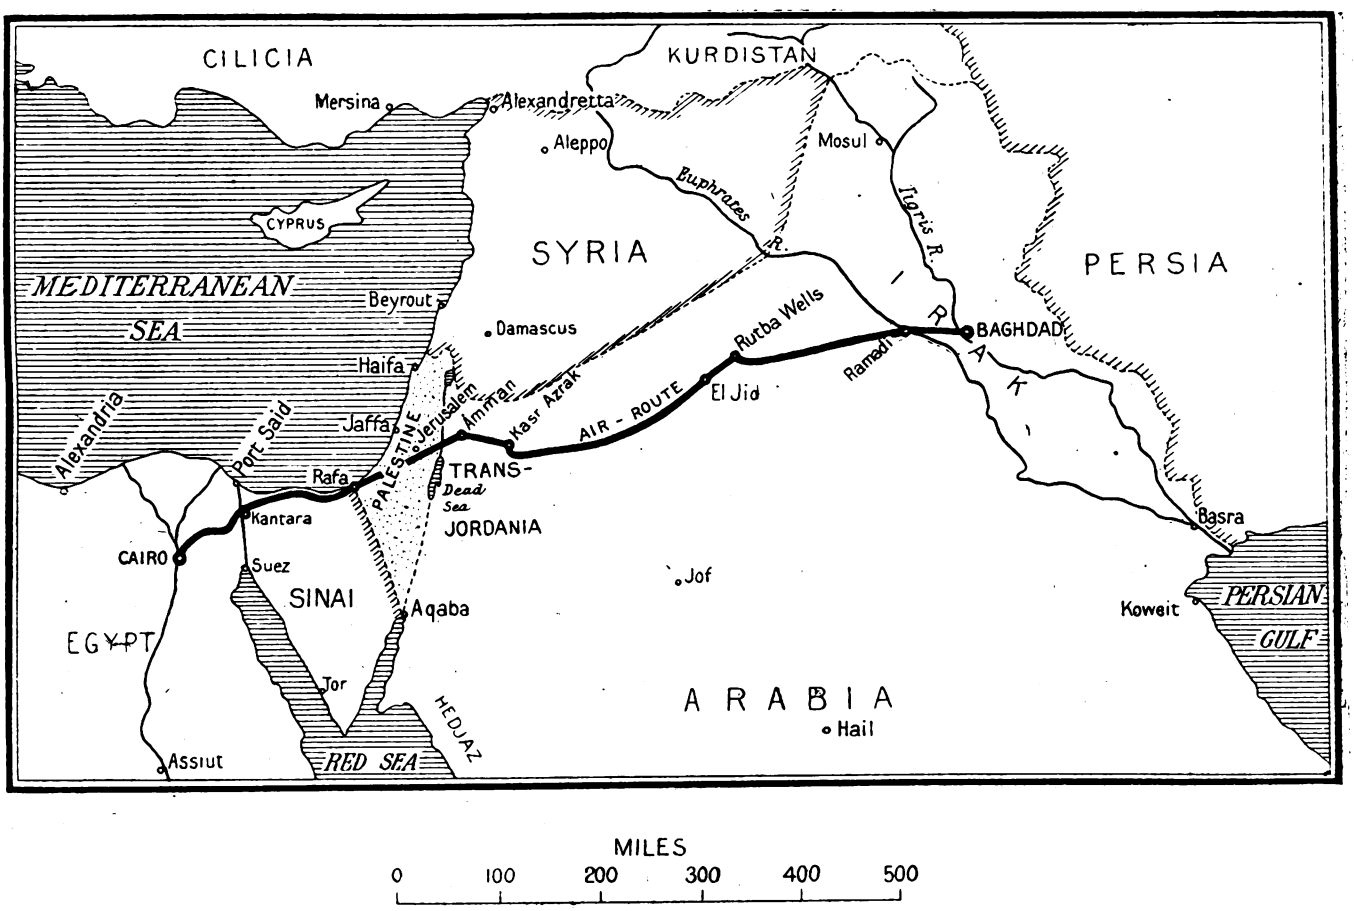
Digitized by Google

more than one pilot astray. Now we are on it, and we ascertain from the wireless operator that the aerial is unwound and that we are working Baghdad. All cultivation has disappeared and we are pushing out into the Blue. The infinite expanse of desert opens before us, appearing to move backwards under us. Its centre of gravity seems to find a locus in the sinuous thread of the track, twisting here and there to negotiate wadis, unwinding itself to the level horizon, which, owing to the high visibility, looks like a wall reared up against the vacuity of atmosphere. The Vernon drums steadily along in the early morning air. The petrol pumps are working, which we see by the float gently oscillating on the dashboard. Both oil pressure gauges are registering over 40 lb., which is quite satisfactory, and we play about with the radiator shutters till the engines are running at a comfortable temperature. The flat plain is rising imperceptibly beneath us, and although we had tried to ease off the engines a bit to avoid detonation, we find that we have to open them out again to gain the necessary height. We fly close by a couple of vultures which swirl past the wing tip. We have been in the air for over an hour and a half when away on the horizon a pale yellow streak becomes gradually visible. It is the big mud flat at L.G.V., at an elevation of 1,600 feet. We have now climbed to 3,000 feet on our aneroid, so we can throttle down a bit. With the easing of the throttles, the engines take on a more comfortable, commerely sticking, we turn on to one of the two 120-gallon gravity tanks on the top planes. These have calibrated glass petrol gauges, so that henceforward we can tell fairly accurately how the petrol supply is getting on, which will be particularly important when we begin to run low. As it is summer we probably set out from Ramadi in a shirt, khaki shorts and stockings, with a mackintosh on top just to keep out the early morning chill. If we are sensible we are wearing tinted goggles, for the glare of the desert and the perpetual watching of the track tend to fatigue the retina. We now feel that it is time to discard the mackintosh and open the throats of our shirts, as, although the top plane is still keeping the cockpit in shadow, the air feels as if it came out of an oven and gently roasts your hand if you put it outside.

We now send a wireless message to our companion in front asking him how his petrol is getting on. In five minutes or so the wireless operators hands us back the reply: "Petrol O.K., but port oil pressure only 30 lb." This is not very encouraging, but it may be only a piece of grit under the oil relief valve, which will free itself.

Meanwhile far ahead on the track we see what look like three tiny tongues of flame. As we come up with them they turn out to be sunlit trails of dust raised by three cars of the Nairn Transport Company, racing along at 50 to 60 m.p.h. and at about 400 yards distance from each other. To the south there are low hills serrating

MAP OF THE CAIRO-BAGHDAD AIR-ROUTE



placent note, and settle down to 1,950 r.p.m. quite contentedly. The important thing is to get them running where there is no periodic vibration, and to adjust them so that the aeroplane does not shake. This one can very often do by making them run at slightly different r.p.m. If we are working the wireless, the Vernon which is accompanying us will be flying just ahead so that we can keep him in sight. But it is essential that we shall both individually follow the track, so that the case shall never arise of the blind leading the blind.

We are now approaching L.G.V. We have taken an hour and fifty minutes to do the 112 miles from Ramadi. In England we should at this point be 12 miles beyond Exeter. From our low speed we deduce an unpleasant head wind; but never mind, it will probably turn with us at Al Jid, as it often does. If we had taken two hours to reach L.G.V. we should have had to land and take in a few gallons from the desert tank, for which we carry a special key, in case the head wind persisted and we were unable to reach L.G.D., the next refuelling point, 280 miles ahead. Our ground speed is at present just about 60 m.p.h.; so with luck we shall reach L.G.D. in 6½ hours from Ramadi, with a few gallons in hand. But if there is any doubt about it, it is well to follow the old proverb: "A gallon in the tank is worth two in the dump." As we leave L.G.V. behind us, the sun is well above the horizon. The air is rapidly heating up and the Vernon bumps occasionally. We have to open the radiator shutters fully. The little float on the dashboard has dropped, which indicates that the bottom tank in the hull has run out. After giving a few pumps with the hand pump to make sure that the float is not the skyline, and from the north-east shallow drainage lines are running across the track. In about an hour from L.G.V. we cross the Wadi Hauran, at the Rutbah Wells, which are a meeting place for nomad tribes. It is usual to see several dozen to several hundred black goatskin tents along the edge of the wadi. Now a combined Police Post, Rest House and Wireless Station has been built there, close by a well-marked landing ground for Imperial Airways. The massive grey stone building, with an avenue leading up to it from the landing ground, is strangely impressive, and seems to dominate the inhospitable upland 2,000 feet high like a lonely sentinel. At the time of which I am speaking, the Bedouin had the place to himself, and quarrelled spasmodically with his brethren as to the title deeds of wells.

On the western horizon we can see a rugged line of hills, which seem to have curved in from the south and swung across the track. At this point the air track bends sharply south-west, while other tracks continue along valleys like the fingers of an outstretched hand. One of these leads eventually to Damascus, and has had a fatal attraction for unwary pilots. Legend has it that there was once a king of this country, who ruled from Rutbah to Al Jid, and who hewed out deep wells at these places. There are still to be seen on the barren hillsides what seem to be remains of walls of houses and of mine shafts. But now the remnants of this civilisation are spread out on the desert like the bones of the old camel that sleeps peacefully at Al Jid.

As we follow the turn of the track among the hills, sure enough

Digitized by Google

the wind has changed; and we estimate by our drift that it is now blowing from the south-east, for the nose of the Vernon is inclined to the south when we keep our shadow moving parallel with the track. The sun now looks down over our top plane and scorches our necks and wrists. It sets up a dull ache in the left shoulder blade just where it projects from the spine pad which the cautious pilot wears. We drink some lemonade from a thermos flask and eat some pheasant and ham sandwiches. The wireless operator passes up a weather report from Amman saying that the best height to fly to obtain a favourable wind is 6000 feet; but as that height is beyond our capacity to reach, the information leaves us hopeful but unenthusiastic. We then get another message saying that the petrol in the tank at L.G.D. has run out owing to heavy demands by armoured cars, but that a convoy is on its way to fill the tank and should be there by noon. The air by now is thoroughly disturbed, and the Vernon in front is shooting up and down like a lift. We constantly have to work the controls to keep anything like an even keel. The thermos that we have propped up on the floor of the cockpit without its cork in falls over with a violent lurch and spills its valuable contents. We glance back at the petrol gauges and turn on to the other top tank to even up the supply in each. We feel that if only a cloud would cover up that sun for five minutes, things would be incomparably more bearable. The drumming of the engines makes us feel a little sleepy, and we seem to have been flying along a track of infinite length. Now and then it eludes our gaze, and we have to zigzag slightly to pick it up again. One by one the landing grounds pass underneath. We check the times and find that our ground speed is now 75 m.p.h. We have left the hills behind, and have passed over Al Jid and out on to the upland 120 miles wide, which sometimes looks like an enormous tiger-skin spread out. The curved markings are caused by the sparse vegetation running across the paths of wadis. At other times it looks like hard polished metal reflecting the brazen sun. To-day the portion of the desert within reach of our eyes appears as an amber disc, some ninety miles in diameter, to which the rocking and swaying of the aeroplane has given a reflection of its own motion.

Our position now would correspond to a few miles beyond Worcester. The wireless operator passes up a message to say that the Director of Civil Aviation is on his way to Baghdad, escorted by two D.H.9 A's and that they passed L.G.D. an hour ago. We make a rapid mental calculation and come to the conclusion that we shall cross him at L.G.N., the highest point on the track, just over 2,900 feet. As we approach this landing ground we see three tiny specks in the sky, which materialise into aircraft, and the two companies of aircraft move past each other like ships sailing on opposite courses across the open sea. In five minutes the Director and his escort are swallowed up in the sunlit distance and we are alone again.

Suddenly a stream of red flashes out from the Vernon ahead, hangs in the air for a moment, and then tumbles downwards like a dull spark. This is a red Very light, and means that he is forced to land. However, the country is good, and we watch him circling downwards and his shadow gradually drawing nearer to him until a little trail of dust shines out and shows that he is down. He has the mail on board, so that unless he can rectify the trouble at once we must land too. We circle round meanwhile to watch for his ground strip signal. Soon the door of his hull opens, two minute black figures hop out and put out a tee in white cloth strips. We send out a wireless signal giving our position, wind in the aerial and throttle down the engines. The Vernon drops her nose. It is very gusty, as we can see from the erratic course described by the smoke from the smoke-candle that the men on the ground have just lighted. We must glide down with a good margin of speed, as the air is thin and hot; and although we have got rid of over half a ton of petrol, the ground is more than 2,000 feet high, and if the air density is considered, its equivalent height may be anything up to 4,000 feet. We find that the Vernon drops quickly when we come to flatten out; in fact, the ground seems to rush up towards us. However, we effect a landing without positively damaging anything or colliding with the camel-thorn, and taxi up beside the other Vernon.

It is, of course, the oil trouble that he reported to us by wireless at L.G.V. The port oil pressure has fallen to zero, yet there is plenty of oil in the tank and the engine is not overheating unreasonably. It may be a piece of grit in the relief valve, or it may be the oil gauge itself. A mechanic is unscrewing the valve. Soon it is replaced and the engine is run up. The needle in the gauge only makes one or two ineffectual splutters. The radiation from the ground hits us in the face like something solid, and we keep wanting to take refuge in the shadow of the planes. Someone picks up a spanner that has been left in the sun and hurriedly drops it again as it is too hot to hold. We decide that the oil gauge must be defective. We fortunately have a spare one. The offending gauge has to be renewed amid much vituperation and leakage of oil, and when all concerned have got in a thorough mess and a worse temper, the job is complete and the engine restarted. The needle spins round at once and assures us that all is well. But a valuable hour has been wasted before we are in the air again. In a quarter of an hour or so we see ugly-looking black hills ahead. This is the beginning of the basalt country. The belt of basalt where it crosses the Mail route is about sixty miles wide, and runs northward into the Druse country and southward towards the oasis of Kaf. The black basalt caps all the hills which rise gaunt and flat-topped like grim slag heaps. This country always imparts an eerie feeling. Its barrenness, its utter loneliness seem to embody something sinister. It makes one imagine the primal twilight of the first toil of creation. Originally the lava appears to have welled up in some great seismic disturbance, and it has spread itself as a thick sheet over the limestone rocks. In the course of ages it has been gradually eroded away from the interspaces between the hills. Owing to its extreme hardness, these interspaces are covered with basalt boulders often more than two feet in diameter. These have rolled down the hills and have ranged themselves like giant cobble-stones over miles of comparatively flat-bottomed valleys, amongst which sparse thorn and scrub find a precarious existence.

A very noticeable feature of the basaltic region is the existence of extensive mud flats. These occupy shallow depressions, and are the result of the evaporation of drainage water loaded with sand and a fine reddish mud which has collected in these depressions after years. They are frequently of an elliptical or kidney shape, and anything up to two miles across. They have a surface like a billiard table, and when dry make perfect landing grounds. But Heaven help the pilot who lands on one when it is really wet! Luckily this can be judged pretty well from the air by their colour; and in addition they make characteristic and conspicuous landmarks, in sharp colour contrast to the surrounding country. In hot weather the glare from them is excessive, and the pilot has to use great care in landing on them, as he is apt to misjudge the surface in the same way as that of the water when it is without a ripple. The best way is to touch your wheels near the edge, or to drop a smoke candle and land close to and parallel with the trail of smoke.

The kind of country I have attempted to describe unfolds itself beneath us as we fly westwards through the turbulent air. Our aneroid shows that we are ballooning up and down about 500 feet every now and then, the crests of the invisible waves seeming to be roughly at five miles distance from each other. As we pass over the well-known kidney-shaped mud flat at L.G.F. with its whale-backed basalt hill to the north of it, we have been 5½ hours in the air since leaving Ramadi. We have roughly another half-hour to reach L.G.D., where the petrol supply is. We have now ten gallons of petrol in one top tank, twenty in the other, and fifteen in the emergency tank, so that we should have a little over fifteen gallons in hand on reaching L.G.D., which is none too big a margin on a flight of nearly 400 miles. We wend our way through this country of the dead until we sight the twin mud flats at L.G.D., and on approaching them we catch sight of the convoy of motor transport by the desert tank. We send a wireless message reporting that we are landing to re-fuel, wind in the aerial, fly over the landing ground and drop a smoke candle to ascertain the direction of the wind for landing. Here we have to be very careful of the camel-thorn which grows in quite large bushes, and is such a deadly enemy to our tyres. It is not long before we are chatting with our friends of the armoured cars and hearing the latest gossip of the desert.

We take in about 80 gallons of petrol, rapidly inspect the engines, and push on to Ziza, 86 miles ahead. If we had started at Penzance, L.G.D. would be equivalent to Durham, and Ziza to Edinburgh. We pass over the pools at Qasr Azraq, which in winter develop into quite a large lake. We are now in Trans-Jordan, and the sunlight picks out the old fort of Qasr Kharana, which is one of a series running north-east from the Dead Sea, built possibly by the Romans, and used subsequently by the military forces of the Caliphs of Damascus. Qasr Kharana is a square fortified building standing about 200 yards south of the track. When I visited it, it was full of skeletons.

We find an escort of armoured cars waiting for us at Ziza station, together with a small party from Amman to help fill up the petrol tanks. The aircraft always had to be filled laboriously by hand out of four-gallon tins of petrol and five-gallon drums of benzol. Assuming that we were using an 80/20 mixture, we should need five four-gallon tins of petrol to each five-gallon drum of benzol. On the westbound journey we usually took in 300 gallons of mixture, which would give us a good five hours' flying. This involved manhandling sixty tins of petrol, twelve drums of benzol, and, say, two drums of oil per aircraft. To fill two aircraft in this way, and give the aircraft and engines a rapid inspection, normally took two hours.

On this occasion we spent the night in the little upper room of the railway station, which has a few iron bedsteads and mattresses. There are not enough to go round, so those that have beds go without mattresses, while the remainder spread the mattresses on the floor. The aircraft are taxied down as near the station as possible, and securely picketed down by the wing tips and tail portion of the fuselage; for if a sudden dust storm gets up in the night, it is apt to carry all before it. The control wheels are also securely strapped up to prevent the ailerons lashing up and down and stretching the control cables. There may be a certain amount of work to be done, and this is willingly caried out by tired hands, if necessary on into the darkness with wandering leads and electric bulbs, or with the help of headlights of the desert tenders. To-morrow morning we shall have to cross the Judæan Hills and the Dead Sea, *en route* for Cairo. It is Friday night, and the mail train does not leave Cairo until 6 p.m. on Sunday evening, so we have plenty of time. We check over the mail bags carefully, and place a guard over the aircraft. The wooden labels on the mail bags from Baghdad marked "London City," and dispatches from Persia, destined perhaps for Westminster, used to give us a queer feeling in those distant places. To-morrow, when we pass over Beersheba in Palestine, we should have arrived at Inverness on our imaginary trip from Penzance; by the time we have sighted Kantara on the Suez Canal we should have reached the northern shores of the Orkneys; and finally, when we fly down the eastern fringe of the Nile delta and see in the distance the minarets of the Mahomet Ali mosque in Cairo, we should have arrived in the Shetland Islands. Accordingly, the length of the Mail route, 860 miles, would just have taken us from Land's End to the Shetland Islands. And this trip was accomplished once a fortnight in fair weather or foul, in intense heat and sometimes in bitter cold, as a part of the Squadrons' normal duties. The mail itself was practically never

Digitized by Google

fate, which meant that one aircraft at least practically always got through in the scheduled time.

I have not had time to refer to the excellent Signals service, nor to the Meteorological service, except incidentally. It is no exaggeration to say that without wireless the task would have been impossible to carry out with a reasonable margin of safety. The modern civil aircraft, with radial air-cooled engines and a 30 per cent. higher cruising speed, now fly over the route almost as easily as they fly from London to Paris.

There was a time when the mails used to travel from Baghdad to Damascus on the backs of racing camels. Compared with the centuries during which that method of transport remained unchanged, the coming of air transport seems instantaneous. But the 1400 h.p. air liner as we see it in 1928, more wonderful in construction than those monuments of the past which watch over the desert, was not conjured up by the rubbing of a lamp. The rare and heated atmosphere of Iraq put every difficulty in the way of getting into the air at all.

The following story is told of an officer coming home on leave. He was travelling as second pilot in a twin-engined aircraft. They were attempting to take off in the heat of the day; and after running over the ground for what seemed to him an interminable distance, he turned nervously to his first pilot and said: "I say, old chap, if you are going to motor home, I wish you would go a bit more slowly."

If I were asked to sum up in a few words what I thought were the difficulties of the Mail which left the sharpest impression on my mind, I should say, first, mechanical troubles with water-cooled engine installations; second, tyres; and third, the laborious hand-filling of petrol tanks. But one impression that will remain when all those are blotted out will be that of the deep satisfaction we got out of those mail trips over the desert, in which such trials as there were only served to beget enduring friendships.

[We are obliged to hold over until next week a report of the interesting discussion which followed the lecture; it included, notably, some comments by Sir Arnold T. Wilson.

The first account of a flight between Cairo and Baghdad was given in The Near East of May 18, 1922.—Ed.]

THE ENGLISH HIGH SCHOOL AT CONSTANTINOPLE.

In 1903, the English High School for Boys was founded in Constantinople to provide a sound commercial education for British boys living in Turkey, while offering the same education to boys of other nationalities. With a view to placing the school on a more satisfactory financial footing a fund of £16,000 was raised between 1908 and 1912, the principal subscribers being the British Government (£5,000), the British community, who, assisted by donations from England, raised £5,800, and Sultan Abdul Hamid, who presented property valued at about £5,000. With this money a site was purchased, and a modern school building was erected on it. Attendance at the School increased steadily from 31 boys in 1906 to 142 in 1914. The School opened again in 1920 with 98 boys, and in 1921 the highest number, 166, was reached. Adverse trade conditions and the departure of many British and other foreign residents from Constantinople reduced the attendance to 46 in 1923; but there has been a marked increase since and at the present time there are 156 boys at the School. Of these 30 are British, 51 Muslim Turks, 40 non-Muslim Turks, 7 Greeks, 6 White Russians, 5 Armenians, 5 Italians, and 12 of other nationalities. Unfortunately, since the War the income from fees has not been sufficient to cover expenditure. Losses to a total amount of £8,841 (for the last two years only £159 and £244 respectively) have been incurred, and there remains in hand now only a sum of £2,000. In 1921 the School boarding-house was destroyed by fire. The position now is that, to ensure the continuance of the School, steps have to be taken to raise a fresh endowment fund. To this end a Committee has been formed in London. A meeting for the purpose was held on February 9 at Lady Lowther's house, 23, Belgrave Square, at which the following were present:—

Lady Lowther, Sir Charles Marling, Sir Harry Lamb, Sir Maurice de Bunsen, Sir Wyndham Deedes, Sir George Thurston, Lady Sykes, Lady Neave, Lady Barker, Colonel Ian Smith, Dr. Clemow, Mrs. Cobham, and Messrs. A. Baker, George Kidston, Herman Norman, A. Silley, Philip Sarell, and H. Charles Woods.

Among others who had agreed to join the General Committee, but could not be present, were:—Earl of Bessborough, Lord Lloyd, Lord Berners, Admiral Lord Wester Wemyss, Colonel Wilfred Ashley, Sir Horace Rumbold, Admiral Sir Richard Webb, Admiral Sir Douglas Gamble, Sir Walter Townley, Sir Alban Young, Sir James Whitehead, Sir Vincent Caillard, Sir Robert Graves, General H. Conyers Surtees, Hon. A. Cadogan, Hon. H. Nicolson, Sir Wm. Ramsay, Col. L. L. R. Samson, Rev. Dr. Frew, Messrs. F. W. Baker, G. P. Baker, P. Graves, H. T. Montague Bell, Evelyn Wrench, and Mrs. Doughty Wylie.

An Executive Committee was formed to give effect to the appeal that it was decided to make for funds, and the Honorary Treasurer announced that a sum of £365 had already been subscribed or promised.

PALESTINE UNDER THE MANDATE.

Sir Thomas Haycraft, formerly Chief Justice in Palestine, lectured to the Central Asian Society on February 29 on "Palestine under the Mandate." Sir Arnold T. Wilson was in the Chair.

The lecturer recapitulated at some length the story of the disintegration of the Ottoman Empire before British forces during the War, and explained how, though Egypt, Palestine, Trans-Jordan, Syria and Iraq were in the hands of the British at the close of the War, Palestine alone, the smallest of all these territories, had been kept by the British. During the military occupation of Palestine were laid down the foundations of the social life which were developed and consolidated under the civil administration of Sir Herbert Samuel. Sir Thomas then classified under different heads the improvements which had been made in Palestine—in such things as Public Health, Law Courts, Roads and Railways, Public Security, and so on.

At the end of the lecture various questions were asked concerning the immigration into Palestine, and, more recently, the emigration from Palestine of Jews, the injustice through which Palestinians living outside Palestine were, though paying taxes to the Palestine Government, deprived of Palestinian nationality, and the Dead Sea Salts concession. Some of these questions were put by Miss Broadhurst and Miss Farquharson. Mrs. Eder deprecated the tendency to regard as "foreigners" the Jews entering Palestine, claimed that the emigration of Jews was wholly due to the economic collapse in Poland, and asserted that on the land in Palestine Arab-Jewish co-operation was a real thing.

The Chairman, who reminded the audience that the "K." Division of the Metropolitan Police had to supervise, in the Whitechapel District, more Jews than there were in the whole of Palestine, was of opinion that, in the exchange of the civil for the military administration of the Holy Land, the shadow of the sword had been replaced by the shadow of sentimentalism.

"ASIATICA."

We have received from Messrs. Kegan Paul, Trench, Trübner and Co., London publishers, the first copy of *Asiatica*, a monthly record of literature dealing with the East and with Africa. The attempt is to be made to record all publications, in whatever language, which deal with the East and Africa. These publications are somewhat curiously classified into "The Near East (Arabia, Persia, Turkey) and Islamic Civilisations," "Egypt, Palestine, Syria, Mesopotamia, etc.," "India, Ceylon, and Burma," "Central Asia, Tibet, and Mongolia," and so on. It is hoped that students and scholars will buy the books they desire through the publishers of *Asiatica*, and so make possible the continuance of what is undoubtedly a very valuable enterprise.

Only those who have earnestly studied the Islamic and other Oriental civilisations know the difficult task it is to keep abreast of current literature on the subject, and *Asiatica*, if it is enabled to continue, will considerably lighten that task.

In the first number fuller notice is given of Far Eastern books than of the remainder; and certain publications appear as having already seen the light of day when they should have been classified under "Forthcoming"; but such things as these will no doubt be remedied in future issues. We wish *Asiatica* the success that it merits.

PERSONAL AND GENERAL

TO-DAY

March 8, 1928 (New Style).
February 24, 1928 (Old Style).
Ramadhan 16, 1346, A.H., of the Muslim Calendar.
Adar 16, 5688, of the Jewish Calendar.

Sir Otway and Lady Cuffe are leaving about the middle of March for a tour in Palestine.

Major-General Sir Richard Bannatine-Allason has returned to England from Egypt.

The Hon. Lady Cooper and Miss Cooper have left England for Egypt and will not return until April 6.

Sir John Leigh, Bart., M.P., and Miss Leigh have returned to Witley Park, Godalming, from Egypt.

The Earl and Countess of Lisburne, who arrived last week in Cairo, will return on April 5 to their residence in Green Street, Park Lane.

Field Marshal Viscount Allenby was the guest over the week-end of Lord Lloyd in Cairo. He rejoined his steamer in Port Said on March 5.

Sir Ian Malcolm has returned to 57, Onslow Square, from Egypt, where he has been visiting Lord and Lady Lloyd at the Residency, Cairo.

Lord and Lady Rayleigh, who arrived in Venice last week from London, will visit Athens before returning at the end of March.

Lady Burghclere, who is visiting Lord and Lady Lloyd at The Sirdarieh, Cairo, is expected to return to 30, Green Street, Park Lane, towards the end of April.

Viscount Wimborne is expected to return at the end of March to Wimborne House from India. Viscountess Wimborne, who is in Egypt, will arrive in London about the same time.

Viscount and Viscountess Folkestone are travelling to Egypt in the Bibby Line motor vessel Cheshire, which left Marseilles on March 3. Sir Joseph Napier is also a passenger.

The Egyptian Chargé d'Affaires, Sesostris Sidarouss Bey, will give a reception in honour of the King of Egypt's birthday on March 26, at the Legation in South Audley Street.

Professor Nuttall has been appointed to represent Cambridge University at the Centenary Celebration of the Faculty of Medicine, Cairo, and the International Congress of Tropical Medicine and Hygiene in connexion therewith from December 15 to December 22, 1928.

Mrs. Ashley, wife of Colonel the Right Hon. Wilfrid Ashley, M.P., Minister of Transport, performed the naming ceremony at the launch of the Anglo-Persian Oil Company's new motor tanker British Justice, at Messrs. Palmers, Hebburn-on-Tyne, on March 6.

Where to stay in the East

Write for particulars of attractive offer for Advertising Hotels on this page.

BEYROUT—Hotel Metropole.
CAIRO—The National Hotel.
JAFFA—Hotel Jerusalem.
JAIPUR (Rajputana)—New Hotel.
JERUSALEM—St. John's Hotel,
H. & F. Fast, Managers
KYRENIA, Cyprus—
Sea-View Hotel.
NICOSIA, Cyprus—
George Hotel.
PORT SAID—
Casino Palace Hotel.
Grand Hotel de la Poste.
Marina Palace and Savoy Hotels.

Lieut.-Gen. Sir George MacMunn will lecture to the East India Association, at the Caxton Hall, Westminster, on March 12, at 3.30 p.m., on "India and Afghanistan." The Earl of Ronaldshay will preside.

Bishop A. W. Howells, Assistant Bishop in West Equatorial Africa, arrived at Plymouth on March 3 on his way to Jerusalem to attend the International Missionary Conference.

Princess Mary Viscountess Lascelles and Viscount Lascelles leave Victoria Station to-day (Thursday) with Viscount and Viscountess Boyne for Marseilles, where they will embark for their tour in Egypt.

Lieutenant-Colonel E. H. Keeling, Hon. Secretary of the Persia Society, has been unanimously adopted prospective Conservative Parliamentary candidate for Central Southwark, in place of Mr. C. Roper-Curzon, who recently retired.

Sir Alfred and Lady Mond and their daughter, Viscountess Erleigh, concluded their visit to Palestine on March 3, and left for Port Said *en route* for Marseilles. They had proposed to visit the remains of Petra, but the authorities would not allow it owing to the possibility of the presence of Wahhabis in the direction of Maan.

Sir George Clerk, British Ambassador to Turkey, left last week for London on leave, and, owing to the impending transfer to Cairo of Mr. Hoare, Counsellor of Embassy, Mr. Geoffrey Knox, Acting Counsellor in Angora, will be Chargé d'Affaires during the Ambassador's absence.

Sir Horace Rumbold, Bt., his Majesty's Ambassador-Extraordinary and Plenipotentiary at Madrid, whose appointment to be his Majesty's Ambassador-Extraordinary and Plenipotentiary at Berlin has been approved by the King, has served, among other places, at Teheran, Cairo and Constantinople.

The Afghan Minister on February 28 held a reception at the Afghan Legation in Prince's Gate to celebrate the anniversary of the Independence of Afghanistan. The Minister, Shuja-ed-Dowleh-Khan, received the guests, who included many members of the Diplomatic Corps and representatives of the Foreign Office.

Mr. Alexander W. Keown-Boyd, Director-General, European Department, Egyptian Government, had the honour of being received by the King at Buckingham Palace on February 29, when his Majesty invested him with the Insignia of a Companion of the Most Distinguished Order of St. Michael and St. George, and of a Commander of the Most Excellent Order of the British Empire (Civil Division).

ROYAL ASIATIC SOCIETY.

The next two meetings of the Royal Asiatic Society are upon March 13 and April 3 respectively, at 4.30, at 74, Grosvenor Street. At the first Professor S. H. Langdon will read a paper on "Results of the Herbert Weld (for Oxford) and Field Museum Expedition at Kish (Hursagkalamma) and Jemdet-Nasr during the two seasons, 1925-7 and discoveries in 1928." At the second Dr. J. M. Unvala will read a paper on "Excavations of the French Mission at Susa in 1926-27." Both lectures will be illustrated.

THE KING OF AFGHANISTAN.

When the King and Queen of Afghanistan visit the Guildhall on March 14, the route will be *via* the Strand, Fleet Street, Ludgate Hill, St. Paul's Churchyard, Cheapside, and King Street. The return journey will be made by way of King Street, Queen Street, Queen Victoria Street, and the Victoria Embankment. The Amir Amanullah will visit Portsmouth Dockyard on March 19.

THE INDIAN BUDGET.

"I ask those who profess unending dissatisfaction with the reforms and denounce them as a sham and the Government as insincere and unresponsive, does the financial story of these three short years justify depression or despondency?" In words which were never more timely than to-day, on the eve of a new epoch in India's constitutional development, Sir Basil Blackett reviewed, in his 1926-27 Budget statement, the results of perhaps the most progressive period in the history of the financial administration of India since the Mutiny. "For five years," the Finance Member proceeded, "the reformed Legislatures have been at work in India. It is true that weather conditions have, on the whole, favoured us, and that the level of taxation is still high in comparison with 1915, though not in comparison with other countries; but to me it seems undeniable that the association of chosen representatives of the people of India with the Executive Government and their constant interaction, the one upon the other, in the Legislative Assembly and the Council of State have enabled India to win through the inevitable discomforts of the period following the War with a measure of success that makes her financial position the envy of other nations, and it could scarcely have been possible without a reformed Constitution." "Members of this House," Sir Basil Blackett concluded, and the truth of his words have never been more abundantly demonstrated than by the events of the past few weeks, "appear to me sometimes to fix their attention so earnestly on what are called political questions as to overlook the steady advance towards the goal of constitutional self-government which is being registered day by day in administration and in finance."

The general Budget which was introduced in the Legislative Assembly last week, is not, as the Finance Member himself observed, "a spectacular Budget," but we shall be surprised if the verdict of posterity does not acclaim it none the less as the most momentous of the six for which Sir Basil Blackett has been responsible. The outstanding feature of a remarkable record of solid achievement is, of course, the permanent remission of the contributions payable by the provinces to the Central Government. In this respect the statement follows closely the lines foreshadowed in a recent issue of this paper. Originally the contributions amounted to 983 lakhs of rupees. The necessity of reducing the salt tax from Rs. 2-8 to Rs. 1.4 per maund in the Budget of 1924-25 postponed the beginning of the operation now happily concluded. The Budgets for 1925-26 and 1926-27, relieved finally of the uncertainties of railway finance by the separation of the railway budget from the general Budget, effected a reduction in the provincial contributions amounting to 3.75 crores or, if the Bengal contribution be included, a reduction of the original figures of 9.83 crores by 4.38 crores to 5.45 crores. Last year the estimated surplus for 1927-28 was devoted, it will be recalled, to their further reduction by 3.50 crores. This did not, of course, completely extinguish them, and Sir Basil Blackett adopted the bold device of utilising a part of the realised surplus of 1926-27 for the remission of the remainder for the year 1927-28. He was careful to point out at the time that this non-recurrent remission was temporary only and that, if a recurring surplus sufficiently large to make the remission permanent should not be available this year it would be necessary either to restore the remitted balance wholly or in part or to impose additional taxation. The revised Estimates presented last week show that the Finance Member was justified in the course he adopted. It is not necessary to restore the contributions either wholly or in part or to impose fresh taxation. But, as we also anticipated, the revised Estimates do not show a large enough advance on the Budget figures to provide for any relief of taxation beyond the abolition of the import duties on mill stores and machinery which were remitted last September. As we have previously explained the 1926-27 surplus was carried forward to a special reserve, so that the revised Estimates for that year did not exhibit either a revenue surplus or a deficit. The current year's estimated surplus is similarly supplemented by a transfer from this account, with the result that the total expenditure stands at 12,774 lakhs of rupees, and the total revenue at the same figure. Revenue receipts for 1928-29 are estimated at Rs. 13,223 lakhs, and expenditure at Rs. 12,960 lakhs, leaving a surplus of Rs. 263 lakhs. Of this surplus, which is treated as recurrent, Rs. 258 lakhs will be utilised for the complete and final extinction of the provincial contributions, which "ever since the Reforms were inaugurated, have been a millstone round the neck both of the Central Government and of the provincial Governments, poisoning their mutual relations and hampering their every action."

Last week's Budget was Sir Basil Blackett's sixth and last. He has every reason to congratulate himself on the achievements of his memorable term of office, the longest that has fallen to the lot of any Indian Finance Member, we believe, with the sole exception of Sir James Westland. When Sir Basil Blackett assumed charge the Government of India was enmeshed in the financial difficulties consequent upon the War. The great rise in prices, the heavy charges necessitated by the increase in pay and personnel of establishments, and the special expenditure on the defence of the frontiers had added enormously to its liabilities. In each of the five years 1918-19 to 1922-23 there had been a succession of large revenue deficits, amounting in the aggregate to nearly 100 crores of rupees. Apart from these deficits many crores of rupees spent on unproductive purposes had been improperly classed as capital expenditure. The inevitable effect upon India's credit both at home and abroad was shown in the decline in the price of 3½ per cent. rupee paper from 81 in 1918-19 to 61 in 1922-23 and the Government of India's borrowing rate in both countries was as high as 6½ and 7 per cent., respectively. The currency was also in a state of chaos, following the failure of the premature attempt made in 1920 to stabilise

Digitized by Google

the exchange at a fixed gold ratio, and to quote Sir Basil Blackett's own words "the rupee had broken loose altogether from its moorings and was drifting in an unchartered sea." To-day the financial position, both in review and prospect, is, as Sir Basil Blackett rightly claims, "sound and prosperous." The rupee has been stabilised and the unproductive debt reduced by Rs. 76 crores, while borrowings for productive purposes, at progressively reduced rates, have increased by more than twice that figure. By the end of next year the accumulation of the early post-War revenue deficits will have been liquidated and another twelve years should see the extinction of unproductive debt. And an ordered financial policy, of which the present Budget is the final phase, has brought about a steady improvement in the Indian Government's credit, reflected both in the level of security prices and in the terms and success of the recent sterling loan. An unprecedented series of favourable monsoons has, of course, been an important factor, but the change is very largely due to Sir Basil Blackett's skill and ability. This is not the time to pass in review the long list of considerable achievements to the credit of the retiring Finance Member. The last and probably the greatest is the extinction of the provincial contributions happily signalised in the statement presented to the Central Legislature last week.

CURRENT TOPICS.

Living on Balances.

We shall have to await details of the Bombay Budget, but the figures cabled are not reassuring. The Government of the oldest Presidency has for some years been living on its balances. The true balance, apart from Famine Insurance and Loan Funds, had fallen from 388 lakhs at the end of 1925-26 to 181 lakhs at the end of 1926-27, and a further decrease to 108 lakhs was budgetted for at the end of 1927-28. This reduction of the balance would have been serious enough, but it would appear that the depletion has, owing to the exceptional floods in Guzerat and Sind, been greater than was anticipated. Owing to the fortunate absence of serious scarcity in recent years it had been expected that the Famine Insurance Fund would have risen from 195 lakhs in 1925-26, to 262 lakhs at the end of 1927-28; but here again we are informed that the serious floods have decreased the balance. So far as famine is concerned, however, the remaining balance is likely to be ample, but it is another matter when current revenue and expenditure are considered. Last year, the Bombay Government deliberately budgeted for a deficit of 50 lakhs: and for the coming year, with equal equanimity, it contemplates a deficit of 34 lakhs. It is true that it hopes that the Government of India will forgo the contribution of 37 lakhs due under the Meston Settlement, and that financial ends will thus be made to meet. But this seems a dangerous policy. We may appreciate the view of the Bombay Government that the Meston Settlement is totally unfair to Bombay. So long, however, as it exists, it would seem desirable to make some effort to meet the obligation imposed by it.

The real need of Bombay is a larger revenue, and the absence of it is due to two causes—poor trade, and the unwillingness of the Legislature to impose fresh taxation, or even to agree to the increase in Land Revenue which would accrue through the revision of time-expired Land Settlements. As regards trade, the slow recovery of the City of Bombay in this respect must give ground for anxiety. The financial dead weight of the unfortuante development schemes must have some bearing on this question. Not only have the heavy interest charges of the Development Loans to be met, but the special cotton cess tends to drive trade away from the port, and the Port Trust cannot reduce its admittedly burdensome charges. As regards taxation it is probable that the Bombay Government will be hard enough put to it, to get the Stamp and Court Fee Acts renewed, without being able to devise fresh taxation. As regards Land Revenue, however, much as we may sympathise with the cultivator, it is obvious that cash assessments fixed more than thirty years ago when the rupee value of the produce was far less than it is now, should in equity be revised, and a larger sum should be received by Government. As Land Revenue is left by the Government of India to the local Governments, the failure by the Bombay Government to revise its assessments must prejudice its case for the revision of the Meston Settlement.

Economy in expenditure is of course desirable, and is always preferred by the local politician to any increase in taxation. In Bombay, however, it may be doubted whether cheeseparing has not already reached its limit and whether indeed efficiency is not already dangerously reduced in several departments. If economy is possible, it is at the top. The Government with, in addition to the Governor, four members of Council and two Ministers, is admittedly over-staffed and underworked. Here surely some economy is possible. It may also be questioned whether in modern conditions such appurtenances as bands and bodyguards are now necessary for dignity or prestige. They are not found necessary for the newer governorships, and though we should hesitate to place these on the same level as the thrones of the ancient Presidencies, the prestige of the latter will be sufficiently maintained by the fact that they are prize appointments from home. Whatever view, however, may be taken, it seems clear that some action is necessary. Bombay cannot continue in its present hand to mouth policy without running the risk of falling behind the other Provinces of India.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 16, 1928.

The Statutory Commission.

Sir John Simon's letter to the Viceroy on the subject of the procedure of the Commission and the Joint Committee (if there is one) was followed in a few days by a second letter, this one to Sir Sankaran Nair. A word first about the earlier letter. There has been circulating a persistent report that the wording of that letter had been settled in London by Lord Birkenhead and Sir John Simon together. That was authoritatively denied. Had it been, one does not see quite how that would have constituted a crime. What the incident shows is how touchy some of us are; how ready to see a crime in everything. To pass to the letter to Sir Sankaran Nair. It is too long to give in full. Suffice it to say that it deals with the members of the Joint Committee, which, be it remembered, is to be composed of members of the Central Legislature, and their relation to the sittings of the Statutory Commission and Committees of the Provincial Legislatures, or their status then. They are not to be mere spectators, Sir John has ruled. This second letter was written after a meeting between Sir John Simon, Sir Sankaran Nair, leader of the Parliamentary Party in the Council of State, and Mr. Chari, the Honorary Secretary to that party, when, it may be assumed, or no letter would have followed the meeting, agreement was reached with the Parliamentary Party. It is something to have agreement somewhere.

There has been a flutter over calling. The Government of India decided to call on the members of the Commission, instead of waiting to be called on; but they neglected to inform the President of the Legislative Assembly of their intention. He, therefore, waited to be called on, the Commission meanwhile waiting for him to call on them.

The great debate—whether there is to be a Joint Committee of the Central Legislature, or none at all, but a

Digitized by Google

boycott in that quarter—is even now proceeding in New Delhi. The decision there may be expected either to strengthen or to weaken the hands of the advocates of a boycott among the members of the Provincial Legislatures. If the Central Legislatures decide not to form a Joint Committee, it is probable, it is said, that three or four of the Provincial bodies will follow suit.

The Reserve Bank Bill.

It was announced on Friday that the Government of India had decided to drop the Reserve Bank legislation altogether. The best-informed opinion on your side, according to a later cable, is disposed to regard the decision as a blessing "in disguise," while the opinion that I have collected here among equally well-informed persons is that it is a blessing "and no need to add 'in disguise.'" It is thought here that Sir Basil Blackett, his record at the Treasury notwithstanding, his undoubted success as India's Finance Member also notwithstanding, lacked either a profound enough knowledge of the working of a Central Bank or a deep enough reading of Indian psychology, or both, and that his Bill contained many very dangerous features. The charter of the Imperial Bank expires, I have read, in 1931. Something will have to be done before then, but there are a few alternatives to establishing a Central Bank better to perform functions now performed by the Imperial Bank. A question that has not been asked, and that might have been asked on all sides, is, "Is it not now seen to have been a little too soon to borrow seven millions in London?" for the object of borrowing those millions, it was explained, was to give the Reserve Bank a better "send-off." But never mind that.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, February 18.

A Hasty Conclusion.

Every day brings a fresh point of controversy regarding the Statutory Commission on Indian reforms. The last is the attitude of the Central Legislatures on the question of the boycott. In the Council of State, great importance is attached by those who accept the Commission to the Parliamentary Party headed by Sir Sankaran Nair. Throughout this week negotiations have been in progress between that party and the Commission regarding the procedure to be adopted at the Joint Free Conference. What Sir Sankaran Nair and his party desired should be explained in connexion with the Commission's procedure is not known, but Sir John Simon's reply contains two interesting explanations. First in regard to the powers of cross-examination of the Central Committee when Provincial subjects are under investigation, Sir John states: "There would be (but subject always to my ruling as President of the Conference) an opportunity for further questions from members representing the Central Body." I do not know what the Parliamentary Party think of this elucidation of the powers of the Central Body, but it seems to me that it is a further limitation of their powers. The next point is that Sir John Simon does not seem to think that any useful purpose would be served by his making at this early stage precise and binding rules on every possible matter. Considerable importance is attached to the fact that the Parliamentary Party sought elucidation on these doubtful points and it is even inferred that Sir John Simon's explanation has satisfied Sir Sankaran Nair. The Delhi correspondent of the *Times of India* declares that the Party have satisfied themselves that the scheme of co-operation offered by the Statutory Commission is one upon which Indian men of position and standing can enter with honour. Here again is a hasty conclusion. Sir Sankaran Nair is essentially an administrator and as such the methods of hartal and boycott may not appeal to him; but that does not mean that he will even for a moment proclaim the shadow as the substance and declare that Sir John Simon's offer is a magnaminous one.

The Lower House

While there seems to be some chance of the Council of State accepting the Commission and the suggested procedure, the Assembly shows a strong tendency for boycott. In fact, taking non-officials by themselves Congress is assured of victory. It is the official *bloc* which whittles the opposition majority down to such a negligible figure that it is feared that the absence of a member or two on either side may upset all calculations. That the decision of the Assembly is hanging by a thread will be realised by the fact that on Thursday when the debate on the Simon Commission was initiated by Lala Lajpat Rai's motion for its boycott, the House had to be adjourned owing to the death of a member who was hurrying to Delihi to record his vote, against the express advice of his doctor. The calculations of party whips seem to indicate that the Opposition has a majority of two votes but until the votes are finally recorded it is difficult to say which side the decision will be. The strength of the Opposition is the strength of its weakest adherent.

Lala Lajpat Rai.

Turning to the debate on Thursday, there can be no doubt that Lala Lajpat Rai's speech was straightforward and to the point. Before we condemn it as violent, offensive and vitriolic let us give it due consideration. In the first place it is a bitter speech—a bitterness born not of the disillusionment of youthful ideals but of age and experience in the school of politics. That his speech should have been received with silence by his followers does not mean that they did not approve of the sentiments expressed therein; it must have filled them with awe that the most restrained among them should have felt it necessary to give such expression to his feelings. Even the official benches must have felt that the temper of the House was a changed one. The laughter with which they greeted his first charges froze on their lips and the Leader of the Responsive Co-operators in the Assembly finished his speech uninterrupted. Mr. Crerar, the Home Member, replied with restraint. He pointed out that the House was taking an irrevocable step in rejecting the Commission and predicted that the searching inquest of history will not fail to return judgment against those who sought to use their power to hinder when it was in their power to help.

Mr. Jayakar's Last Appeal.

If any evidence was needed of the fact that Indians genuinely anxious to help the Commission have persistently and repeatedly been repulsed in their attempts, Mr. Jayakar's speech is a striking example. He offered to prove to Sir John Simon why his letter did not meet their point of view. He emphasised the fact that he had in the face of strong public opinion offered to meet the Commission and discuss procedure with them; but he had at last realised that no useful purpose would be served by it, as the Commission did not seem to be anxious to conciliate Indian opinion. He concluded by saying that the door was still open but would not be for long.

According to a Press *communiqué* issued from New Delhi the Roads Development Committee will hold one meeting during the present session of the Legislative Assembly in order to take evidence from two important witnesses. Thereafter the Committee will meet in Bombay, early in April, to discuss the lines on which the report should be drafted and the draft report will be taken into consideration when the members assemble again in Simla for the autumn session of the Central Legislature.

The Bombay Municipal Corporation have accepted the generous offer of Rs.22 lakhs from Sir Ness Wadia and Mr. C. N. Wadia for the establishment of a Children's Hospital of 110 beds. The land and building will cost sixteen lakhs, towards which the two brothers are to contribute nine lakhs and the Municipality seven lakhs. The latter will also contribute ten lakhs towards the maintenance fund, to which the remainder of the Wadia bequest has been devoted.

INDIA IN PARLIAMENT.

BY SIR FRANK NELSON, M.P.

Before I entered the House of Commons I fondly imagined that India was a topic which was frequently debated in a crowded House; this delusion was fostered right up to the time when I took my seat by all kinds and conditions of people who ought to have known better. who, in varying forms, both wrote and said that anyone with a practical working knowledge of India would be most usefully employed in Parliament.

The primary education of a member of the House of Commons chiefly consists for the first year or two in having illusions dispelled by a variety of methods, and his future Parliamentary career depends to no small extent upon the condition of the patient at the end of his convalescence.

When he has assimilated the fact that the British Constitution is perhaps the most haphazard, cumbersome and inconsistent in the world, he will begin to realise that, despite this, the Government machine is marvellously efficient, and to come nearer to my subject, the fact that India is debated perhaps once a year in a bored and apathetic House consisting of probably 20 members, in no way denotes inefficiency or ignorance, but merely that the House of Commons is satisfied with the administration of India.

Some time during the summer we shall have a debate on the India Office Estimates, and I should imagine that in this instance we shall really have a full House and the interest of the public.

I assume, of course, that the members of the Simon Commission who will be temporarily back in England will necessarily be onlookers (if that) only, as it would be highly improper for them to participate in a discussion which, so far as private members are concerned, will almost certainly hinge on the Commission, its work, the attempted boycott and all that these things entail.

I would that it were possible to fill the public galleries on this occasion with a selection of Indian politicians who have recently so successfully dissembled their love for their country and done it so signal a disservice by their actions and utterances in connexion with the Commission.

They would, I am convinced, take away with them much food for thought; for the printed report of a debate cannot convey the "atmosphere" of the House of Commons, and, unless I am greatly mistaken, England will speak with no uncertain voice some time this year through the mouths of her elected parliamentary representatives as to the views she holds of some of the leaders of a people to whom we have given Reforms and who refused to work them, or even discuss their future.

Fortune has been kind to Sir Basil Blackett, but even his bitterest critics will admit that he has deserved her smiles. He has the capacity to use the opportunities that are offered him, and India has gathered the profit. Moreover his financial genius is linked with a lucidity of expression which makes it easy for all who have eyes to see to follow the marvellous rehabilitation of India's finances, and the restoration of her credit, which the past quinquennium has witnessed.

For, as Mr. Burdon has reminded us, "for a proper appreciation of the situation, next year's Budget must be related to the cycle of six Budgets framed by the Hon. Sir Basil Blackett, and should be iewed as the final phase, final so far as he is concerned, of an ordered financial policy which has brought great benefits to India." The Financial Secretary could scarcely have been accused of exaggeration if his tribute to his distinguished chief had been couched in far stronger terms.

Those of us whose memories go back to the desperate struggle away from the slippery slope leading to final bankruptcy which preceded the arrival of the present Finance Member, may well blink our eyes in amazement at the transformation, of which last week's statement is a fitting culmination. In face of enormous difficulties Sir Basil has won through to a success which must command the admiration and respect of friend and foe alike.

Sir Basil Blackett's sixth, and last Budget is, as he himself remarked, "not a spectacular Budget." After last year's statement, and the railway Budget for 1928-29, with its large reduction in passenger fares and in freights, it might also be called an anti-climax. No alteration in taxation is proposed beyond the abolition of the import duties on mill stones and machinery which were announced six months ago. Nevertheless, as I have previously observed, the Budget for 1928-29 marks in a very real sense an epoch in the history of Indian finance, since the surplus, in spite of the loss of nearly a crore of Customs revenue, is sufficient to provide for the complete and final extinction of the provincial contributions, which were tentatively remitted last year, and still leave an estimated balance of Rs.5 lakhs in hand. The ground won last year in other words has been consolidated, and the Finance Member has triumphantly vindicated his action on that occasion which was so roundly condemned by many exponents of orthodox finance.

LORD SINHA OF RAIPUR.

THE NEAR EAST AND INDIA regrets to announce the death, which occurred suddenly on Monday, from heart failure, of Lord Sinha. The first Indian Member of the Governor-General's Executive Council, Lord Sinha, who was called to the English Bar in 1886, also enjoyed the unique distinction of being the only Indian so far to become a K.C., to be raised to the British peerage, to be a member of a British Ministry and to be appointed Governor of a province of British India. He was also only the second Indian to be appointed a member of the Judicial Committee of the Privy Council. A short review of a career which thus marked a definite stage in, as it is without parallel in the history of, British and Indian relations has to be held over until next week's issue. Lord Sinha's last public act, the cordial welcome which he sent to the Simon Commission, was characteristic of his whole public life.

In a message of sympathy with the family Lord Birkenhead writes: "By his great ability, industry and sound judgment Lord Sinha achieved for himself a position both as a lawyer and an administrator such as no Indian had held before, and he used it for the benefit of his country. In the sphere of politics his singleness of purpose and high ideals, coupled with a sober appreciation of realities, assure him a place in the foremost rank of Indian statesmen."

NEWS IN BRIEF.

It is understood that the report of the Indian Cinema Inquiry Committee will be issued in May.

The following are the members of the Committee of the Bengal Chamber of Commerce for 1928-29:—President, Sir George Godfrey, of Bird and Co.; Vice-President, Mr. J. H. Fyfe, Mackinnon Mackenzie and Co., Mr. A. Alker, Shaw Wallace and Co., Mr. R. W. Buckley, Agent, Chartered Bank of India, Australia and China, Mr. G. L. Colvin, Agent, East Indian Railway, Mr. T. W. Dowding, Turner Morrison and Co., Ltd., Mr. B. E. G. Eddis, Gillanders Arbuthnot and Co., Mr. J. Reid Kay, James Finlay and Co., Ltd., and Mr. R. A. Towler, McLeod and Co.

A compromise, according to a Reuter message from Bombay, has been reached in the matter of the motion of censure against the Development Department and the Bombay Government, brought in owing to allegations of corruption in the Development Department. The Legislative Council has adopted, and the General Member has accepted, on behalf of the Government, the appointment of a committee of five non-official members, including Mr. Nariman, the well-known lawyer who originally brought the charges, to investigate the charges of corruption against the Development Department.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Standard of Roumanian Cereals.

Our Bucharest Correspondent refers this week to a proposed new law for the standardisation of Roumanian cereals. In recent years the reputation enjoyed by Roumanian grain on the foreign markets has suffered severely owing to the frequent presence in the produce of considerable percentages of foreign bodies. The root cause of this falling away from standard is to be found in the agrarian reform scheme under which the land was divided up among small holders, who were not able to deal with their cereals like their predecessors—the large landowners. Our Correspondent points out that if the proposed measure be passed it is doubtful if it will have any great effect in the immediate future, but it is so much to the good to know that the Roumanian Government recognise the imperative necessity for the safeguarding of the grain standard, and if the measure becomes law we may look to them to find means to make it effective.

The Future of Palestine.

Those who take the more optimistic view of the outlook for the development of Palestine into a prosperous industrial country will derive considerable encouragement from the views expressed by Sir Alfred Mond during his visit to that region. The point has often been advanced that Palestine's real economic rôle must lie mainly in pursuits connected with agriculture, but in Sir Alfred Mond's view there are not greater obstacles to industrial than to agricultural development. He looks forward to important economic progress as soon as the harbour at Haifa is constructed, and anticipates that that town will become one of the greatest ports on the Mediterranean. It must be said in this connexion that much will depend on the route chosen for the projected pipe-line from Iraq, and if it should have its outlet in Palestine (which is not the shortest way to the sea) its influence on Haifa must naturally be very pronounced. Sir Alfred Mond looks forward to the time when large new capital will be forthcoming for Palestine enterprises, and he points out that it is the fact that in Jewish opinion Palestine has been regarded in terms of national or philanthropic undertakings which has been responsible for the non-participation on a large scale of Jewish capital in commercial and industrial enterprises in the country. In his opinion business enterprises, well planned and with adequate capital, could earn as large profits in Palestine as in any other country, and this view, coming from one of the leading industrialists, must carry great weight. The principal difficulties apparently which have to be overcome in the development of important industries are the supply of raw materials and the discovery of the necessary markets for the resultant products.

Cyprus Trade Progress.

In an article which will be found elsewhere in this issue the main features of the trade of Cyprus in 1927 are reviewed. In that year the Island once again had an adverse trade balance, but only a small one of £43,070, or roughly less than one-tenth of the adverse balance of the previous year, while the volume of trade showed the substantial increase of about £500,000. A particularly satisfactory feature of the trade was that both in imports and exports the United Kingdom and the rest of the Empire play an important part. In the Island's imports the share of the Empire constitutes 44.65 per cent. of the total, and while the percentage of the export trade is nothing like so large, the United Kingdom is at any rate first with 18.04 per cent., the figures for the Empire being 21.72 per cent. As the total for the United Kingdom was £278,367 as against only £97,966 for 1926, it will be evident that the efforts in recent years to develop a market here for Cyprus produce are now meeting with a marked measure of success. I pointed out at the time of the British Empire Exhibition that the value of participation in it could only be fairly judged over a term of years, and it is not going too far to assume that Cyprus is now beginning to benefit by being represented both years at the Exhibition.

Ottoman Debt Settlement.

While particulars of the terms of the settlement reached between the representatives of the bondholders and those of the Turkish Government have already been outlined in these columns, it is desirable, now that this long-standing question is out of the way, to recapituate the main features of the agreement. Under the Treaty of Lausanne Turkey was made responsible for £T7,168,000 of the total annual service of the Ottoman Debt. Under the new agreement she will pay £T2,000,000 (gold) for seven years beginning June, 1928, £T2,380,000 for the next six years, £T2,780,000 for the next five years, £T3,180,000 for the next five years, and £T3,400,000 from June, 1951, onwards. Thus Turkey's payment of interest will average 38 per cent., so that she is entitled to congratulate herself on the terms which the bondholders have agreed to accept. While those annual payments will be distributed among

the various loans, the Unified Loan will receive preferential treatment. The distribution will be as follows:—For the first seven years the Unified Loan will receive 47.22 as against 34.43 on the other loans, for the next six years 59.64 as against 43.49, for the next five years 72.07 as against 52,55, for the next two years 84.49 as against 61.61, for the next three years 100.00 as against 86.12, and from June, 1951, until the extinction of all the loans 100.00 as against 100.00. Another feature of the agreement to which reference is necessary is that the Debt Council will no longer possess anything like the measure of control over the revenues allocated to the service of the Debt. Turkey's payments under the agreement, it may be noted, will amount to no more than 10 per cent. of the country's Budget, so that it cannot in any way be described as an onerous charge. Turkey, in short, has been able to make an agreement on very favourable terms, but their nature is bound to be reflected in negotiations for future foreign loans, the rate of interest for which is likely to be much higher than would be asked in the case of States which meet their engagements to the full.

Markets Ignored.

I have often had occasion to draw attention to the apparent apathy of our manufacturers with regard to the Near East markets. An illuminating instance of this is given in the current issue of the *Monthly Journal* of the British Chamber of Commerce of Egypt. Some time ago it was necessary to purchase a typewriter for the Chamber, and naturally it was desired to obtain a British machine. Unfortunately it proved impossible to carry out this intention.

"Both Cairo and Alexandria were ransacked but without result, for apparently there is no British typewriter on sale in either city. We say 'apparently,' because it is possible that hidden somewhere in the purlieus there may be one, and we apologise sincerely to any dealer whom we may have overlooked. But it is certainly deplorable for a patriotic Chamber, whose principal slogan is 'Buy British Goods,' to have to admit that it cannot put its slogan into practice, and we are writing this to draw the attention of British manufacturers that, to the best of our knowledge, there are no agents for British typewriters in Egypt."

Comment is superfluous. One can only hope that the sequel will be that our manufacturers will henceforth pay due attention to the requirements of the Egyptian market and, be it added, of other similar Near Eastern outlets. British typewriters both from the point of view of quality and price have nothing to fear in the way of foreign competition, and as there is a demand to be satisfied in the Near East it behoves our manufacturers to see that a substantial share of the trade that is going comes to this country.

Commentator.

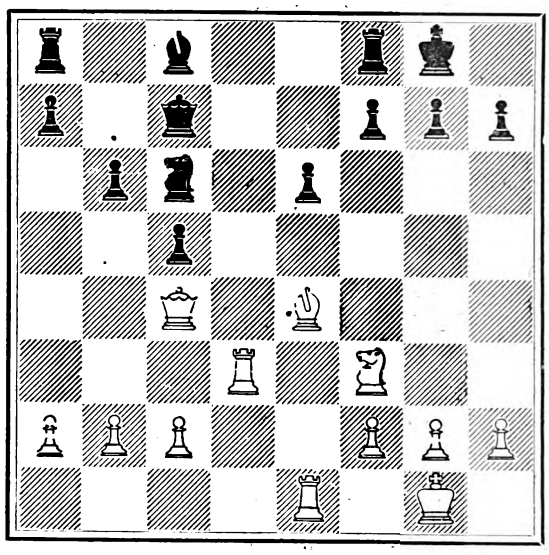
HIGH PRICES FOR BAGHDAD STAMPS.

For a complete set of twenty-five unused Baghdad stamps issued in 1917 the sum of £120 was obtained by Messrs. H. R. Harmer, philatelic auctioneers of 6-8, Old Bond Street, W.1, at their auction on Monday, whilst for a pair of 1 anna claret, one stamp with part of overprint omitted, £60 was paid.

CHESS.

By "CARO-KANN."

This week sees the commencement of the Murton Cup Tournament at the City of London Chess Club. There are nineteen entries, and it is to be played this time in one section, so that it will continue until the end of July.



I give this week a particularly striking example of a successful attack. In the position shown Black unwisely played B—Kt2 whereas P—KR3 would have given a temporary respite which would possibly have allowed Black to bring some help to the threatened wing. Play continued: 1, BxP (ch), KxB; 2, Q—R (ch), K—Kt; 3, Kt—Kt5 and Black resigned, mate in six being threatened.

MAILS FROM CYPRUS.

During a recent visit to Cyprus by Viscount Inchcape, Chairman of the P. and O. and British India Steam Navigation Companies, arrangements were made for the weekly Khedivial Mail steamers plying between Cyprus, Egypt and Syria, which are subsidised by the Colonial Government, to leave Cyprus for Port Said on Friday evenings, instead of Thursdays at noon. This will enable the inward mails arriving on Thursdays to be answered by return of post and will save the business community some thousands of pounds in cables. The innovation, which will not add to the subsidy, has been well received. The Government have also restored the Sea Post Office, discontinued last year, to enable mails to be delivered in Cyprus immediately on arrival.

The Prince Line has paid an interim dividend of 5 per cent. per annum free of tax.

The traffic receipts of the South Indian Railway Company for the week ended February 4 amounted to Rs.11,50,963, making the total from April 1 Rs.5,24,19,824.

Motors and Motoring.

By G. B. B.

One of the finest week-ends we have had for some time in the south of England brought great numbers of new cars and, evidently, new motorists, on the road. One can always tell the newcomer by the air of superiority he assumes. Admitting, for the sake of argument that he has some justification for this, one cannot then but admire the condescension with which he speaks to other road users. I shall always remember, I am sure my friend remembers it gratefully, the advice on road manners and customs which a quite new driver gave to the aforesaid friend in a certain inn on the Brighton road. He told us quite a lot about the proper way to get the most out of an engine, and what to do in cases of emergency and so on. I admired it all the more because my friend had really had a good deal of experience, having driven touring and racing cars for many years. Just lately, I may mention, he has been making history, and bringing credit on the old country by the extraordinary speed he succeeded in getting out of a car whose name, like his own, bids fair to become a household word. But no matter, our novice gave him advice and no doubt to-day, if he realises that he was speaking to Capt. Malcolm Campbell, is telling his friends that he taught him to drive!

Road and Rail.

A decisive step has been taken in connexion with the proposal that railway companies should engage in road transport. The parties interested in the applications of the seven railway companies are the railways, manufacturers and traders, established firms of carriers and hauliers, and the public generally. It is, as has been pointed out, the public who are most interested, because it is their capital which is invested in the various concerns and it is they and their goods that are to be carried. It may be taken, I think, that they are generally satisfied at the way in which events have moved.

Registration.

The difficulty about all official schemes for registration and licensing is that mechanical progress overruns their bounds and ignores, as the *Commercial Motor* pointed out recently, the limitations they would set up. The articulated six-wheeler and then the rigid six-wheeler came in to confound the licensing authorities and it took a little time to find a niche for them in the classification and now there has arrived the eight-wheeler, of which two are on the road. One of these has already come before the magistrates because it had been registered as a heavy motor car and someone has throught proper to arraign it on the ground that it should have been registered as a locomotive and trailer.

From a published description this type of vehicle is a distinct addition to the facilities for transport which are being offered to haulers. The journal quoted points out that as an articulated six-wheeler, its maximum total axle weight loaded, would be 18½ tons; as a four-wheeler and trailer it would total 22 tons, but this vehicle, loaded, weighs 35 tons 6 cwt. No wonder the magistrates agreed with the clerk of the court that the question was not one for them to decide, but asked the owners to produce a certificate showing exactly what the vehicle is. Everyone in court seemed to think the design worthy of recommendation because of the wide area of contact between the 12 inch types and the road surface and the manner in which the weight of the load was distributed over the road. Actually, one of these vehicles should do less damage to an ordinary road than a four-wheeler carrying a little more than half the weight.

Cleaning Engines.

A leaflet has just been issued by Lacy-Hulbert and Co., Ltd., of 91, Victoria Street, London, dealing with the merits and describing the construction, of the Boreas paraffin spray gun which is intended for use in cleaning engines and other components of the chassis. Compressed air is used to drive the paraffin spray, the oil being drawn from a container. The spray which is almost as finely divided as to deserve the term "vapour," is emitted with considerable force and the jet loosens and washes away dirt and grease with great rapidity. After the paraffin has been sprayed, the oil can be turned off and a jet of clean dry air directed on to the cleaned part for drying purposes, and this air jet can also be used without the paraffin to blow dust out parts of the mechanism or from the vehicle itself. Readers interested should write to the firm for a copy of the leaflet, mentioning THE NEAR EAST AND INDIA.

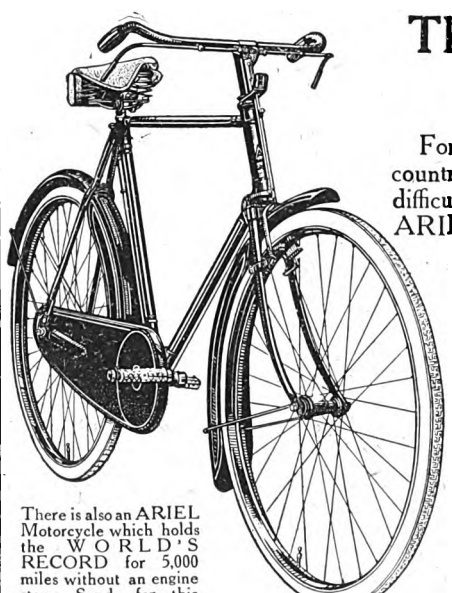
A Motor Cycle Feat.

Mr. S. T. Glanfield has just returned to Southampton after accomplishing a trip of 17,500 miles round the world on a 3½ h.p. motor cycle and sidecar. The motor cycle was a standard 3½ h.p. Rudge Whitworth and I had the pleasure of seeing it a few days ago in a Southampton garage. The machine certainly looks as if it had had a gruelling test, but there is still plenty of service in it and no doubt as soon as it has been overhauled it will be in a fit state to undertake the journey again. This test, like others I have described, speaks volumes as to the reliability and quality of the British motor cycle.

It is announced that the Banca Chrissoveloni of Roumania will discontinue its New York branch as from April 1, 1928.

The Bicycle for the hardest wear

ARIEL



There is also an ARIEL Motorcycle which holds the WORLD'S RECORD for 5,000 miles without an engine stop. Send for this Catalgue also.

The Good Cycle

For rough and hilly country and under difficult conditions, the ARIEL is the cycle you must ride. It is far ahead of all others for easy, effortless riding, unfailing reliability and comfort. The finish is smart and enduring, the splendid specification and reasonable prices will surprise you.

THE YUGOSLAV MERCHANT MARINE.

In the *Belgrade Economic Review* Dr. Ivo Belin has an interesting article on the post-War development of Yugoslavia's merchant marine. He shows that the fleet has expanded from 114,386 gross tons in 1921 to about 270,000 in 1927, while additions at the beginning of this year have brought the tonnage to over 300,000. He continues :—

Thanks to the large subsidies given to their shipping companies by Austria and Hungary before the War coastal shipping, either in connecting some of the places on the present Yugoslav coast, or linking them with Trieste and Fiume, was well developed, with ships of the necessary tonnage, speed, and convenience. Thus, in addition to many passenger and cargo lines, Trieste and Fiume maintained four services weekly all along the Dalmatian coast as far as Kotor. Since at that time Dalmatia had not a single normal gauge railway line to connect it with the other parts of the Monarchy it was unnecessary to carry on so many services. Passengers, mail, and goods could only reach Dalmatia via Trieste or Fiume.

With the conclusion of the War matters changed considerably. Trieste and Fiume no longer belonged to the same State as Dalmatia and the Croatian coast, and consequently such frequent connexions via those two ports were not wanted. Moreover, in 1925 the normal gauge line was completed connecting the ports of central Dalmatia, Split and Shibenik, with the rest of the Yugoslav railway system, and this made shipping connexions still less necessary. For, whereas formerly Dalmatia had connexion exclusively by sea, it now has its railway, and the steamships are no longer its only means of communication.

For this reason the need for lines of steamships is not so great as it was before the War. Instead of four services weekly the fast lines Trieste-Kotor and Shushak-Kotor go only twice a week, and in the dead season are amply sufficient. But with the needs of the foreign tourist traffic, which is very brisk from spring to autumn, and grows rapidly year by year, it is intended in the summer of 1928 to introduce a daily fast service in the line Shushak-Kotor. Although the railway goes to Split, the foreign visitors always travel by ship to Shushak and back, in order to enjoy the beauty of the coast.

From this is does not seem likely that shipping between the ports on this side and with the Italian ports on the other side of the Adriatic will need any very much larger number of ships. The one change worth while is to make the old ships more modern and comfortable. In any case the development of our merchant fleet has not come from the increase of coastal shipping. On the contrary, this form of shipping employs fewer ships now than before the War, owing to the fundamental change of conditions. Moreover, when other railway lines, which are already planned, are finished, the need of coastal ships will be even less, and especially in the winter months, when there is no foreign tourist traffic.

Of all the merchant ships which we possess, only seven or eight medium-sized cargo boats give regular connexion abroad. This form of shipping, therefore, has contributed nothing to the development of our merchant marine, like the coastal shipping.

The greatest development has come in free international shipping, which does not keep to any fixed lines, but goes to those parts where there is a demand for boat accommodation, and whose field consequently is the whole world. The tripling of our merchant shipping is not due to the growth of regular lines or local traffic, but exclusively to the growth of our free shipping. Of the 114,000 gross register tons of our merchant fleet, about 40 went to coastal traffic, leaving about 70 to free navigation. Now, out of about 300,000 tons, coastal shipping takes less than 40,000, regular services over 20,000, leaving for free navigation nearly 250,000 tons. Taking into account the fact that in 1921 our free shipping was only 70,000 gross tonnage, and that it now amounts to about 250,000, it is clear how much progress has been made in this branch of shipping in the last seven years. Other merchant fleets have increased more in absolute figures, but in relative progress we certainly take the first place.

One extremely satisfactory point worth noting is that our free merchant shipping has absolutely no subsidy of any kind, and hence its rapid progress must be ascribed to the enterprise of our shippers. Austria-Hungary used to subsidise this form of shipping also. Not one of the subsidised ships needed to call at home ports; they could carry on transport of coal, for instance, between England and South America, but if they flew the Austrian merchant flag they could get a good annual subsidy. Some even of our freely navigating ships which had a good subsidy in the days of Austria-Hungary have had to get used to working without aid. Nevertheless they have prospered and have not only paid their owners a good dividend but made possible the accumulation of reserves with which new boats were subsequently bought.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

*†BRITANNIA ... March 16 *†CIRCASSIA... April 13
‡ASSYRIA ... March 30 *ELYSIA ... May 11
*First class passengers only. Specially low fares. †Calls Port Sudan
‡Carries 1st and 3rd Class.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 6.

The past week on the Stock Exchange has not been conspicuously eventful, but there is a strong undertone in most markets. Gilt-edegd securities have been firm. The revenue return continues to be eminently satisfactory and lends substantial support to Mr. Churchill's hope that the Budget will balance. The large majority for the second reading of the railway companies' Road Bills was a favourable point for home rails, but prices did not materially respond. There was again considerable activity in the industrial share market, the talking machine group, and certain tobacco and textile shares being prominent. Courtauld's shares are showing signs of stability around £8¼. Marconi shares fell owing to the report of a breakdown in the company's negotiations with the cable companies; this report was officially denied, it being stated that the negotiations are continuing. Oil shares rallied on the rumour that an agreement had been reached to end the price-war, but relapsed when this was proved to be unfounded. Mexican Eagles were the exception, being strongly supported. Rubber shares remain under the cloud which settled upon them following the announcement of the Government inquiry.

Protecting the Investor: A Suggestion.

A week ago we discussed the Companies Bill from the standpoint of the protection which it will afford the investor. It would seem, however, that a certain measure of protection could be extended to the investor apart from, or rather in addition to the Companies Bill. We refer to circulars containing investment tps and offers which are sent through the post. The position in this respect is most unsatisfactory. Many small investors and would-be investors do not appreciate the difference between circulars sent by bucket-shops and those sent by members of the recognised Stock Exchanges. To retort that the members of the Stock Exchanges can circularise none but their own clients is beside the point, for experience abundantly shows that many are not aware of this rule. In these circumstances, it would seem advisable for members of the Stock Exchanges to indicate the fact of their membership prominently and unmistakably on their circulars; and the public advertisements of the Stock Exchanges should draw attention to this point and clearly explain the significance of membership of the Stock Exchange. Thus in time the public would be educated to look for information relating to membership of a Stock Exchange on all investment circulars and to ignore those not containing it. Apparently this information will be hardly less valuable when the Companies Bill is on the Statute Book.

Building Societies.

During the past week or two a number of building societies have published their annual reports and these mostly show a considerable measure of progress. For instance, the report of the Abbey Road Permanent Building Society for 1927 discloses an increase of more than 50 per cent. in membership, the new share capital and deposits have increased by £1,921,908—also over 50 per cent. in excess of last year—while the sum of £3,373,292 has been advanced during 1927. The building society movement continues to gain in popularity and this is not to be wondered at. The building society is a valuable social institution, while at the same time it offers favourable opportunities for investment. Broadly speaking, the investment opportunities fall under two heads—namely, investments and deposits. A number of the leading societies pay 5 per cent. free of income tax on their shares and these are an excellent holding, especially for the investor of modest purse. Alternatively, the investor can place his money on deposit and thus arrange for it to be withdrawable at short notice. His rate of interest, however, will not be as high as that of the shareholder's. There are many building societies courting the investor's favour and he should take the greatest pains to assure himself of the financial stability and competence of the directors before entrusting an institution with his savings.

Foreign Corporation Stocks.

A few days ago a foreign municipality appealed to the British investor for funds. This is something of an event, for during the past year or two foreign corporations have not been heavy borrowers in the London market. But the list of foreign municipal stocks already quoted on the London Stock Exchange is fairly extensive. The yields vary considerably, in one case being as low as £3 18s. per cent. and in another being as high as £7 19s. per cent. The stocks giving intermediate returns provide the investor with investment opportunities which merit consideration. There is, of course, a higher degree of risk in foreign corporation stocks than in home corporation stocks, but the yield on some of the foreign securities generously discounts this factor. The City of Amsterdam 5 per cent. sterling loan, finally redeemable 1974, returns £5 10s. per cent. A yield of £5 11s. per cent. is obtainable on the City of Bergen 5½ per cent. loan, the final redemption date being 1963. The Department of the Seine 7 per cent. sterling loan, finally redeemable 1952, returns £6 10s. per cent. A yield of £6 7s. per cent. is given by the City of Berlin 6 per cent. sterling loan, finally redeemable 1957.

A private company is undertaking the establishment of a shipbuilding yard at Constantza (Roumania).

A house at Nablus (Palestine) which was cracked by the earthquake of February 22, collapsed on March 2, killing three persons.

An "economic assembly," composed of some 40 bankers, business men, and economic experts, has been appointed by the Turkish Government to consider how the cost of living may be reduced, and how the Turkish pound may be stabilised. Hassan Bey, a former Minister of Finance, has been elected President of the Assembly.

During December 253 immigrants (170 of them Jews) entered Palestine and 355 left permanently, including 262 Jews, 190 of whom were recent settlers. During January 259 immigrants (176 Jews) entered Palestine and 217 left permanently, including 186 Jews, 129 of whom were recent settlers.

CYPRUS TRADE IN 1927.

Increased Exports.

The trade of Cyprus in 1927 showed a welcome improvement. The value of the imports of merchandise was slightly greater at £1,585,940 as against £1,570,278 for 1926, an increase of £15,662, but that of the exports was £1,542,870 as against £1,103,571, an increase of £439,299. The result was that an adverse balance of trade of £466,607 for 1926 was reduced to one of £43,070. The increase in imports, it may be noted, took place despite an increase in the Customs import duties in the early part of the year. The following table gives particulars of the trade during the past three years.

	Imports. £	Exports. £
1925	1,583,436	1,198,615
1926	1,570,178	1,103,571
1927	1,585,940	1,542,870

It is satisfactory to be able to record a further increase in the percentage of goods imported from the United Kingdom which are now approaching half the total imports. The figures for the United Kingdom and other parts of the British Empire were £708,083 representing a percentage of 44.65. Greece is second in the list of countries exporting to Cyprus with £122,430 or 7.72 per cent., while France is third with £106,179 or 6.70 per cent.

The principal increases in the imports were in fertilisers, £27,952; cotton yarns and goods, £26,478, due to the increased spending power of the population consequent on the high prices received for their produce; sugar, £20,644; and wheaten flour, which showed an increase of nearly £19,000, although the local wheat harvest was good. This increase was due partly to imported flour being cheaper than native, and partly to the fact that the urban population are becoming accustomed to consuming white bread which cannot be made from local flour. It is anticipated that the importation of artificial fertilizers which, as noted above, has increased so considerably will continue to increase as the value of this article is more extensively realised. The olive crop of 1927, coming in towards the end of the year, was considerable, but owing to its partial failure in 1926, there was an increase in importations of £3,932 during 1927.

There was a decrease of £58,465 in the value of machinery imported. This was due principally to the mining companies, which considerably extended their plant in 1926, having satisfied their present needs. There was a decrease of £12,845 in the value of wheat imported owing to the plentiful harvest.

The following table shows the direction of exports during the year 1927:—

	1927. £	Percentage.
United Kingdom	278,367	18.04
Other parts of the British Empire ...	56,748	3.68
Egypt	267,501	17.34
France	116,499	7.55
Germany	117,181	7.60
Greece	157,021	10.18
Italy	195,094	12.64
Spain	110,605	7.17
Turkey	5,939	0.38
United States of America	27,799	1.80
Other countries	210,116	13.62
Total	1,542,870	100.00

The outstanding feature of the export trade during 1927, was the greatly increased value of domestic exports which has been the means of restoring prosperity to many farmers and producers. A significant development of the year was the pronounced increase in the value of exports to the United Kingdom which rose from £97,966 in 1926 to £278,367 in 1927.

With the exception of animals and gypsum, decreases were insignificant. The only really serious decrease in the export of the former was that of oxen, the demand in Egypt and Greece having fallen off. The decrease in gypsum was due to the establishment of factories in Egypt which are now obtaining raw material from other countries, thus cutting out the Cyprus product.

On the other hand, increased exports in other articles were considerable and more than counter-balanced the few decreases. Not only were the quantities exported more than those of the previous year, but enhanced prices were obtained. Carobs showed an increase of £150,474. This was partly owing to stocks being held over from the previous year. Prices increased from 12s. to 14s. per cantar in 1926 to 18s. to 24s. in 1927-8. These very satisfactory prices were due to the partial failure of the carob crops of Portugal and Crete. The quantity of raisins exported increased from 66,069 cwt. in 1926 to 87,949 cwt. in 1927, and in value from £58,198 to £86,508. This in spite of the facts that the export of grapes was normal, and that the value of wine exported increased by £16,798. The export of barley increased from 268,728 to 389,369 kiles and in value by £23,504. In spite of disease the quantity of potatoes exported increased from 173,993 cwt. in 1926 to 234,166 cwt. in 1927, and in value by £30,811. The export of silk cocoons decreased by £2,294, but this was more than made up by an increase of £9,564 in the value of raw silk.

The quantity of oranges exported increased from 14,275,459 to 20,774,568. Prices were normal. Orange gardens continue to extend. The bulk of the fruit is still going to Egypt and Greece, but as production increases, markets further afield will have to be found in the near future. Attempts to interest exporters in the English market have hitherto failed owing to the distance, involving higher freight charges and risk of damage on the long journey. A trial consignment of 100 cases sent to England met with success, the exporter receiving a bonus from the Government of £2 10s.

There was considerable increased activity in mining. Asbestos showed an increase of £82,855 and pyrites £40,579.

The Banque d'Orient of Athens is to distribute a dividend of 22 francs, free of tax, for the year 1927.

The Agricultural Bank of Egypt recommends a dividend of 10s. per share on the ordinary shares and one of £55 per share on the deferred shares.

The Nundydroog Mines announces a balance dividend for 1927 of 1s. 3d. per share, making the total distribution for 1927 1s. 9d. per share.

The traffic receipts of the Suez Canal from February 18 to 24 amounted to 3,600,000 francs, as compared with 4,480,000 francs for the corresponding period of last year.

Tools and implements used in handicrafts have been deleted from the list of articles which are exempted from Customs duty on importation into Palestine.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended February 10 amounted to £E8,559, making the total from April 1 £E268,324. For the corresponding periods of the previous twelve months the totals were £E8,959 and £E291,803.

Contracts have been given by the Egyptian State Railways for mechanical signal fittings to the British Power Railway Signal Co., Ltd., London; for fish bolts and nuts to Guest, Keen and Nettlefolds, Ltd., Birmingham; and for cable to W. T. Glover and Co., Ltd., Manchester.

Near East Markets

JAFFA ORANGE SHIPMENTS.

The Empire Marketing Board reports that shipments of Palestine oranges since February 11 have been limited to two shipments, one on February 18 and the other on February 20. Only three vessel, with about 70,000 bores, are now on the way to this country, according to cabled advices received up to the present. Revised estimates of the total quantities to be shipped this season state that about 450,000 boxes now remain for shipment to the United Kingdom, and 50,000 for the Continent. The damage from locusts which were reported to be swarming in the neighbourhood of Petra and Maan is said to be now over.

CYPRUS CROP PROSPECTS.

The following report has been issued on Cyprus crops in January :—

Cereals.—Sowing of wheat continued up to the middle of the month. Sufficient rain has now fallen, and the crops are growing normally, but the dry spell following the slight rainfall at the beginning of the season affected the germination of early sown cereals to some extent. Imported chemical fertilisers are being increasing used.

Vetches.—Sowing has begun.

Broad Beans.—A large area has been sown. Attacks of the early crop by aphis are reported in some ditsricts.

Onions.—High prices are causing extended cultivation and a heavy demand for seed. Prices are increasing rapidly to 4s. 6d. per stone.

Cumin Seed.—Sowing has started. Crops are expected to be larger than last year.

Potatoes.—Good demand for export. A larger area is expected to be planted during this season. Large quantities of potato seed have been imported from Ireland and England and are selling at 1s. 8d. to 2s. 6d. a stone.

Oranges.—The demand for export to Egypt and Greece is steady. The price is running from 40s. to 50s. per 1,000. Plantations are still extending.

Carobs.—Florescence has been damaged in certain localities by hail. Prices rising, ranging from 22s. to 23s. per kantar.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date February 29 :—

Currants.—The firmness of Greek prices continues, and a feeling of great confidence exists among holders that higher prices will be seen later in the year. There has not been any appreciable expansion of business, and trading was on an even more restricted scale, if possible, than that ruling during January, somewhat dull conditions prevailing. Buyers appear indifferent, and there is no perceptible change in values. Where any easing in price is noticeable it is entirely due to slight concessions on the part of sellers anxious to effect quay sales. Quotations :—Pyrgos, 51s. to 51s. 6d. ; Amalias and Patras, 51s. 6d. to 52s. 6d. ; Zante, 52s. 6d. to 53s. ; Zante (Bags), 51s. 3d. ; to 51s. 6d. ; Gulf, 54s. to 56s. ; Vostizza, 55s. to 62s. ; Vostizza Smalls, 54s. to 58s.

Sultanas.—The market in general is very quiet and with the exception of a few transactions in rain damaged at 40s. to 41s., and medium grades round 50s., demand has been most disappointing. Buyers show little or no confidence, as the response from the country is so poor. On the other hand, Smyrna reports advancing prices with Continental purchases, and very little prospect of further shipments to the United Kingdom. Quotations : Rain-damaged, 40s. to 42s. ; Fair to Medium, 50s. to 54s. ; Good, 56s. to 60s. ; Fine, up to 65s. ; Greeks, 60s. to 62s. ; few fine up to 75s.

Figs.—A dragging sale. Choice Natural, Bags 27s. 6d. to 29s. ; Genuine ordinary, 29s. to 32s.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Oils, Etc.—A/Officer Commanding, H.M.'s Nile Yachts, Bulaq, Cairo, invites tenders for the supply of oils, points, timbers, cleaning articles, and electric articles necessary for the yachts during the year 1928-1929. April 14.

Clothing, Etc.—The Director of Equipment and Finance, Ministry of the Interior, Cairo, invites tenders for the supply of clothing and necessaries required for the Police and Ghaffirs in 1928-1929. April 15.

Motor Watering Carts.—The Municipality of Alexandria invites tenders for the supply of five motor-driven watering carts and street sweepers. March 20. (D.O.T.)

Stores.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of consumable stores required for 1928-1929, such as ropes, oils, paints, leather, ironware and buildings material. April 10.

Terminal Strips.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 2,000 terminal strips for cast iron terminal boxes, 7, 14, and 28 pair to drawing for telephones. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

Sheets, Etc.—The Ministry of the Interior, Egypt, invites tenders for the supply of sheets, napkins, blankets, towels, socks, etc., required by the Department of Public Health during the year commencing May 1, 1928, and ending April 30, 1929. April 5. (D.O.T.)

Paper and Stationery.—The Egyptian Ministry of Finance invites tenders for the supply of paper and stationery required during the year 1928-1929. April 12. (D.O.T.)

Pumping Equipment for Mex.—Tenders are invited by the Ministry of Public Works, Egyptian Government, for the supply and erection at Mex Pumping Station of pumping equipment. The contract includes two complete Diesel pumping units, the engines being of the vertical four stroke air injection type driving pumping of the horizontal, centrifugal, or turbine type and the supply of two 60 K.W. 110 volts Diesel electric generating auxiliary sets. April 14. (D.O.T.)

Brown Boots.—The Egyptian Postal Administration at Alexandria invites tenders for the supply of 2,400 pairs of brown leather lace-up boots. April 9. (D.O.T.)

Cotton Waste.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 140 metrical tons coloured cotton waste. April 10.

THE SUDAN.

Steamers' Stores.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of steamers' stores to the Egyptian Irrigation Department in the Sudan for the year 1928-1929 of the following general description : oils, greases, cleaning materials, packing and jointing, hemp and wire rope and yarn, lamps, small tools, wrought iron steel, copper, paints and enamel, brushes and brooms, bolts and nuts and pins, life buoys, piping, minor electric light spares. April 2.

INDIA.

Bridge Girders.—Tenders are invited by the Indian Stores Department for 31 bridge girders for the Railway Board. Order No. N-7979. The bridge consists of 4 spans of 4 oft. clear, 16 spans of 20 ft. clear, 2 spans of 12 ft. clear, 9 spans of 6 ft. clear. April 19. (D.O.T.)

Steel Bridges.—Tenders are invited by the Indian Stores Department for 35 steel road bridges in connexion with the Lloyd Barrage Canals Construction. March 31. (D.O.T.)

TURKEY.

Pontoon Bridge.—Tenders are invited for the construction of a pontoon bridge across the Golden Horn at Oun Kapan. A minimum delay of three months as from January 31 last has been fixed for the receipt of offers. (D.O.T.)

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, February 29.

A Foreign Loan.

Although very little is published in the press and the negotiations are being kept strictly secret, public opinion is greatly interested over the prospects of arrangements being made for a foreign loan. It has long been realised and publicly admitted by the Roumanian Minister of Finance that a large foreign loan is required both for the stabilisation of the leu and for the reconstruction of the railways. For some weeks past it has been evident that negotiations were proceeding with the Banque de France, two representatives of which institution made long visits to Bucharest. Recent guarded notices in the press, however, seem to indicate that the negotiations have been extended to English and German and also American banking institutions and great hopes are based on their success.

Stabilisation of the Leu.

According to the report of the National Bank it appears to be the intention of the Government to stabilise the leu at about its present value, i.e., round 790 to the £. This, of course, will mean a heavy loss to people who have pre-War incomes in lei, but after much consideration it has been decided that it would not be safe to attempt to stabilise at a higher figure, in order not to risk a repetition of the experience of Poland whose currency fell considerably after legal stabilisation had been effected.

Standardisation of Cereals.

The most important measure brought before Parliament during the last week is the Bill for the standardisation of cereals. This is the second time such a Bill has been drawn up. The first time was three or four years ago, when the differences of opinion as to its practicability and the difficulties in the way of its realisation caused it to be referred to a special committee. Apparently the work of this committee has now been finished and the Bill has come before Parliament, but the differences of opinion appear now to be almost as great as formerly.

The object of the law is to make it compulsory to classify cereals (in the meantime particularly wheat, barley, and oats) according to their freedom from foreign bodies. At the present time it is not uncommon for Roumanian wheat sold for export to contain as much as 10 per cent. of foreign substances, and this, of course, gives it a bad name on the market.

Before the War the high quality of Roumanian grain was well known, but it is part of the price the country has had to pay for agrarian reform (which from other points of view was probably very necessary) that the standard of her agricultural products has fallen very considerably, owing to the ignorance of the peasant cultivator.

Even if the law be passed in this session of Parliament, however, it is not clear how it can be put into execution without a good deal of delay, and Roumania does not possess an adequate system of silos to store the grain, expect in the ports, and grading stations will have to be established all over the country. With this object in view it is apparently the intention of the Government to try to form a company with a large capital to undertake the organisation and exploitation of the grading stations.

Miscellaneous.

The Danube was reported completely free of ice at the end of last week, and in spite of the low temperature which has since prevailed it is not considered at all likely that it will be frozen again this season. Several ships which have been frozen in all the winter have been able to leave, and normal navigation has recommenced.

The weather continues exceedingly cold, with high winds and occasional falls of snow. Several degrees of frost have been registered daily for over a week. In some districts the snow drifts have been so high as to interfere with railway traffic.

Commercial Bookshelf

THROUGH THE SUEZ CANAL.

A new edition has been issued of the interesting little brochure by Mrs. D. M. Stewart Beale entitled "Through the Suez Canal" in which the writer gives a description of a voyage through that vital connecting link between East and West, and besides giving an outline of the working of the Canal gives a short survey of its history. Among the thousands of passengers who go through the Canal each year there must be very many who desire to know something of the landmarks they pass from the time that the statue of Ferdinand de Lesseps comes in sight until Suez is reached and *vice versa*, and in this brochure they will find a wealth of particulars which will give interest to the transit of the Canal. "Through the Suez Canal" can be obtained at Port Said and Suez or direct from the authoress at Ismailia, Egypt, on receipt of a Postal Order for 1s.

TRADE UNDER MODERN CONDITIONS.

To-day trade is developed by judicious and persistent publicity and as the result of the facilities afforded for getting in quick touch with manufacturers and traders in all parts of all countries. No business book of reference in this connexion renders more admirable service than Sell's Telegraphic Address Directory. The 1928 edition contains in addition to 100,000 telegraphic addresses, valuable information on a host of subjects of value to the business house, and is a monument of painstaking compilation calculated to meet every business requirement.

WHERE TO STAY IN LONDON.

Visitors to the East, where accommodation is often limited, know the advantage of being able to decide upon a hotel before arrival at their destination, and to this end a small list of hotels appears each week in The Near East and India under the heading "Where to Stay in the East." Their "opposite number" for London is now appearing on our front cover, and visitors to England who wish to combine comfort with moderate terms are recommended to make use of the list of hotels there given.

Greece's exports of leaf tobacco last year totalled 41,756,654 okes.

Straw hats are more widely used in Beyrout than felt and are worn from the first of May until the end of October. Many of the natives, especially Muslims, who wear the tarbush during the winter, have adopted the straw hat for summer (says an American Consular report). The imports of straw hats are larger than those of felt since it is often necessary to purchase at least two during the long hot summer months. Styles in vogue are usually of the split-straw variety, sailor type, and are imported principally from Italy and France.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson, in their report for the week ended February 29, state:—

Egyptian Futures.—Sakel Contract.—A further hardening in values was experienced during the sessions immediately following our last report, the Alexandria market continuing to show evidences of "bullish" speculative activity, whilst at this side the movement attracted fresh buying and also forced in further short covering. Under these combined influences prices at the week-end were practically ¼d. per lb. dearer than the level obtaining at the time of our last report. During the latter part of the advance trade interests held aloof, also, apart from this, it had been particularly noticeable that the class of buying then in evidence was of a rather poor character; thus, the ensuing reaction gave little surprise to those closely following the course of events. To-night's close shows a steady tone with values 10 to 13 points higher for near and 10 to 11 points for distant positions since we last wrote. When, a few weeks ago, our market stood at the low levels of the season, i.e., nearly 2d. per lb. below the top prices reached this week, the position both here and in Alexandria were certainly oversold; now, with the very quick turn round that has taken place, we have the reverse side and there seems little doubt that quite a large speculative "long" interest has been built up both at this side and in Alexandria during the last fortnight.

Non-confirmation of the detrimental rumours regarding the Sudan crop and political trouble have unsettled the Alexandria market during the past two days and caused prices there quickly to lose about 1 dollar per kantar; there is practically no change to report regarding the straddle differences between the two markets. Trade reports, as far as the fine section are concerned, continue to be satisfactory, and spinners are meeting a steady offtake for their production at remunerative margins. The volume of business, however, is not such as to warrant them at the present moment following blindly any decided upward movement in the values of their raw material, and, as mentioned previously, it has been particularly noticeable this week that once prices advanced to a certain level the market received very little support from this quarter. To-day, however, we notice a more decided tendency in certain quarters to take advantage of the decline to cover requirements. During the week March liquidation has been in progress, but this option has continued to receive support from one or two spot firms who evidently intend to take up tenders. The March/May difference has fluctuated between 5 and 17 points discount and very probably the next few days will witness some rather erratic fluctuations in this.

Whilst for a long view we are not against the market at the present level, we consider that rather a weak long interest is now outstanding and this will probably be liquidated on any further setback, causing perhaps exaggerated weakness at the time; should our ideas prove correct we would advise moderate purchases, as we remain of the opinion that the statistical position has improved and also hold a more optimistic view regarding the trade outlook.

Upper Contract.—Only a very moderate amount of business has transpired in this contract during the past week and, on the whole, the tendency has been somewhat heavy, especially latterly, owing to the reactionary tendency of the American markets. Our contract stands at a reasonable difference, either compared to the overseas market or spot values, also, trade activities appear to be on the increase and more support is coming into evidence from this quarter. We still consider that the best policy to pursue at the moment is to take advantage of any declines to enter into moderate commitments.

Egyptian Spot.—A healthier business has been done under this heading since last we wrote. A sharp rise in futures, caused by rumours regarding the Sudan Sakel crop, reached its culminating point last Saturday (25th inst.), and a reaction, caused primarily by a political crisis in Egypt, has since been in progress. Egyptian spinners, however, have been unable to conceal their anxiety regarding the immediate supply of fine cotton, and some substantial buying has taken place even, as during the last few days, in face of a falling market. This would seem to confirm our recent surmise that there is a shortage of cotton at the mills. Trade reports from Manchester have continued in an optimistic vein, and a more reasonable feeling has lately prevailed at the conferences between masters and men.

The local Sakel inquiry has again contained a very large percentage of orders for low cotton at from 4d. to 12d., but, as against this, there has again been a steady improvement shown in the inquiry for the better grades, chiefly in qualities quoted at about 150 on in the one case, and at about 250 to 300 on in another. Uppers have been in improved request, but attention still remains focussed largely on the lower grades at from 12½d. to 13½d., to the partial neglect of the better cotton.

The less popular growths, such as Pilion, White, etc., have met with but little inquiry. Sudan cotton also has been dealt in on only a very retail scale. C.i.f. business has been reported as being brighter than has been the case for some considerable time. Forwardings to spinners for the week ending the 24th inst. were returned as 7,748 bales Egyptian and 1,100 bales Sudan. Estimated spot sales, 2,300 bales Egyptian and 200 bales Sudan.

Quotations of Sakel show a net advance on the week of 10 points; Upper and Pilion are 15 points lower. F.G.F. Sakel to-day, 18d. F.G.F. Upper to-day, 13.30d. F.G.F. Pilion to-day, 13.70d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 23, state:—

Since our last report the futures market has been active and prices show an appreciative advance. The weeks' summary of price movements is as follows:—Sakellaridis: March, 34.63 dollars, 1.29 dollars up; May, 34.95 dollars, 1.22 dollars up; July, 35.30 dollars, 1.25 dollars up; November, 35.61 dollars, 1.01 dollars up. Ashmouni: April, 25.46 dollars, 0.86 dollars up; June, 25.70 dollars, 0.82 dollars up; October, 25.66 dollars, 0.59 dollars up.

Sakel.—The rise is principally due to the reports current here that, both in quality and quantity, the Sudan Sakel crop is not turning out as good as expected; these reports have alternately been confimed and contradicted, and it is impossible to form any reliable opinion. Another factor which has contributed to the firmness of the market is the strength of the spot market; the turnover has not been exceptionally large but the stock is strongly held and certain grades are becoming scarce and difficult to buy. There has been a fair amount of covering on the part of the local speculators; in spite of this covering, however, we think that a fair short position still exists. The demand from abroad has been only moderate, but if the bad reports on the Sudan crop are confirmed we shall, in all probability, see an improvement in the inquiry for Egyptian Sakel, in view of the fact that mill stocks in general are very low. With the maintenance of the restriction of acreage in Egypt and the recent good tone of the American market, we look for a continuation of the present firmness and possibly a slight rise in prices.

Uppers.—This market has not been as active as the Sakel market, but the tone has been equally good. The firmness of the American market has been reflected here, whilst recent large purchases by American spinners for prompt shipment have also contributed to the better feeling. Contrary to the general expectation, the straddle between Sakel and Ashmouni has widened during the past week, in spite of the fact that, with the very small stocks of Ashmouni up-country, the statistical position of this cotton is distinctly better than that of Sakel.

At the third February tender, 5,500 kantars dockets were issued, making a total for the month of 22,250 kantars. The week's receipts amount to 94,381 kantars, against exports 120,557 kantars; the stock in Alexandria stands at 3,020,791 kantars.

The World follows Liverpool Cotton Quotations daily.

GROWERS AND SHIPPERS SHOULD SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary.

Digitized by Google

Spot: Business continues very quiet at Minet el Bassal and the past week has seen another series of poor markets and a continued poor demand from abroad. Sales amount to about 11,950 bales, of which we estimate 6,300 bales Sakellaridis, 4,800 bales Ashmouni and Zagora, 600 bales Pilion, and 250 bales other varieties. The spot situation is unchanged technically, and in all growths it continues very hard to buy any cotton below Fully Good Fair at a commercial basis.

Sakellaridis: A moderate business has been done covering all grades. Offerings this week are a little larger, the rise in contracts having brought out some more cotton for sale. Spot differences are firm without change from last week.

Ashmouni and Zagora: A mediocre business has been done. All styles have been dealt in, but, as for some time past, the medium qualities have absorbed the bulk of the demand. Spot differences are generally unchanged and firm.

Pilion: Has been in fair demand for all grades. Spot differences are generally without much change.

Other Varieties: A fair business has transpired in White. Spot differences are on the easy side. Brown is neglected and no business is reported. In Nahda and Fouadi a small business has taken place.

Up-country: Spot business up-country continues to be negligible. The Interior stocks are still an unknown quantity; factory stocks are getting worked off, but how much cotton is still in the hands of the growers remains to be seen.

Crop, 1928.—Weather conditions in Lower Egypt have not been at all favourable this week and ploughing and planting have been seriously interfered with. It is to be hoped that we shall soon see an improvement, otherwise replanting on an extensive scale will be necessary, with a corresponding depreciation in the quality of the crop owing to the fact that the seed used for replanting is never so good as the seed first put in.

The latest advices *re* the water supply are not at all satisfactory and, in spite of the economies effected, the level of the Assouan Reservoir stands at 112.19 metres against 113.59 metres at the same time last year. The Sudan Nile gauges are nearly everywhere appreciably below last year, Malakal showing 9.84 metres against 10.20, Roseires 11.18 metres against 11.56, and Wadi Halfa 0.90 metres against 1.88.

The British Overseas Bank announces that funds for the payment of the coupon due April 1, 1928, on the bonds of the Roumanian Four per Cent. Consolidation Loan, 1922, have now been received.

The Financial Sub-Committee of the League of Nations Council recommends an international loan of £5,000,000 for Bulgaria. It will be floated in France, Great Britain, U.S.A., and Holland.

The Associated British Manufacturers have secured the contract from the Ministry of Public Works for the Belquas power station, totalling about £185,000 (says a Reuter message from Cairo).

The Balaghat Gold Mines announce a balance dividend of 6d. per share on both preference and ordinary shares, making the dividends for 1927 1s. 6d. per share on the preference shares and 6d. per share on the ordinary shares.

Navigation between Soviet and Persian ports in the Caspian Sea was last week interrupted by a violent storm. A yacht lying in the Meshed-i-Sar Roads (Persia) was wrecked and 12 people were drowned, including the Chief of the Fisheries recently transferred to Persia.

Notes of the Week.

The Negotiations with Egypt.

Whatever may be the ultimate adjustment of Anglo-Egyptian relations, certain points emerge from the negotiations that resulted in the rejection of the draft Treaty by the Wafd, and it may be as well to emphasize them at this stage. In the first place the original draft submitted by Sarwat Pasha on July 18 was a conscientious attempt to meet the situation and did not deliberately burke any of the outstanding questions. The counter-draft approved by His Majesty's Government ten days later was a more formidable document, of which it may be said that it aimed at keeping Anglo-Egyptian relations within clearly defined and restricted limits. This counter-draft was subjected by Sarwat Pasha to a searching analysis, in the course of which he pointed out that "the most important provisions of the draft are in conflict with its aims as set out in the preamble," and he added: "These provisions indeed give the impression that the British Government have no great confidence in Egypt and that they seek by means of a series of measures of precaution and control to bring about the results which, between free countries, would be ensured by confidence and the feeling of reciprocal interest." To the credit of the British Government it has to be admitted that they must have followed very closely Sarwat Pasha's line of reasoning over fourteen pages of print, for few of the points which he challenged came scathless through his criticism. Thus the draft Treaty which was submitted to the Wafd bore testimony alike to Sarwat Pasha's skilful advocacy—to which Egypt, if she is right-minded, will pay a handsome tribute—and to the conciliatoriness of the British Government. To complete the picture, let it be said that even at the last moment, when Sarwat Pasha, having agreed to the draft Treaty in London, was seized with misgivings on his return to Egypt in regard to certain points of detail, Lord Lloyd still pressed for concessions on the part of the British Government. To this very striking record of an honourable give-and-take, and of, as it were, an intellectual tug-of-war, the abrupt and unreasoning rejection of the draft Treaty affords an unworthy ending.

The Wafd and the Treaty.

Although we hold that the fixing, in Article 7 of the draft Treaty, of a hard-and-fast period of ten years for the maintenance of British troops in their present localities, before the question is to be brought up for reconsideration, was a mistake, this provision cannot of itself justify the action of the Wafd. In connexion with Clause Ia of the Annex, which regulates the maintenance as at present of the British personnel in the Egyptian Army "in default of previous agreement between the high contracting parties," Sarwat Pasha obtained the consent of the British Government to consider suggestions for the conversion of the existing British personnel into a military mission—a notable concession towards meeting Egyptian aspirations. If, therefore, in spite of the rigidity of the period fixed in Article 7, the Wafd had reciprocated the spirit of the negotiations, there can be little doubt that this great stumbling-block to an alliance would have assumed on reflexion far more moderate proportions. In the wildest dreams of the extremists of the Wafd—if they set store on a reputation for sanity—they could not have counted on a shorter period than five years being fixed; it may well take two years to build the necessary cantonments for troops to be concentrated at a new centre. Much can happen in the course of five years; and it would be by no means unlikely that the construction before the end of that time of ideal cantonments elsewhere, with the establishment of satisfactory relations between Egypt and Great Britain, would prompt the British authorities, in the interest of the troops themselves, to order their earlier withdrawal from Cairo. If ever there was a case for examining a situation through the large end of a telescope, this was one; the Wafd has preferred to bring a microscope to bear, not on the Treaty as a whole, but on one particular point. The Treaty as it stood entailed a marked advance in Egyptian independence; its rejection means not only a set-back in this respect, but also a diminution of Egyptian prestige in the eyes of the world, for it has once more let loose those forces of disorder in the country, which give foreign

Digitized by Google

States an opportunity to express their misgivings over Great Britain's policy of relaxing her hold in Egypt.

The Present Situation.

The delay in the formation of a new Cabinet in Egypt may prove to be all to the good. It has forced the politicians to study the details of the negotiations conducted by Sarwat Pasha and has drawn attention to the mischievous versions of the draft Treaty that were distributed—it must be inferred by the Wafd—before the decision of the Egyptian Government was communicated to Lord Lloyd. Whether the attitude of the Wafd was influenced by these versions may not be disclosed; but it would be only natural, if it was, that there should be a reaction against the rather abrupt rejection. It is true that, writing in November last, Sir Austen Chamberlain stated that no further changes in the Treaty could be made and that it had to be accepted or rejected as it stood, and for this reason the Wafd may have supposed that it was called upon to couch its rejection in the briefest possible form. The subsequent negotiations, however, between Sarwat Pasha and Lord Lloyd showed how liberally the British Government was prepared to admit annotations upon the Treaty. It was, therefore, open to Wafd so to frame its reply that it left the door open at least to reconsideration on its own part. As things are, it is not clear by whom the next move is to be taken. The existing situation is clearly more irksome to Egypt than it is to Great Britain. The rejection of the Treaty does not relieve Cairo of the presence of British troops, whereas with the acceptance even of a ten-year period there would be the prospect of their withdrawal at a certain date. There is no need to suppose that, with things going well in the interval, any tenable argument could be advanced at the end of that period for the retention of the troops in the capital; whereas it is easy to believe that long before then relations between the two countries would have been placed on such a basis that an arrangement wholly satisfactory to Egypt would be reached. It is to be hoped that the Wafd will still see the situation in this light and, encouraged by the success that attended Sarwat Pasha's efforts at persuasion, make up its mind to sign the Treaty and then to rely on Egyptian diplomacy to achieve the rest.

Roumania and Hungary.

The Council of the League of Nations has created an infinity of trouble for itself and for South-Eastern Europe by the fatal habit of trying to avoid a decision that might be inconvenient to somebody. Under the terms of the Treaty of Trianon certain Transylvanian landowners who had opted for Hungarian nationality appealed to the Roumano-Hungarian Mixed Arbitral Tribunal against the application to their property of Roumania's agrarian legislation. The Roumanian Government contended that the Tribunal had no jurisdiction in the matter, and when this objection was overruled by the Tribunal, it refused to enter pleadings against the Hungarian claims, but withdrew its representative from the Tribunal, in order to prevent the latter from dealing with the question. Under the Treaty of Trianon provision was made for the filling of the vacancy caused by the withdrawal of the Roumanian representative, and the Hungarian Government called upon the Council of the League to nominate a substitute. Instead of adopting this course, the Council preferred to investigate the whole matter itself, only to find it too embarrassing for a clear-cut ruling. As far as is known, there was no reason to suppose that the Mixed Tribunal would necessarily support the Hungarian claims against the Roumanian point of view; but the Roumanian Government decided that it could allow no interference with the application of its agrarian laws, and in the absence of any definite decision by the League Council a deadlock has followed. After the question had been bandied backwards and forwards between the Council and the disputants, the former last week hit upon a compromise. It proposed that the Roumano-Hungarian Mixed Arbitral Tribunal should be reconstituted by the return of the withdrawn Roumanian arbitrator, with the addition of two new arbitrators chosen from neutral countries. The claims of the Hungarian "optants" would then be considered by this new Tribunal. This proposal the Roumanian representative at the Council meeting was persuaded, after a rather tense session, to agree to submit to his Government, although he held out no hope of its being accepted.

The Cypriot-Greek Hartal.

The Cypriot-Greeks—or at least the articulate section that dominates the towns under the leadership of lawyers and the politically-minded Archbishop—have remained true to type. It would have been almost embarrassing for the authorities to be confronted by a friendly Greek community participating whole-heartedly in the commemoration of the withdrawal of the Island from Turkish jurisdiction. Such action might have given rise to the belief that, after all, the handful of self-seeking politicians could be relied upon to place the Island's interests before their own, when more serious problems were involved. This, however, is not the Cypriot-Greek's way. In solemn meeting, presided over by the Archbishop, the commemoration was adjudged by resolution to be a "festival of servitude," and, unable to rise above the level of Hindu obstructionists, a *hartal*, or day of mourning, to the extent of prayers in the Churches, was proclaimed for the fiftieth anniversary of the elimination of Turkish rule from Cyprus. Even the Athens press has been constrained to offer apologies or excuses for the references to servitude, and to suggest that, if Cyprus had not been occupied by the British, the Greeks would have shared the fate of the expelled Greeks of the Anatolian mainland, or of the inhabitants of the Dodecanese under Italian jurisdiction. Considerations of this nature are lost on the parrot-mentality of the leaders of the Cypriot-Greeks, so that no misgivings will trouble their *hartal*. Nothing could better prove the pseudo-Greek character of these self-appointed leaders than their decision to boycott celebrations which contemplated nothing more formal than sporting events. The genuine Greek, true to the spirit and tradition of the Olympic Games, would have welcomed an occasion for international contests, if only in order that the Greek youth of the Island could show that, whatever might be the case with their seniors, they at least had thrown off the mental and physical trammels of prolonged Turkish rule.

THURSDAY, MARCH 15, 1928.

THE ROYAL AFGHAN VISIT.

The arrival of King Amanullah and his Consort in London constitutes an interesting landmark in the chequered history of Anglo-Afghan relations. Thirty-four years have passed since the King's grandfather, the Amir Abdur Rahman, was invited by Queen Victoria to visit England; he was unable to accept the invitation, but in the following year, 1895, his second son, Sirdar Nasr Ullah Khan, came. Much water has flowed down the Kabul and Indus Rivers since that date. To-day "neighbourly relations" between the two countries rest on the Treaty of November 22, 1921, by which the two Governments mutually certify and respect, each with regard to the other, all rights of internal and external independence. Of primary importance is the fact that Afghanistan is now ruled by an enlightened and energetic Sovereign, who has already launched his country on the path of modern development and progress. The first eight years of his reign have been occupied in giving the initial momentum to the new order. As the motive power may be said to have derived directly from King Amanullah himself, the process has required his whole and constant attention. Each step on the path of progress has been inspired by him, and, in order that the onward march of the country should not be checked by the failure of others to maintain the pace set, his Majesty has been constrained to keep a watchful eye on every detail of the State machinery. The King presides over his own Cabinet; his interest in the work of his Ministers is not confined to Cabinet Councils, but follows them in the ordinary routine of their Ministries. The foundation on which it is sought to build the new Afghanistan comprises popular education, and the inculcation of industrious habits—both innovations capable only of slow and gradual application in the conditions that prevailed when King Amanullah came to the throne. By introducing an organised system of government and by inspiring confidence in the administration of justice his Majesty hopes to win his people to an appreciation of the advantages of a State run on modern lines, while he seeks to promote their personal well-being by the encouragement given to the improvement of agriculture, with the concomitant construction of roads, and to the development of national industries.

Coming to the throne after the close of the Great War, King Amanullah was not slow to avail himself of the new outlook on international relations which that struggle bequeathed as a heritage for all minor Powers. He stipulated complete independence for his country, and sought to adjust Afghanistan's relationship to her more powerful neighbours, Russia and Great Britain. His difficulty was that the ever-present menace from Russia had prompted Afghanistan to confide, more than a generation before, her foreign policy into British hands. The removal of the northern threat as a result of the developments in Russia had freed Afghanistan from the necessity for British control even within the narrow limits in which it had been carefully kept. King Amanullah's inexperience at that date, unfortunately, could suggest no better way of overcoming his difficulty than a sudden declaration of war on India. At the end of a nine days' campaign in May 1919 the Afghan forces were completely defeated, and the King was obliged to sue for peace. The terms granted him were of a very liberal character. Full recognition was accorded to the internal and external independence of Afghanistan, and virtually the only penalty imposed on the Afghans for the unprovoked attack was the withdrawal of the privilege of importing munitions of war through India, and the refusal to grant to King Amanullah the subsidy which had been accorded to the previous Amir. In November 1921 a more elaborate treaty between Great Britain and Afghanistan adjusted the relations between the two countries, and incidentally the right to import munitions through India was restored to the Afghan Government. In the meantime the Russian Soviet Republic, anxious to disarm all suspicion in those States that from the nature of their internal organisation had no bearing on Soviet world policy, hastened to give the necessary assurances of disinterested friendship, which were duly embodied in a Russo-Afghan Treaty of February 1921. Since that date Russian interest in Afghanistan has been manifested in the continually increasing number of Russians in the country. Great Britain holds herself more aloof, but the action of the Government of India during the serious risings in Afghanistan in 1924-5 contributed in no small measure to the restoration of King Amanullah's authority over the rebellious tribes. There can never be any question of Great Britain's vying with Russia for Afghan favours. The key to the British attitude is to be found in the words of the 1921 Treaty which permits the importation of arms to Afghanistan through India "as long as the British Government is assured that the intentions of the Government of Afghanistan are friendly." Uncertainty regarding the future relationship of his country to Great Britain, no doubt, prompted the emphasis laid by the King on Afghanistan's community of interests with Persia and Turkey, under Soviet Russia's ægis. Anything that conduces to the consolidation of Afghanistan's position and to her economic development can be welcomed, for Great Britain has no other interest in regard to Afghanistan than to see it unified and progressive.

King Amanullah's prolonged absence from his country is a testimony to the headway already made by the people and to the confidence that his Majesty has in his own position. His policy of reform and the assertion of the authority of the central Government were bound to rouse opposition, and the path of progress has proved more difficult in Afghanistan than it has been for either of the King's fellow-Dictators in Turkey and Persia. From 1923 to 1925 there were serious rebellions in the country, which inevitably checked the march of reform. King Amanullah, however, has been successful in keeping his hold on his people, and has weathered two international incidents occasioned by the presence of European experts in his realm. His foreign tour reflects his present desire to be on good terms with all the Powers. The geographical exigencies which necessitate close relations with Russia and Great Britain he cannot hope to eliminate; but by familiarising himself at first-hand with conditions in the different countries King Amanullah will be better able to form his own judgment on their respective capacities to assist in the material development of his own kingdom. In England his Majesty and Queen Souriya are assured of a cordial and sincere welcome, as the success of his efforts to lead his people along lines of development that will combine Western advantages with the good points of the East cannot fail in the long run to promote the maintenance of friendly relations between Afghanistan and India, which is Great Britain's main concern in regard to the interest that she has in Afghan affairs.

LEGENDS OF ARABY.

It is fortunate for Great Britain that the Press of a country is no infallible criterion of the degree of civilisation which it possesses. Otherwise, the journalistic experiences suffered during the past week were sufficient to implicate us all as barbarians. We in this country are apt to grow impatient at the absurdities, the exaggerations, the impossibilities that creep into, say, the Indian, the Arab, or the Egyptian papers; but what, we now ask, of the beam in our own eye?

In our issue of last week we had time but to touch upon and to pooh-pooh the extraordinary stories of a Holy War declared by King Ibn Saoud of the Hijaz and Najd upon the *mushrakin* (that is, upon the non-Wahhabi Arabs) living in Iraq, Trans-Jordan, and Kuwait. In some journals of March 6 was actually published a document, alleged to be the address which the Wahhabi leader made to the tribal chiefs forgathered in Riyadh; and almost all the papers which had not the privilege of reproducing this priceless call to a *Jihad* referred directly to its existence. Rubbish, the veriest rubbish, all of it!

The explanation appears to be that the section of the Press which talks so volubly about the sands and the swamps and the deserts and the "sheeks" and the subsidies in Arabia, knows, in fact, abolutely nothing about that historic land. Which writer of all those now gravely admonishing the British Government for its commitments in Arabia has even visited the country since the War? Is there even one?

We ought, perhaps, to have expected this story of all Arabia under arms, of the *Jihad*. For certain things had pointed to something by way of idiotic consummation. Fantasy had been piled on fantasy. For weeks past Basrah had been strangely omniscient upon affairs hundreds of miles away in the desert; the farther away these nefarious Wahhabis were concocting dark schemes against the integrity of Kuwait, Iraq, and Trans-Jordan, the more, it seemed, Basrah knew of them. Nor were the capitals of Trans-Jordan and of Palestine so very far behind in exposing the wide activities of the wicked Wahhabis. Since Basrah had not said it first, Jerusalem took the word of a scared Badu to flaunt the news that King Ibn Saoud was about to wrest Maan and Aqaba from the Mandatary's hands. It must have felt aggrieved that Basrah had not the sportsmanship to reinforce this particular story a day or two later. . . .

And then this story of Indian troops being landed in the Gulf! Kuwait may have desired them, but is that really a sufficient excuse for Basrah to have wired, not once, but twice—the second time after an official denial—that India, our older commitment, was being called in to redress the balance of Arabia, our newer commitment? This statement that the Ghurkas (it was a miracle that Indian Muslim troops were not dreamed of by the newspaper correspondents) were coming to, and had been disembarked in, the Gulf, was made without reserve, and was particularly unhelpful to British interests in India.

The fact is that the British Press, with scarcely an exception, still treats Arabia as the land of romance, of legend, of cinematographic stories, and presumably, therefore, of legitimate "stunts." Arabia is still "Araby," the country of myth and mystery. Its colours and its inhabitants never alter: swamp and desert and fanatic and the false, subsidised one—it is an eternal tune, with never a change of key and scarcely a change of *tempo*. Our sensational Press has, to put the matter quite simply, destroyed the possibility of the play of the intelligence upon Arabian affairs. Which of the millions of its readers would dare so far as to spoil the effect of its Juggernaut headlines as, for instance, to reflect for one moment that messages from the desert may conceivably suffer distortion as messages passed from mouth to mouth suffer distortion in advanced countries, that Basrah is not exactly next door to Riyadh and can in no possible circumstances know very rapidly what is happening in the capital of Najd, that Trans-Jordan and Palestine are not quite in the best position to know what is happening on Iraq's southern border? Nor was the opportunity missed to buttress up all this "news" with leading articles advocating this or that policy: out came the stock-in-trade about "Mespot," Mr. Bonar Law, evacuation, and so on. Some of our newspapers, unlike our Conservative M.P.s, never grow up.

There is, however, one aspect of this sensational Press *démarche* which has a serious aspect: we refer to the readiness with which the honour of King Ibn Saoud has been attacked. Quick as a thought the fact that for some six years he received a subsidy from the British Government has been brought up against him, as if the motto were for ever sound: "Once a paymaster, always a master." As a matter of fact, King Ibn Saoud's friendship for the British was firm long before he was paid a subsidy, and has been firm since that subsidy was discontinued. Nothing, however, could contribute more to sense of disgust with the British than the howls of execration which have been ululated round his name.

Another deplorable aspect of this Arabian bubble has been the publicity given to the statement that the Wahhabis are in the pay of Moscow. Admittedly, the British papers had not the originality to think of this explanation of the alleged hostility of the Wahhabis to Great Britain in the Middle East, but they seemed to appreciate the omniscience of Paris upon the inner problems of Arabia, and avidly took over the puerile comments of French journals. The truth is that in these days of sensational journalism we are living in an unreal atmosphere. The *Ikhwan* have become the Bolshevists of Arabia; with the threat that they are coming mothers frighten their children to obedience, and the "Stunt Press" their readers to pulp, just as in the minds of some Europeans all evil is ascribed to Moscow, and Die-Hard beds are stalked by the spectres of the Soviets.

But we would emphasise the fact that to profess fear of the Wahhabis is no greater error than to exercise bravado at the Wahhabis' expense. This talk of crushing the *Ikhwan*, through the meeting of rifle bullet with bomb, is highly dangerous, whether indulged by expert or ignoramus. No conceivable end is served by the causing, and the publication, of hundreds of casualties in the desert, through the medium of the Royal Air Force; that sort of procedure is calculated to set the desert ablaze with wrath. That there are puzzling and unsatisfactory elements in the present situation we should be last to deny; nor should there be any shouting until the wood is traversed. For ourselves, we do not rush to take sides in this internal Arabian affair, for misunderstandings or mistakes, over a frontier such as that between Iraq and Najd which runs through real and immemorial desert, are very easily made. There may be rights and wrongs upon both sides. If, for instance, it could be proved that the motive of the erection by the Iraq Government of a police post at Busaiya was misinterpreted by the Wahhabis, the raids upon Kuwait, at any rate, still remain without published justification. That, however, is not the present point of capital importance. What is necessary is to come, by diplomatic means, to a fresh understanding with King Ibn Saoud, to hold back our stronger hand until the real integrity, instead of the literal integrity, of our commitments in the Middle East is threatened, and to ensure that though punishment of evil be done, the major interest of continued collaboration with the chief Arab force in Arabia be never forgotten.

Arabia is becoming decreasingly the land of legend and shadow; it is suffering a revivification, brought about not only by increased contact with the West but by such an internal impulse as has not been experienced since, possibly, the times of the Prophet Muhammad himself. The continuation of the attitude that the land has interest of no kind for any but its own shifting inhabitants is, therefore, one that is increasingly false. If, then, the recent scare set about by the conspiracy of Basrah with Trans-Jordan and Palestine, achieves no other end than a fresh investigation of the real forces in and the real significance to the world of Arabia, it may not have been wholly harmful.

The Near and Middle East*

From Our Own Correspondents.

Sofia, February 29.

Brigandage.

Brigandage has been a curse of Bulgaria for some years. It appeared after the War, as a direct consequence of the social and political dissolution of the country, which, indeed, at first was threatened with anarchy. Under the Agrarian régime brigandage had widely increased, encouraged as it was by the Bolshevist ideology and by the Government, the chief of which had an avowed weakness towards the inmates of the prisons—whom he successively amnestied or pardoned. But it was after the anti-Agrarian *coup d'état* of June, 1923, and the revolutionary troubles of the following September that brigandage took on an organised form, with a frankly political leaning towards the Agraro-Communist extremists, who were very numerous in the country. The authorities struggled bravely against these anti-social and anti-Governmental organisations, but in spite of much endeavour and sacrifice, they were unable to stamp out political brigandage; nor could they stop the organised robberies and acts of violence. Recourse was at last made to exceptional military measures after the *coup de main* directed against the Sovereign and the incident in the Sofia Cathedral, and the evil seemed temporarily to disappear.

But it manifested itself again in the following year, though on a smaller scale. The police of M. Liaptcheff worked hard to bring it to an end—an end which has been reported during the last few days, when the sensational discovery has been made of the vast organisation of the brigands. The leading brigands and their lieutenants were arrested or killed, and the complicity was established of a very great number of experts among public servants, students, and railway employees. The Ministry of the Interior has begun to clear things up, and it is to be hoped that this work, firmly supported by the military forces and by the gendarmerie, will end in the more or less complete purging of the country of brigands, whether Agraro-Communist brigands or brigands pure and simple.

Communal Elections.

This event has coincided with another, which demonstrates the increasing tranquillity of the people and of the country. I refer to the elections which took place on February 19 for the communal Councils in every village. The elections, which were preceded by an intense campaign of propaganda, on the part of both the Government and the Opposition, have given results which upset all calculations. The Government obtained 586,095 votes, and the Opposition altogether 308,606. Admittedly, these numbers, which have been communicated by the Ministry of the Interior, will be altered in some respects, to the benefit of the Opposition, but they undoubtedly prove the existence of a current in favour of the Government, much more favourable now than it was in the Legislative elections. Such at least is the official view. Actually, without denying the success of the Democratic Entente, one can say that this is due primarily to the slackness of the electorate, which is sick of incessant political struggles and is beginning to take the practical view of things in the villages, where communal affairs are being organised independently of the bitter rivalries surrounding the quest for power. This is a great step forward in getting the country placed upon a normal basis.

The External Situation.

The approach of spring gives rise to anxiety over the development of inter-Balkan relations and particularly of Yugoslav-Bulgarian relations. The Yugoslav maintain that a vast revolutionary action is being prepared in Macedonia. It is impossible to say whether the assertion is correct or not, but taking into account the great animosity between Yugoslavia and Macedonia, one is forced to agree that the spring has its dangers. It should not be forgotten that the Yugoslav-Bulgarian frontier has been closed for more than four months and that normal relations have not yet been established between the two countries. Hopes of attenuating the existing situation are reposed in the new Yugoslav Minister of the Interior, who is no Chauvinist, but a cultured Slovene. Dr. Koroshetz visited Sofia last summer and made an excellent impression. It is doubtful, however, whether Dr. Koroshetz can obtain from the Serbs recognition of the rights of the Bulgarians in Macedonia as a national minority in Yugoslavia—the only solution of the problem which would ensure peace in that province. The leader of the Slovene Popular Party may, moreover, have rough experiences at the head of a Department which military men have been in the habit of supervising.

Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

TRANS-JORDAN.

Amman, March 2.

Welcome Rains.

The anxiety that existed in consequence of the small rainfall during the early part of the winter has been dispelled by the heavy rains which fell in the latter half of February. There has now been sufficient rain to ensure a good harvest, should the threatened plague of locusts be averted. This is a matter of great importance, as in parts of Trans-Jordan last year the crops were ruined by drought, as a result of which a great part of the taxes for those districts had to be remitted.

Wahhabis and Trans-Jordan.

The long-expected Wahhabi raid took place early last month. During the winter months the Bedouin of Trans-Jordan frequently move east and south in search of milder weather, and at the time of the raid a branch of the Bani Sakhr tribe, under Hatmal Bin Zaban, were encamped near the salt pans of Najd. They were dismounted and separated from their horses when the Wahhabis attacked and killed about a hundred of the tribe, including Hatmal Bin Zaban and his son. The Bani Sakhr are Bedouin of Trans-Jordan, but the fact that they were not in their own territory at the time of

the raid, and that the Wahhabis have not yet crossed the frontier and entered Trans-Jordan, renders punishment difficult.

The Tobacco Factory.

On February 15 the first tobacco factory started in Trans-Jordan was formally opened by the Amir Abdullah, in the presence of the British Representative, the Ministers, heads of Departments, and all the Notables of Amman. Speeches were made, after which the Amir pronounced the factory open, and made a tour of inspection, and all the visitors enjoyed an excellent tea.

General News.

Two earthquake shocks were felt in Trans-Jordan and Palestine on February 22, the first at about 2.30 a.m., and the second at 7.30 p.m. Ramadhan commenced on February 21.

According to the custom by which the English and French Air Forces entertain each other alternately, a party of French flying officers visited Amman recently.

The family of the Amir Adbullah have returned to Amman from Cairo.

CYPRUS.

Nicosia, March 1.

Greeks and the Jubilee.

Those who have followed Cypriot affairs will not be surprised to hear that a decision has been arrived at by the ecclesiastical and political leaders of the Greek community to abstain from any participation in the celebration of the Jubilee. A conference was held on February 18 at the Palace of the Archbishop, attended by the Prelate and other members of the Holy Synod, the Greek elected members of the Legislative Council, and the Mayor of Nicosia. The matter was discussed at length, and it was unanimously decided that the attitude of the Greek people of Cyprus, which its self-respect dictates, must be one in which it will abstain entirely from participation in celebrations which would fatally call to mind their prolonged subjection. The anniversary, indeed, is deemed by them to be a fit and proper occasion on which the Greek people should lawfully protest, and put forward their views and aspirations.

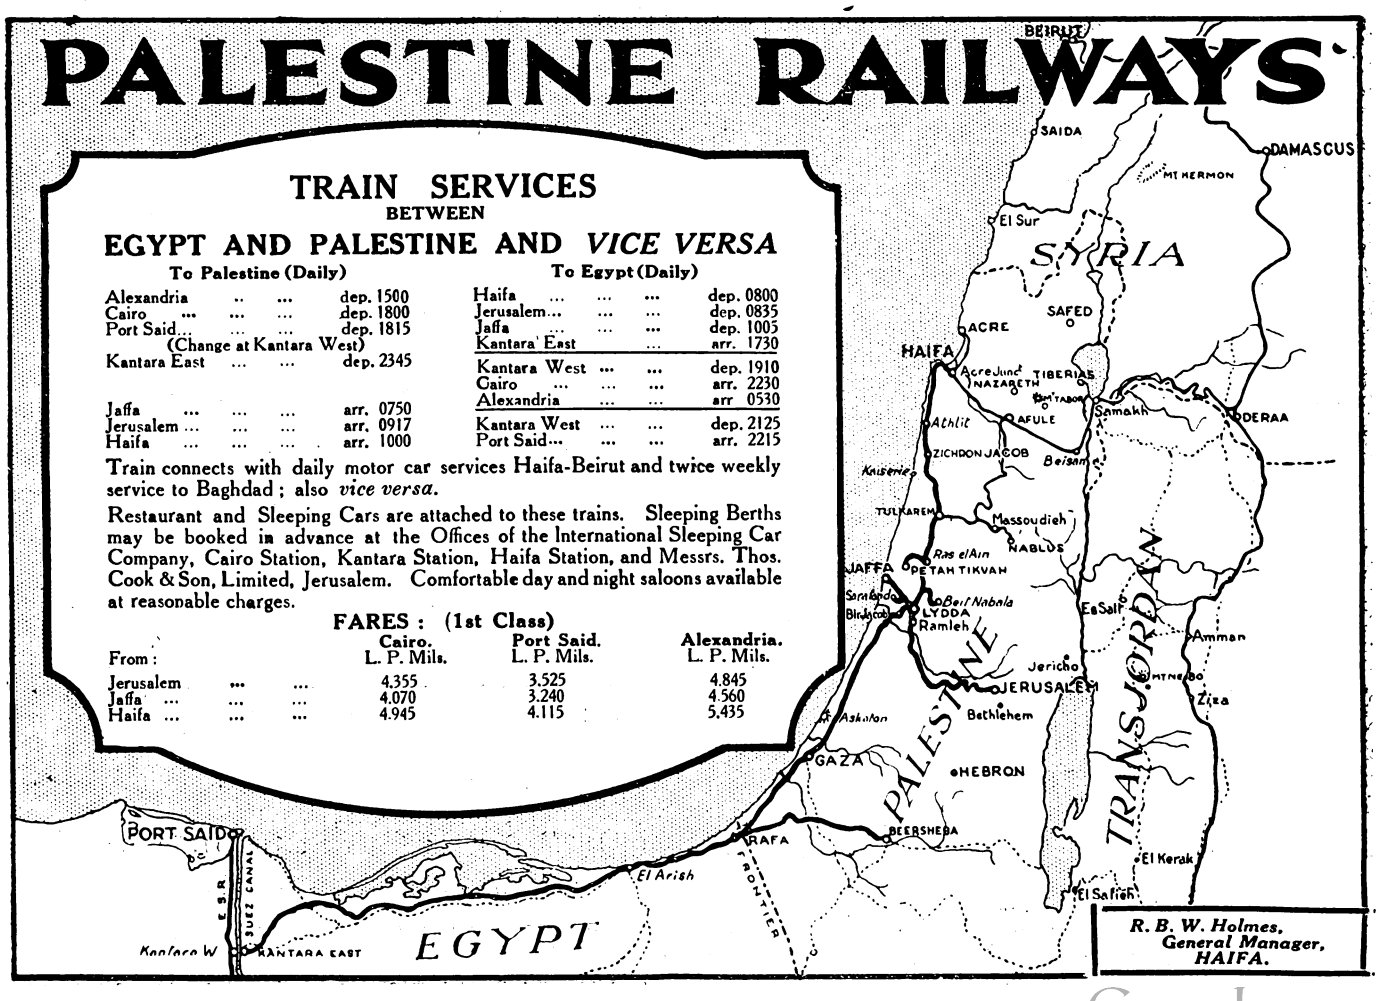
It was agreed that a proclamation embodying briefly this decision, and signed by all the members should be communicated to all the Greek people of the island. A committee, consisting of the Bishop of Kition and Kyrenia, two members of the Legislative Council, and the Mayor of Nicosia, was appointed to draft and submit one to the Conference at another meeting on February 25. But, owing to the absence of several members on that date, it was postponed for a week. The leaders are confident that the Greeks will comply fully with the directions thus to be conveyed.

A Motion Disallowed.

The two members of Council, one Greek and one Turk, who gave notice of a motion to support a claim that £600,000 surplus from the amounts paid on account of the late "Turkish Tribute" should be refunded by the British Treasury to Cyprus, have been informed by the Clerk of the Council, by direction of the Governor, as President of the Council, that such a motion is out of order, and cannot be discussed by that body.

The Kyrenia District.

Great discontent still prevails in the town and district of Kyrenia over the decision to reduce their administrative division to a sub-district under an Assistant Commissioner. A reply to their protest has been received from the Colonial Secretary, stating that the Minister for the Colonies does not propose to interfere with the arrangement made by the Cyprus Goernment. A new Greek

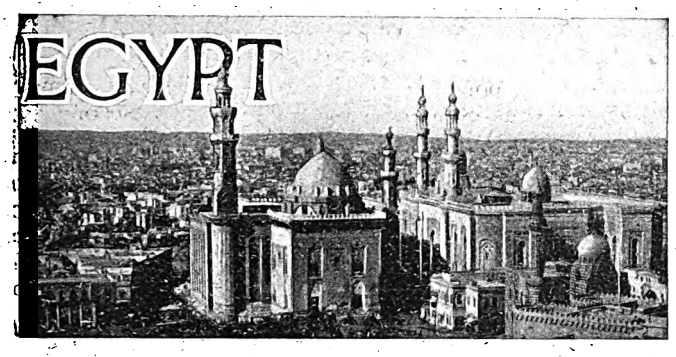


Digitized by Google

Member of Council, recently elected for Kyrenia, M. Sevéris, will, it is said, submit a fresh protest and a proposal for reconsideration.

The Trade Commissioner.

The papers continue to grumble over the establishment of the office of a Trade Commissioner in London. They argue that so far nothing has been achieved which could not be equally done from Cyprus, and that the expenditure of £2,000 a year on such an office is not justified. But it seems to be overlooked that it has only been in existence, under new management, for eight or nine months; and adverse criticism seems very premature. The need of far more activity on the part of a Chamber of Commerce in Cyprus is more apparent.



Cairo, March 3.

Victoria Hospital.

This week the High Commissioner inaugurated the new clinics which the British Red Cross and Order of St. John of Jerusalem have presented to Victoria Hospital. This hospital, as Mr. Home, Chairman of the Committee, explained in his introductory speech, was founded in 1881 in order to provide accommodation for the sick of the four principal Protestant communities in Cairo, namely the American, the British, the German and the Swiss. Its principal founders were Dr. Lansing, an American Oculist, Pasteur Gräber of the German Evangelical Mission, Mr. Ernest Kramer, one of the leading members of the Swiss community, Dr. Murison, who recently left the country, and Dr. Alexander, head of the American Mission in Egypt, who was the only one of the original founders present at the inauguration of the clinics and officiated as chaplain for the occasion.

The hospital has popularly been known as the Diaconesses Hospital, owing to the fact that since its early days the entire nursing staff has been recruited from the sisterhood at Kaiserwerth on the Rhine, to whose devoted and efficient work Mr. Home paid a well-merited tribute. But in reality its name is the Victoria Hospital, which it assumed when it took over the equipment and material of the Lady Strangeford Hospital which had been established to help the Egyptian wounded of the 1882 campaign. Its connexion with Queen Victoria was further strengthened in 1887 and again in 1897 when, to commemorate her Jubilee and Diamond Jubilee the British community erected on the first occasion an isolation ward for infectious diseases which since, owing to the generosity of the British Red Cross, has been converted into an eye clinic, and on the later occasion added an additional story to the original building.

Mr. Home emphasized the amicable manner in which the committee with its four nationalities had always worked, and drawing attention to the work which everyone knows it does amongst the poor in Cairo, he stated that between the two outpatient Départments alone the hospital treats gratitously over 20,000 cases a year. The inauguration ceremony was carried out in the presence of the German Minister, of the American Chargé d'Affaires, of the head of the Swiss community, and of Dr. Mohamed Shahine Pasha, the Under-Secretary of State for Public Health, to whose energetic and enlightened work Lord Lloyd paid a warm tribute in his speech.

The Late Sir Lee Stack.

Before the inauguration of the clinic Lord Lloyd, at the request of Brigadier-General R. E. Wilson, District Grand-Master of the Lodges of Egypt and the Sudan, unveiled in the hall of the Hospital a tablet recording the fact that the British Masons of Egypt had endowed a bed in the Hospital in memory of Major-General Sir Lee Stack, who had been District Grand-Master of the Lodges at the time of his assassination in November, 1924.

The Tourist Traffic.

The first meeting of the year of the Economic Council set up by the Ministry of Finance has just taken place. The Minister, Mohamed Mahmoud Pasha, in his speech of welcome outlined the more important questions still before the Council. Among these is the development of the tourist traffic in Egypt, in regard to which a report had already been prepared in 1923, but had not been examined yet by the Council. The Minister pointed out that Egypt is incontestably the one country amongst the world's health resorts which is the least favoured by the tourist traffic, for the number of tourists who come annually to the Valley of the Nile is almost insignificant compared with those who go to Switzerland, Italy or France. According to present statistics those already in the country or due to arrive this season number about 19,000 and they will spend approximately £E2,000,000. The Minister expressed the opinion that Egypt offers such attractions in the way of climate, monuments of historical, archæological and artistic interest, and stands so on the route between the East and the West that a far greater number of travellers should visit her every year. It was decided that a sub-committee should re-open again the study of the question and should submit a new report with suggestions, taking into account the many new factors which have come into existence since 1923. The Commission is particularly instructed to discuss the matter with the hotel companies in view of the complaints made of the high prices charged by these hotels—which naturally reacts on the tourist traffic.

The Royal Mummies.

The proposal made by Ismail Sidky Pasha that all Royal mummies now exposed should be returned to their

sarcophagi and reburied in their tombs has raised a little controversy. There are obviously two distinct schools of thought on the question. Dr. Borchardt, who is well-known as one of the leading Egyptologists, has handed me a note in which he strongly supports the idea underlying Sidky Pasha's proposal. The eminent scientist says that every time he passes the Royal mummies in the Cairo Museum he feels ashamed of those who founded this unworthy exhibition. The violation of the Imperial German tombs in Speyer and the vandalistic treatment of the Royal French graves at St. Denys always come into his mind. To think that the man who ruled from the Sudan to the Euphrates and the Tigris, Tothmes III, should be put on show for the miserable fee of P.T. 10! Just as repugnant is the exhibition of Amenophis II in his coffin at Bihan El Muluk, with the lamp over his face and the four mummies in the adjoining chamber lighted with electricity, as in a Chamber of Horrors, where anyone who can afford P.T. 180 can obtain admission.

There are, he says, surely sufficient beautiful objects well worth seeing in the Museum and in the monuments for the Antiquities Administration to be able to abstain from using such unworthy means to attract tourists. But to return the kings to their tombs, he considers, would be dangerous. Before long in spite of the greatest precautions, they would be dragged out by unauthorised persons and would make their way to the antiquity markets abroad.

The only possible plan is to build for them a Royal mausoleum worthy of their memory such as Schweinfurth conceived. Now is the right moment. The Cairo Museum, which at its opening was already too small, can no longer have all its treasures in a dignified manner. A new building has long been needed. Why not, says Dr. Borchardt, erect a building, which would serve on the ground floor as a Royal mausoleum, on the first floor would have the treasures from Tutankhamen tomb and in the upper storey the remaining finds from the Royal tombs? And he suggests that, since no suitable site could be obtained in the vicinity of the present Museum, a site should be taken to the south of Gezira where Ismail Pasha planned the original Museum building.

An Egyptian Olympia.

Groppi's gardens last week-end was the scene of an interesting exhibition of British motor cars, the first of its kind in Egypt. Amongst the cars shown were the A.C. (Acedes) by Messrs. Fuad Kutby and Co., Armstrong Siddeley (a Cotswold four-cylinder 14 h.p. tourer) and Thorneycroft (30 cwt. A.I. chassis and A3 rigid six-wheeler) by Messrs. John Thorneycroft and Co., Austin (a Windsor saloon and Clifton tourer) by Mr. Forsthy, Rolls Royce (20 h.p. cabriolet) and Daimler (20-70 h.p. landaulette de luxe) by Messrs. Mosserie Curiel and Co., Singer (junior 8 h.p. and senior 11.9 models) by Messrs. Moring and Co. The Associated British Cars Company, which has recently been floated to run in joint agency certain British types, had on show, Wolseley (12 h.p. four-cylinder tourer), Standard four-cylinder 14-18 h.p. and six-cylinder 18-36 h.p. Vauxhall (20-60 six-cylinder) and the following Morris cars: 11.9 h.p.; 14-28 h.p.; Colonial model 15.9 h.p. and special closed Royal fabric body on a 14-28 h.p. chassis, as well as a 12 cwt. chassis with ambulance body, a 1½ ton chassis, a Z5 chassis for buses and a six-wheeled chassis. The Show, which was under the patronage of the High Commissioner, who paid it a long visit, attracted much attention, and it is to be hoped that the enterprise will have the result of promoting the use in this country of British cars.

GREECE.

Athens, March 5.

The Reconstructed Government.

Since it was an open secret that the life of the late Government was being prolonged artificially, in order that the loan might not be endangered, it was no surprise that its fall coincided with the news that the loan was secure. What *was* a surprise—as much to themselves as to others—was the size of the majority which the reconstructed Government obtained, when the vote of confidence was taken. It was an ingenious move to shift the responsibility of a decision on the road question to the Chamber, which was naturally bound to refer it back to the Government, which has thus obtained what amounts to a second vote of confidence. Whether, as a result of having a free hand, the Government will take any immediate decision, seems doubtful. Where such a large contract is involved, the amount of pressure brought to bear upon Ministers must be immense, and it is to be feared that a decision will be postponed too long to make it possible to begin work this year, and, at the worst, the whole question may be indefinitely shelved.

Roads.

The debate in the Chamber was characterised by a good deal of liveliness. Most of the party leaders spoke, and M. Metaxas, Minister of Communications, who has the chief responsibility in negotiating the contract, explained the reasons for preferring one firm to another. He did not explain, however, what roads the Government intended to make, nor on what system they would be constructed.

The whole question is of such vital importance to the future of Greece that, though one naturally regrets any delay, it is far better that a year should be lost than that a hurried decision should be taken. The history of road-making in Greece in the past has been lamentable enough—the country is, in fact, full of badly-constructed or half-finished roads. The most notorious is the road to the Piræus, which fell to pieces before it was finished. It is fortunate that this important question is to be decided at a time when the country can count among its leaders so many capable and disinterested men.

A Rare Sport.

A heavy fall of snow, coinciding with the last days of Carnival, produced never-to-be-forgotten scenes in the streets of Athens. Snow-balling is not forbidden by law, with the result that a "snow war" raged in the streets, in which all ages and sexes took part. The chief victims were women, especially the better-dressed, and girls. Nor were clergy, politicians, or police spared. The latter, however, did not consider it beneath their dignity to take part in the game, and one of them was seen to lollop a large armful of snow from the tram on which he was riding, through the window of a passing car, in which was seated a leading member of Athenian society. The Manager of a well-known Bank repaired at midnight with his friends to the Zappeion garden to indulge in the amusement of snow-balling. Long-range shots across Stadium Street are painful and even dangerous when they find

their billet, but, strangely enough, few accidents occurred as the result of the direct hits; one man, however, drew a revolver and shot his assailant dead. The best form of protection was to carry a large armful of snow oneself. Thus provided with ammunition, one could retaliate, and consequently was left in peace. There was, however, no form of protection against people lined up on house-roofs and balconies, bombarding the passers-by below. A snow-man was put inside the sentry-box outside the Ministry of Marine, while the sentry was obliged to remain outside.

Captain Hastings.

Preparations for the commemoration of the centenary of the death of Captain Hastings are well advanced. The ceremonies will take place at Missolonghi, though Hastings received his mortal wound at Anatoliko and died at Zante. It is well that the memory of this gallant English sailor should be revered, for he contributed more than any other foreigner, not excepting Byron, to the success of the Greek arms in the War of Independence. His heart is preserved in the English Church at Athens; his body is at Poros.

The faithful observance of the centenaries of distinguished foreigners of whatever nationality who took part in the Liberation of Greece has shown that Greeks possess in an eminent degree a virtue which they are sometimes said to lack—gratitude towards their friends.

CORRESPONDENCE

The columns of The Near East and India *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East and India.

HUNGARY AND ROUMANIA.

To the Editor of The Near East and India.

Sir,—As a Slav and a Westerner I would like to take exception to certain assertions of Sir Graham Bower put forward in his letter "Hungary and Roumania," published in The Near East and India of March 1.

Sir Graham Bower says: "The conception of the rights of property, as represented by the Russian *Mir*, the Serbian family community, or the Soviet system of State ownership, differs fundamentally from the Western notions of individual liberty and the rights of private property." Defending Teutons and Magyars, he claims that "the Great War was a conflict between two civilisations—the civilisation of Western Europe as maintained by Teuton and Magyars and the civilisation of Asia as represented by Slavs." One more passage: "But Hungary experienced the rule of Bela Kuhn and retains bitter memories of Oriental theories of social progress."

Now, against Sir Graham's assertions stand these well-known truths:—

Private property rights in Czechoslovakia, Poland, and Yugoslavia are exactly the same as in England, France, Germany, or America. True, a good portion of feudal lands has been given to peasants, and peasants freed of serfdom, but such a procedure could hardly be classed as "Oriental." Hungary, on the contrary, is the only European country in which mediaeval feudalism still reigns supreme and peasants continue to be serfs. Serfdom and feudalism hardly belong to Western civilisation.

In every Slav country, except in Russia, obtains universal suffrage, which should be a Western institution, whereas Hungary has retained such a pre-War reactionary electoral law as has no parallel in any Western country.

As regards the "Soviet system of State ownership," this system is not a Slav invention. Karl Marx, the inventor and father of Communism, was not a Slav. Both he and Engels belong to Teuton civilisation. Communism was forced upon helpless Russian people by Trotskys, Kamenevs, Zinovievs, Radeks, Brilliants, Nahamkes, Stalins, Peters, with real or assumed names, none of whom is a Slav. Lenin and Trotsky were smuggled into Russia by Teutons to prevent Russian people from adopting democratic Western institutions. Even those real Russians, as Lenin, Lunacharski, and others, who tried to force un-Slav Communism upon Russian people, were no representatives of Slav thought or mentality, but blind disciples of the Teutonic "Westerner" Karl Marx. Communism broke down in Russia through the resistance of Slav mentality to it.

Hungary's bitter memories of Bela Kuhn cannot be ascribed to Slav "Oriental" civilisation. If Bela Kuhn is not a Magyar, he certainly is not a Slav. In fact, there is hardly any difference between Bela Kuhn's and Admiral Horthy's reactionary régimes. Both of them proved good guardians of feudalism and restorers of "historic" Hungary, which for the initiated means renewed enslavement of Slovaks, Roumanians, Croatians and Serbs.

As to the Great War, we all know that Hungary was the main culprit for it, having so largely contributed to its coming by her oppression of subject peoples. Denying of liberty to other peoples certainly is not a part of Western civilisation.

Had the Teuton and the Magyar accorded Slav peoples the liberties they claimed for themselves, there would have been no Great War, nor would Austria-Hungary have crumbled to pieces between October 28 and 30, 1918—long before the Peace Conference was obliged to recognise the *fait accompli*. In fine, it would be interesting for us "Oriental" Slavs to know whether, according to the "Western" mode of thinking of Sir Graham Bower, we have the same right to be free and independent as Magyars, Teutons, English, and other peoples?—I am, etc.,

I. F. Vukitch.

Book Review

THE KING OF THE WAHHABIS.

"IBN SAOUD OF ARABIA. HIS PEOPLE AND HIS LAND." By Ameen Rihani. (London : Constable. 21s. net.)

Of all contemporary Arab chiefs, King Ibn Saoud of the Hijaz and Najd is indubitably the one about whom it is most important to obtain the truth. But what is truth in Arabia? A fact is set out; soon, it seems, the sands of the desert blow round it; and it becomes either monstrously exaggerated or hopelessly obscured. Now the truth about the object of this very valuable study, Ibn Saoud, the leader of the Wahhabi revival, was early perceived, first by the British who had interests in the coastal sections of Arabia, and, later, what is less generally known, by certain Nationalist Arabs who were then by no means connected with the Sharifian cause. The identification of Arab "Nationalism" with the Sherifian dynasty is to some extent an accident. Time in Arabia has brought many changes; the enemies of Ibn Saoud have been rich and vocal; and the danger has not been absent of a wide forgetting of the fact that Ibn Saoud is the indisputable Arab of his generation.

It is good, therefore, to have an objective, quite disinterested estimate of the Wahhabi leader. The author of this book, a Christian Syrian who at an early age emigrated to America, returned to Arabia after the War with the main purpose of exploring the possibilities of a "united Arabia." He went to the Yaman, to Asir, to the Hijaz, to Iraq, to Uqair, where he assisted at the 1922 Conference between Sultan Ibn Saoud of Najd and Sir Percy Cox, High Commissioner for Iraq. After that Conference he was privileged by the Sultan to visit Riyadh; and this book is the story of his journey from Uqair to Riyadh *via* Hufuf and of his return *via* the Dahna to Kuwait.

Mr. Ameen Rihani writes English remarkably well, and we have heard that he (who, incidentally, has visited Mecca under both Sharifian and Wahhabi régimes) is equally proficient in Arabic. At times there is a slight straining of language, which produces the exaggerated effect of the cinematograph; but of the directness and vividness of his words there is in general no question. Quite emphatically his is a book which, though first and foremost readable, may also be read with profit by the student of affairs, of men, and of the future.

The book begins with a not too sly dig at the British authorities in Arabia—because Mr. Rihani was not allowed to go exactly where he chose as he chose. He quotes the Najdi proverb: "We said: Huraimala, but Allah said: Dh'ruma." But, after seing in Baghdad Sir Percy Cox, Miss Gertrude Bell, and various officials whose confidence in their ability to direct the affairs of the Arabs he plainly did not share, he did get from Iraq to Bahrain. His description of his journey by *jalbout* from Bahrain to Uqair, and of his meeting the Imam of the Wahhabis in the Nafud is excellently done. Meeting Ibn Saoud, Mr. Rihani at once stated the purposes of his travel in Arabia. He said:—

> The first has been fulfilled in seeing you; the second will be fulfilled, *inshallah*, when I write of what I have seen; and the third can only be accomplished by your assistance. I am certain, *ya mowlai* (O my Lord), that Arab unity can only be realised by a meeting of all the ruling Ameers for acquaintance first and a common understanding. They are to-day isolated from each other, if not at war with each other, and no one has a true knowledge of his contemporary.

Ibn Saoud's reply is also worth quoting:—

> "Who are the Arabs?" he asked, when I mentioned his contemporaries. "*We* are the Arabs!" he replied, striking the carpet with his bamboo stick. "We know well each other," he continued; "I know them all. The trouble with the Arab is that he will not do anything in which his own interest is not paramount. . . . I, Ibn Saoud, what do I want? Two things are essential to our State and our people, two fundamental things: religion and the rights inherited from our fathers. To these I add two things, which are deemed essential these days: right relationship with the foreigner and right understanding among ourselves."

The Sultan made no secret to this American-educated Arab of his real friendship with the "Inglaiz." Mr. Rihani gives of him a very intimate picture, of his physical, intellectual, and spiritual qualities. We have no space to dwell on these, except to say that the portrait is convincingly made. It seems that the Syrian Arab, who knew what the love of Christianity and the enlightenment of the West meant, came out of the whole experience a little disillusioned—not with the Wahhabi leader himself, but with the prospects of "Pan-Arabism." Perhaps we are wrong, for Mr. Rihani nowhere implicitly confesses to the probable failure of his ideal. But there are some sentences of his, such as those in which he refers to the responsibility of Islam for the only vacuities which he says are in Ibn Saoud's soul, or those written in his diary on Christmas Day, 1922, when he was lying sick with malaria, and Ibn Saoud himself was the only man "Christian" enough to visit him, from which we gather the impression that, even were an edifice eventually to be reared upon the Pan-Arab basis, as Mr. Rihani had hoped, or under the Wahhabi ægis, it would still, in his opinion, be far from imposing.

But that is by the way; and in any case, the personal factor in this book—of which, by the way, there is rather overmuch—is inferior in importance to Mr. Rihani's descriptions of places and men. Riyadh, an austere, inhospitable place, where simplicity only rarely merges into sublimity, and where, he says, even the Sultan himself feels a stranger, where the standing Army hangs round the Palace for food and where from their leavings plenteous beggars make their meal, where, in fact, the people are supported by, rather than themselves support, their King—Riyadh really provides the pith of the book; and excellent pith it is. There is a vivid sketch of the Rashids of Hayil, actually prisoners, but at play with the Saouds.

Other chapters deal with the Badawin of Najd, recurrent apostates, whose conquest and real conversion to Islam, by means of making Wahhabis of them and then chaining them to the soil in the settlements called *Hijar*, is one of Ibn Saoud's most considerable achievements, definitely demarking him from his less resourceful forbears; with the "*ulama*" of Najd, who control the Sultan in religious matters, but whose sway over politics is *nil*; of the *Ikhwan*, whose pleasure in booty the author makes no attempt to minimise; and with the rule of Ibn Saoud, who had brought justice and security in Najd in marvellous measure. This part of the book is also illuminating and sound.

ISLAMIC LITERATURE.

Mr. Rihani's return from Riyadh to the Gulf *via* Daraiya, Shaqra, Anaizah, Buraidah, Al-Asyah, the Uroudh, Al-Hafar, and Jahrah, is notable mainly for its human note. The author makes the most of his entertaining companions, provided by the Sultan. Of all sorts was this returning party, a Mutairi *Akhu*, an Ajmani, a Dawsari, and so on, and the differences between them are most cleverly set out. It was a memorable little gesture of farewell that the author was privileged to make to them a few miles outside Kuwait. After supper, at the time of the sunset prayer, a violent sand storm was raging. It was impossible to pray outside the tent, for—

> The sand pierced the skin like needles. The mat was therefore removed and at my suggestion they also prayed in the little tent, and I prayed with them. It was a fitting close, a beautiful ceremony, the sacrament and the seal of brotherhood in a sandstorm.

This book, which is being published to-day, is pre-eminently readable. It upsets in no serious manner our existing knowledge of Najd and of the Wahhabi movement—Mr. St. John Philby's "The Heart of Arabia," still remains the classic in this respect—but it is of undoubted value in drawing more popular attention to what is the most important developments in Arabia of the present time.

Whether Mr. Rihani's experience in Najd has brought any nearer the ideal of a united Arabia is a question which, with picturesque discretion, he does not answer. Obviously it is practicable only under the auspices of King Ibn Saoud, whom the author rightly and very greatly admires; but whether that condition provides a bar or an impulse he leaves to the sympathetic but still doubtful reader to judge.

THE WEEK AT HOME

London, Tuesday Morning.

Equal Franchise.

It is quite impossible to stir the emotions nowadays by news of an extension of the franchise, and the Conservative Party will, I think, gain little popular support from the fact that it is giving the vote to girls of twenty-one. Equal franchise is a thing which for the democrat is absolutely unassailable in logic. There is in fact no reason on earth why, if the young man of twenty-one enjoys the vote, his counterpart on the female side should not equally taste its blessing. And so at the next General Election women will vote on the same terms as men.

The country is not very enthusiastic about it—not that the unintelligent scream of protest against "Votes for Flappers" makes any echo—but merely because the vote *per se* is seen now to be a thing over which it is impossible to wax joyful. The Prime Minister in his inimitable way suggested that public life would be the more healthy for the extension of the franchise, but that sort of optimism, though it went down well enough in the pre-Syndicalist days, is unacceptable now. However, there we are: and each Party will be hoping that it itself possesses more really good-looking men than do the "other fellows."

Joking apart, this deification of an electoral device is really childlike. Everyone knows nowadays that the representative system is a misnomer, and is suffered only because Englishmen are afraid, as certain other nations are not afraid, of putting something else in its place.

Liberals Jubilant.

Two elections were won by the Liberals last week, at St. Ives and at Middlesborough respectively. The first was a clear-cut victory, the other was a narrow staving off of a nasty defeat. What do they mean?

Nothing, I think, more than this: that Liberalism survives, a perplexed remnant of the "good old days." At St. Ives, Mrs. Runciman triumphed after somewhat ostentatiously neglecting to avail herself of the support of Mr. Lloyd George, though it is true that Sir Herbert Samuel unfolded to the eclectic Cornishmen the superior virtues of Liberalism. At Middlesborough, the Liberal majority was very considerably pulled down by the Labour candidate, although it was undoubtedly an achievement of a sort to hold a seat in an industrial district.

Liberty in England.

Few things are more annoying in post-War England than the prohibition against purchasing certain articles after a certain hour. One need not detail such articles: they are well known to every upright and full-blooded man. The phrase "After Hours, Sorry," spits, so to speak, in the face of the liberty-loving Englishman, who quite emphatically would rather see his country free than sober.

But liberty, as was proved in the House of Commons, is a curious thing. What may be freedom for one is conceivably prison for another. Our far-seeing administrators have been considering the interests of the shop assistants, and have decreed that it is they, not the public, whose interests must most jealously be guarded. Last week in the House the Home Secretary, who may not, perhaps, be thought to be a very typical Englishman, explained that it was an administrative impossibility to ensure that shop assistants were not overworked, unless the present regulations were continued.

And so we progress. What we gain on the swings, we lose on the roundabouts. No more we cry: "Who is for Liberty?" but rather, "What is Liberty?"

O Mores!

Nobody, one would have thought, could have accused the present age of excessive "morality," but in some respects, it seems, we are as Victorian as we were in Cromwellian times! The Northampton Art Gallery, for instance, has just removed from its exhibition a picture by a very well-known artist, Mr. Dod Procter, on the apparent ground that it is not fit for public scrutiny.

The painting, which I saw at an exhibition in London, is called "The Judgment of Paris," and it is really quite ridiculous to suppose that it can have any obscene effects. If people who do not visit an art gallery to look at works of art have been seen to "giggle" at this work of Mr. Procter, it scarcely seems a legitimate excuse for denying other, better minded folk from having a view of it.

Myself, I often feel hopelessly old-fashioned in this our modern time, but this exhibition of the existence of Mrs. Grundy is pathetically silly. If it were not so pathetic, one would suspect that a clever "publicity agent" had been at work in the interests of the Procters! Our future works of art will have, it seems, to pass through what has aptly been called "the giggle test."

A Feminine Habit.

Everyone has recognised in a vague way that during these recent years smoking has become one of the more distracting virtues of the female, but statistics are now available upon a remarkable social phenomenon. Messrs. Players' tobacco factory at Nottingham has just published the fact that English women are the heaviest female smokers in the world, though one wonders exactly how such statements are arrived at.

Similarly with another one made by the same firm: that clergymen smoke much above the average consumption of tobacco. Perhaps this asseveration was made by the cynic, who might be tempted to grant to clergymen on earth the smoke which, presumably, they will be denied later on.

One more statement amazes me, not so much because of itself, but because of the seeming impossibility of obtaining grounds for making it: that "most cigarettes are smoked between six and seven p.m." That is, of course, about the hour when "they" open, and when factories, shops, and other places where the mass congregates shut. But to base a generalisation on that fact alone is a little risky.

In any case, such information is useless to the philosopher, who knows that the best smoke is either the first of the day or the last—never the intermediate one.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

March 15, 1928 (New Style).
March 2, 1928 (Old Style).
Ramadhan 23, 1346, A.H., of the Muslim Calendar.
Adar 23, 5688, of the Jewish Calendar.

Lord and Lady Glanely arrived last week at Exning House, Newmarket, on their return from Egypt.

Sir Ian Malcolm has returned to London from the Suez Canal.

Colonel the Hon. George and Mrs. Monckton-Arundell returned to England from India on March 3.

Mr. and Mrs. Charles Rey have taken a flat at 69, Curzon Street, W.1., which will be their future address.

Sir Alfred and Lady Mond will arrive in England on their return from Palestine about the middle of the month.

Their Majesties, the King and Queen received Princess Yashimabet of Ethiopia, who was accompanied by Miss Clark-Lloyd, at Buckingham Palace on March 10.

Viscount and Viscountess Devonport are expected to return at the end of the month from Egypt to 41, Grosvenor Place.

Sir Stephen Demetriadi has returned to 41, Hans Place from the country. Lady Demetriadi will join him shortly from a cruise in the Mediterranean.

Field-Marshal Viscount Allenby and Viscountess Allenby arrived at 24, Wetherby Gardens on March 20, on their return from Egypt.

Among recent arrivals from Calcutta are Mr. and Mrs. Kellock, of Minto Park, Calcutta, who are staying at the Hotel Inverness Court, Hyde Park, W.1.

Viscount Elibank arrived last week in Cairo from Penang to join Viscountess Elibank. They are going up the Nile to Aswan and will not be back in England till early April.

Muzahim Beg Amin al Pachachi, until recently Iraq Diplomatic Agent in London, left England this week on his return to Baghdad. He is visiting, among other places, Geneva, Constantinople, and Angora on his return journey.

Viscount and Viscountess Dunedin, Lady Buckland, Colonel and Lady Mabel Mackenzie Smith, Sir Cecil and Lady Walsh, have returned to London from India and Egypt, arriving at Marseilles in the P. and O. Rajputana on March 9.

When Princess Mary Viscountess Lascelles and Viscount Lascelles, accompanied by Lord and Lady Boyne, left Victoria by the P. and O. Bombay express, on their way to Egypt on March 8, they were received at the station by the Hon. Alexander Shaw, the deputy-Chairman of the P. and O. Company, the Hon. Elsie Mackay, daughter of Viscount Inchcape, Chairman of the Company, and Sidarouss Bey, Egyptian Chargé d'Affaires.

A marriage has been arranged, and will take place in London on April 10, between Miss Rowena Burr, second daughter of Dr. Malcolm and Mrs. Burr, and Mr. W. Spiller.

Major Harold and Lady Zia Wernher left last week for a holiday in Egypt and the South of France, and expect to return to Someries House, Regent's Park, during the first week of April.

Lieut.-Gen. Sir George F. MacMunn will lecture to the Near and Middle East Association to-night, at 9 p.m., on "Afghanistan." The meeting will take place, by kind permission of Lady Beecham, at 19, Grosvenor Square, W., and Sir John Brunner will preside.

NEWS IN BRIEF.

The India Office has issued a *communiqué* announcing that no Indian troops have been or are being sent to Kuwait.

King Amanullah of Afghanistan, during his stay in the Rhineland, visited the Krupp works and workmen's dwellings at Essen on March 8.

The Belgrade newspaper *Pravda* reports that King Alexander of Yugoslavia will pay an official visit to King George at the end of April.

A sergeant of the French Frontier Legion, in Belgrade on leave, was killed last week on the railway line from Nish by an incoming train.

Heavy snowstorms occurred recently in the Lebanon. In consequence railway traffic was suspended for ten days, but was resumed on March 5.

Principal and Mrs. MacKenzie, of Wilson College, Bombay, have gone to Palestine to attend a conference of the International Mission in Jerusalem at Easter, after which they will pay a visit to Egypt.

The appointment of Mr. Robert Stephen de Vere, President of a District Court, Cyprus, to be the Chief Justice of the Supreme Court of Seychelles has been gazetted.

According to a message from Constantinople, Turkey has decided to accept an invitation of the League of Nations to take part in the Disarmament Committee's work.

Dr. W. W. Woodhead, Professor of Classics at McGill University, has been granted special leave of absence to enable him to study at first hand recent archæological discoveries at Athens.

The Swiss National Council has ratified the treaty recently concluded with Turkey on the subject of conditions of residence of Turkish subjects in Switzerland and Swiss subjects in Turkey.

In reporting on the alleged peculation in connexion with grain imports, the special commission of the Turkish Grand National Assembly gravely criticises the conduct, while in office, of Ali Jenani Bey, a former Minister of Commerce.

Mr. Frank T. Ellis, who retired in 1927 after 30 years as Headmaster of Bishop Gobat's School in Jerusalem, died in Jerusalem on March 5. Mr. Ellis was in the service of the Church Missionary Society.

Dr. Taha Hussein, the blind litterateur and Professor of Arabic Literature at the Egyptian University, Cairo, is to attend the International Congress of Orientalists at Oxford on August 27. Dr. Hussein is the author of the book on the origins of pre-Islamic Poetry.

It was stated in the House of Commons on March 8 that until Anglo-Egyptian relations are modified by the establishment of an alliance or otherwise they will continue to be governed by the Declaration of Egypt's independence, with reservations, of February 28, 1922.

The French Institute of Oriental Archæology, which is carrying out excavations at Deir-el-Medina, Luxor, reports the discovery of a small tomb within the necropolis of Thebes. The entombed is a person of modest condition, and the furniture, which is still lying in its original position, is of poor quality.

It is stated from Cairo that Shaikh Hafiz Wahba, the Wahhabi Agent in Cairo, who went to Kuwait in November for a conference with the British about outstanding frontier difficulties between Najd and Iraq, has denied that the Wahhabi King has approved of a *Jihad* (holy war) on the part of the Mutair and other tribes against the *Mushrakin* or infidels of Kuwait, Iraq, and Trans-Jordan, or that King Ibn Saoud has supplied them with military assistance.

THE DRAFT TREATY BETWEEN GREAT BRITAIN AND EGYPT.

The "Papers Regarding Negotiations for a Treaty of Alliance with Egypt" were published on March 7 as a White Paper (Cmd. 3050. 1s. net). The following is the text of the draft treaty:—

His Majesty the King of Great Britain, Ireland and the British Dominions beyond the Seas, Emperor of India, and His Majesty the King of Egypt,

Being anxious to consolidate the friendship and to maintain and perpetuate the relations of good understanding between their respective countries,

And considering that in order to secure this object it is desirable to give precision to the relationship between the two countries by resolving and defining the outstanding questions at issue which formed the subject of the reservations which His Britannic Majesty's Government considered it necessary to make on the occasion of the declaration of February 28, 1922,

Being anxious to eliminate the possibility of interference in the internal administration of Egypt,

And considering that these objects will best be achieved by the conclusion of a treaty of friendship and alliance, which in their common interest will provide for effective co-operation in the joint task of ensuring the defence and independence of Egypt;

Have agreed to conclude a treaty for this purpose, and have appointed as plenipotentiaries, etc.

ARTICLE 1.

An alliance is established between the high contracting parties in consecration of their friendship, their cordial understanding and their good relations.

ARTICLE 2.

His Majesty the King of Egypt undertakes not to adopt in foreign countries an attitude incompatible with the alliance or liable to create difficulties for His Britannic Majesty; not to oppose in foreign countries the policy followed by His Britannic Majesty and not to conclude with a foreign Power any agreement which might be prejudicial to British interests.

ARTICLE 3.

If, by reason of any attack or act of aggression whatsoever, His Majesty the King of Egypt should be involved in war for the defence of his territory or for the protection of the interests of his country, His Britannic Majesty will, subject always to the provisions of the Covenant of the League of Nations, come immediately to his aid in the capacity of belligerent.

ARTICLE 4.

Should circumstances arise likely to imperil the good relations between His Majesty the King of Egypt and a foreign Power or threaten the lives or property of foreigners in Egypt, His Majesty will at once consult with His Britannic Majesty with a view to the adoption of the measures best calculated to solve the difficulty.

ARTICLE 5.

In view of the co-operation between the two armies as contemplated in Article 3, the Egyptian Government pledge themsleves to carry out the instruction and training of the Egyptian Army in accordance with the methods of the British Army; should the Egyptian Government deem it necessary to have recourse to the services of foreign officers or instructors, they will choose them from among British subjects.

ARTICLE 6.

In the event of His Britannic Majesty being menaced with or engaged in war, even though such war should in no way affect the rights and interests of Egypt, His Majesty the King of Egypt undertakes to furnish to His Britannic Majesty in Egyptian territory all the facilities and assistance in his power, including the use of his ports, aerodromes and all means of communication.

ARTICLE 7.

In order to facilitate and secure to His Britannic Majesty the protection of the lines of communication of the British Empire, and pending the conclusion at some future date of an agreement by which His Britannic Majesty entrusts His Majesty the King of Egypt with the task of ensuring this protection, His Majesty the King of Egypt authorises His Britannic Majesty to maintain upon Egyptian territory such armed forces as His Britannic Majesty's Government consider necessary for this purpose. The presence of these forces shall not constitute in any manner an occupation and will in no way prejudice the sovereign rights of Egypt.

After a period of ten years from the coming into force of the present treaty, the high contracting parties will reconsider, in the light of their experience of the operation of the provisions of the present treaty, the question of the localities in which the said forces are to be stationed. Should no agreement be reached on this point, the question may be submitted to the Council of the League of Nations. Should the decision of the League of Nations be adverse to the claims of the Egyptian Government, the question can, at their request and under the same conditions, be reinvestigated at intervals of five years from the date of the League's decision.

ARTICLE 8.

In view of the friendship between the two countries and of the alliance established by this treaty, the Egyptian Government when engaging the services of foreign officials will as a rule give preference to British subjects.

Nationals of other Powers will only be engaged if no British subjects possessing the necessary qualifications and fulfilling the requisite conditions are available.

ARTICLE 9.

His Britannic Majesty undertakes to use all his influence with the Powers possessing capitulatory rights in Egypt to obtain the modification of the capitulatory *régime* now existing in Egypt so as to make it conform more closely with the spirit of the times and with the present state of Egypt.

ARTICLE 10.

His Britannic Majesty will use his good offices for the admission of Egypt to the League of Nations, and will support the request which Egypt will present to this effect. Egypt for her part declares herself ready to accept the conditions prescribed for admission to the League.

ARTICLE 11.

In view of the special relations created between the high contracting parties by the alliance, His Britannic Majesty will be represented at the Court of His Majesty the King of Egypt by an Ambassador, duly accredited, to whom His Majesty the King of Egypt will grant precedence over all other foreign representatives.

ARTICLE 12.

Nothing in the present treaty is intended to or shall in any way prejudice the rights and obligations which devolve or may devolve upon either of the high contracting parties under the Covenant of the League of Nations.

ARTICLE 13.

The arrangements for carrying certain provisions of the present treaty into effect form the annex hereto, which shall have the same validity and duration as the treaty.

AARTICLE 14.

The high contracting parties, although convinced that by reason of the precise definitions laid down as to the nature of the relations between the two countries no misunderstanding is to be anticipated between them, agree, nevertheless, in their anxiety to maintain their good relations, that any disagreement on the subject of the application or of the interpretation of these provisions which they are unable to settle by direct negotiation shall be dealt with in accordance with the provisions of the Covenant of the League of Nations.

The Annex referred to in Article 13 is as follows:—

ANNEX.

I.

(*a*) In default of previous agreement between the high contracting parties to the contrary, British *personnel* on the existing scale shall be maintained in the Egyptian Army with their present functions and on the conditions of the existing contracts during the period of ten years provided for in Article 7 of the treaty.

(*b*) The Egyptian Government will not cause the *personnel* of the Egyptian Army to be trained abroad elsewhere than in Great Britain. The Government of His Britannic Majesty for their part undertake to receive any mission which the Egyptian Government may send to Great Britain for this purpose.

(*c*) The armament employed by the Egyptian Army shall not differ in type from that of the British Army. His Britannic Majesty's Government undertake to use their good offices, whenever so desired by the Egyptian Government, to facilitate its supply from Great Britain.

(*d*) The privileges and immunities at present enjoyed by the British forces in Egypt shall continue. The Egyptian Government will continue to place at the disposal of the said forces, free of charge, the land and buildings at present occupied by them until such time as an alteration is made, in accordance with the second paragraph of Article 7 of the treaty in the localities in which the said forces are stationed. When any such alteration is made, the land and buildings vacated shall revert to the Egyptian Government, who will provide, free of charge, in the localities to which the forces are transferred, equivalent accommodation to that provided by the land and buildings vacated.

(*e*) Unless the high contracting parties shall previously have agreed to the contrary, the Egyptian Government will prohibit the passage of aircraft over the territory situated on either side of the Suez Canal, and within 20 kilom. of it. This prohibition will not, however,

apply to the forces of the high contracting parties or to services already established under existing agreements.

II.

(*a*) The Egyptian Government, in agreement with His Britannic Majesty's Government, will appoint a financial adviser. When it shall be so desired, the powers at present exercised by the Commissioners of the Debt shall be conferred upon him. He will be kept informed of all legislative proposals of such a nature that, to be applicable to foreigners, they would require in present circumstances the consent of the capitulatory Powers. He shall be at the disposal of the Egyptian Government for all other matters in regard to which they may wish to consult him.

(*b*) Having regard to future changes in the judicial organisation as envisaged in Article 9 of the treaty, the Egyptian Government will name, in agreement with His Britannic Majesty's Government, a judicial adviser. He shall be kept informed of all matters concerning the administration of justice in which foreigners are concerned, and will be at the disposal of the Egyptian Government for all other matters in regard to which they may wish to consult him.

(*c*) Until the coming into force, as the result of agreements between Egypt and the Powers concerned, of the reform of the capitulatory system contemplated in Article 9 of the treaty, the Egyptian Government will not modify, except in agreement with His Britannic Majesty's Government, the number, status and functions of the British officials engaged at the moment in the public security and police services.

THE BAGHDAD-CAIRO AIR MAIL.

[Last week we published extracts from the paper by Wing Commander Hill on "The Baghdad-Cairo Air Mail," given under the auspices of the Royal Aeronautical Society on March 1. To-day we publish some account of the interesting discussion which followed the reading of the paper. In this discussion many experts took part. First, Sir Arnold T. Wilson was asked to speak by the Master of Sempill, who referred to the unique experience of the Middle East possessed by the former Civil Commissioner of Baghdad.—ED.]

Sir Arnold said:—

"I have listened, as I am sure we all have, with very great interest to Wing-Commander Hill's most attractive paper. I have listened to many lectures by members of the Services, but do not remember to have heard any lecturer who succeeded in conveying so graphically to his audience his own impression of the country and of the particular enterprise on which he was engaged. He has struck a new and very attractive literary note, and it will be a great pleasure to hear him again. His references to the early history of the route do not go back as far as they might. The first flight from Baghdad to Cairo *via* Damascus and Ramleh was undertaken ostensibly to convey me to Cairo in February, 1919.* The members of the party were Squadron-Leader Boyd, F.O. Lapraik, and the late Flying Officer Nuttall and myself. We had two D.H.4's, both old and in none too good repair. Our route was from Baghdad to Albu Kamal, thence to Palmyra, where we were forced to land to make engine adjustments and had great difficulty in getting off owing to the hummocky soil; next Damascus, where torrential rains which kept us for some days had flooded the hotel in which we were living to the depth of four feet. There was a further forced landing on the hills round Lake Galilee, yet another on a rain-soaked aerodrome at Tul Karaim, and finally one which almost ended in disaster just outside Ramleh, but we got to Cairo and were careful to say nothing of our mishaps lest it might interfere with the return journey. We returned to Baghdad six weeks later with D.H.9 A's *via* Aleppo and Deir ez Zor.

"The second time the Desert was crossed from Baghdad to Cairo was in May. This time also we had D.H.9 A's, but one of them 'konked out' half an hour outside Baghdad, and my pilot, Mills, a young man of not more than 18 summers, performed the flight alone with a non-stop run from Ramadi to Damascus, a flight which did the more credit as he had never previously crossed the Desert or been further north than Ramadi, and, moreover, had had little or no experience of long-distance flying alone. We got to Kantara that evening, thus for the first time in history accomplishing the Baghdad-Egypt flight in a single day.

"I have flown in the Middle East as a passenger rather more than four hundred hours, but mostly between the years 1918 and 1920, and I think I have landed on every aerodrome that ever existed in Mesopotamia and upon a good many patches that were never designed to receive aircraft; indeed, I have at different times had nine aeroplanes smashed under me, not including miscellaneous minor mishaps. The furthest north I ever got was Qazvin, the furthest south Kuwait and Bushire, the furthest west Cairo and Suez. I have been flown at all heights up to about 15,000 and in all weathers, and, generally speaking, my experience is that, given a competent pilot, there is nothing formidable in the climatic conditions even at their worst. Fog is almost unknown; meteorological conditions can be predicted ahead with considerable accuracy, and are the same over wide areas; the rainfall varies from an inch or so at Cairo to an average of six inches at Baghdad and Bushire. Aerodromes are easily found and easily maintained. The heat at ground level is great during the summer and a pall of hot air hangs over the whole country at about 3,000 feet, so that in the summer the air temperature is actually hotter at 3,000 feet than it is at 500 feet; but above 3,000 feet the air rapidly cools, and at 5,000 or 6,000 the air is as cool and as pleasant as could be wished, and the sun's rays no hotter than in England. So from these points of view aviation has undoubtedly a great future.

"I believe that the early trial trips I have described were responsible for the warm advocacy of the air route at the Cairo Conference in 1921 by Mr. Winston Churchill, to whose vision and foresight we owe much. But even he could scarcely have brought the air route into being had he not been at the time both Secretary of State for Air and for the Colonies, and thus responsible for the Middle East. His being able, so to speak, to give orders to himself saved weeks of delay. It is now a well-recognised route, which has, I believe, as good a record during the last six years for reliability as any route in Europe, as well it might, for the conditions are essentially good.

"Mails from Cairo to Baghdad take as many hours by air as they did days in the past, but this section, 866 miles in length, is only a link in a long chain, and that chain must extend to India either through Persia or down the Persian Gulf. If amphibians can be used, the route down the southern side of the Persian Gulf, which was surveyed last year, has much to be said in its favour. The harbours of Kuwait and Bahrain, Musandam and Gwadar are landlocked and suitable for landing in any weather, as are several intermediate harbours, and the risks that will be run by passengers are no greater than those involved by the route along the Persian side of the Persian Gulf through Bushire and Bandar Abbas, which is in some ways inevitably unsatisfactory. To begin with, it is in summer exceedingly hot, and for more than three months in the year there is a strong north-west wind sweeping down the Gulf which would handicap machines flying from India, and monsoon conditions in June, July, and August on the last thousand miles to Karachi would make things difficult. The ground is broken, good aerodromes are none too common, and if a machine is obliged to land and requires assistance it would take weeks to obtain spare parts, and so on, as there are no motor roads along the southern shore, nor are there likely to be any. These objections apply to both routes down the Persian Gulf. The only alternative is to fly across Central Persia, through Kermanshah and Hamadan to Isfahan and Kerman, and thus to India, or from Baghdad to Ahwaz, Shiraz and Kerman. The most serious objection to both these routes is the height of the Persian plateau, which averages 5,000 feet, whilst no route for aeroplanes could be devised which would altogether avoid the mountain ranges, which are from 8,000 to 10,000 feet high, and this is bound to be a very serious handicap in present circumstances for commercial flying, though it does not seem to deter the Junker Company from making a living. On the other hand, except for a month or six weeks of light snow, the climate throughout this sector of the route offers less difficulties than that of the Persian Gulf route; the terrain is easy, landing grounds frequent, and there are prospects of local mail and other traffic on this route which the Persian Gulf route does not offer. Therefore, much as we may regret the attitude of the Persian Government in regard to the air route along the Persian Gulf, it is possible that further research and technical developments will put us into a position to secure a connexion between Baghdad and India, either by following the southern shores of the Persian Gulf, or by reaching a compromise with the Persian Government in regard to a central Persian route.

"The position adopted by the Persian Government is, as I understand it, that, whilst they have adhered to the International Air Convention of October 13, 1919, it has not yet been ratified by the National Assembly, and is not in present circumstances likely to be so ratified. Inconvenient as it is to us to have our well-laid plans frustrated by what must seem to a layman to be a pure technicality, we must be chary of imputing bad faith to foreign Governments in such matters. It is no new thing for nations to be parties to International Conventions and then to fail to ratify them. As stated in the House of Commons on February 28, France has voted for nine Conventions which France has not thought fit to ratify; Czecho-Slovakia for twelve; the Netherlands for thirteen; Norway for ten; and Great Britain for four. Persia's record in these matters is probably as good as that of any other European nation, except Great Britain. The fact is that International Conventions devised at Geneva are apt to go considerably further than National Governments are prepared to go, and hitches of this sort are in present circumstances inseparable from the running of aerial transport systems through foreign lands. The truth is that we cannot have an 'imperial' airway which traverses a succession of foreign countries. It ceases to be an 'imperial' and becomes an international airway, and the needs of aviation will probably be best met by the formation of international airway companies which will not be distinctively connected with any particular country. I see no other solution, nor do I think that our national interests need suffer."

Air Commodore Borton spoke in high praise of the lecturer, but Wing Commander Harris differed from him upon the efficacy of smoke candles as a reliable aid to landing. Often in the desert, he said, the smoke would go up straight for 40 feet and then blow parallel to the ground. He mentioned the desirability of night flying in the desert. Many other flying men spoke, and the discussion was concluded by Lord Thomson of Cardington, who emphasised the value of Sir Arnold Wilson's remarks, reinforced the statement that the Cairo-Baghdad flight was but a link in a great chain, and contrasted his pleasant flying experiences in the Middle East with those described by the lecturer, to whom, however, he paid handsome tribute.

* The *Aeroplane* of March 7 reminds us that a Handley Page aeroplane, leaving Cairo on November 30, 1918, reached Delhi on December 12, after landing at Baghdad, Bushire, Bandar Abbas, Charbar, and Karachi. The pilots in this, the first trans-desert flight, were Major-General W. G. H. Salmond (now Air Vice-Marshal Sir Geoffrey Salmond) and Captain Ross-Smith. Brigadier-General A. E. Borton (now Air Commodore Borton) and two mechanics accompanied them as far as Baghdad.—ED.

THE DEFENCE OF INDIA.

The eagerly awaited announcement of the Imperial and Indian Governments' decision regarding the Report of the Indian Sandhurst Committee was made by the Commander-in-Chief in the course of the Budget debate last week. That the result would be disappointing to the most vocal section of Indian public opinion will not be surprising to readers of the THE NEAR EAST AND INDIA. As Sir Frank Nelson has pointed out on several occasions recently, many Indian politicians and publicists seemed to have made up their minds to regard the Committee's far-reaching recommendations—more political than military, more idealistic than practical—as tantamount to judicial decisions binding the Government of India, and the India Office and the War Office as well. On the other hand the Congress Party's amendment to Dr. Moonje's resolution, adopted without a division at the last Simla session of the Legislative Assembly, declared that the Committee's proposals in no way satisfied public opinion, "but should be carried out as the definite beginning of Indianisation." Others again have wondered how the Chief of the General Staff agreed to put his signature to a document which, so far as the major issues are concerned, was obviously merely a praiseworthy but unwise attempt to secure unanimity at the expense of vital principles.

The Committee, of which Sir Andrew Skeen, Chief of the General Staff in India, was Chairman, was appointed by the Government of India in 1925. With the exception of the Chairman and Mr. E. Burdon, the present Financial Secretary, then Secretary to the Government of India in the Army Department, its personnel was exclusively Indian, a majority, including Pandit Motilal Nehru, Mr. M. A. Jinnah and Sir Phiroze Sethna, being members of the Central Legislature. Its terms of reference were limited; it was instructed to inquire into and report upon two main questions—the improvement of the supply of Indian candidates for the King's Commission, both in number and in quality, and the desirability and practicability of the establishment of a Military College ("an Indian Sandhurst") in India. In connexion with the latter part of the inquiry a Sub-Committee of three of the Indian members spent the greater part of the summer of 1926 in visits to educational institutions of all kinds in England, and also toured in France, Canada and the United States. The chief point of interest in the Report, which was issued nearly a year ago, is, as we pointed out at the time, to be found in the recommendations on certain aspects of the problem which were not generally supposed to come within its province. These amount to a proposal to jettison the present "eight units scheme" and in its place to set about the organisation of a separate "Dominion Army" for India, complete in all its parts and including the Artillery, Engineer, Signal, Tank and Air arms of the Army in India, as distinct from the present Indian Army. In the meantime, and to that end, the Committee proposed that the existing number of vacancies allotted to Indians at Sandhurst should immediately be doubled, that eight vacancies should forthwith be alloted to Indians at Woolwich and two at Cranwell, and that these numbers should be progressively increased until in 1933 "a military college, with an establishment at the start of 100 cadets doing a three years' course, should be created in India on the model of Sandhurst." Under the scheme proposed half the total cadre of officers in the Indian Army would, by 1952, be Indians. The Committee did not attempt to carry their proposals beyond that point or to forecast the time when it might be possible to dispense with the British element in the Indian Army.

In his speech at Delhi Sir William Birdwood said that in arriving at their final decision the authorities had been influenced by three primary considerations. They were, first, that a further degree of Indianisation was necessary; secondly, that, as the Committee had rightly insisted, there must be no diminution in the admitted efficiency of the Army in India; and thirdly, that, as the Committee also observed, there should be no breakdown in the supply of British officers for the Indian Army. To that end the Government had not only agreed to an immediate increase in the number of direct vacancies at Sandhurst open to Indians from 10 to 20 a year, but had also decided that a further number of vacancies—varying from 5 to 10—should be reserved for officers who hold the Viceroy's Commission. Although the Government had accepted the Committee's initial recommendations, and in the latter respect were prepared to go even further, Sir William Birdwood made it clear that the projected scale of increase between 1929 and 1952, which amounted to a mere time-table, bearing no relation to the rate of supply of efficient and suitable candidates, could not be entertained. The British and Indian Governments have, moreover, agreed to throw open Woolwich and Cranwell to Indian aspirants for King's Commissions who are to be given special privileges in the entrance examinations. But they have rightly refused to be bound by the other recommendations of the report. The Committee's proposal for the creation of a Sandhurst in India in 1933 was based, Sir William pointed out, upon the conjecture that the number of Indian cadets at Sandhurst would soon exceed the accommodation available, and also that it was unfair that Indian parents should be called upon to bear the additional expense of maintaining sons in Great Britain. This last grievance will be removed by a Government grant. But the first contention is not in accordance with the known facts and the authorities are fully justified in refusing to commit themselves either to the expenditure involved in the establishment of a separate training centre in India or to the adoption of the Committee's "time-table" of Indianisation without much more cogent reasons than can be adduced at present for such a revolutionary step. Whether they are equally right in the circumstances in continuing to persevere with the "eight units" scheme, for the Committee's objections to the undesirable features of that arrangement are not confined to Indian opinion, time alone will show. As we have observed on several previous occasions, the real problem

Digitized by Google

of the future defence of India is not the discovery of means of converting suitable human material into capable naval and military officers, consistent with the maintenance of the present high standard of efficiency of the existing units, but rather to find the human material itself. Many youths of the type likely to make the best officers—as, for instance, the sons of officers holding the Viceroy's Commission—are deficient in education; while others who have been better educated and are financially independent are displaying a not unnatural preference, in spite of the grandiloquent claims of the politicians, for the liberal professions, the Civil Service and commercial and industrial appointments. Neither the Budget debate nor the subsequent discussion on the motion for adjournment, when "a vote of censure" on the Government was adopted by 70 votes to 41, brought the real problem any nearer a solution.

CURRENT TOPICS.

India's Greatest Industry.

It always seems to us to be regrettable that the promotion of the agricultural interests of India does not make a stronger appeal to the Indian leaders, political and other. They are all convinced that manufacturing industries must be established and maintained at whatever cost; but unfortunately they are not nearly so keen for the advancement of what is at present and will most likely always be India's greatest industry—agriculture. The Government, being in closer touch with the life of the people, are much more awake to the great importance of agriculture; and the central agricultural department, and the provincial departments likewise, have been of recent years greatly enlarged and their efficiency much increased. Staffs of scientific agricultural experts are now maintained, and experimental stations, farms and nurseries have been established, with the result that an enormous amount of useful and valuable work has been and is being undertaken. Efforts are being made to promote agricultural education in most of the provinces; and, in some, agriculture has been introduced into the curricula of the ordinary provincial schools. We notice, for instance, from the last annual report of the Bengal Agricultural Department, that a scheme for teaching agriculture in the Middle English and Higher English schools is being put into operation in that province. Fifteen schools have been selected for this purpose and the training of teachers has been already begun. The object of the instruction is not to make the school into a factory for turning out finished farmers. What is aimed at is the introduction into what is now an exclusively literary curriculum of a nucleus of practical training. The scheme is attracting increasing public support in the province. For if it succeeds, and is extended, it may do something to counter the almost universal objection on the part of Bengali schoolboys to any form of manual work. Moreover, it may impart a bias towards agriculture which will be all to the good.

This is merely an isolated instance of the numerous efforts that are being made by the Provincial Agricultural Departments to improve and to extend agricultural education. Another interesting experimnt which is also being undertaken in Bengal is related to the silk industry. The Department maintains a number of sericultural nurseries which have been established in various districts. At three of these nurseries it has now started primary schools where, in addition to reading, writing, and arithmetic, the children are taught a few simple facts about modern sericulture. Not only does the Department maintain these sericultural nurseries; it has in addition a larger number of experimental farms, to some of which the sons of cultivators are admitted for training. The Department now proposes to establish three farm schools in different parts of the Presidency. These will be somewhat similar to the primary schools at the nurseries to which we have referred. But they are intended for the sons of cultivators who have been through a primary school and who are willing to learn a little more about modern agriculture. It would be easy to multiply these illustrations of what is being done by the State to promote agricultural education, and thus to advance the interests of the agricultural population. But those which we have quoted—from one province only it must be remembered—are sufficient to indicate the educative value of the work that the Provincial Agricultural Departments are doing. About such work there is none of the glamour beloved of the politician. But—to borrow Sir Basil Blackett's expression—those who carry it on are better Swarajists, they are doing more to promote self-government, that is to say, than all the apostles of non-co-operation.

"The Old Toughs."

The unveiling of the memorial in the Cathedral of Bombay to the "Old Toughs," otherwise the Bombay European Regiment, which became the Bombay Fusiliers and afterwards the 2nd Battalion of the Royal Dublin Fusiliers, rouses many old memories. It may not always be remembered that this regiment descended directly from the four companies raised by Sir Abraham Shipman in 1661, for the taking over of the new possession of Bombay. The regiment might, therefore, have claimed to be the oldest British line regiment. The Royal Scots and perhaps also the Buffs may claim a longer corporate existence, but they were in the service of foreign Powers at the date mentioned. The Bombay Regiment had an unbroken career until the disbandment of the Royal Dublin Fusiliers in 1922. The Regiment distinguished itself on many fields, particularly at Kirkee, Aden, and Multan, and earned its title of the Bombay Toughs in many varieties of climates. Very suitably has its memory in Bombay been perpetuated by the memorial in the Cathedral.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 23.

The Statutory Commission.

Sir John Simon and his colleagues arrived in Calcutta on Monday morning, unperturbed, apparently, by the adverse vote of six in the Assembly; were entertained by Calcutta at the Calcutta Club and by the Governor at Government House; spent Tuesday at work in their offices in Council House Street, and left for Madras early the following morning.

The leaders of the three non-official parties in the Assembly have issued a statement to their constituencies and the public, in which they hold the Government of India, the British Government, and the Statutory Commission responsible for the situation which led to the adverse vote of six. The Government of India, which includes three Indians, were principally responsible, says the statement, for giving an incorrect perspective of the Indian situation, and this led Lord Birkenhead and Lord Winterton to make their statements in Parliament. The attitude of Lord Birkenhead, as evidenced by his last speech, and the cablegram of Mr. Ramsay MacDonald to Mr. Hartshorn had proved that they had made up their minds to enforce their decision at all costs, without waiting for the result of the Assembly debate.

The leaders of the three parties appeal to organisations throughout the country to settle communal or sectional differences, to prepare a draft Constitution with the maximum amount of agreement, and to work for its establishment. It is as if one were to say to another, "Prepare a draft Constitution, won't you?" when the other replies, "No, no; you do it." "No, no," says the first, "I leave it to you." "But I should not know how to set about it," says the other; "you must draft it." Ever since the announcement was made that the Commission was to be a Parliamentary one the opposition parties in India have been talking of drafting a Constitution of their own, and they are still only talking, each group trying to pass the

Digitized by Google

difficult job on to another. The party leaders' statement is signed by Pandit Motilal Nehru, Mr. Srinivasa Iyengar, Pandit Madan Mohan Malaviya, Lala Lajpat Rai, Mr. Jinnah and Sir Purshotamdas Thakurdas. They are the men to draft a Constitution. If they could not do it, who could?

The leaders have appealed to the Legislative Councils throughout India to follow the example of the Assembly. The *Statesman* commenting on this observes, "They feel no doubt towards others whose freedom of decision is unimpaired much as the betailed fox did towards those that were yet untrapped." But the fox of the fable was not betailed but, as Calverley knew, curtailed. "As we curtail the already cur-tailed cur."

The Railway Budget.

India has been presented with an extremely satisfactory Railway Budget. The gross receipts expected from the commercial lines amount to 103½ crores, an excess of over three crores on the Budget estimate, and an increase of five crores compared with the preceding year. All classes of traffic have contributed towards this satisfactory result. Attention may be specially drawn to the rise of 40 per cent. in the export trade in coal during the first seven months of the year. The estimated expenditure is 80 lakhs below the Budget figure of 91.47 crores. The fall in the price of coal accounts for 50 lakhs. The main economies, which had to offset a rise of one and a half crores in interest charges, were effected by better methods, improved equipment, and greater general efficiency, and all these should tell on the financial results in the future. The final balance sheet for 1927-28 is expected to show a surplus of nearly thirteen crores, which is 5½ crores more than was looked for. The General Revenues will benefit to the extent of nearly ninety lakhs more than the figure that Sir Basil Blackett put down in his budget. The railway reserves will be raised to sixteen crores. Once more the value of India's railway assets have been shown.

The Bengal Budget.

The Bengal Budget, which the Finance Member presented to the Legislative Council on Monday, is a very different story, thanks to the so much abused Meston Award. It is less a budget than a statement of anticipated revenue and expenditure, the latter containing one item—54½ lakhs, Bengal's contribution to the Government of India under the Award—which nobody expects to be paid, but which for form's sake must be put down in the budget. The expenditure for 1928-29 is expected to exceed the estimated revenue by no less than 92 lakhs, or, if the sum of 54½ lakhs is deducted, by 37½ lakhs; so that more is called for than merely the tearing up of the Meston Award. Bengal has not a revenue sufficient to cover the present-day scale of expenditure. The authorities evidently hope for better things, for, despite the fact that Bengal has been steadily eating into her capital for some years, they have prepared a budget that shows increases of expenditure under such heads as police, education, and public health. Nevertheless Mr. Marr felt constrained to end his statement with, "No one realises more than I do that this is a very unsatisfactory budget, which does not do justice to any department of Government, and, especially, to the Transferred Departments. But I do not think that any one can hold the Hon. Ministers, or even the Members of Government, in any way responsible for the position. It is solely due to our Financial Settlement, and until that is put right, we can expect little or no amelioration." The *Englishman* concluded its review of the position with the words, "That is an intolerable situation." We all agree.

Tattoo at the Fort.

Arrangements are now well in hand, it was announced a day or two ago, for a Torchlight Tattoo at Fort William at the end of this week. It makes the third to be staged in Calcutta, and the promoters are confident that the spectacle will eclipse its predecessors. Massed bands are to provide an impressive opening to the programme. The bands will march into the arena from various points, and will be lit up by searchlights as they enter. They will then form up in the centre of the arena, marching and counter-marching. There is also to be a representation of the storming of Badajos during the Peninsular War.

THE LATE LORD SINHA.

(From a Correspondent.)

The death of Lord Sinha has removed one who was in many respects quite the foremost Bengali, if not the foremost Indian of his time. To all who have lived in Bengal it was, of course, as a successful barrister that he was best known; and, as Sir Harry Stephen remarked in *The Times* the other day, his heart was always with his profession. He was by no means the only Bengali who has been an outstanding figure at the Calcutta Bar. But he is the only one who, in addition to being a great barrister, has held successfully a variety of public appointments of first-class importance. He was enrolled at the Calcutta High Court as far back as 1886—a few months after his call to the Bar. There were at that time several other Bengalis—notably the late Mr. W. C. Bannerjee and the late Mr. Mano Mohan Ghose—who were in large practice at the Bar. But the majority of the members were Englishmen, quite a number of them being men of very considerable ability as lawyers and advocates. Indian clients also were not at that time so ready as they now are to entrust their cases to Indian barristers. And it must have been decidedly uphill work for a young Indian, with no experience and no social or family influence, to gain a footing. But Sinha had extraordinary application with great perseverance and exceptional ability; and after much patient waiting he succeeded in making a position for himself notwithstanding the keenness of the competition. Once well-started he never looked back, and in about twelve years he was a recognised leader. By 1903 he became Standing Counsel, and a few years later he accepted the post of Advocate-General of Bengal, being the first Indian to hold that office. He was a success both as Standing Counsel and as Advocate-General, his work comparing favourably with that of his predecessors. Sound as a lawyer, eloquent and convincing as an advocate, and courteous and restrained in his manner, he was popular with the Bar, as well as with Judges, juries and clients. His extensive and lucrative practice developed from year to year until it became probably the largest of any Calcutta barrister of his day. It was interrupted for some time while he served for about eighteen months as Law Member of Lord Minto's Executive Council; but he resumed it when he relinquished that post. He became, later, a member of the Bengal Executive Council; and in 1917 he went to England with the Maharaja of Bikanir to take part in the deliberations of the Imperial War Cabinet and the Imperial War Conference. He also represented India, with the Secretary of State and the Maharaja of Bikanir, at the Peace Conference. His subsequent career is well known, and need not be detailed here. He is the only Indian who has been raised to the Peerage; and he was the second Indian to be appointed to the Judicial Committee of the Privy Council. He also held the unique distinction of being the only barrister—Indian or European—who, practising exclusively at the Indian Bar, has been appointed a King's Counsel. As a politician he was never conspicuous, but in 1915 he presided at the Bombay session of the National ongress; and his presidential address was marked by that good sense, breadth of view and moderation of language which always distinguished his public utterances. But although he consistently expressed himself with restraint he was a more sincere patriot than many who indulged in violent declamations. He was a believer in the British connexion and he was an outstanding example of how that connexion has opened out great careers for talented Indians, and has thereby enabled them to promote the best and truest interests of their country.

AIR ROUTES OF INDIA.

[Introducing the Air Estimates in the House of Commons on Monday, Sir Samuel Hoare, Secretary of State for Air, said that the Air Ministry hoped during the course of the year to make a beginning with the biggest air route in the world, a weekly mail service to India. The proposed service would go from London to Delhi in seven days and from London to Calcutta in nine days. The details of the agreement to be entered into with the Imperial Airways Company were still under discussion with the Government of India and the company, and the final contract would be presented to Parliament in the form of a White Paper as soon as it was ready.]

Future air routes in India were discussed by Lieut.-Col. I. A. E. Edwards, Chief Technical Adviser, Department of Civil Aviation, Air Ministry, in the course of an interesting paper read last week before the Indian Section of the Royal Society of Arts. Colonel the Master of Sempill presided.

In addition to the advantages which India offers for the internal establishment of air transport, the fact that she lies on the highway to the still farther East, Colonel Edwards pointed out, renders her development, aerially, of paramount importance.

Before dealing with India itself, the lecturer gave an outline of the developments which had already taken place in Western Europe, and explained how if they continued, they were likely to play an important part in linking up not only with India but with all the rich territories beyond.

The lecturer proceeded:—

"To summarise briefly the foregoing, it will be seen that the majority of the traffic for the Far East will be concentrated on Karachi on one side of India and at Calcutta on the other side. Moreover, it will be seen that Calcutta will become, if not the most important air junction in the Western Hemisphere, at least only second to the big air junction which must eventually be established either in Syria or in Palestine."

Turning to the possible internal routes of India, Colonel Edwards said that the first was that from Karachi *via* Delhi and Allahabad to Calcutta and from Karachi to Bombay to connect with the Egyptian service. The next in importance of the true internal services was that from Bombay to Calcutta. Then an important service would doubtless run from Calcutta *via* Benares, Cawnpore, Allahabad, Lahore to Rawalpindi. To-day there was a vast volume of traffic on both routes. "Then from Calcutta," the lecturer added, "there would be a further route following the coast, *via* Visagapatam down to Madras and on to Colombo, at which point it will probably tap in with the airship service. There will be a similar connecting service from Bombay across to Madras and on to Colombo. Incidentally, there will probably be two routes from Bombay to Calcutta, one *via* Nagpur and Jharsaguda and the other *via* Jubbulpore and Allahabad. The former route is approximately 200 miles shorter than the one which follows a more northerly course, and the saving in time which would be involved on this route will make for considerable simplification in arranging for connections on the extension of the route to Rangoon. It is inevitable that, at any rate, one of the Bombay-Calcutta routes and a section of the route from Karachi to Calcutta will be operated by night.

"Even as early as 1919 detailed schemes for the operation of a service from Bombay to Calcutta and on to Rangoon were submitted to the Government of India, and of these the former was to be operated by night. India offers the most ideal country for night flying; in fact, in the hot weather season it is undoubtedly preferable to day flying.

"Then we come to possibly the most important service of all, also based on Calcutta, namely Calcutta to Rangoon. This is likely to be the first service to be put into operation, as the benefits which it will confer on these two places are self-evident. All the other points which have been referred to in India are already connected by train services, whereas Calcutta-Rangoon is dependent on ships only. Flying day and night passengers, mails, etc., leaving Bombay at 6 p.m., should be able to arrive at Rangoon on the following day by 6 p.m., as compared with a lapsed time by ground transport of approximately five days and nights, assuming that a connection is established at Calcutta."

"In this paper," Colonel Edwards proceeded, "I have made no efforts to deal with the economics of air transport, but have confined myself entirely to air routes, and in so doing I hope I have impressed upon you the tremendously important part which India is destined to play in the future of air transport. Remember that already in Europe vast strides have been made; similarly in Australia wonderfully efficient services are operating. The Dutch East Indies and Japan will soon have routes in regular operation, while it is probable that a British service will be flying in the Malay States within a short time. India is the connecting link to all these services, and consequently cannot remain indifferent without creating an absolute barrier to the development which is taking place on either side of her. It cannot be long before London is only six days from Karachi, and she has little time to spare if she is to be ready when that happens. The link was forged when Sir Samuel and Lady Hoare flew over from England to Delhi and back to Cairo at the end of 1926 and during the early part of last year."

"For example, the establishment of a daily service between Calcutta and Rangoon which will be accomplished in about ten hours must clearly result in expanding the trade which now exists between these two important business centres. The boat sails twice weekly, and is scheduled to take fifty-two hours over the journey. The comparison between the two gives such an enormous advantage to the aeroplane that it cannot fail to attract a considerable portion of the existing traffic, and will doubtless create a considerable volume which is at present non-existent."

In conclusion, Colonel Edwards gave an instructive review of what has already been accomplished in India and the many schemes in progress.

"The first real step forward," he said, "was made the year before last, when the Government of India issued a memorandum of its policy and later appointed a Director of Civil Aviation. Prior to this, however, owing to the desire of the Home Government to operate an experimental airship service between England and India, and also because the British Government had entered into an agreement with the Imperial Airways, Ltd., for the operation of a regular aeroplane service between Cairo and Karachi, the construction of a combined airship and heavier-than-air port was put in hand at Karachi, and this is now nearing completion. This will eventually be equipped with a mooring tower, an airship hangar, gas plant, aeroplane hangar, offices, quarters and wireless and meteorological installations. In addition, civil aerodromes have been provided at Itarsi, Jodhpur, Nazirabad, Agra, Cawnpore, Allahabad, Patna, Calcutta on the route Karachi-Calcutta. In addition, there is an aerodrome at Akyab, on the Rangoon route, while Bombay has had an aerodrome on and off. Recently an Aero Club has been formed in India, which will organise Light Aeroplane Clubs, air meetings and so forth; already four clubs are in course of formation, three of which will be at the following places, Karachi, Delhi and Calcutta.

"To recapitulate, already large sections of the route between the far corners of Australia and England are either actually operating or are about to be operated. To-day it is possible to fly from London to Constantinople. In the near future it is hoped that it will be possible to get from London to Cairo. A route is already in existence from Cairo as far as Basrah, which it is hoped will be extended on to Karachi and Delhi.

"Discussions are at present taking place with regard to the possible establishment of a service in the Malay

Digitized by Google

Straits from Penang to Singapore, with a possible weekly extension to Calcutta *via* Rangoon, and a service has already been agreed upon for the establishment of routes through the Dutch East Indies which next year will probably connect Singapore with Sourabaya. In Australia a route follows the West Coast from Wyndham down to Perth, and the East Coast will very soon have a route from Port Darwin to Brisbane, with extensions on to Sydney. It will thus be seen that within the next year or so considerable links in this great Imperial route will have been established, and it will only remain to connect up the remainder to have a through route all the way."

INDIA IN PARLIAMENT.

By Sir Frank Nelson, M.P.

The channels through which Socialist Members of Parliament are supplied with Questions, to assail the very competent Under-Secretary of State, seem to have been slightly at fault on Monday last.

I give the following extract from Hansard which I will allow to speak for itself:—

"4. Mr. Maxton asked the Under-Secretary of State for India whether the Indian Foreign Secretary is expected shortly to visit Persia; for what purpose this visit is being undertaken; how long is it expected to last; and from what funds the cost of the visit will be defrayed?

Earl Winterton: I am not aware of any proposal that the Indian Foreign Secretary should visit Persia.

Mr. Maxton: Has the Indian Foreign Secretary recently visited Persia?

Earl Winterton: No, Sir, he certainly has not recently visited Persia, nor am I aware of any proposal that he should visit Persia.

Mr. Saklatvala: Is it not a fact that Sir Denys Bray, the Foreign Secretary, did go to Persia last November for certain negotiations?

Earl Winterton: No, Sir, to the best of my belief Sir Denys Bray has not visited Persia recently."

If the "attack on the India Office," to which I alluded a week or two ago, is to be of any moment the assailants must try to do better than this.

There were, however, one or two questions asked during the previous week to which I may perhaps make a brief if somewhat belated reference now. The most interesting was the repetition of the rumour that an Indian member of the India Council had resigned, the inference being, of course, that he had done so by way of protest against the Commission's appointment. The answer in the negative from Lord Winterton will, I hope, now dispose of the canard.

In reply to Commander Kenworthy the Under-Secretary said that the Secretary of State was in communication with the Government of India regarding the situation created by the Assembly's rejection of the Indian (Navy) Discipline Bill and promised to inform the Honourable Member when he was in a position to make a statement.

In a written answer to Mr. Gardner, Lord Winterton made the interesting announcement that the Government of India hope to introduce a revised Trade Disputes Bill either during the present session or at the next Autumn Session of the Central Legislature. Nobody with experience of the protracted strikes which were at one time almost an annual event in the Bombay mill industry, or the more recent Khargpur negotiations, can but welcome the news, though the subject bristles with difficulties, and the previous history of the question does not make for confidence in the Government's ability to devise a *modus operandi* acceptable to all the interests concerned.

The House has been particularly dull this week and India was not mentioned—apart from the exceptionally thin list of "briefed" questions put by the Socialist Party—except for a sentence or two in the Secretary for War's speech on the introduction of the Army Estimates.

In view of the discussion which preceded his departure for his trip to India, I make no apology for quoting his exact words whilst alluding to his Indian visit:—

"I propose to say a few words about my visit to India this winter. Let me repeat that the units of the British Army in India are under the command of the Commander-in-Chief in India, Field Marshal Sir William Birdwood, and they are administered by the Government of India, and that consequently I had no jurisdiction and no official position in relation to the troops in India. I only repeat this to avoid anything I may say being considered an encroachment upon the province of the Government of India. I spent over a week at Quetta, Rasmak and Peshawar, and I visited most of the posts on the Indian frontier. I stayed with the General Officers Commanding and I saw most of the British units and many of those belonging to the Indian Army. I am most grateful to them for their kindness and for the useful information they gave me."

Such visits—as a general rule—cannot but be productive of good, although I must confess that I commence to foresee danger of a precedent being established which may tend to "the man-on-the-spot" complaining with some force if his superior officers in the Cabinet make a habit of "seeing for themselves."

I am reminded by inquiries which I have received on the Budget statement that there is a good deal of loose thinking, even in India itself, on the subject of the provincial contributions. Under the Government of India Act of 1919 the sphere of influence of the Central Government was greatly restricted and that of the local administrations correspondingly enlarged. The functions of the former are now limited to the defence of India; her relations with foreign powers and the Indian States; the management of the public debt and the currency; and certain miscellaneous duties. Practically the whole of the progressive forces, commonly called the nation-building activities, were transferred to the ægis of the local Governments. At the same time with either static or, in some cases diminishing revenues, the latter were charged with the payment of nearly Rs. 10 crores a year to the central exchequer. It follows then that every rupee remitted is equivalent either to a rupee liberated for expenditure on education, medical relief, sanitation or other nation-building activities, or a corresponding reduction of provincial taxation.

Reduced, therefore, to its simplest elements, the Budget places at the command of those entrusted with these great responsibilities two and a half crores—the balance temporarily remitted last year—for the permanent amelioration of the social and economic status of the masses of the people. Inasmuch as expenditure on Reserved Departments is either static or declining, this money will be mainly at the disposal of Ministers in charge of the Transferred Departments. The final extinction of the provincial contributions is, therefore, of immediate benefit to the community; it will accelerate progress without increasing local burdens. In the words of the Finance Member, "the local Governments can proceed to carry out the great task allotted to them in the governance of India with the knowledge that no part of the revenues at their disposal will be diverted to the Central Government's purse."

Mr. Samuel Andrew Smyth, C.S.I., I.C.S., has been appointed a Member of the Executive Council of the Governor of Burma, in succession to Sir William Keith, C.S.I., I.C.S., whose term of office will expire on April 30.

Mr. Tiruvalangadu Raju Sastri Venkatarama Sastri, C.I.E., has been appointed a Member of the Executive Council of the Governor of Madras, in succession to Sir C. P. Ramaswami Ayyar, K.C.I.E., whose term of office expires to-day. Rao Bahadur Chittoor Vaithilinga Ayyar Anantakrishna Ayyar has been appointed Advocate-General, Madras, in succession to Mr. T. R. S. Venkatarama Sastri.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Old Greek Loans Dispute.

It is announced that the arbitrators appointed to settle the dispute between the Greek Government and the International Financial Commission as to the method of calculating the plus values payable in 1927 have been unable to agree, and the President of Switzerland has, therefore, been invited to nominate a third arbitrator. In the meantime the Greek Government is to distribute 24 per cent. additional interest on forthcoming coupons and 8 per cent. additional amortisation as representing the amount not in dispute on plus values of 1927 distributable in 1928. Holders of the Four per Cent. Loan of 1889 and the Five per Cent. Loan of 1893 will consequently receive 8 francs respectively per bond of 500 francs on April 1 next as on October 1 last.

The Bulgarian Loan.

As anticipated, the proposals of the Bulgarian Government with regard to the reform of the National Bank were approved by the Finance Committee of the League of Nations, and consequently approval has been forthcoming for a loan of £4,500,000. A portion of this loan is to be issued in London, and it will presumably be dealt with by the same group which issued the Refugee Loan. For Bulgaria the loan is of the greatest importance, for while in recent years the country has been able to make fair progress towards stable conditions, financial difficulties have been a constant obstacle. But for the difficulties arising in connexion with the reform of the National Bank the loan would have been forthcoming long ago. This problem proved very difficult to solve owing to the unwillingness of the Bulgarian Government to transform the bank into an independent concern. The solution, as usually happens in such cases, has been in the nature of a compromise. The bank is to become a private company, but the date of its transformation is left for future decision between the Government and the Finance Committee of the League. In the meantime a Financial Adviser appointed by the League will have full powers in respect of the bank, and will continue in office until the reform is completed.

Other Near Eastern Loans.

Two other Near Eastern loans are on the tapis, one for Yugoslavia and the other for Roumania, both being primarily designed for the stabilisation of the currency. Whether both or either of the loan schemes will be submitted for the approval of the League of Nations is at present uncertain, but in view of the importance which has come to attach to the authorisation of that body it seems improbable that Geneva will not be concerned in the loans. In the case of the Roumanian scheme, should the League of Nations be approached it is possible that a difficulty may arise which will prove less easy of solution than that for which an issue has been found in the case of Bulgaria, for it is conceivable that the League might impose as a condition for granting the loan satisfaction of its requirements in respect of the Hungarian question. That possibility makes it at any rate conceivable that Roumania will endeavour to satisfy her financial requirements without approaching the League and will only go to Geneva if it proves impossible to obtain a loan on satisfactory terms through other sources. If a loan is vital for Bulgaria it is equally certain that it is at least as important for Roumania, for the lack of financial support is holding up the development of the country and preventing it from utilising to the full its important national resources. The transport question still has to be solved, and the fact that the railways are now in a worse condition than they were a few years ago indicates very plainly that, left to her own resources, it is impossible for Roumania to carry out the necessary improvements.

Southern Punjab Railway.

At the meeting of the Southern Punjab Railway the Chairman, Mr. James M. Rendel, was able to give a very satisfactory account of the company's working during the past year. The net receipts in India totalled Rs.71¼ lakhs, realising £528,500, and the company's net revenue for the year was £268,949, the disposable balance after payment of the Preference dividend being £176,949, as against one of £170,000 for the preceding year. In the course of his speech Mr. Rendel dealt with the question of the premium which the Secretary of State will have to pay in the event of his purchasing the line in 1929, and said it would not be safe to assume that the full premium of 20 per cent. will be earned on the whole of the capital expenditure. It has already been earned on the main line and the Ludhiana extension. As regards the other two branches he stated that the earnings of the Sutlej Valley Railway are improving most satisfactorily and that some part of the premium will probably be earned, and he indicated that there would be strong grounds in the case of this branch in asking for the full premium even if it has not been earned. In the case of the Jullundar Doab

branch, however, traffic returns have continued to be disappointing, and he expressed the view that hopes of any premium being earned must be abandoned.

The Rubber Position.

It cannot be said that the rubber position has improved in the past week. The price of the commodity has tended to decline, and has even fallen below 1s. per lb., while the share market can only be described as dull. This is, of course, the sequel to the Government's announcement of the inquiry into the industry, which has obviously been interpreted as foreshadowing the early end of restriction. I think it very far from certain that it means anything of the kind, and it is surely a reasonable supposition that a fairly long notice would precede a development of this importance; but it is a habit of markets to take the gloomiest view, hence the depression. Far too much has been made, in my opinion, of the losses sustained by the industry, for in the majority of cases they must represent paper losses only and will be automatically recovered as soon as the depression in the industry ends, and that will only be when the uncertainty arising from the Government inquiry is at an end. Various efforts have been made to obtain a statement from the Government which would throw light on the situation, but so far without avail. It is, however, unthinkable that in view of the importance of the industry from the national point of view that the state of uncertainty will be prolonged more than is necessary, and it is to be presumed that the inquiry committee will press on with its work with the utmost speed.

Commentator.

During the fourth quarter of 1927, the long process of readjustment and return to normal market conditions, which began in the latter half of 1926, was at last completed in the Greek lumber trade (says an American Consular report). Old stocks which had accumulated in the hands of lumber dealers as a result of the construction slump that followed the boom period of 1923 to 1925, were at last cleared, thus permitting the lumber market to adapt itself to the normal requirements of the consuming trade. A clear indication of this is the placing by lumber dealers of substantial orders for March, June, and September delivery, in contrast to the past policy of scheduling orders on the basis of the immediate requirements of the market. This in itself is a very significant development, because it marks the beginning of normal market conditions and the re-establishment of confidence.

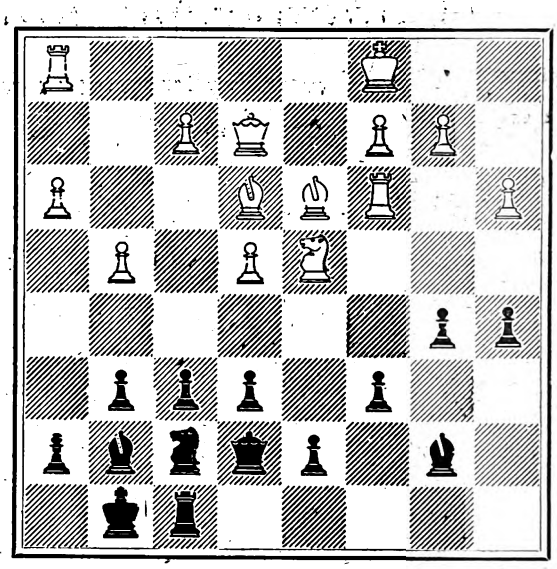
CHESS.

By "CARO-KANN."



This position occurred in a game in the first round of the Murton Cup handicap at the City of London Chess Club last week. Black, who conceded the odds of a Rook and move (the largest odds that are given), after some difficult passages has at length obtained a position holding out attacking possibilities. Black had to make his 24th move, and play proceeded as follows:—24, . . . P—Kt5; 25, PxP, PxP; 26, R—Kt3, P—QB4; 27, Kt—Kt5, R—R (!); 28, K—Q2 (K—Kt was, of course, perfectly safe), P—Q4; 29, P—R4, PxP; 30, B—QB4, Q—Q2 (ch); 31, B—Q4 (it would be difficult to find anything better now), B—R3 (ch); 32, P—Kt5, PxP; 33, P—QB3, PxB; 34, KtxP, PxP (ch); 35, K—B2, P—K6; 36, B—Kt5, B—K5 (ch); 37, B—Q3, and Black wins.

The production of the Anglo-Egyptian Oilfields for the week ended March 9 amounted to 4,599 tons.

It is stated from Allahabad that twenty-five Afghan boys have set out for Italy to be trained as air pilots for the Afghan Air Force.

Mr. J. H. S. Yates, of the Egyptian Irrigation Department, has returned to England from Egypt on retirement from the service of the Egyptian Government.

The production of crude oil by the British Burma Petroleum Company and the Rangoon Oil Company for the month of February amounted to 41,055 barrels.

Yugoslavia's exports of cereals in 1927 were: Wheat, 6,500 wagons, of the value of 200 million dinars; and maize, 22,000 wagons, of the value of 370 million dinars.

Owing to the exceptionally long drought, Yugoslavian exports of agricultural produce showed a great falling off in 1927 and the trade balance shows a deficit of 960 million dinars.

The areas sown in cereals in Roumania in 1927 (in hectares) were as follows:—Wheat, 3,101,153; rye, 281,255; barley, 1,764,260; oats, 1,084,408; rape, 36,949; peas, 11,946. The production (in metric quintals) was as follows:—Wheat, 26,344,648; rye, 2,426,349; barley, 12,499,157; rye, 8,518,514; rape, 209,876; peas, 108,033.

A message from Athens states that a general meeting of the shareholders of the National Bank of Greece has approved the agreements between the Bank and the Greek Government, regarding the latter's renunciation of the right to issue bank notes in favour of the bank, and the creation of an Agricultural Bank.

The net profits of the Central Bank of India for 1927, including Rs.4,31,653 brought forward, was Rs.20,50,051 (against Rs.23,62,973). Income-tax and super-tax absorbed Rs.1,00,000, depreciation in land and buildings Rs.1,00,000, and a final dividend at 8 per cent. per annum, free of tax, on 6,72,528 shares (making 9 per cent. for the year), left a carry forward of Rs.3,36,863. The directors have thought it necessary, in view of the year's working, to reduce the rate of dividend by 1 per cent., but they hope that the results of the current year will be more favourable.

Engineering Topics.

By G. B. B.

An instrument for measuring surface heat loss and a new type of bomb calorimeter were shown a few days ago by the Junior Institution of Engineers to a number of members of the textile industry, and it was generally agreed that their design and construction marked a great advance on the side of engineering work. The surface heat loss meter, by Foster, has been designed for ascertaining the amount of heat lost in boiler settings in factories and in similar work, and although it is already far in advance of anything of the kind that has yet been introduced its inventor considers it capable of still further improvement. The Scholes bomb calorimeter is also a novel piece of apparatus, constructed of stainless steel and on entirely new lines. It is in two portions, which are screwed together lightly by hand and are then a perfect seal. There is thus no need for any effort, as in other designs, to bring the two portions together and in sealing the interior. The apparatus has been designed for ascertaining, within very narrow limits, the calorific value of coal, coke, and other fuels and since the introduction of the method of purchasing fuel on a calorific basis is now so largely in vague an appliance of this kind should be of particular value. The Society also showed an analytic quartz lamp which was provided with a special glass colour filter of high efficiency. The lamp is designed to help in carrying out analyses of the fluorescent properties of various material as well as for detecting and determining the presence of various chemical bodies in solutions.

Steel or Timber.

For some little time past the British steel and iron trade has been under a cloud but it would seem that a new era of prosperity is in store for it, largely due to the progress which is being made in structural engineering. The steel trade is wise enough to recognise this and to do all in its power to stimulate the class of work. The steel makers are no longer content to sit down and supply steel to those who come knocking at the door to ask for supplies. On the contrary they are doing all in their power to ensure that steel is used for more and more purposes. In that way they should create an ever increasing demand.

Lord Furness, of the South Durham Steel and Iron Co., Ltd., said recently that this country is not developing the use of steel and iron to the extent that it is being done by America and parts of the Continent. In America, he said, which is a timber-growing country, practically all railway rolling stock is of steel, whilst we, a timber-importing country build practically all our railway coaches and wagons of wood! It does seem foolish on the face of it; so foolish that one could hardly credit the assertion were it not backed by the name of Lord Furness and were its truth not vouched for every time we look at a railway passenger or mineral train. I would urge our railway companies seriously to consider this matter especially having regard to the fact that they would derive the revenue on six tons of traffic—including raw materials—for every ton of steel used in the construction of such wagons.

Oil Engine Work.

What engineers would have thought, one hundred years ago, had they been able to hear Prof. C. J. Hawkes' remarks on the "Marine Oil Engine," one is unable even to begin to imagine. The whole trend of the paper was to show the great progress that has been made during the past decade or so, and in spite of the immense strides that have been made, the cry of the industry is still for more and more research workers and experimentalists. Incidentally I might say that not all the crying in the world for this class of worker will attract them in sufficient numbers unless adequate pay is offered. So many seem to think that research workers and experimentalists ought to deem themselves sufficiently well paid by being allowed to do the work! But to continue: Prof. C. J. Hawkes pointed out that a single cylinder experimental engine not only enables one to get first-hand knowledge and experience, but the plant is always there available for testing any modification found necessary. This appears to me to be much the same as saying that the possession of a single cylinder petrol engine, with side-by-side valves and, say, coil ignition would be a useful piece of plant to an experimentalist who desired to design an engine that would enable the car in which it was fitted to put up a higher speed than Malcolm Campbell did the other day, which, in plain English is rot! But I was not present when Prof. Hawkes made his remarks and as they sound so unlikely to have been uttered by any engineer, I can only come to the conclusion that he was mis-reported. But in case he was not, I would like to make it clear that we cannot hope to do good research work, to evolve ideas and by experimenting bring them to fruition and to beat other countries in the race for new adaptations and new developments unless our research workers are equipped, not with single cylinder engines, but with the finest tools and plant that money can buy.

The Egyptian Government has renewed its concession to the Compagnie Internationale des Wagon-Lits (International Sleeping Car Co.) until 1942 (says a Reuter message from Cairo). The company will now bring to Egypt two "Blue trains" with single-berth compartments for the Upper Egypt service and two "Golden Arrow" Pullmans for the Lower and Upper Egypt services.

Twenty-five Baghdad Stamps realise £120!

High prices are being paid to-day for rare Postage Stamps. Recently we obtained for a complete set of twenty-five "Baghdad" stamps £120, whilst a pair with part of overprint omitted realised £60. The original cost of these stamps in 1917 was less than half-a-crown!

Owners of rare stamps or collections wishing to realise successfully should consider the Bond Street Auctions. Patronised by a wealthy clientele, these weekly Philatelic Auctions will be found the most satisfactory method for the disposal of Single Rarities, General or Specialised Collections. Valuations and advice are supplied on request.

Serious collectors desiring to receive auction catalogues are invited to write to us.

Next Sales: March 19th, 26th, April 2nd, 16th and 23rd
at 2.30 p.m. each day.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Sensitive Paper, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of sensitive paper and chemicals for photostat for 1928-1929, June 4; calico and shash for map mounting, 1928-1929, June 11; and loose leaf post binders for 1928-1929. June 20.

Asphalt.—The Egyptian Ministry of Public Works invites tenders for the supply of asphalt required during the year 1928-1929. May 1. (D.O.T.)

Swing Bridge.—Tenders are invited by the Municipality of Alexandria for the construction of a metallic swing bridge over the Mahmudia Canal of which the free passage is 18 metres wide. June 5. (D.O.T.)

Oils, Etc.—A/Officer Commanding, H.M.'s Nile Yachts, Bulaq, Cairo, invites tenders for the supply of oils, points, timbers, cleaning articles, and electric articles necessary for the yachts during the year 1928-1929. April 14.

Clothing, Etc.—The Director of Equipment and Finance, Ministry of the Interior, Cairo, invites tenders for the supply of clothing and necessaries required for the Police and Ghaffirs in 1928-1929. April 15.

Motor Watering Carts.—The Municipality of Alexandria invites tenders for the supply of five motor-driven watering carts and street sweepers. March 20. (D.O.T.)

Stores.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of consumable stores required for 1928-1929, such as ropes, oils, paints, leather, ironware and buildings material. April 10.

Terminal Strips.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 2,000 terminal strips for cast iron terminal boxes, 7, 14, and 28 pair to drawing for telephones. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

Sheets, Etc.—The Ministry of the Interior, Egypt, invites tenders for the supply of sheets, napkins, blankets, towels, socks, etc., required by the Department of Public Health during the year commencing May 1, 1928, and ending April 30, 1929. April 5. (D.O.T.)

Paper and Stationery.—The Egyptian Ministry of Finance invites tenders for the supply of paper and stationery required during the year 1928-1929. April 12. (D.O.T.)

Pumping Equipment for Mex.—Tenders are invited by the Ministry of Public Works, Egyptian Government, for the supply and erection at Mex Pumping Station of pumping equipment. The contract includes two complete Diesel pumping units, the engines being of the vertical four stroke air injection type driving pumping of the horizontal, centrifugal, or turbine type and the supply of two 60 K.W. 110 volts Diesel electric generating auxiliary sets. April 14. (D.O.T.)

Brown Boots.—The Egyptian Postal Administration at Alexandria invites tenders for the supply of 2,400 pairs of brown leather lace-up boots. April 9. (D.O.T.)

Cotton Waste.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 140 metrical tons coloured cotton waste. April 10.

THE SUDAN.

Steamers' Stores.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of steamers' stores to the Egyptian Irrigation Department in the Sudan for the year 1928-1929 of the following general description: oils, greases, cleaning materials, packing and jointing, hemp and wire rope and yarn, lamps, small tools, wrought iron steel, copper, paints and enamel, brushes and brooms, bolts and nuts and pins, life buoys, piping, minor electric light spares. April 2.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

carrying 1st, 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvres and with Fans.
This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

Shipping Intelligence.

P. & O. AUSTRALIA SERVICE.

The P. and O. Company has arranged for all their mail steamers to call in future at Marseilles, thus providing a fortnightly service via that port, without transhipment at Colombo. The alternate departure from Marseilles will be made at 1 p.m. on Fridays, and during the greater part of the year, overland passengers will be able to travel from London to Marseilles by the P. and O. Special Train of restaurant and sleeping cars, leaving Victoria Station of the Southern Railway on Thursday afternoon.

The calls at Algiers programmed for this season will be made, but calls at Malta will, in future, be omitted by these particular steamers.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, March 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mokalla for Calcutta (Birkenhead, March 24).

Bibby Line.—S.s. Leicestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 21).

British India Line.—S.s. Domala for Bombay and Karachi (London, March 17); s.s. Morvada for Colombo, Madras, and Calcutta (London, March 24).

Cunard Line.—S.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, March 24); s.s. Bosnia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool March 31, and Swansea April 3).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 24); s.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila Liverpool, March 31).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, March 16); s.s. Trekieve for Colombo, Madras, and Calcutta (London, March 31).

Prince Line.—S.s. Korean Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, and Mersina (London, March 17); s.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 22).

Ellerman and Papayanni Lines.—S.s. Lesbian for Oran*, Algiers*, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool March 17, Swansea March 17); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 17); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume* (Liverpool March 17, Swansea March 22); s.s. City of Milan for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 24); s.s. Mardinian for Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 17). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The Asiatic Petroleum Co. have placed an order for half a million boxes of Welsh tinplates.

It is reported that the Yugoslav Government has decided to increase the duty on all flour imports.

The Yugoslav Consul in Buenos Aires has been raised to the rank of Minister to the Argentine Republic.

Messrs. Stern Brothers inform holders of Bulgarian Five per Cent. Loan of 1902 that "non-barre" coupon No. 51, due March 14, 1928, may be presented for payment at 49 per cent. of its nominal £ sterling amount. Coupons must be left three clear days for examination.

The Ottoman Railway from Smyrna to Aidin announces that the accounts for the half-year ended December 31 last, which have now been audited and passed by the Council, permit the payment of a further 2 per cent. (actual) on the Six per Cent. Second Debenture stock, making 6 per cent. for the year 1927.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 13.

The past week in the Stock Markets has seen a considerable degree of irregularity in certain sections and although gilt-edged stocks and home rails have been steady there have been many erratic movements in the industrial section. Rubber shares have developed further weakness, and the anticipated strength in the oil share market has not developed, though Mexican Eagles have shown great activity. The poor reception given to the Australian Government 5 per cent. loan, issued at 98½—underwriters were left with 84 per cent.—was not unanticipated, but dealings began at a comparatively small discount. Other new issues have been mostly oversubscribed. Several foreign loans are spoken of as impending, and Bulgaria is expected to be in the market quite soon.

The publication of the departmental estimates for the coming financial year discloses welcome economies in expenditure, but the cuts which have been made do not give grounds for hopes of any alleviation in direct taxation in the coming budget.

The Speculative Fever.

During the week there has been almost feverish activity in certain industrial shares. The public rushed to deal and prices fluctuated wildly. In particular, the shares of the talking machine group were conspicuous. The upward movement of prices, especially at the beginning of the week, undoubtedly lost touch with reality and speculators were largely indulging in nothing more than day-dreams. This is deplorable and when the inevitable day of reckoning comes tends to discredit, though unfairly, the Stock Exchange. There may be some sort of excuse for these outbursts of speculation, such as the high cost of living, but actually gambling on the Stock Exchange is the least promising method of supplementing one's resources. The average man rarely makes money by wild speculation, for he generally comes in too late. And even if prices are moving rapidly it is the professional who is in close touch with the situation, who mainly nets the profits. During the latter part of the week there were welcome signs of an abatement of the speculative fever, there being a tendency for interest to centre in motor shares and electricity supply stocks. It is necessary, however, to sound a note of caution regarding the motor industry, for conditions are most uneven and the position requires careful investigation.

The Reform of the Balance Sheet.

It is a healthy sign that there is an increasing tendency to be dissatisfied with the modern balance-sheet. The ranks of the critics have been reinforced by the addition of Sir M. W. Jenkinson, the eminent chartered accountant, who this week has read an important paper in which he made suggestions for reform in balance-sheets. Like the majority of critics, he is anxious to make the balance-sheet more useful to the investor. It would seem possible, says Sir M. W. Jenkinson, so to frame a balance-sheet that two points of particular interest are emphasised—namely, the amount of working capital available and the extent to which the share capital is represented by fixed assets, the value of which varies with the earning power of the business. He presented a model balance sheet designed to bring out these points and there can be no doubt that it represents a great advance upon the average balance-sheet with which the investor is familiar. Moreover, he said that there would appear to be no objection to explaining the basis upon which the value of certain assets had been ascertained, while he also suggested that it would be advisable to have periodical independent valuations made by experts. It is a distinct gain to the investor to have so eminent an accountant championing his interests and it is to be hoped that he will be successful in gaining the ear of those concerned, and especially of his professional colleagues.

Argentine Securities.

This week the principal financial and commercial institutions interested in Anglo-Argentine enterprise gave a banquet in honour of the first Argentine Ambassador to London and attention has thus been focussed upon the economic position of Argentina. The majority of qualified observers declare that Argentina has an assured future. "The progress of Argentina," says Lord Revelstoke, "stupendous as it has been, is still gathering way, to the benefit not only of the Republic itself, but of the world at large." Argentina is undoubtedly passing through a period of marked prosperity. Moreover, the outlook is regarded as favourable. In these circumstances, the investor may welcome a list of Argentine securities. The yields are not extremely generous, since prices have lately been advancing, but this is naturally a reflection of the country's favourable outlook. Among the longer-dated stocks are the 4 per cent. railway guaranteed recission bonds of 1897, which return £5 6s. per cent.; the final redemption date is 1954. A shorter-dated security is available in the 5 per cent. international gold loan of 1907, the final redemption date being 1944; the yield is £5 10s. per cent. The 5 per cent. Port of Buenos Aires bonds, finally redeemable 1949, return £5 9s. per cent.

BANKING AMALGAMATIONS IN YUGOSLAVIA.

The current issue of the Monthly Review of the Anglo-International Bank, Ltd., contains an interesting article on the two banking amalgamations which have taken place in Yugoslavia since the beginning of this year—the first being the conversion by the Wiener Bankverein of its Yugoslav branches into an independent Yugoslav bank, the Allgemeiner Jugoslavischen Bankverein, and the second being the amalgamation of the Croatian Discount Bank and the Croatian Slavonian Land Mortgage Bank. The article states:—

These two important amalgamations, in which English, Belgian, Swiss, Austrian, and Hungarian capital is interested, are of primary importance to the reorganisation and unification of the Yugoslav banking system. They may be described as the first essential step in that process of financial consolidation and concentration of capital which must be carried out before Yugoslav banking can be established on a healthy basis. Since the creation of the Triune Kingdom Yugoslav banking has suffered from several very obvious disadvantages. The incorporation of several provinces, which before the war had been under no less than four different administrations, into one State left the new kingdom with a whole series of provincial banks without a single institution which had any claim to be called a genuine Yugoslav bank. The Serbian banks were and still are small banks, which owing to the impoverishment of the country by the War have been unable to increase their capital in Yugoslavia in proportion to the dominant position which the Serbs hold in the Yugoslav State. The Croatian and Slovenian banks were richer and larger institutions but, because of their Budapest and Vienna connexions, they were not liked in Belgrade and in times of financial stress did not receive that support from the Yugoslav National Bank to which their importance to the country's interests entitled them. From the first days of the new State's existence it has been clear to the impartial observer that without a proper unification of these provincial interests the development of Yugoslav banking was likely to be seriously retarded. Unification, however, has been difficult to achieve, partly because hitherto there has existed a different system of taxation in the various provinces and even a different legal code, but, chiefly, it must be admitted, because the economic life of the country has suffered so severely from the racial rivalry between the Croats and the Serbs and from the attempt of both these Slav peoples to keep even their business activities in watertight compartments. To-day, these handicaps have been, or are in process of being, eliminated. The law for the unification of taxation has already been passed by the Skupshtina. Unification of the legal code is not likely to be long delayed, and, if the relations between Serb and Croat and Serb and Slovene are not yet as good as they might be, economic necessity is forcing all the Slav units of the population into a closer co-operation. In this necessary work foreign capital can play an effective part. It is no secret that during the past two years the Yugoslav banks have been passing through a difficult time and that many of them have suffered severe losses from the deflation of the dinar. These losses have been due to the same causes as in other countries where a heavy inflation of the currency has taken place. In the case of the Yugoslav banks they have been aggravated by a desire to build their Rome in one day and by the rash investment of large sums of money in new and uneconomic home industries. In consequence a large portion of their capital has become immobilized.

The two amalgamations to which we have referred are the first step towards the re-organization of the Yugoslav banking system. They are the more welcome because they coincide with a period when a reconstructed Yugoslav industry is just beginning to emerge from the depression of the last three years. The outlook for the future is by no means unpromising. Yugoslavia is a country that is richly endowed with natural resources. It is inhabited by a hard-working and virile population, ninety per cent. of which belongs to a common Slav stock speaking the same language and, in spite of centuries of separation, having the same interests and the same ambitions. It is a population, too, which is far more compact and far more united than a superficial knowledge of the political situation might lead one to believe. For the successful development of the country's economic resources all that is required is stabilization and a sound financial administration. When these requirements have been fulfilled, the foreign capital, which the country is seeking, is not likely to be withheld. Already the Yugoslav Government is tackling the problem of stabilisation with the necessary energy, while during the past two years the various industries of the country have been subjected to a rigorous reconstruction. It is now the turn of the banks to put their house in order and by a concentration of their resources to provide the industry and the agriculture of the country with the credit facilities which they require. The recent amalgamations show that this process of reconstruction has already begun. If they can pave the way for further amalgamations and for the creation of Yugoslav banks in place of Croatian or Serbian or Slovene banks; if they can build a bridge between Belgrade and Zagreb, they will have accomplished the most arduous and necessary step towards the reorganisation of the Yugoslav banking system.

THE AGRICULTURAL BANK OF EGYPT.

NOTICE IS HEREBY GIVEN that the TWENTY-FIRST ORDINARY GENERAL MEETING of The Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo, on Wednesday, the 11th April, 1928, at 4 o'clock p.m. for the purpose, among other things, of:—

Receiving the Directors' Report;
Receiving the Auditors' Report;
Approving the Accounts for the period ended 31st January, 1928;
Declaration of Dividends;
Election of Directors:
Election of Auditors and fixing their remuneration;
And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 31st March, 1928), when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

In Egypt—At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.
In London—At the National Bank of Egypt, 6 and 7, King William Street, E.C.4.

P. HORNSBY, President.

Cairo, 12th March, 1928.

The National Bank of Egypt proposes a final dividend of 13 per cent., making 17 per cent. for the year.

Mr. Ernest Cook has ceased to be a partner in the business of Thos. Cook and Son, Ltd., and Mr. H. H. Spiller and Mr. H. W. Hill have ceased to act as directors. Lord Dalziel has joined the board.

M. Liouba Stetchkovitch, Deputy-Governor of the National Bank of the Kingdom of Serbs, Croats, and Slovenes, who has been acting Governor for some time, has been appointed Governor of the bank by Royal Decree.

The Eastern Bank recommends a final dividend of 5s. a share, less tax at 3s. 8.657d., after allowing for relief in respect of Indian taxation, making 9s., placing £25,000 to reserve fund, £5,000 to premises account, and carrying forward £40,351.

JOHNSTON LINE
Mediterranean, Black Sea and Danube.
REGULAR SAILINGS from:

Near East Markets

JAFFA ORANGE SHIPMENTS.

The Empire Marketing Board reports that shipments of Palestine oranges were held up by bad weather during the latter part of February, but four steamers left Jaffa between March 1 and 4 with over 100,000 boxes for various parts in Great Britain.

Total shipments up to March 4 amounted to 1,220,000 boxes, to which should be added transhipments estimated at 150,000 to 200,000 boxes, as compared with a total of 1,282,000 at the corresponding date last year. It is estimated that 350-400,000 boxes still remain to be shipped to all destinations, as compared with some 500,000 boxes at the corresponding date last season.

SUDAN GUM ARABIC TRADE IN 1927.

A comprehensive review of the Sudan gum arabic trade in 1927 has been issued by Messrs. Boxall and Company, of Khartoum, from which we take the following:—

One is tempted to treat the exports of any one year as roughly indicating the gum arabic crop, though an estimate is usually made of stocks at the end of the year, which over the past few years has varied between, say, 500 and 1,500 tons. The clear up of practically all stocks of old crop gum at the end of 1927, together with a very close study of arrivals figures published by the Central Economic Board and market figures kept by merchants, in the light of local conditions, shows how fallacious the assumption has been.

As regards Talh we can safely reckon that the entire crop is shipped from year to year, because little or no stocks are carried over at the end of any one year. The exported gum dust, classed with Talh for Customs' purposes, is so small that it is hardly worth considering. The exports of Hashab (including bleached) for 1927 were roughly 19,150 tons against 20,900 tons for 1926, a difference of 1,750 tons; but who would suppose the difference in arrivals amounted to about 6,000 tons, which is shown by the following figures:—

	1926.	1927.	Plus or Minus.
Kordofan (including Tendelti)	17,150	13,300	— 3,850
Other Hashab: Gezira, Gebelain, etc....	4,700	3,200	— 1,500
Kassala (Gedaref Hashab)	2,750	2,100	— 650
Tons	24,600	18,600	— 6,000

At a first glance these differences appeared not only astounding but depressing too, because it seemed the carry over from the large crop of 1926 could not have been shipped in 1927 extra to the arrivals of that year, but the following approximate calculations put a better face upon matters by bringing the stocks at the end of 1926 to no more than 2,900 tons and ultimately agree with the known lack of stocks of old crop gum at the end of 1927. Whilst various figures are estimated and can only be approximate, it is not to be supposed they are merely guessed or altered to get a working result. For instance, the figure for loss in weight through evaporation of moisture has taken the peculiarities of various districts into consideration, whilst loss in gum due to cleaning both Hashab and Talh, bleaching, etc., has all been allowed for.

1926.—Hashab stocks at end of 1925, 400 tons; arrivals of Hashab in 1926, 24,600 tons; total, 25,000 tons. Exports Hashab and Bleached, 1926, 20,900 tons; loss in weight, etc., on Hashab, 1,200 tons; stocks December 31, 1926, 2,900 tons; total, 25,000 tons.

1927.—Hashab stocks at end of 1926, 2,900 tons; arrivals of Hashab in 1927, 18,600 tons; total, 21,500 tons. Exports Hashab and Bleached, 1927, 19,150 tons; loss in weight, etc., on Hashab, 1,000 tons; old crop stocks for bleaching, 300 tons; new crop gum in course of transit and awaiting shipment, 1,050 tons; total, 21,500 tons.

The arrivals for 1926 might be somewhat incomplete, and if so there is room to enlarge slightly the figure for new crop gum at the end of 1927 (gum in transit and awaiting shipment) beyond the figure named without upsetting the known facts that whereas there was a large crop and large stocks in 1926, there were practically no stocks of old crop at the end of 1927.

With a large crop expected for 1928 it is satisfactory to know that all old stocks were cleared at the end of 1927.

Distribution of Exports.

Comparison of the distribution of the exports for 1926 and 1927 might be of interest, all markets showing a decline with the exception of Germany and Belgium.

	1926.	1927.	Plus or Minus.
Great Britain	5,962	4,402	— 1,560
United States of America	5,169	4,358	— 811
Germany	2,441	3,641	+ 1,200
France	2,513	2,258	— 255
Italy	1,772	1,483	— 289
Belgium	1,337	1,680	+ 343
Other countries	3,551	3,438	— 113
Total tons	22,745	21,260	— 1,485

As, however, there was no more old crop gum available at the end of 1927 the exports in the latter year could not be increased in the total whatever the demand might have been, but on the other hand there was no real shortage of supplies as against demand, otherwise we should have had higher prices.

It may not be generally realised that from 1923 onwards gum production has increased over 50 per cent. on the previous five years. It is this increased production which has caused such falling levels of prices, but *vice versa* one might say it is now obvious the low prices were essential to the export and consumption of such large crops.

Average price at El Obeid:—1918, P.T.148; 1919, P.T.115; 1920, P.T.143; 1921, P.T.76; 1922, P.T.104; 1923, P.T.134; 1924, P.T.109; 1925, P.T.105; 1926, P.T.73; 1927, P.T.61.

The fall in price averages would have been more regular and we should not have had such a high average price in 1920 except for an exporter, now out of business, buying to make large stocks, and it was those stocks which afterwards depressed the average in 1921. Nor would 1923 have had such a high average on a big crop except for the three previous years' average shortage. It was in the 1923 season that prices fell from 165 piastres in December, 1922, to 110 piastres in December, 1923.

Great credit is due to the Government and particularly those officials who have been instrumental in making such increase of production possible, and that such large crops have all been exported affords striking evidence of the expansion of demand. What remains most unsatisfactory, however, is that the whole fall in prices has had to be borne by the native collector and at times very largely by the exporter here and the importer abroad before the prices paid to the native on a falling market could adjust themselves whilst the Sudan Government have always refused to reduce either royalty or railway freight charges.

The supplies which might well come from the Sudan could undoubtedly be developed to an extent almost as unlimited as the demand—if only a natural product had a price more in relation to its natural cost and so enabled it to compete better with dextrin and gelatine.

The expenses on gum arabic since the War have gone up nearly £10 per ton, of which only a small portion is extra sea freight and the rest Government charges. So far we have hoped in vain for a gradual return to pre-War charges, which were already high on gum arabic in those days and even then due to the forced necessities of a Government who wanted money in an extremely poor and undeveloped country.

Crop Prospects for 1928.

What are the crop prospects for 1928? With cotton we know approximately the extent of the area under cultivation and a pre-

diction may be ventured with comparative safety, but it would be exceedingly dangerous to do so in the case of gum arabic, in view of the many conflicting factors bearing on production. Just prior to, and early in the season, it looked as if the crop would at least be late, but there is no doubt that ideal conditions for production have been created by a period of far hotter weather for the time of the year than has been previously known, following ample rains. This caused arrivals to be abnormally high and, provided we do not get cold weather in March to restrict the second tappings, or very early rains to shorten the period of exudation, the probabilities are that we shall have a very large crop. Weather prophets in the Sudan are, however, about as trustworthy as elsewhere.

We have hitherto believed that comparatively low prices paid to the native collector against former years have an important influence on production and that a high price for dura in years of diminished crops compelled him to earn a living by collecting gum. Whether the low level of 60 piastres per kantar at El Obeid may be considered sufficiently remunerative is difficult to say, owing to varying distances and differing stages of development of the natives, but one thing is certain and that is 60 piastres is an extremely low average —even for gum before the War, though the sugar, tea, and cotton goods which the native buys cost him about double pre-War prices.

The value of gum overseas created by demand and supply must settle the problem of price at El Obeid until, of course, after deducting the cost of internal transport a stage is reached when the tapping and collection of gum is not even worth while to a Sudan native. An abundance of dura tends, undoubtedly, to make the native of Khartoum and the Gezira less inclined to work, but we are not sure whether this influence has the same effect on gum collection, due, we assume, to most of the crop being gathered under a kind of community profit-sharing basis which prevents any actual wage factor on which to base our calculations.

Selling prices, based on Chamber of Commerce Journals, in 1927 reached the low average of 39s. 3d. for Kordofan Natural c.i.f. Continental ports, and fluctuations during the whole twelve months seldom exceeded at any time £1 per ton.

Sudan exporters and buyers overseas should not forget in their considerations as to what limits prices are likely to fall under present circumstances that:—(1) Since 1914 expenses have gone up nearly 10s. per cwt., of which only a small portion is extra sea freight, the balance being Government charges. (2) If the native is paid 14s. per cwt. (P.T.60 per kantar) at El Obeid (from which must be deducted camel or other local transport), Government royalty, railway freight, and export duty amount to 18s., and this is by no means all that the Government gets out of the gum business. (3) If there is no known absolute rock bottom basis of price lower than which the native will not go or below which supplies will commence to be restricted, we must already be very near that level and we might well be there even now.

In a footnote Messrs. Boxall and Company call attention to the fact that at the time of writing prices at El Obeid have reached the almost unprecedented level of 52 piastres (out of which camel or other local transport must be deducted), which is equal to £11 17s. 5d. per ton of 1,000 kilos and to this is added Government charges of royalty, railway freight, and export duty totalling £17 6s. 2d. per ton of 1,000 kilos.

DEVELOPMENTS IN PALESTINE.

Recent reports from Palestine indicate an improvement from the crisis that prevailed in 1926 and the greater part of 1927 (says an article in the United States "Commerce Reports). Industrial activity has increased, and the orange crop is more satisfactory. The unemployment problem, however, is still serious, in spite of the increased industrial needs and relief afforded through additional requirements of labour for construction work on the new Rutenberg hydro-electric project.

The country had made rapid progress during the period 1921-1925, and the reaction which set in during the latter year was a natural result of over-expansion. This reaction, however, has not been without certain beneficial effects. It has eliminated the less stable factors from the economic structure and has resulted in a general readjustment of the country to its increased population and changed conditions, thus paving the way there for further constructive work.

The population of Palestine at the end of 1926 was estimated at 890,000, as compared with 737,000 in October, 1922. This increase created an urgent demand for housing and gave impetus to certain small industries, which provided employment for many immigrants. When the reaction set in during 1925, however, the labour released from these activities could not be absorbed by agriculture, which had not progressed so rapidly as had industry. Moreover about this time the immigration into Palestine was at its peak, so that a rather difficult situation developed—unemployment increased, the purchasing power of the people declined, and industries dependent upon the home market reduced or ceased operations. This situation marked the beginning of the readjustment that has continued through 1926 and 1927.

Funds from abroad had contributed largely to the rapid development of the country, so that a diminution of this supply during the past two years has had an important effect on the credit situation. Money has been tight and the banks have adopted a very conservative credit policy, a condition that has resulted in numerous failures of concerns established during the peak of prosperity. These failures, however, are not an accurate index of general conditions in the country, since these concerns were the first to feel the effects of depression, whereas the more stable institutions have been able to survive the reaction.

Agriculture.

Of the total area of approximately 9,000 square miles, about one-third is barren land capable of little, if any, agricultural development. Fully 1,800 square miles more are of questionable agricultural use. The remainder, an area of somewhat more than 3,000,000 acres, has definite agricultural possibilities, but in some large sections irrigation and other more or less expensive operations are necessary for profitable farming.

The chief development in agriculture has been the settlement of Jewish immigrants under the auspices of the various organisations. Large sums have been spent for the purchase of land for settlement purposes, considerable areas of swamp have been drained, and agricultural experiment stations have been established; all this has resulted in the introduction of new crops. A special study of livestock husbandry has been undertaken, with a resultant improvement in the care of animals and their breeding; also, an educational campaign has been launched for the purpose of introducing modern methods of poultry farming. A survey was also made of soil conditions, fertiliser requirements, and underground water supply, with a view to placing agriculture on a more scientific basis.

Manufacturing is relatively unimportant in Palestine. A few industries have been introduced, with varying success; but, temporarily at least, the lack of raw materials and the absence of coal for fuel handicap the establishment of manufacturing on a large scale. The fuel need, however, is expected to be substituted by power from the proposed hydro-electric projects under the Rutenberg scheme. Among the older and more important industries of the country may be mentioned flour milling, production of silicate bricks (made of sand and lime) vegetable oils and soap, cement, wine, cigarettes, etc.

The mineral resources of the country have not been fully investigated, but partial surveys indicate that the only potential mineral wealth is contained in the waters of the Dead Sea. The deposits of this sea represent a valuable asset from a commercial point of view, and negotiations for their exploitation have been carried on for some time.

The economic development of the country has been accompanied by a general improvement and extension of communications. There has been no new railway construction of any importance, but the existing roads and rolling stock have been improved considerably. The net work of motor roads have been so extended that good roads are now available to all points of interest in the country, including Bethlehem, Hebron, Nazareth, the Sea of Galilee, Nablus, Jericho, the Dead Sea, the River Jordan, Es-Salt, Amman (Transjordania), Damascus (Syria), Tyre, Sidon, Acre, Haifa, Jaffa, and Tel-Aviv. The Government's programme of road construction anticipates further extension to all centres of population in the country.

The streets in the principal cities, particularly in Jerusalem and Jaffa, are not in a satisfactory condition, but contracts have already been let for macadamizing the main thoroughfares. It is planned to resurface all the city streets in the near future.

Company Meetings.

SOUTHERN PUNJAB RAILWAY.

The ordinary general meeting of the Southern Punjab Railway Company, Ltd., was held on March 7 at the company's offices, 36, New Broad Street, E.C. Mr. James M. Rendel (the Chairman) presided.

The Chairman said:—I have now to submit to you the report and accounts for the year ended September 30, 1927, which I presume that you will, as usual, take as read.

I am sorry that we miss the presence here to-day of two valued colleagues, Mr. Henry Gladstone and Sir Ernest Bell. Mr. Gladstone is in the south of France, and I feel sure that we should, none of us, wish him to cut short a holiday of which on grounds of health he is in need. Sir Ernest Bell is in India on business of other railway companies with which he is connected and is not expected home till the end of this month. At our request he has undertaken, before he returns, to pay a visit to our line and to confer on the spot with out agent and with the authorities of the North-Western Railway on various matters of interest which can be dealt with in this way more conveniently than by correspondence.

Turning to the accounts you will see that we have had another very satisfactory year. The net receipts in India amounted to over Rs.71¼ lakhs, realising at an average rate of 1s. 5 29-32d. to the rupee a sterling sum of £528,500. Out of this the Secretary of State is entitled to no less than £180,394 as his share under our contracts, and after providing for this, as well as for Indian taxes, interest on debenture stock, and all other liabilities and charges, bringing in the income of our investments, and making all necessary adjustments, we have £268,949 as the net revenue for the year. After payment of the dividend on the preference stock there is a disposable balance of £176,949 as against a corresponding balance last years of £170,006.

In dealing with this surplus we are following the same conservative policy as governed us last year. The Secretary of State has the option, under his contracts with us, of buying us out at the end of next year. Will he exercise it? We do not know. Looking to what has happened in the case of the Delhi Umballa Kalka Railway, the East Indian Railway, the Great Indian Peninsula Railway, and the Burma Railways, there is perhaps good reason to expect that he will. On the other hand, as you know, it is often the unexpected that happens. We must accordingly be prepared for either alternative. If he decided to buy us out at the end of next year, you will not have long to wait for anything you do not get now. If, on the other hand, we are left in possession for another five years or more, a situation will arise in which we shall, I am sure, be glad to find ourselves from a financial point of view in as strong a position as possible. We think it prudent, therefore, at the present juncture not to increase the distribution beyond what may be regarded as the customary and very satisfactory rate of £14 per cent. This absorbs £140,000, of which £60,000 has already been distributed by way of interim dividend, and leaves a balance of £37,000 to be otherwise disposed of. Out of this we have decided to place £25,004 to reserve, and, in view of the possibility of the Secretary of State acquiring the company's lines in 1929, to earmark that sum under the title of "Staff Compensation Reserve," so as to enable us to make some provision for men who have served you faithfully for many years, in India as well as England, and who otherwise would be turned adrift at a time of life when it would be difficult, if not impossible, to find other suitable employment. We feel quite sure that this is a duty which you will expect us to discharge, and that you will be glad to think that by acting now you are relieving what must be a very natural anxiety on the part of those concerned. In setting aside this sum we do not mean that we ascertained with precision the exact amount that will be needed. That is hardly possible at this stage. We believe, however, that it is approximately sufficient for the purpose intended, and that it is unlikely that we shall have to ask for any large addition to it.

After setting aside this amount there remains a balance of some £12,000, which will go to increase the "carry forward," bringing it to nearly £70,000.

Let me, in conclusion, remind you of what I said last year, and the year before, on the subject of the premium which the Secretary of State will have to pay us in the event of his purchasing the line in 1929, viz., that it is not safe to assume that the full premium of 20 per cent. will be earned on the whole of the capital expenditure. That it will be fully earned on the Main Line and Ludhiana Extension expenditure is certain. It has, in fact, already been earned. The position on the other two branches is different. The earnings of the Sutlej Valley Railway are now improving in a most satisfactory manner. Some part at least of the premium, therefore, may be, and probably will be, actually earned. It is, however, becoming increasingly evident, in view of the development that is now going on, that had the line not been dismantled for War purposes and put out of commission, so to speak, for a period of seven or eight years, the average for the five years 1925-1929 on which the calculation depends would have reached a point sufficient to secure the full premium of 20 per cent. It may be, therefore, that when the time comes we shall have ground, and perhaps very strong ground, for asking the Secretary of State to pay us the full premium even if it has not been earned.

As to the Jullundur Doab Branch, the traffic returns continue to be so disappointing that all hope of any premium being earned by December 31, 1929, must, I fear, be abandoned and any estimates which include an allowance for premium must in this respect be revised.

The report and accounts were adopted.

NEWS FROM ALL SOURCES.

The Turkish Council of Ministers has approved the appointment of honorary Consuls in Malta, Birmingham, Cardiff, Dublin, Sheffield, and Glasgow.

The two Yugoslav submarines (Hrabri and Nebojsa), with the parent ship (Hvar), which have been in England nearly four months, left Portland on March 11 for Gibraltar.

The Metropolitan Museum of Art, New York, holds its first auction shortly to dispose of 2,500 art objects from Cyprus, covering the period from 3000 B.C. to the Christian era. Many of the articles are duplicated in the museum's collection.

Lord Lloyd, British High Commissioner in Egypt, and Lady Lloyd addressed a meeting of the British community in Alexandria on March 6 in favour of the appeal which has been made for £E120,000 to £E150,000 for the foundation of British schools in Alexandria, where they are much needed.

A private meeting for the non-party committee for the study of Colonial Affairs was held in the rooms of the Empire Parliamentary Association, Westminster Hall, on March 7, when Major W. H. Flinn, Commissioner for Cyprus, delivered an address on "Cyprus." Sir Robert Hamilton presided.

M. Sorkovitz, agricultural expert to the Yugoslav Government, arrived in Cairo at the beginning of March in order to study the conditions of the Egyptian cotton market and of its cultivation. He proposes to visit the interior and will remain in Egypt till the end of the cotton season.

It is announced from New York that a contract to build 150 miles of railway for the Turkish Government, involving a total expenditure of nearly 60,000,000 dollars (£12,000,000), has been secured by the Fox Brothers International Corporation of New York. The contract is said to include the construction of breakwaters, piers, and modern docking and loading facilities at the ports of Mersina, on the Mediterranean and Samsun on the Black Sea.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 7:—

Egyptian Futures.—Sakel Contract.—This market has shown considerable strength throughout the past week, higher Alexandria advices and increasing trade support encouraging further speculative and Continental buying, to-night's close showing a gain of 81 to 103 points for near and 71 to 80 points for distant positions on the week. A feature that has had considerable effect on the local outlook has been the strength displayed by the current position; when we last wrote March stood at a discount of about 10 points with May. Only a moderate tender was experienced on the 1st instant, and those manipulating the position quickly took advantage of this to force the market. They met little opposition and quickly ran the near month to 12 points premium over May. For some little time we have drawn attention to what might happen should anybody ask for a quantity of docket cotton, and our ideas have been fully borne out by what has recently taken place. It now appears probable that, given any sort of trade encouragement that all local old crop positions will utimately go to a premium with new crop months. Trade reports continue to be of quite a satisfactory character, although it is still noticeable that rapid advances, such as have been experienced during the past two or three days, tend to check business and cause would-be buyers to withdraw from the market for the time being. As far as the fine spinning section is concerned, we still consider that there are more grounds for optimism in the outlook than have been discernible for several months. We are rather at a loss to explain the strength recently shown by Alexandria. One would have thought from the political crisis and the fact that the quality shown by the early arrivals of Sudan completely refutes the alarmists' rumours circulated two or three weeks ago, that the overseas market might have shown some reactionary tendency, but this has been far from the case, as constant appreciation has taken place. Much of the firmness is no doubt due to stocks at the other side being well held and reports coming to hand of considerable resowing necessitated in the Delta, owing to unfavourable weather, not to mention the healthier outlook encouraged by an improved export demand. During the recent days the advance has been very rapid, and this in itself calls for a certain degree of caution on the "long" side. We still, however, have a favourable opinion of the outlook and on this account would advise purchases on any set-backs.

Upper Contract.—Quite a fair business has been done in this option during the past week and the undertone displayed throughout has been very steady despite the American markets showing a reactionary tendency at times. Near positions particularly appear to be firmly held and only a very small tender was made on the first of the month. We are rather of the opinion that the spring and summer options will develop considerable tightness later on and advise those that have hedges to transfer them to new crop options at present differences. Trade reports have been more favourable and the local stock of tenderable grades has been considrably reduced during the past two or three months. We still maintain a favourable view of the outlook and are prepared to advise purchases on any reactions.

Egyptian Spot.—Business in spot Egyptian has been just a little quieter this week, but prices have naturally followed the course of the futures market, with the result that quotations to-day (particularly for Sakel cotton) are substantially higher than they were a week ago. Alexandria has been mainly responsible for the rise, apparently acting on the assumption that this year's Sudan crop is a failure, an assumption which appears to have been based on nothing more substantial than rumour. The sudden and uncalled-for rise in the Sakel market, coinciding with the arrival of the first shipments of Sudan cotton, has had the effect of transferring the interest of spinners very largely to the latter cotton. The daily inquiry has shown little change. Sakel at from 10d. to 14½d. has been in fair request, and some interest has again been shown in cotton at from 150 to 200 on. Cotton at "50 off to 100 on" has been rather neglected, and the best qualities of Sakel also have met with but little inquiry. Uppers at from pass to 25 on contracts have again been in good request, but purchases have been on only a moderate scale. A small inquiry for Pilion at from 13½d. to 14½d. has been in evidence, but there is little offering at these prices. Other growths have been neglected.

The early shipments of Sudan Sakel have proved to be fully up to the average of last season's No. 1 quality and have sold freely. The local stock should be increased by further heavy arrivals during the next day or two, and a good selection will then be available for spinners. Speculators who have placed too much reliance on the reports of deterioration circulated a few weeks ago are likely to be disappointed.

A fair amount of c.i.f. business has been transacted, and forwardings to spinners for the week ended the 2nd inst. were returned as 9,400 bales Egyptian and 806 bales Sudan. Estimated spot sales for the week, 1,900 bales Egyptian and 1,750 bales Sudan. Quotations of Sakel have been advanced by 75 points (Extra fine 65 points); Uppers and Pilion are 40 points higher. F.G.F. Sakel, 18.90d. F.G.F. Upper, 13.75d. F.G.F. Pilion, 14.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 1, state.—

Since our last report the futures market has been very active and fluctuations have been wide. The week's summary of price movements is as follows:—Sakellaridis: March, 34.95 dollars, 0.32 dollars up; May, 35.43 dollars, 0.48 dollars up; July, 35.78 dollars, 0.48 dollars up; November, 36.18 dollars, 0.57 dollars up. Ashmouni: April, 25.43 dollars, 0.03 dollars down; June, 25.67 dollars, 0.03 dollars down; October, 25.72 dollars, 0.06 dollars up.

Sakel.—The feeling at the beginning of the week was optimistic and March went as high as 36 dollars on short covering as a result of persistent reports of damage to the Sudan Sakel crop. The rapid rise of prices proved to be very short-lived; later reports indicated that the Sudan crop would, after all, probably turn out as large as last year and, with the local political situation somewhat unsettled, speculators took fresh courage and sold short, bringing prices quickly down to about 34.50 dollars. The market has reacted slightly to-day and prices have recovered about ½ dollar from the low level of the previous day. The demand from abroad has been fairly good and, but for the unsettled state of the market, we think that the turnover would have been still better. Most of the purchases have been for prompt shipment, and the spot market has, accordingly, been correspondingly active. The local statistical position shows some improvement and the Alexandria stock is now down below 3,000,000 kantars.

Uppers.—This market has moved in sympathy with Sakel but the fluctuations have been less violent. The difference between the two varieties has widened still further and now stands at about 9½ dollars for the near positions.

The week's receipts amount to 109,647 kantars against exports 145,367 kantars; the stock in Alexandria stands at 2,985,071 kantars.

Spot: During the past week a slightly better demand has appeared but Minet el Bassal continues quiet. Sales amount to about 13,400 bales, of which we estimate 5,850 bales Sakellaridis, 6,050 bales Ashmouni and Zagora, 1,275 bales Pilion, and 225 bales other varieties. It is to be noticed that in all varieties the basis has

Digitized by Google

stiffened steadily during the past week or ten days for every grade except the best and there is no pressure to sell anywhere.

Sakellaridis: A moderate business has been done covering all grades. Offerings are not large and holders are very difficult to deal with. Spot differences are very firm and inclined to stiffen.

Ashmouni and Zagora: Rather more business has been done than last week. All styles have changed hands, but the medium qualities constitute by far the greater proportion of the inquiry. Spot differences are somewhat dearer for the medium qualities, which are very firmly held, and unchanged for the better grades.

Pilion: Has been in good favour with buyers and a very good business has been done, covering all grades, at about last week's differences.

Other Varieties: In White a fair business has been done. Spot differences have hardened somewhat. A few bales of Maarad have changed hands. Other growths are neglected and no business is reported.

Up-country: Spot business has again been negligible. The factories are working off their stocks; some of them in Upper Egypt have already closed down and it looks as if the end of the month will see many of the Lower Egypt factories also finished for the season.

Crop, 1928.—Weather conditions have been unfavourable during the past week both in Lower and Upper Egypt. Temperatures have been very low, rains have been frequent and cold strong winds have been blowing. Ploughing and planting have been seriously interrupted; fields already planted have been damaged and some resowing will be necessary. Reports from up-country indicate that the acreage which will be put down under Sakel will be slightly below last year, whilst the reduction in the area under Pilion will be considerable; the acreage lost to these two varieties will mostly go over to Zagora and Nahda. The law restricting the acreage to one-third of the cultivable area is appearently being strictly enforced.

FURS IN GOOD DEMAND.

The London Fur Trade Association (Inc.) reports that the results of the London winter raw fur skin sales reflect the general improvement of business in the home market and throughout the European fur trade during the past year. Values generally have been fully maintained, despite the continued depression of business in America. Fine furs, which were in moderate supply, again sold well, registering advances in most instances. The offerings of Australian and American staple furs, although on the whole substantial, met with good competition, and sold surprisingly well. On the other hand, there was little interest in Russian squirrels, which were neglected by American buyers and limited too highly for European consumption. Prospects for the maintenance of the present firm tone appear to be good, as buying has been mainly to replenish stocks, and the position of European trade appears to be healthy. It should be recorded, as a matter of interest to the trade in general, that the Hudson's Bay Company's new fur trade saleroom was used for the first time at these sales.

According to *The Times* Kabul newspapers print a protest from an Afghan trader against the refusal of the Soviet Government to remit transit charges on Afghan trade passing through Soviet territory. The newspapers urge that the Ministry should not agree to any trade agreement with Moscow until Afghan traders obtain their rights, and a boycott of Soviet trade is advocated as a means of bringing pressure to bear. A Soviet trade agent recently arrived at Mazarisharif to deal with this difficulty and persuade Afghan traders to enter into commercial relations with Soviet merchants.

Notes of the Week.

A New Egyptian Ministry.

Nahas Pasha, the leader of the Wafd, has finally accepted office as Prime Minister, and the composition of his Cabinet has been announced. The coalition between the Wafd and the Liberals is maintained, but only two members of the new Government, both of them Ministers under Sarwat Pasha, belong to the Liberal Party. In his statement of policy to the Legislative Assembly Nahas Pasha had no difficulty in satisfying his most extreme followers, without saying anything to which serious exception could be taken in other quarters. The Cabinet, he declared, did not intend, in taking office, to accept or admit anything encroaching on the complete independence and sovereignty of the country. He was certain that they would reach a solution which would secure the independence of Egypt and provide for British interests where they were consistent with that independence. It is to be hoped that no hurried decision will be taken regarding the attitude to be adopted on the subject of Anglo-Egyptian relations. The fact that, after a careful study of the position, which had not been made when the rejection of the draft Treaty was decided upon, the Wafd leader has seen fit to accept the responsibility of office is of good augury. Five attempts to arrive at a solution of the matters at issue between Egypt and Great Britain have been made and have failed. The last came nearest to a settlement, and if a sufficient interval is allowed to elapse for reflexion on both sides, the sixth attempt may prove successful.

Roumania and Hungary.

The latest move on the part of the Council of the League of Nations in the dispute between Hungary and Roumania has been taken very seriously in Roumania. The whole question is so complicated and the controversy so long-drawn that clear thinking on the subject is difficult for both parties. There is, however, no need to accuse the Council of worse mistakes than it has actually committed. The charge is brought against it of having gone back upon its decision of six months ago. This, however, it cannot be said to have done. In September last the sub-Committee of the Council, having failed to persuade the two parties to come to a compromise, called upon six lawyers to advise it upon the legal issues involved. The lawyers laid down three principles which in their opinion ought to govern any attempt to settle the dispute. These principles the sub-Committee asked Roumania and Hungary to accept, and passed them on to the Council with certain recommendations as to the course to be pursued in the event of either of or both the parties refusing to accept them. The Council was not able to adopt these recommendations, and postponed further consideration of the question. Hungary in the meantime had refused to accept the three principles, and urged that the Roumanian contention regarding the Mixed Arbitral Tribunal should be submitted to the Permanent Court of International Justice at The Hague. Roumania accepted the three principles, but rejected the Hungarian suggestion of submission to The Hague. There the matter was left until the Council at its recent session pressed Roumania and Hungary to agree to the proposal that the Mixed Arbitral Tribunal should be reconstituted by the reinstatement of the Roumanian representative and the addition of two neutral arbitrators appointed by the League. In these circumstances the Council cannot be accused of having taken sides; its duty in the first instance was, perhaps, to support the Mixed Arbitral Tribunal, which was a creation of the Treaty of Trianon, and now it has tried to do so, with a special concession in favour of Roumania. In view of the fact that any independent Tribunal is bound to give due consideration to all the arguments that appeal so strongly to the Roumanian Government, it is difficult to understand why the latter should hesitate to have the case tried by the reconstituted Mixed Tribunal.

A Troubled Yugoslavia.

A close perusal of the Yugoslav Press these days suggests that the new Kingdom of the Serbs, Croats and Slovenes is passing through a bad attack of growing pains. Scenes in the Skupshtina are of daily occurrence

Digitized by Google

and almost of increasing intensity; one scandal after another is unearthed, or at least cited, by the Opposition, and withal there is a general feverishness whenever the question of foreign affairs is raised. This "close-up" picture, it need hardly be added, does not do full justice to the patient. It may well be the case that the prison system of the country leaves much to be desired, and it is to be expected that, if Dr. Koroshetz remains long enough in office, he will leave this branch of the administration in a healthier condition than that in which he found it. Whether there is any truth in the allegations of the Opposition that the existence of famine conditions in certain districts has been taken advantage of by a large number of places, with the connivance of deputies belonging to the Government parties, to help themselves to State funds, with speculation in grain as an inevitable accompaniment, remains to be proved. Possibly of greater significance is the fact that a pessimistic speech on foreign affairs delivered in the Skupshtina by M. Yovanovitch, leader of the Serbian Peasant Party, should be wholeheartedly endorsed by the Government's followers. The Deputy Minister of Foreign Affairs had previously spoken of the peaceful character of Yugoslav foreign policy. M. Yovanovitch followed with a speech of unrelieved gloom. Roumania, he pointed out, had not acted loyally to her partners of the Little Entente over the machine-guns affair; Yugoslav relations with Hungary were unsatisfactory; relations with Bulgaria he hoped would improve, but he feared that she would use the new loan for armaments. Finally, Italy was represented as the bugbear to Yugoslavia which Austria-Hungary had been to Serbia, and, if there was to be any treaty between Italy and Yugoslavia, the latter must protect herself by having it guaranteed by the Great Powers. The Fascist régime would in any case remain a menace, so long as it lasted, to Yugoslavia. The "superiority complex" from which Yugoslavia is adjudged by her neighbours to be suffering would seem to have given place to an "inferiority complex" for home consumption. If definite overtures of a friendly nature could be made to neighbouring States, Yugoslavia would have less occasion to complain of her isolation and of hostility around her.

The Royal Afghan Visit.

With the termination of their official visit to the King and Queen at Buckingham Palace King Amanullah and Queen Surayya have entered upon the more strenuous portion of their stay in England, during which they will make themselves acquainted with British achievement in various directions, British methods and British traditions. Towards the end of last week their Majesties witnessed an Air Force display, and while the King has visited a munitions factory at Birmingham the Queen has interested herself in an exhibition of household equipment in all its branches. This week's programme has included a journey by car to Portsmouth and Southampton, where the Royal Dockyard and docks were inspected; luncheon was served at Admiralty House, visits were paid to the Victory, H.M.S. Tiger and the White Star liner Majestic. King Amanullah had the novel experience of making the voyage from Portsmouth to Southampton in a submarine, and Queen Surayya embarked on a mine-layer. Wednesday had been fixed for an inspection of British commercial aviation; the Croydon Aerodrome was to be visited, and their Majesties had arranged to take a flight over London in one of the big air liners of the Imperial Airways' London-Paris service.

The Persian New Year.

It is not to be supposed that the hopes and resolutions commonly attendant on New Year celebrations will be absent from the hearts of Persians, who to-day are celebrating *No-Ruz*, the festival which as potently as any other reminds them of their glorious past. It is curious to speak, as one does speak, of the "awakening" of a people which is now celebrating the year 1307, but the anomaly may be explained by saying that the Persian people is one that is eternally young, despite its great and venerable age. The resuscitation of Persia in the last half dozen years or so is a resounding achievement, which it is all the more important to keep intact in view of the known Persian disposition for inconstancy of effort. Whether all the actions of the Teheran Government in recent years have been in the best interests of Persia is perhaps arguable; certainly it is not only foreigners who would be inclined to assert the contrary. What is above all necessary is that the fervid, and very laudable, national feeling of the Persians should not degenerate into unreasoning Nationalism, of the zenophobic type so distressfully evident in many parts of the East. If one could presume to offer, in all humility, advice to the Persians during the coming year, it would be to cultivate, and most assiduously to pursue, the Persian virtue of tolerance, both externally and internally. As we have said many times before, the tribes, not Teheran, are the backbone of Persia, and their good-will is the most valuable asset of any Persian Government. Next, one would emphasise the importance to Persia of correct foreign relations. In this connexion it is to be hoped that during the coming year will be resolved the whole set of questions which unhappily continue to divide Persia from Great Britain. *No-Ruz* is a present-giving time; why not choose it for an exercise of assuredly beneficial generosity? The blood that courses in England's springtime would quickly respond.

The Arabian Imbroglio.

THE NEAR EAST AND INDIA felt quite lonely, among the British Press, in its refusal, from the beginning, to treat the wild stories emanating from various parts of Arabia with the seriousness that was elsewhere accorded to them. Now, however, it is perfectly obvious that our judgment of King Ibn Saoud was a correct one, for the latest information makes it certain that the Wahhabi leader is doing all that he can to restrain certain of his followers from attacking the Mandated States or Kuwait. Of those Wahhabis as yet unreconciled to the present position, the Ataibah, under Shaikh Ibn Hamid, are probably the most important, but a credible report has been issued from Baghdad that King Ibn Saoud has contrived to stop their running the risk of punishment by the Royal Air Force. The Mutair, it would seem, have finished with the game for the time being; nor are the Ajman likely to attack Kuwait in the present circumstances, of which incidentally, they are probably at least as well aware as the majority of newspaper correspondents at Basrah! In short, the time is peculiarly ripe for a general reconsideration of the whole situation in Arabia as between the Wahhabis and their northern neighbours, and it is profoundly to be hoped that no untoward circumstance will arise on either side to postpone such a discussion. As far as can be made out, peace now rules in the desert; the opportunity should, therefore, be swiftly seized.

Forts in the Desert.

A view that may be taken as the official Wahhabi attitude on the dispute that has arisen in the desert is to be found in the letter which we publish this week from our Jidda Correspondent. It is claimed in the Hijaz, and, presumably, still more strongly in Najd itself, that the construction of a post (whose actual dimensions seem to us an insignificant matter) at Busaiya last year was a definite breach of the Uqair Protocol of the Treaty of Muhammarah of 1922. This it certainly was not, for, as we explained many weeks ago, Busaiya is seventy miles or so within the frontier which was agreed upon as demarking Iraq from Najd. Whether that line was a sensible line is entirely another matter; the point which we emphasise here is that Iraq was within legal rights, and the Wahhabi claim in this connexion falls to the ground. The moral aspect of the problem has been considerably clarified by some comments which the High Commissioner for Iraq, Sir Henry Dobbs, made last week

Digitized by Google

to the Baghdad Correspondent of *The Times*. In an interview it was explained that the object of the Busaiya post (and of other similar posts) was the opposite to that which the Wahhabis apparently imagined it to be; it was to prevent raids by Iraqi tribes into Najd or the Hijaz, rather than to prevent Wahhabi raids into Iraq. We need not remind readers of THE NEAR EAST AND INDIA of what a difficulty the refugee Shammar have been, ever since 1921, to the Iraq Government, and of the punishment since meted out to them for violating the frontier. It is a fact that control of them in the past has been an extremely difficult matter, and at last, it would seem, the Iraq Government, possibly encouraged by the success of a similar policy pursued in regard to Southern Kurdistan, where the activities of brigands have been largely circumscribed by a system of block-houses, hit upon this plan of establishing the so-called "frontier posts." This explanation appears to us to shift the problem on to another plane altogether, and it is now for the experts, alike on the British, the Iraqi, and the Wahhabi side, to reconsider the question of raiding across the borders. The whole affair appears to be the result of the unhappiest of misinterpretations, and if the quarrel be nipped in the bud before such a possible calamity as the weakening of the authority of King Ibn Saoud over Najd should ensue, everyone will have reason to consider himself lucky. There is every evidence that King Ibn Saoud's constant endeavour has been to act loyally to the British authorities, who are unanimous—even if certain other forces in Arabia are not so—in believing the continuation of the Wahhabi leader's sway to be in the best interests of all concerned in Arabia. Were King Ibn Saoud's position to fall, quite patently the difficulties of the Mandatory authorities in the Middle East would be enormously increased.

Representation at Riyadh.

The recent scare over the intentions of the Wahhabis towards Iraq, Trans-Jordan, and Kuwait, and the apparent uncertainty officially displayed upon tendencies in the deserts of Central Arabia, have caused a proposal that is by no means new to be revived, namely, that Great Britain should be represented at Riyadh, the capital of Najd. Now without disputing the good intentions of those who are thus stirring the embers, it is permissible to remark that their knowledge of Central Arabia is not profound. The protagonists of this idea imagine, apparently, that Riyadh is King Ibn Saoud's capital; they talk of "the Court of King Ibn Saoud at Riyadh." But Mecca, not Riyadh, is the capital of the Dual Kingdom of the Hijaz and Najd, and Great Britain is represented at Jidda, which is the nearest available town to Mecca. At Jidda there is always at hand for diplomatic representatives a representative of the Wahhabi King. It should be remembered that the Kingdom of the Hijaz and Najd is an anomaly in so far as no non-Muslims can be resident in the capital, Mecca. Whether, in addition to representatives on the Red Sea and on the Persian Gulf, Great Britain should have a representative also at Riyadh, is another matter. We have seen the curious suggestion that the British Empire should delegate one of its Indian Muslim subjects to reside at Riyadh, as if a non-Wahhabi Muslim were more palatable to the inhabitants of Riyadh than a Christian would be. It may be that in time, when Riyadh is in communication with the outside world, by wireless or telephone, some object could be served by appointing a British representative at Riyadh, so that he might confer with King Ibn Saoud when the Wahhabi leader passed through on a tour of his vast domain, but as circumstances are at present we can see few advantages in the proposal. Had the benefits been demonstrable we should, we think, have heard of the proposal from King Ibn Saoud himself.

On the Perso-Iraqi Frontier.

It is to be hoped that the Press will not take fresh alarm at the raid reported to have been made upon the Bani Lam by tribesmen from over the Persian frontier. Iraq at the moment is having a thin time in the hands of our omniscient journalists, and such headings as "New Iraq Raid," to describe this tribal foray, might cause anxious hearts to believe that the Wahhabis, who have already been reported to be marauding in the Syrian Desert, had now leaped to the Push-ti-kuh country in order to continue their nefarious work against the mandated State of King Faisal. As a matter of fact, this affair with the Bani Lam is one of those inevitable and picturesque reminders that international niceties have not yet wholly overcome immemorial tribal customs; nothing more, at least as far as we can judge at present. Readers of Fulanain's "Hajji Rikkan," at any rate, are not likely to overestimate the importance of this raid towards Amara.

Excitement in the Syrian Desert.

An incident of minor importance, which, *pace* Basrah, that earlier had reported the cessation of the desert motor service between Iraq and the Mediterranean, in all probability has no connexion with the general unrest in Central Arabia, happened last week in the Syrian Desert, where cars on the Baghdad-Beyrout route were held up and the passengers robbed. The motor service was an Arab one, and the motive of the unusual event was, apparently simple robbery. At first it was bruited abroad that the robbers were Wahhabis, but second thoughts attributed to the Druses the distinction of the crime. It seems quite possible that certain Druses, who since the extermination of their rebellion by the French may have had a hard time, may have turned to this method of waylaying local Arab cars as a means of surviving unprofitable times. The fact that none of the Nairn cars have been robbed in this matter, on the other hand, might be held to indicate that it is some of the tribesmen who are paid by the European Company a subsidy for good behaviour who have thus added to the excitements of the desert.

The Problem of the Yaman.

It is only occasionally that the Yaman crops up in the news, but when it does, it almost invariably emphasises the difficulty of maintaining British official pretensions in the Aden Protectorate. The negotiations between the Imam Yahya and Sir Gibert Clayton broke down, it will be remembered, because the Imam refused to cede that territory which he had filched from the Aden Protectorate, and since the British Government took the line that real interests were involved in its retention of that territory, the Italians, who had, so to speak, been waiting on the

BULGARIA'S PROBLEM.

The Government of M. Liaptcheff has reason to congratulate itself on having secured the authority of the League of Nations for the Bulgarian Reconstruction Loan. It was only after a close investigation of the economic situation in Bulgaria and of the Government's financial policy that the necessary permission was accorded, and it may be taken for granted that some consideration was given to the degree of political stability which the country has won for itself. In normal circumstances the conclusion of the negotiations in Geneva and the pending flotation of the Loan (which is supplementary to the Bulgarian Refugee Loan of two and a quarter millions, sanctioned by the League of Nations in September, 1926), would be expected to strengthen the position of the Government. Of the four and a half million sterling that Bulgaria is to receive one-third is to be devoted to increase the funds of two of the State Banks, one-third to defray budgetary deficits and the remainder is to be used for the construction of railways and other public works. The two Banks in question—the Agricultural Bank and the Co-operative Bank—are so intimately connected with the economic life of the country that the reinforcement of their liquid funds plays a direct part in the further development of Bulgaria. Similarly money devoted to railway construction will be almost immediately productive, and thus, although the three million pounds to be expended will not do the work of the larger sum that the Bulgarian Government would have liked to obtain, some impetus will have been given to the relief of the present economic stringency.

In these circumstances it is unfortunate that the successful conclusion of the Loan negotiations in Geneva should find the Bulgarian Government actually threatened with a political crisis. The recent resignation of the Minister of Railways, Posts and Telegraphs has been generally regarded as an attempt to force the resignation of M. Liaptcheff's Ministry. For the moment the delicacy of Bulgaria's relations with Geneva nipped the movement in the bud; but it is clear that the forces at work will now direct a massed attack on M. Liaptcheff's position without even waiting for the Loan to be floated. Danger appears to threaten not so much from the parliamentary Opposition as from within the ranks of the Democratic Entente—the coalition group that has been behind the Governments of M. Tsankoff and M. Liaptcheff since the *coup d'état* of June, 1923. The hostility to the Prime Minister is ostensibly led by M. Tsankoff; but there is reason to suppose that, as the latter was merely the figurehead in the movement that deposed M. Stambouliski and secured for himself the titular leadership of the Government, so now he is in reality acting at the behest of a military combination. Dissatisfaction with the existing régime is based on its alleged weakness in grappling with the internal situation. In other words, it is held in quarters opposed to M. Liaptcheff that his policy of the velvet glove in dealing with his political opponents, especially with the Agrarians and Communists, is a mistake. Whether the argument is also used to cover uneasiness over the stricter discipline enforced against the Macedonian revolutionary organisations is not clear; but this aspect of the situation may well widen the support on which M. Liaptcheff's antagonists are counting. Although the problem is essentially Bulgaria's own domestic affair, it is impossible for those outside who have the welfare of the country at heart to view without misgiving any attempt to reimpose the régime that led to the supersession of M. Tsankoff in January 1926. The dour stubbornness of the Bulgarian character, which has been the nation's great asset throughout its chequered history, will never submit indefinitely to a military dictatorship in the country. It is difficult to understand what Bulgaria would derive from a return to the campaign of political repression that marked the premiership of M. Tsankoff apart from an accession of political hatred, which will still further retard the work of reconstruction. It is conceivable that the interests of the country might be promoted by the broadening of the Coalition, which is the demand put forward, it is understood, by the constitutional Opposition; but a return to a veiled military rule must inevitably set back the clock in Bulgaria and prejudice her in the eyes of her neighbours and the rest of Europe.

Between the military leanings of some of his supporters and the strict constitutionalism on which the official Opposition base their objection to the present Government M. Liaptcheff has a difficult course to steer. At the first passage of arms in the Sobranye, which followed the return from Geneva of the two Ministers who had represented Bulgaria before the Council of the League of Nations, the Government maintained its majority unimpaired. M. Tsankoff and his followers, who had previously criticised the Cabinet's policy at a meeting of the Democratic Entente, were evidently not ready to bring things to a head and supported the Government. The latter, however, is not likely to regard itself as out of the wood. It is certain that any violent political upheaval would gravely prejudice the flotation of the Loan. On the other hand, both the internal and the external situation call for co-operation on the part of the constitutional elements of the country in a joint endeavour to solve the numerous problems with which Bulgaria is confronted. Although there has been a marked improvement in her foreign relations, she has not yet emerged from a negative situation to one which provides any positive foundation on which she can proceed to build. If Governments and Prime Ministers are to be changed every two years, there will be little chance—having regard to similar changes across the border—of carrying negotiations with Yugoslavia to concrete results. The frontier between the two countries still remains closed, and tales of incursions into Serbia from the Bulgarian side are now being varied by reports of raids from Serbia into Bulgaria. These conditions can be permanently improved only by the joint action of the two Governments, and it is evident that both require more freedom from domestic anxieties than they have enjoyed of late to be able to launch serious negotiations between themselves with any degree of confidence in obtaining satisfactory results. From many points of view, therefore, Bulgaria seems to stand to gain much from the broadening of the basis of the present coalition that would follow the incorporation in the Government of M. Malinoff's group at least. Personal ambitions may appear at the outset to be an insuperable obstacle; but it would not be the first that has been overcome by tactful pressure from influential quarters.

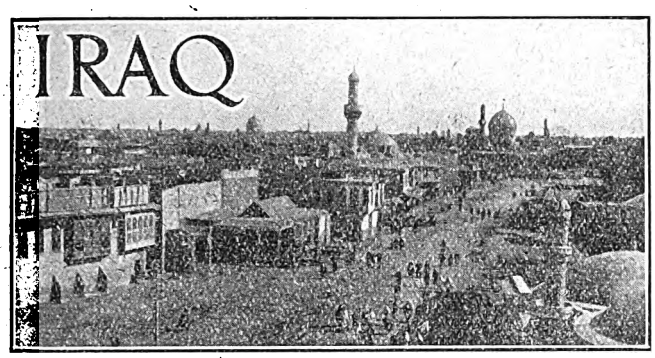
The Near and Middle East*

From Our Own Correspondents.



Baghdad, March 10.

The Ikhwan.

Conflicting reports continue to be received from the Najd frontier, and it is at present impossible to give any accurate résumé of the situation. In the middle of last month the leaders and notables of Kuwait unanimously agreed to refuse to the followers of Shaikh Faisal al Dawish permission to trade there, in spite of their threat to raid the town and take what they needed by the sword. King Ibn Saoud then ordered his representative in Al Hasa to prevent Dawish from trading with Hasa ports; but since then persistent reports of his giving support to Dawish have reached Baghdad.

From February 19 to the 24th there was considerable aerial activity against the raiders, and heavy casualties were inflicted, though it was of course impossible to compute these accurately.

Transport Facilities.

Transport facilities to and from Iraq continue to improve and multiply. A new service is being inaugurated in April by the Junker Company, which already runs a very efficient regular aeroplane service from the Iraq frontier into Persia. They are now undertaking a weekly flight from Qasr-i-Shirin (on the Persian-Iraq frontier) to London and Paris *via* Teheran, Baku, Moscow, and Berlin. Mails from Baghdad dispatched by this route will take only six days. Another regular weekly line is to run between Bushire and Teheran, linking up with the mail steamer running from Basrah to Bombay *via* Karachi.

Regular services of taxis now run between Baghdad and Kut, Kut and Amarah, Amarah and Basrah—between any towns, in fact, that are connected by anything that can be roughly described as a motor road. The charges are very low, and this road transport offers serious competition to the Iraq railways, which are economically unable to offer such low prices as can the owners of ancient and ramshackle Fords purchased at low prices after the War.

Persian Subjects in Iraq.

A special envoy of the Persian Government is now in Iraq, charged with an inquiry into the alleged wretched condition of the large number of its nationals resident in this country. His reports suggest the grant of free return passports to these people, and the Persian Majlis has at the same time instructed that the issue of passports into Iraq be stopped. In view of the large pilgrim traffic between the two countries, and of the much higher wages generally paid for ordinary labour in Iraq than in Persia, it is probable that these measures may be found to have been over-hastily devised.

Indian Trade Mission.

An Indian Trade Delegation, with special interests in the piece-goods trade, has been spending a week in Baghdad. A number of meetings with the Iraq Chamber of Commerce were arranged. The falling off in this branch of trade in Iraq is due to the competition from Italy and Russia in the Persian market, which formerly took 80 per cent. of the piece-goods imported by Baghdad merchants. Russian piece-goods are sold so cheaply in Persia that the trade is reported to be subsidised by the Soviet Government.

Plague.

Two cases of plague having occurred in Baghdad during the month of January, the medical authorities decided to carry out compulsory inoculations in the infected districts. Statistics of cases during the last few years have shown that in the year following an epidemic, that is the year following extensive inoculations, very few cases occur; yearly inoculation, therefore, seems highly desirable in certain areas.

THE HIJAZ.

Jidda, March 1.

The Iraq Frontier.

The current issue of *Umm al Qura* publishes a long statement on the recent troubles on the Iraq frontier, with special reference to the explanation offered by King Faisal and his former Prime Minister, Jaafar Pasha. Their statements, it is pointed out, are contradictory, in that, while the King in conversation with newspaper correspondents declared that the offending construction at Busaiya was only a police post—why after all a police post in the desert?—Jaafar Pasha proudly confessed in Parliament that the building was a fortress worthy of the best traditions of the Iraq Army. It is obvious, says the article, that Jaafar Pasha is right in his description of the building, and, therefore, that the Iraq Government stands definitely convicted of a provocative breach of its Treaty obligations.

However that may be, the fat is in the fire and King Ibn Saoud is saddled with the difficult and responsible task of pacifying the widespread alarm caused by the building of a fort at Busaiya among the Badawin tribes, who regard it as threat to their time-honoured freedom of movement in the desert under the laws thereof. The introduction of a town-bred device like a police post to control access to the desert waters is an innovation and a precedent which they can scarcely be expected to stomach. And no one knows that better than King Faisal, who, it seems, contemplates the possibility of a misunderstanding between King Ibn Saoud and Great Britain. The former's proved statesmanship is scarcely likely to fail before such an ordeal, but it is regretted that British policy could devise no better approach to the solution of the problem than to send aeroplanes into the desert—whose only result can be to create further alarm and unrest. And it appears that the Royal Air Force has added insult to injury by wrapping their bombs in broadsheets, some of which have floated down on the desert breezes to Jidda. One can

but smile at the simpleness which still puts its faith in proclamations! King Ibn Saoud is not relaxing his efforts to restore the tribal equilibrium disturbed by Iraq; but, to restore tranquillity on the Iraq frontier three things are required: (1) respect for Treaty obligations; (2) the immediate disbandment of the present military concentration at Ur; and (3) the stoppage of the hostile propaganda conducted by certain prominent individuals in Iraq, presumably for no other purpose than to convince the Iraqis of the charms of conscription. It may safely be assumed that, if the Busaiya fort had never been built, the present trouble would never have occurred.

[Comment upon this paragraph will be found in our "Notes of the Week."—ED.]

The Fast of Ramadhan.

The month of fasting was ushered in by the usual salute during the evening of February 21. The crescent of the new moon was not seen at Jidda, but the sharp sight of Badawin north of Yanbu detected it and the news was flashed down to Mecca by wireless and telegraph. The extreme youth of the moon at sunset on the 21st renders its detection by human eyes remarkable, and it must be a rare occurrence indeed that the first day of the Muslim Fast should coincide with the first day of Lent. It would be interesting to know whether there is an historical record of the coincidence. As usual, night has been turned into day, and day into night, in the Suq and in Government offices. Serious work is inevitably more or less at a standstill. But the fasters have been favoured with ideal climatic conditions with an average maximum temperature of about 76 degrees at Jidda and a night minimum of 60 degrees. A stiff northerly gale has prevailed with great persistence and the country is obscured by a thick veil of flying dust.

Arrivals and Departures.

The French Consul, Commandant Ibrahim Depui, left Jidda on February 13 on the termination of his appointment. He had been here off and on as Vice-Consul and Consul and on special duty ever since the days of the French military mission during the Great War. And with the departure of the Commandant, unfortunately in bad health due to a long sojourn under unfavourable climatic conditions, Jidda loses a conspicuous landmark of its international society. The acting charge of the French Consulate is now in the hands of M. Gault, formerly Vice-Consul, and the French gun-boat, Diane, has recently paid a short visit to Jidda.

On the first day of Ramadhan, H.M.S. Dahlia arrived in the harbour on her return from Malta to the Red Sea. She is understood to be proceeding to Kamaran Island. but during her short stay at Jidda, a cricket match was arranged, in which the naval team beat the British in Jidda, who, possibly for the first time on record, were able to field a complete team without substitutes, but not without some crocks.

The arrival of the first of the new Fords is also perhaps an event worthy of chronicle in your columns. In spite of Ramadhan a large crowd gathered on the Customs Wharf to see it unpacked and assembled.

EGYPT

Cairo, March 10.

The Political Situation.

The situation is so fluid that it is exceedingly difficult to write anything to-day which will be certain to hold good when this letter is published in your columns in a fortnight's time. Certainly it is quite out of the question to make any forecast on what solution the present state of affairs will find or even how the situation may develop within the next week. Go where one will, ask whom one chooses, one encounters the same perplexity, the same uncertainty. The only sure feature is the conviction which the British Note has given that the British Government is determined not to tolerate any of the tactics which hitherto have steadily undermined the authority of Government and so have affected public security, in the maintenance of which Great Britain, from the point of view both of the safeguarding of Imperial communications and the protection of foreign interests, has a very lively concern.

The rejection of the British proposals has received unanimous approval throughout the length and breadth of Egypt. Not that everyone entirely agrees with the rejection out of hand, which has been decided. There are indeed a number of fairly important Egyptians who think either that the terms could have been accepted, or that, at any rate if a more conciliatory spirit had been shown by Egypt after the terms had been made public, some more acceptable formula with regard to the British forces might have been secured. But none of these has dared to give expression in public to his views. The fear that they would be made to suffer the same harsh and humiliating treatment as was meted out in the early days of the revolution to others who at that time had the courage of their convictions has caused them one and all to take the line of least resistance and to subscribe to the verdict of political leaders, who have had little interest in securing a settlement.

The British Note.

By contrast, however, much more independence of

spirit has been shown in regard to the British Note. Too many have suffered as a result of the interference with the executive which has gone on during the past four years with progressive intensity, not to be delighted to find that at long last a term is now set to what was fast becoming a national scandal. The recent emasculation of the Public Assemblies Act, which the Chamber, bowing to the will of the extremist element of the Wafd, decreed and which had only been saved from becoming law by the delay in securing the King's signature; the draft law changing the mode of appointment of Omdas and substituting election by universal suffrage for the time-worn practice of selection by nomination; and the Arms law, which extended the free carriage of arms to all manner of classes of the population, combined with the encouragement Parliament gave to interference with the executive, had aroused considerable apprehension amongst the large number of those who realised not only the ulterior object of the element which put forward these measures, but also the great danger which their application threatened to the social as well as to the political life of the nation.

They were, however, powerless to do anything, in spite of the fact that it was known that the British Government took exception to this interference with the proper administration of the country and the potential threat which these measures constituted to public security. Now that the British Government has so publicly and clearly put on record its view in this connexion one hears on all sides cordial approval of this action. Indeed, many take no pains to conceal their views, and particularly does this apply to the executive, who literally breathed a sigh of relief when the delivery of the Note was known, for it spells to them freedom to resume duties unhindered by pressure in Parliament. The danger which the country ran from the introduction of the measures in question is now eliminated. No Cabinet, unless it deliberately desires to court British intervention, will dare to put such measures into operation, and Parliament would be very foolish indeed, if it insisted on these measures becoming law, since it is so evident that such an attitude would place in jeopardy not only its existence but also the continuation of parliamentary life itself.

Demonstrations.

The total lack of appreciation of the real facts of the situation which Egypt in general and the Wafd in particular have shown in rejecting the Treaty received further expression in the demonstrations which have taken place here at Tanta, at Assiut and at Chebin El Kom. It is idle to maintain that the students who were the mainstay of these manifestations acted solely on their own initiative. It is understood that full documentary proof exists that the students were actually egged on from within the Wafd, which in any case has, it is known, for some time now been actively reorganising the students for some such eventuality as the one that has just arisen.

Nothing could have been more unfortunate from the Egyptian point of view than these disturbances of public order, for they have come as a sort of justification of the British Note on public security. The Wafd leaders evidently realised this and endeavoured to cry halt. But their realisation came too late to prevent the outbreak. The refusal of the students to listen even to the injunctions of *Um El Masreyeen* (Madame Zaghloul Pasha) is an eloquent indication of the lack of moral influence which those at present at the head of the Wafd enjoy over their more ebullient followers. To-day there has been calm, but the mischief has been done, and more than ever, since it has been made so abundantly evident that those who in the past encouraged the student element to participate in politics do not enjoy sufficient influence to be able at the critical moment to stem the enthusiasm of their disciples and instruments, has foreign and instructed Egyptian opinion been convinced of the justification of the British Note and the need for close British supervision of all matters having in any way a connexion with public security.

Attacks on Sarwat Pasha.

A particularly unpleasant feature of the situation is the campaign which is being directed against Sarwat Pasha. One is glad to be able to report that such responsible journals as the *Syassa* and the *Mokattam* have courageously taken up his defence, but the rest of the vernacular Press, without staying a second to obtain a proper appreciation of what has already happened, has displayed such indecent haste to vent its venom, that one suspects that it has only waited for some such opportunity to rend the man whom, it is evident, it has always regarded as a political opponent.

It must be admitted that it came as a surprise even to his friends that the British proposals were in the form of a cut and dried treaty. When he accompanied King Fuad to London it was understood—in fact he himself made it perfectly clear to those who discussed his visit with him—that he would take advantage of his contact with British official circles to try to remove any misunderstanding that still existed, clear the atmosphere and prepare the way for a future understanding. There was no question of a treaty, and everyone anticipated that what would be presented to the nation would be the broad lines on which it might be possible to come to an eventual agreement.

What brought about the change no one here knows. But one thing is certain, and that is, that Sarwat Pasha in his sincere desire to crown by a settlement of the outstanding question the great work he did for his country in 1922 overestimated the chances of success. It is sad to have to record that the only result of the great work which, at the expense of his health, he set himself to do single-handed in the interest of his country should have been to bring down upon him a storm of abuse not one whit less violent than that with which the Wafd received the British Declaration of February 28, 1922.

Sarwat Pasha has the lively sympathy of British and foreign opinion, for the almost thankless task with which he was confronted was recognised from the very outset. When Adly Pasha retired a year ago owing to the difficulty of carrying on while dependent on a partliamentary majority which owed no allegiance to the head of the Government, Sarwat Pasha sprang into the breach and

EGYPTIAN MINISTRY OF EDUCATION.

EGYPTIAN UNIVERSITY.—The following vacancies will occur in the Faculty of Arts in October 1928:—

(1) The Professorship of GEOGRAPHY.

(2) The Professorship of MEDIAEVAL HISTORY.

(3) The Professorship of EGYPTIAN and ORIENTAL HISTORY, prior to Graeco-Roman Times.

(4) The Professorship of CLASSICS and GRAECO-ROMAN HISTORY.

The Salary in each case will be L.E. 1140 (approximately £1168) a year, and the appointment will be on contract for three years. The Contract may be renewed at the end of that period, if agreeable to both parties. One month's salary will be paid on arrival for travelling expenses.

Application should be sent to the Director, Egyptian Educational Office, 39 Victoria Street, London, S.W.1 not later than April 30th.

Applicants should state their age, academic qualifications, previous experience and other particulars as they think fit, and should give the names of not more than three persons to whom reference may be made.

EGYPTIAN MINISTRY OF EDUCATION.

EGYPTIAN UNIVERSITY, CAIRO.—The following vacancy will occur in the Faculty of Science in October 1928.

The Professorship of Geology.

The salary of the post is L.E.1140 (Approximately £1168) a year, and the appointment will be on contract for three years. The contract may be renewed at the end of that period if agreeable to both parties, but it can be terminated at any time by either party, by giving three months' previous notice in writing. One month's salary will be paid on arrival at Cairo for travelling expenses.

Applications for the post should be addressed to the Dean of the Faculty of Science, Egyptian University, Cairo, and should reach him before May 1st, 1928.

The candidate appointed will be expected to take up his duties at Cairo towards the end of September 1928.

Intending applicants can obtain information with regard to the form of contract from:— THE DIRECTOR, EGYPTIAN EDUCATIONAL OFFICE, 39, VICTORIA STREET, LONDON, S.W.1

took over the reins of office. In spite of the fact that his Cabinet consisted of elements who temperamentally could never coalesce, he contrived to guide his heteregeneous team with satisfactory results until his astounding overconfidence regarding the Treaty played into the hands of disloyal supporters and created for him an impossible situation, which has now resulted in his downfall. Foreign circles, who had always regarded him as the one man capable of directing Egyptian affairs and obtaining a satisfactory solution of the difficulties lying ahead of this country, sincerely regret his departure from office, and instructed Egyptian opinion fully agrees herein and frankly contemplates the future with apprehension.

Belgrade, March 15.

A Stormy Session.

Although during the last fortnight there were no events of outstanding importance in the internal political situation, there was no lack of excitement. The Coalition Government steadily continued its work on the Budget despite the almost fanatical obstruction of the Opposition, led by M. Raditch and M. Pribitchevitch. At almost every meeting there were stormy scenes; several times it almost came to blows between embittered members of the Opposition and the Government supporters, but the overwhelming Government majority has been used automatically to pass all Government measures and to exclude from the Skupshtina Opposition members who became too violent in their actions or expressions. Thus M. Stefan Raditch was excluded for three sessions for the second time since the new Government was formed, after deliberately insulting the Minister for Social Affairs, during a discussion on the measures which the Government is taking to relieve want in the famine areas. These measures include the grant of 150,000,000 dinars, which are to be distributed among the necessitous areas in the form of loans, to be repaid within five years by those who are able, and as gifts to those too poor ever to be able to repay.

The Komitaji Trial.

The trial of Kralyeff, the survivor of the three Bulgarian *komitajis* who murdered General Kovatchevitch in Shtip on October 5 last year, has aroused great interest, and some of the disclosures made are of international importance. Kralyeff gave a detailed account in court of the *komitaji* organisation in Bulgaria, its contact with Yugoslavia and the way in which this particular crime was planned and carried out. According to his sworn statements made in open court in the presence of the public and several foreign journalists the Internal Macedonian Revolutionary Organisation is a State within the State in Bulgaria and more powerful than the Government. He declared that it receives money, arms and stores from the Government; its members are immune from civil law and in many cases dangerous criminals are let out of prison, in order to become members and carry on its dangerous and bloody works. Its chiefs, General Protogeroff, Vancha Mihailoff, Georgi Pop Christoff, and others live openly in Sofia and visit Italy and Albania freely. The *komitajis* have regular ranks and are paid a monthly wage in accordance with their rank. They have a very thorough organisation in the frontier districts, are taught by Army instructors to use revolvers, rifles and bombs, and have a complete set of passwords almost amounting to a secret language, which is frequently changed to ensure secrecy. When international or governmental commissions visit these districts orders are given for the *komitajis* to take to the woods for the time being, and when, in response to the Yugoslav Note, a show of opposition to the *komitajis* had to be made, this was a pure farce—a number of unimportant members being specially paid first and then arrested and put in prison for a time, while the important members carried on their work untouched. If any weight could be attached to these statements, there would be ground for an international investigation of a most thorough description.

Kralyeff's story of the wildly adventurous journey which ended in the murder of General Kovatchevitch, three nights' flight, a desperate battle against overwhelming odds and the death of his two companions, is extremely thrilling. Although he stood well with some of the leaders of the organisation, he alleges, he was informed that he must take part in this attempt or die. He was given arms, money and food, and taken to the frontier by expert guides who knew where a passage could most easily be effected. Three times he and his companions tried to cross the frontier, and each time were prevented by the vigilance of the frontier-guards; but the fourth time they succeeded, and, travelling by night, hiding by day, came on the fifth day to Shtip, where they had accomplices. There they remained in hiding three days. Their instructions were to kill the *Veliki Jupan* (Governor) of Shtip or to throw a bomb into a well-filled kafana. As the *Veliki Jupan* happened to be away in Belgrade, they decided to kill General Kovatchevitch instead. About ten others, mostly denounced by Kralyeff, are being tried as accomplices, either directly or as members of the organisation which planned and carried out the crime. Most of them deny the charges brought against them.

Yugoslavia and Italy.

In the absence of Dr. Marinkovitch who must remain abroad for at least two months on account of his health, M. Shumenkovitch, Acting Minister of Foreign Affairs, made a declaration on foreign policy during the debate on the budget of his Ministry. He emphasised the peaceful character of Yugoslav foreign policy, which is based, he said, on the principles of the maintenance of the Peace Treaties and of reliance on the League of Nations. He pointed out that even in the case of the smuggled machine-guns his Government had not acted from any desire to accuse another country or to cause a dispute, but to maintain the Peace Treaties, the terms of which were being infringed, and to maintain and increase the authority of the League of Nations by entrusting to it the solution of this important problem, which concerned the vital interests of the Succession States, and relying confidently on its decision.

Speaking for the Opposition, the main body of which had withdrawn from the Skupshtina in protest against a decision of the Speaker, M. Yovan Yovanovitch, leader of the Serbian Peasant Party, made a long and interesting speech dealing in detail with Yugoslavia's international position and her relations with her neighbours. He suggested that the St. Gothard affair had shown the weakness of the Little Entente, and he criticised Roumania's bearing in that matter as not strictly loyal to her allies. He expressed himself in agreement with the Government's policy of trying to improve relations with Hungary, but cited the St. Gothard incident and Count Bethlen's speeches against the Little Entente as proof that, despite the convention she signed with Yugoslavia, Hungary has not been friendly in her activities and attitude since she became an ally of Italy. He claimed, too, that Italian influence has been used to embitter relations with Bulgaria and Greece too. With reference to Bulgaria, while hoping for better relations, he feared that the recently concluded loan might be used to purchase armaments for use against his country, either openly or through the *komitaji* organisation. In Albania, too, despite officially friendly relations, he said that the *komitajis* had Italian support and were planning who knows what attacks for the spring.

Digitized by Google

M. Yovanovitch then proceeded to attack Italian policy in the Balkans, stating that Italy was trying to take the position once occupied by the Austro-Hungarian Empire, dominating the Balkans. To this end she was trying to destroy the Little Entente, encouraging Hungarian activities for the revision of the Peace Treaties, trying to isolate Yugoslavia from her neighbours and even, he suggested, to prevent her from getting loans from Great Britain and America. He referred to Signor Mussolini's statement that war must inevitably come between the years 1935 and 1940 as a threat and suggested that Italy was steadily preparing for this war. So long as the Fascist régime lasted, he said, Italy was a constant danger to Yugoslavia, since internal needs might drive her Government to seek successes abroad and this might lead to an outburst even before the time when Signor Mussolini said it would inevitably come. He cited many examples of Italian Press attacks, made more serious by the official nature of all Italian papers, and drew the conclusion that the atmosphere both in Italy and Yugoslavia is not ready for the resumption of negotiations between them. When negotiations can be resumed, he insisted that they should be unfettered by conditions precedent (such as the signing of the Nettuno Conventions) being laid down by Italy, and, except for purely commercial conventions, he said that all agreements between them should be guaranteed by the Great Powers—France, Great Britain, and Germany. Otherwise, he feared, there could be no security for Europe. Although those present were almost entirely Government supporters, M. Yovanovitch's speech drew continual expressions of assent and was warmly applauded at the end by the majority of members present.

An English Artist.

The Belgrade public was greatly surprised on the 13th and 14th inst. by an English artist, Mr. Lester, the partner of Mme. Karsavina, the famous Russian Ballerina. Mme. Karsavina was wonderful and fully came up to the expectations of her many friends in Belgrade. Even the poorest of the Russian refugees seemed to find money to be present, and she received a royal welcome. But that an Englishman could dance as did Lester, drawing almost as much applause in his solos as did Mme. Karsavina herself, caused very pleasant surprise.

ROUMANIA.

Bucharest, March 3.

Roumania and Hungary.

The more serious organs of the Bucharest Press have at last decided that a sordid and disgraceful social scandal is hardly a worthy subject to fill their pages and have turned their attention to the question of the Hungarian Optants recently brought up again at Geneva. The Press and the public of all shades of opinion are unanimous in condemning what they call the *volte-face* of the Council of the League, and their ire is turned especially on Sir Austen Chamberlain, whom they had hitherto regarded as their champion, though with what justification is not clear. There is no doubt, however, that the whole country to a man upholds M. Titulescu in his rejection of the new proposal of the League to refer the question to a reconstituted Mixed Tribunal, and in his refusal to consider any arrangement with Hungary except on the basis of the reparations for War damages due to Roumania from that State. It certainly seems rather unjust that the expropriated Hungarians who have rejected Roumanian citizenship and have practically declared themselves still enemies of Roumania should claim the right to be better paid for their land than their brother Hungarians who have become Roumanian citizens, or than the Roumanian landowners themselves, most of whom are living in more or less impoverished circumstances as a result of the expropriation of their land. Even the Opposition loudly approve of the attitude of the Minister for Foreign Affairs, although they do not cease to clamour for the resignation of the present Government, both in the Chamber and at political meetings all over the country. On the principle that dogged obstinacy gains its point in the end, as exemplified in the Hungarian Optants' question, perhaps they will one day succeed in ousting the Liberals. When that consummation of their efforts is reached it is to be hoped that they will keep their heads.

Stabilisation Loan.

The question of the Hungarian Optants seems to have banished from the Press that of the proposed stabilisation of the currency, but, so far as can be gathered, the negotiations with the Franco-American group appear to have reached an advanced stage. It is not known whether other countries are also interested, but this seems not unlikely, if the loan is to be sufficient to cover Roumania's needs both for stabilisation and for the railways, the condition of which has long caused some concern to their administrators.

Parliament.

At the end of last week the law for the Standardisation of Cereals was passed by the Legislative bodies. In principle it appears to be generally approved of by public opinion, but a great deal of preparatory organisation will be required before it can be put into operation; for, as already stated in these pages, the State does not possess an adequate system of grain silos and store-houses, except in the ports, and every year owners of grain have the greatest difficulty in obtaining storage room in the stations or alternatively means of transport.

An Education Bill.

Another important Bill is about to be placed before Parliament, namely, that for the reorganisation of secondary education. According to an interesting article which appeared on this subject in the *Universul* a few days ago, the object of this Bill is to ensure that school children are not merely crammed with information, but receive a real education, mental, physical, and moral. To this end an interesting innovation is made by the introduction of Greek and Latin in the curriculum of the lower classes of the Academies (Lycées). The avowed and laudable object of the move is to try "to stem the current of materialism" which threatens to swamp Roumanian society. Physical training will also be made compulsory, and it is further proposed to institute secondary schools in the villages. A great deal has been done in the last few years to extend educational facilities to all classes of the population, and a year ago it was officially stated that over 700 schools had been built in one year. The Government is to be heartily congratulated on its activities in this connexion, and the present Bill, taken as a whole, appears to be a step in the right direction. As regards its application, if and when it becomes law, doubtless the fact will not be lost sight of that the most important factor in the education of any children, and especially of such primitive children as those of the peasants, is their teacher, and a high standard of character and pedagogic principle in the village teachers is one of the first requisite conditions for all improvement in the mental and moral development of the children.

Miscellaneous News.

After a short and pleasant foretaste of spring Roumania was suddenly plunged again into mid-winter by a heavy fall of snow, with hard frost and driving wind, two days ago. The temperature to-day had risen again above zero and the sun is rapidly melting the snow. This has been a very long and severe winter, in sharp contrast to that of last year, which was unusually mild.

Bucharest has a large musical community, and during the last few weeks many concerts have been given by well-known musicians, including Kreisler, Sauer, Mischa Elman, Bronislaw Huberman, Slivinsky, and two Cossack choirs, which took the town by storm. The Roumanian conductor, George Georgescu, who was a pupil of Nikisch and has been much appreciated abroad (in Rome and in America), recently gave a splendid rendering of Beethoven's "Choral Symphony," which did great credit to conductor, orchestra, and choir.

THE JUGOSLAV SOCIETY.

The inaugural dinner of the newly constituted Jugoslav Society of Great Britain was held on March 15 at the May Fair Hotel, London. Sir Charles Oman, M.P., presided, and among those present, who numbered in all 140, were:—

The Ministers of Yugoslavia, Bulgaria, Czechoslovakia, and Poland, the Chargés d'Affaires of Greece and Roumania, the Bishop of Gloucester, Lord Riddell, Dowager Lady Swaythling, Sir Edward and Lady Boyle, Dowager Lady Boyle, Sir Martin Conway, M.P., Hon. Ivor Guest, Sir Clement Kinloch-Cooke, M.P., and Lady Kinloch-Cooke, Sir Thomas Lipton, Bart., Lady Lockyer, Lady Meiklejohn, Mr. F. B. Merriman, M.P., Colonel George Ostoyitch, Sir Bernard Pares, Archdeacon Potter, Prof. and Mrs. R. W. Seton-Watson, Major H. W. V. Temperley, and M. de Wesselitzky.

In the absence of Lord Hugh Cecil, who was prevented by indisposition from attending the dinner, the toast of "Yugoslavia and Britain" was proposed by the Chairman. Sir Charles Oman referred to the resurrection of nationalities as one splendid result that the Great War had left behind. Marvellous as was the reappearance of Bohemia and of Poland, the resurrection of Yugoslavia after nine centuries of division and elimination was a still greater miracle. Serbia had had one glorious century in the Middle Ages, but Stephen Dushan died just soon enough to leave no barrier against the Ottoman flood. Sir Charles Oman professed himself old-fashioned enough to hold that sane nationalism was a better thing for men than a vague internationalism. To-day Yugoslavia lived again, and in view of what they had gone through in the War, what was not possible of such a people? Their problem—constitutional and otherwise—was well known, the disillusionment that followed victory, the difficulty of reconciling sectional cleavages and personal ambitions, the hindrances to the establishment of a sane constitutional habit of mind. The people of Great Britain, they could be sure, viewed their efforts at solving that problem with sympathy and believed in the possibility of its solution by such a virile race as the Yugoslavs had shown themselves to be.

M. Juritch, Minister of the Serbs, Croats, and Slovenes, in replying to the toast, spoke of the relations between Great Britain and Yugoslavia. Until about twenty years ago the Serbs, Croats and Slovenes were not well known in England; then came the War, when they stood with Britain for the same cause, and in so doing found sympathy in the great trials through which they passed. He spoke of those who had gone out to Serbia's help, and he liked to recall that whereas the Serbian soldiers spoke of their own hospital nurses as "Sisters," the British nurses were always "Mother" to them—the greatest compliment, he thought, that could be paid to them. The Jugoslav Society could do much in imparting information about Yugoslavia to the British public. There had been many books written about Yugoslavia; indeed, there were some British writers whose knowledge of the history of the country was greater than that of many Yugoslavs, but he looked for the information that would be given by lectures and would be up-to-date with a view to developing relations between Great Britain and Yugoslavia. The country was only at the beginning of its economic development. The national art, too, of Yugoslavia was characteristic and would serve to interpret the people to the British.

In proposing the toast of "The Jugoslav Society of Great Britain," the Bishop of Gloucester said that the Society was not exclusive, in that it aimed at furthering the union of the people of the Balkans, at promoting the solidarity, freedom and peace of the whole Balkan Peninsula. He referred to the Serb theological students who had been brought to England during the War at the instance of the Archbishop of Canterbury and to the ecclesiastical relations between the two countries, which had been so notably helped by the Bishop of Ochrida. The Balkans owed much to the influence of their national churches, and he hoped that Yugoslavia would set special store on the advantages of an educated priesthood.

Professor R. W. Seton-Watson replied to the toast. After reading the list of names of those who had been unable to attend the dinner, he announced that telegrams of greeting had been received from the kindred societies in the United States and from the Society's counterpart in Yugoslavia, the Anglo-Yugoslav Society in Yugoslavia. He outlined the objects of the new Society, which were enumerated in a recent issue of THE NEAR EAST AND INDIA.

In proposing the health of "Our Guests," Major Temperley dwelt on the attractions of Yugoslavia which had hitherto not received the attention that it deserved from travellers. Sir Martin Conway, replying for the guests, said that his imagination had been so fired by the description given of the country that he felt like setting off for it the next day, and, if the potentialities of the country as a fisherman's paradise, as they had been recorded that evening, were made sufficiently known Yugoslavia would be in no lack of tourists.

THE LURE OF GREECE.

Miss Julie Heyneman, American author and artist, who has just returned from a visit extending over several months to Greece, gave an interesting and eloquent address on her experiences in that country to members of the American Women's Club, 46, Grosvenor Street, London, on March 14.

Although Greece is a comparatively small country, Miss Heyneman pointed out, her spiritual boundaries are very wide, as might be instanced by the fact that a French mission had recently been granted permission to carry out archæological researches in Afghanistan. Christianity, it would be recalled, had adopted Greek idealism. We often spoke of our debt to Greece, but when were we going to begin to repay it? Certainly there had never been a better opportunity for doing so than the present. Speaking of Greece's needs, Miss Heyneman referred at length to the Refugee Settlement scheme. Under the guidance of Sir John Hope Simpson she had seen Byron, the settlement of 20,000 people near Athens, and had subsequently travelled throughout the great settlement area in Macedonia. She described conditions as she had seen them—the ravages of malaria, the wonderful spirit of the refugees, their hospitality and their devotion to the homes that they had left behind them. Miss Heyneman paid a tribute to those who, either under the League of Nations or other Societies, or in some cases as private individuals, were sharing the lack of comfort and the hardships of life in Macedonia in order to help the refugees. It seemed to her that the youth of the world was to be found in South-Eastern Europe, so struck had she been with the energy displayed in working against such odds.

In the course of her address Miss Heyneman gave her audience a graphic word-picture of her first impressions of Greece, on her journey through the Gulf of Corinth, and subsequently in Northern Greece, within sight of Mt. Olympus, which, when not wholly obscured, seemed at that time of year to keep a mist round its base, a fitting screen for the home of the gods. The ancient and the modern are never far apart in Greece, and the lecturer cited the ceremony of the blessing of the waters, which she had witnessed in Macedonia, a ceremony that clearly derived from pagan rites and retained some of their characteristics. She spoke of the democratic instincts of the people, and in a reference to M. Venizelos expressed the opinion that his figure still loomed large behind all that was taking place in Greece.

NEAR AND MIDDLE EAST ASSOCIATION.

At a lecture on "Afghanistan" by Lieut.-Gen. Sir George MacMunn on March 15, at 19, Grosvenor Square, W., by kind permission of Lady Beecham, with Sir John Brunner, Bt., in the Chair, among those present were:—The Persian Minister, the Albanian Chargé d'Affaires, the Egyptian Chargé d'Affaires and Rahman Fikry Bey, the Counsellor of the Austrian Legation, the Counsellor of the Bulgarian Legation and Madame Lesshinoff, Prince and Princess Soumbatoff, Lord Lamington, Constance Lady Cozens-Hardy, the Hon. Lady White-Thomson, Captain and Baroness von Heidenstain, Lady Brunner, Lady Beecham, Lady MacMunn, Lady Tighe, Lady Hewitt, Sir Henry and Lady Burt, Captain and Mrs. E. N. Bennett, Mr. and Mrs. Charles Rey, Mrs. Eckstein, Dr. Ernest Griffin, Mrs. Steuart Erskine, Brig.-Gen. J. C. L. Campbell, Mrs. Patrick Ness, Miss Naomi Bentinck, Miss Edith Durham, and Mr. Dudley Heathcote.

Scotland Yard is investigating the theft last week of two cheques, one for £5 and the other for £10, from the Turkish Embassy in London. Both cheques have been cashed.

The usual Ramadhan reception of Al Azhar University and the Mehkemeh Sharia was held at the Cairo Residency on March 12. In spite of threats, says *The Times*, 71 of the 75 invited guests were present, including the Acting Rector of Al Azhar, the Grand Cadi, and a large number of Azhar Ulama. Lord Lloyd received and conversed with each guest. The reception lasted two hours. An atmosphere of marked cordiality prevailed.

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

"HUNGARY AND ROUMANIA."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your correspondent M. Vukitch takes exception to the distinction that I draw between Eastern and Western conceptions of civilisation. Broadly speaking, that distinction is the difference between Socialism or Communism and Individualism; and the point I make is that the Slavonic people are and always have been racially Easterners, with the Eastern mentality. I am, of course, aware that Karl Marx, Trotsky, Kamenev, Zinovieff, Bela Kuhn and others were not and are not Slavs, but the Jews are an Oriental race and I am justified in classing them as Orientals.

M. Vukitch makes the electoral law the distinction between East and West, but the form of government is no test of the civilisation of a people. There was as much (or even more) individual liberty under the extinct Austrian bureaucracy as there is to-day in the Succession States, and I may add that since 1848 there has been only one kind of citizenship in Hungary—Hungarian citizenship. A man, whether Magyar, Slovak, or Roumanian, was and is a Hungarian. Parliamentary government was established and freedom of worship accorded to all. The threat to freedom in Hungary came from Russia and Croatia, and serfdom was a Russian, not a Hungarian, institution. There are many large estates and many small ones in Hungary and the Hungarian gentlemen as a rule farm their own lands. But experience has taught us that personal freedom is inseparable from the institution of private property in land, and rights of civic and religious freedom are probably as safe (or safer) under a limited franchise as they are under universal suffrage.

But the Slav ideals have never resembled the Western ideals. Socialism or Communism is not a new feature in Slav policy and the "judgment of Libusa," which embodies the earliest picture of Bohemian life, is the tradition of a nation trying to uphold the ideal of the communal ownership of land and the guidance of the wisest, modified by public opinion, that is by the *vox populi*.

President Masaryk and Dr. Benesh are, I believe, both of them Socialists, and the land reform of Czechoslovakia is, in effect, the partial confiscation of the landowners' land for the purpose of distributing it amongst the peasants.

But if the Germans, Ruthenians, Slovaks, and Magyars were consulted, they would probably say that the rights of minorities were safer under the rule of the Austro-Hungarian Empire than they are under the Slavonic rule of the Succession States. A dictatorship, whether of Peter the Great or of the proletariat of Marshal Pilsudski or a Russian general is abhorrent to Western ideas; and from the date of Magna Carta to Catholic emancipation civil and religious freedom has been secured by men inspired by ideas of toleration irrespective of class. It was Gabriel Bethlen, Prince of Transylvania, who fought to secure religious freedom for the Czechs in the Thirty Years' War, and it was a great Hungarian magnate, Count Stephen Szecheny, who initiated Hungary's advance in culture and in industrial progress. Most historians now recognise that feudalism represented a stage in human progress and that its greatest service to civilisation has been to save mankind from either the dictatorship of a despot or the tyranny of the proletariat. Slavonic countries have suffered both. But the feudal period has passed; universal suffrage is law in Hungary. Land purchase on the Irish system is operating, and the civil and religious freedom won by the great Hungarians is secure.

On the other hand, no one who contemplates Europe to-day can doubt the source from which our civilisation is threatened by a social revolution.—I am, etc.,

GRAHAM BOWER.

Studwell Lodge, Droxford, Hants.
March 16.

EASTERN AFFAIRS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I notice that whenever a clash of interest arises between East and West your Press colleagues are fond of warning us against the tricks and traps of the Eastern mind, as if the Western mind is above using tricks and traps. This kind of abuse, instead of argument, is itself a well-known trick of Western lawyers, and it is time to call it a common failing of humanity.

The proposed Treaty with Egypt is candid enough in three out of the four main clauses which it contains, but the fourth, relating to the protection of foreign interests and minorities, seems to me too tricky to stand unchallenged, for the Egyptian Khedives, when left to themselves, have never been anything but most hospitable and kind to foreigners in their midst. Plain speaking would, therefore, be better, and that is, British troops must be lent to Egypt, or Egyptian troops must be commanded by British officers, in the interest of all concerned. The Army, after all, is a concern of the King of Egypt, and Parliament has its mandate from the people, so it cannot question what is, in the Treaty, a royal prerogative, which aims only at the safety of the people, without diminishing their liberties. In fact, it is this clause in the Treaty which benefits the people most by saving it much expense, and higher taxation in the future!

And as regards Iraq, and Trans-Jordan, the situation is unsatisfactory and is bound to get worse through Great Britain's thinking that the arrangements which she made there were the proper thing to do and that Arab raids against Arabs must be avenged by her. Here, too, I must deprecate the use of British forces except on Iraq and Trans-Jordan soil, and not beyond it. It is inhuman and bad policy to make enemies of poor Arab tribes, whose *bêtes noires* we chose to put on thrones all around them. The people of Iraq may enjoy their internal independence to the full, but we must dismiss the idea of making a nation of them capable at any time of defending themselves or qualifying for membership of the League of Nations. Trans-Jordan is clearly wanted by Palestine.—I am, etc.,

March 10, 1928. A. SEFI.

Ghazi Mustapha Kemal Pasha has abandoned his proposed visit to Southern Anatolia.

A mass meeing was held in Bucharest on March 17 (organised by the National Peasant Party) to express discontent with M. Vintila Bratianu's Cabinet.

Sir Richard Burn, C.S.I., has accepted the invitation of the Royal National Lifeboat Institution to become the honorary secretary of its Oxford branch, in place of Lieutenant-Colonel N. E. Swan, who is leaving Oxford.

Mr. Nahum Sokolow, president of the Zionist Executive in London, was received by the King of Bulgaria and had interviews with the Prime Minister and many prominent men in Bulgarian politics during his recent visit to that country.

The death has occurred suddenly at Shoeburyness of Brevet Lieut.-Colonel David Keithock Edgar, D.S.O., son of the late Sir James Edgar, of Toronto. Commissioned to the Royal Engineers in 1902, he served ten years in India, and during the Great War took part in the operations in Mesopotamia. Afterwards he was appointed chief engineer in Iraq.

Excavations, which have been proceeding for the last two years on the site of the ancient City of Hadda, in the desert two miles south of Jalalabad, Afghanistan, have revealed traces of large canals, according to a Lahore message. The city appears to have possessed lofty buildings and temples, and it is estimated that it flourished over 1,600 years ago.

News has been received by the Georgian Socialist leader, M. Thoidzé, was discovered by the Soviet authorities, after a long search, at a friend's house at Makvanethi, Georgia. Agents of the Cheka surrounded the house and fired on it, with the result that M. Thoidzé, his hostess, and her infant child were killed.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

KURDISTAN.

Mr. G. M. Lees lectured to the Central Asian Society on March 14 upon "Kurdistan," General Sir George MacMunn being in the Chair. The lecturer devoted the main part of his address, which was illustrated with excellent lantern slides, to events in Southern Kurdistan, and particularly around Sulaimani and Halabja (where he was Political Officer) between the summer of 1918 and the spring of 1921, since which time he had not visited the country. He showed clearly how the hesitating policy of the authorities in regard to the future of that section of Kurdistan which was neither Turkish nor Persian reacted upon the attitude towards the British on the part of the local Kurds. The career of Shaikh Mahmoud was vividly sketched, and amusing descriptions were given of the lecturer's relations with such personages as Adela Khanum, Mahmoud Khan, and Hamdi Beg. The Kurds, he said, needed a strong, stern Government, and in this connexion he paid a striking tribute to the work of the late Major E. B. Soane in Southern Kurdistan. Reversal by the authorities at Baghdad, he asserted, of the policy hitherto pursued towards the Kurds, and their subjection to a Government composed mainly of Arabs, whom they despised, was a step which he felt to be in the best interests neither of Kurdistan nor of Great Britain. The proud, mountaineering Kurds would never mix well with the Arabs of the plains. In short, the lecturer was inclined to take a somewhat pessimistic view of the future of Southern Kurdistan.

In subsequent discussion Air Vice-Marshal Sir John Higgins attempted to modify the lecturer's pessimism upon Kurdistan's future. He contrasted the condition of Southern Kurdistan in 1912, when, he recalled, Major Soane had to wait for a Turkish escort of soldiers to journey from Sulaimani to Halabja, and at the present time, when security was complete. The solution of the problem presented by the return and the pretensions of Shaikh Mahmoud had, he thought—barring accidents—been really found. The system of block-houses had a depressing effect upon marauders; nor was the Arab Army by any means so despicable a weapon as was sometimes assumed. A combination of the R.A.F. and Arab Army—which latter had had some experience of hill fighting in 1925 and 1926—was, in his opinion, sufficient to maintain peace.

Mrs. Soane, wife of the late Major E. B. Soane, put in an eloquent plea for the treatment of Kurdish as a real language, with a real primitive literature. It was not a debased form of either Persian or Turkish, as was sometimes asserted. She reinforced the statement concerning the contempt which the Kurd had for the lowlander.

Major Noel, whose name had been mentioned by the lecturer for his work in furthering the advancement of Kurdistan, amusingly narrated the story of the astonishing evacuation by air of British officers from Sulaimani and Halabja. He showed agreement with the lecturer's somewhat pessimistic extracts of the future of Southern Kurdistan under an Arab Government. For the last three years, he said, he had been serving on the North-West Frontier, where he had observed the same phenomenon as in Kurdistan: the disdain of the mountain-folk for those of the plains, the contempt of the Pathan for the Indian. If the Reforms were ever to be introduced into their country, the Pathans told him, they would rather be under Kabul than Delhi!

The Chairman, in summing up, told of his banishing of Shaikh Mahmoud to India for twenty years, of the reintroduction of this troublesome leader into Sulaimani, and of the subsequent difficulties with him.

Dr. J. H. Ritson, Senior Secretary of the British and Foreign Bible Society, left London on March 16 for the official opening of the Bible House in Jerusalem by Lord Plumer. While he is in Jerusalem Dr. Ritson will attend the International Missionary Conference, which is to meet on the Mount of Olives under the chairmanship of Dr. John Mott.

NOTES OF THE WEEK

(*Continued from page* 355.)

doorstep of Sanaa, were enabled to make their much-advertised Treaty with the Yaman. It appears now that the Imam, so far from giving up territories which in Ottoman times were recognised as British, has been attempting to extend the area of his allegiance. He was warned last September that unless this tendency ceased, the Royal Air Force (who now have charge of Aden) would bomb certain of his towns. But the Imam is not an easy man to frighten, and on February 8 he kidnapped two Shaikhs, of Al Kasha and of Jamil, respectively, who are in treaty relations with the British Government. Due notice was given, and then Dhala and Kataba were bombed. But so far the kidnapped Shaikhs still remain in the Zaidi Imam's keeping. In an answer last week in the House of Lords to questions on the subject by Lord Lamington, Lord Lovat, Under-Secretary for Dominion Affairs, conveyed the impression that nothing could be done in the matter until the position of those tribes to the north of Aden to whom Great Britain had treaty obligations had been regulated. Now this particular obstacle has stood between Great Britain and the Imam for at least two years, and it should not be beyond the wit of our representatives to devise some formula which, while fully recognising British duties towards those tribesmen who were formerly under British protection, can reasonably satisfy the Imam's claims towards these men. The position, as it seems to us, can hardly be improved by the recent action, if only on account of the fact that display of force is not calculated to bring the Zaidi authorities round to the British point of view.

NEW EGYPTIAN CABINET.

The Cabinet which Nahas Pasha formed on March 16 includes the following Ministers:—

Mustapha Pasha Nahas.....	Prime Minister and Interior.
Wassif Pasha Ghaly.....	Foreign Affairs.
*Mohamed Pasha Mahmud.....	Finance.
*Gaafar Pasha Waly.....	War.
*Ali Pasha el Shamsy.....	Education.
Ahmed Pasha Khashaba.....	Justice.
*Neguib Pasha Gharably.....	Wakfs.
Mohamed Pasha Safwat.....	Agriculture.
William Makram Bey Obeid.....	Communications.
Ibrahim Bey Fahmy.....	Public Works.

* Held the same office in Sarwat Pasha's late Cabinet.

RUSHDI PASHA.

Rushdi Pasha, a former Prime Minister of Egypt and President of the Senate, died on March 13. He was Prime Minister at the time of the outbreak of the War, and acted most loyally to the British throughout it. He resigned office in March, 1919, having become alienated from British official opinion in the matter of Egyptian independence. He was about 64 years of age.

The *train de luxe* from Luxor arrived in Cairo on March 14 four hours late. Two coaches were burned out *en route*, but no lives were lost.

The annual field training of British troops in Egypt began on March 13 in the desert area between Mena and Sakkara, operations being carried out as between brigades during the first two days.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Further particulars may be obtained of E. H. Keeling, Hon. Sec.

74, Grosvenor Street W.1.

THE WEEK AT HOME

London, Tuesday Morning.

The Prayer Book.

The finally revised form of the Alternative Prayer Book (which in its original form was emotionally rejected by Parliament) was published yesterday, and already the general opinion seems to be that it stands little chance of acceptance. It has first, of course, to go before Convocation and the Church Assembly, and if those bodies give leave, the Measure will then be presented to Parliament. For the next few weeks, therefore, it looks as though there will be very considerable propaganda up and down the country, for the protagonists of the Measure fully realise that the inadequate presentation of their case in Parliament last year had much to do with its defeat.

The principal changes in the new Measure concern the introduction into the Morning and Evening Service of public prayers for the King; the insertion of the Black Rubric at the end of the Alternative Order for Holy Communion; and the incorporation into the rubrics of rules dealing with Reservation.

Whether these changes are sufficient to gain the assent both of the Church Assembly and of Parliament I have no means of knowing, but it is obvious that only the educated and very seriously-minded have troubled to give the affair a second thought. For the ordinary man the original defeat of the Measure appears to be enough, and the prospect of another manifestation of division between Church and State is regarded, when not with complete indifference, with something like dismay.

The Totalisator.

The Totalisator Bill passed its Second Reading in the Commons last week by the narrow majority of fifteen votes. The opposition to it consisted of a most unholy alliance of those who are dead against all forms of betting and those who were out to defend vested interests, the bookmakers. But even this considerable alliance could not defeat the demand for the tidying up of the race-course —which is what the "Tote" is expected to accomplish, although, of course, this preliminary victory by no means makes it certain that the Bill will become law.

It is amusing to know that odds were offered on the fate of this Bill—six to four on its passing. For one whose bets are strictly confined to the big races, or else to small, unrecorded meetings, it is impossible not to hope that the "Race-course Betting Bill" will become law.

Deaths in Flying.

The death of Kinkead in the racing machine was one of the tragedies which have a stunning effect upon the ordinary man, whose intelligence is by no means content with the ordinary question upon the futility of setting up speed records, but who still is perplexed at the apparently inevitable human toll which the quest of such records exacts. The gallantry of the endeavour inhibits his indulging in statements concerning the uselessness of it, but it is obvious that in this, so to speak, dumb attitude, his sorrow is real.

Of the other disaster, to Captain Hinchcliffe's machine in the Atlantic, with Miss Elsie Mackay as well on board, it is little more difficult to write. The flight had been made a sensation, and since no reliable facts are at hand to explain the situation, it is perhaps best just to deplore the loss of a brave airman. For bravery of a kind possessed by very few human beings is required to attempt a flight over the waters which have already covered stout souls on the same quest.

Nor should we forget, when writing of these tragic happenings, the so-called minor tragedies which happen, with painful regularity, to members of the Royal Air Force.

Late Capitalism.

It is good occasionally to get away from the near or short view of things, and to study them in the larger aspect, and in this chronicle, which purports in the main to supply a "close-up" and, therefore, superficial view of affairs, I propose occasionally to tell of the larger examination of matters which men of leisure and learning are able to make.

A useful instance of this was supplied in a lecture which Professor Werner Sombart gave in London last week. Sombart's theories upon the history of Capitalism have, of course, been widely assailed, but unquestionably he is a stimulating historian.

He believes that psychological laws determine certain regularities in our economic systems; that there is a succession of democratic and aristocratic types. The manorial system, for instance, followed the village system, as Capitalism followed the system of handicrafts. It seems, therefore, that the next system will be a democratic one, with trades unions, co-operative societies, nationalisation, municipalisation, and so on, as its most striking elements. In this late Capitalism, the striving for gain as the determining influence of economic conduct will be dethroned and there will be an advance of the principle of satisfying wants.

These generalisations have, of course, a very particular application to our modern English life, which it is too often the fashion for us short-sighted ones to regard as immutably fixed at least in its main economic principles.

The Calcutta Cup.

English Rugger has every reason to be well pleased with itself this year, for it has beaten, though narrowly, Scotland, Ireland, and Wales, in addition to the Waratahs and France. On Saturday, by defeating Scotland at Twickenham, it gained the Calcutta Cup; whereat we were all greatly comforted.

This is due primarily to the excellence of England's forwards, and secondarily to the way in which Young and Laird have found an understanding at half. Generally speaking, the English backs have shown little genius in offence, and the national victories have been won more by honest work and constant endeavour than (Young excepted) by such flashes of genius with which such men as Davies and Kershaw, or, to go back before the War, Ronnie Poulton, used to delight us.

Obviously the young English team this year is one very difficult to beat, but one cannot help thinking that it has been a little lucky in finding teams of other nations somewhat below the highest level.

PERSONAL AND GENERAL

TO-DAY

March 22, 1928 (New Style).
March 9, 1928 (Old Style).
Ramadhan 30, 1346, A.H., of the Muslim Calendar.
Nisan 1, 5699, of the Jewish Calendar.

The King of Afghanistan has confered on the Mayor of Westminster the Order of Istaur-i-Dom.

The Aga Khan arrived at Marseilles on March 16, from Bombay in the P. and O. s.s. Narkunda.

Mrs. Routledge left 4, Hyde Park Gardens, W., last week en route for the Near East.

Mr. and Mrs. Rudyard Kipling have arrived at Naples from Sicily.

Sir Edmund and Lady Wyldbore-Smith will return from Egypt to 68, Cadogan Place shortly after Easter.

Lieut.-General Sir Henry M. Lawson left London on March 16 in the P. and O. Rawalpindi for Port Said.

The Countess of Malmesbury will return at the end of this month to Heron Court, Christchurch, from Egypt.

Mrs. Bullard, wife of Mr. R. W. Bullard, his Britannic Majesty's Consul, has given birth to a son at Athens.

Sir Alfred and Lady Mond returned to London last week after their tour in Europe, Palestine and Iraq.

Mr. H. P. Tollinton, C.S.I., C.I.E., has joined the Board of Management of the Royal Hospital and Home for Insurables, Putney.

Countess Grey and the Ladies Mary and Elizabeth Grey have returned from Egypt to 33, Eaton Place, where Earl Grey is in residence.

The Persian Minister will hold a reception from 3.30 to 7 p.m. to-day (Thursday) at 47, Bramham Gardens, on the occasion of the Persian New Year.

The Bishop of Manchester left England on March 15 to attend the International Missionary Council at Jerusalem. He expects to be absent until about April 21.

The High Commissioner for India and Lady Chatterjee, who are touring in Italy, are expected to return to 131, Ashley Gardens during the second week of April.

Lord and Lady Inchcape, during whose absence in Egypt the ill-fated flight of Miss Elsie Mackay and Captain Hinchcliffe across the Atlantic was undertaken, are on their way back to England.

Lord Doverdale, who has been cruising in the Mediterranean with the Hon. Edward and the Hon. Aline Partington and a party of friends which includes Viscount Coke, arrived last week in Egypt.

Lord Sinha left London on March 15 in the P. and O. special train to embark on the Naldera at Marseilles for Bombay. Other passengers were the Right Hon. William Ormsby-Gore, Sir Herbert and Lady Read, and Sir Edward Sharp.

The Persian Legation announces the engagement between Mirza Morteza Khan Gazvini, Persian Consul in London, and Sakineh Maryam, elder daughter of Mr. and Mrs. Hussein Agar of Eagle Lodge, Hale, Cheshire. Mr. Hussein Agar is the Persian Consul in Manchester.

Viscount and Viscountess Dunedin, who recently arrived on the Riviera from Egypt, are remaining there until early in April.

The King has been graciously pleased to approved the appointment of the Earl Granville, G.C.V.O., K.C.M.G., his Majesty's Envoy Extraordinary and Minister Plenipotentiary at The Hague, to be his Majesty's Ambassador Extraordinary and Plenipotentiary in Brussels and Envoy Extraordinary and Minister Plenipotentiary in Luxemburg.

Earl Granville has served among, other places, Cairo, Vienna, Salonika (during the existence of the Provisional Government) and Athens.

The King has been graciously pleased to approve the appointment of the Viscount Chilston, K.C.M.G., his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Vienna, to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Budapest. Viscount Chilston has served among other places in Cairo, Constantinople, Athens, Sofia, and Vienna before being Chargé d'Affaires twice in Cettinye and twice in Bucharest.

The King has been graciously pleased to approve the appointment of Sir Thomas Hohler, K.C.M.G., C.B., lately his Majesty's Envoy Extraordinary and Minister Plenipotentiary in Santiago de Chile, to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary in Copenhagen.

Sir Thomas Hohler has served, among other places, in Constantinople (thrice), Cairo (thrice) Addis Ababa (where he was Chargé d'Affaires for nearly a year in 1907-8). He became Minister in Budapest in July 1921.

Mme. Maria Stratos, wife of one of the Greek politicians who were executed in 1922 following the *débâcle* of the Greek Army in Asia Minor, has become an American subject, and it is stated that she will shortly make her *début* on the concert stage.

Telegrams from Seistan (on the borders of Persia and Afghanistan) report that two severe earthquake shocks occurred on Friday and Monday, March 9 and 12 respectively. Half a village, comprising a thousand houses, was destroyed, but only four persons were killed.

The Italian steamer Stella d'Italia, 5,884 tons, will leave Venice on August 24 with a party of British ex-Servicemen and their friends, who are to visit the battlefields and cemeteries in the Gallipoli and Salonika areas. Full particulars may be obtained from St. Barnabas Pilgrimages, 7, Hobart Place, S.W.1.

An enthusiastic welcome was given Sir John Maffey, Governor-General of the Sudan, on his arrival at Asmara, Eritrea, on March 12. Speeches at an official banquet given in his honour at the Palace by Cav. Gasparini, Governor of Eritrea, emphasised the cordiality and friendship existing between the Sudan and Eritrea and between Great Britain and Italy.

Fräulein Claerenore Stinnes, the daughter of the late Herr Hugo Stinnes, arirved in Peking on March 17 by motor-car from Berlin, which she left last May, accompanied by a Swedish cinema photographer and four mechanics in a second car. The party travelled through the Balkans, Turkey, Syria, Persia, Caucasia, Russia, Siberia, and Mongolia.

General Sir John S. M. Shea, K.C.B., K.C.M.G., D.S.O., has been posted to the Eastern Command at Naini Tal. Major-General M. R. W. Nightingale, C.B., C.M.G., C.I.E., D.S.O., commanding the Sind Independent Brigade Area, is coming home in April on six months' leave. Major-General W. H. Kay, C.B., D.S.O., the Artillery adviser at Army Headquarters, Delhi, is granted seven months' leave from April 7.

THE CENTRAL AND PROVINCIAL REVENUES.

One of the most prominent features of his final successful Budget on which Sir Basil Blackett laid particular stress was the complete and final extinction of the provincial contributions. As he truly said, these contributions have been a millstone round the neck both of the Central and of the Provincial Governments, poisoning their mutual relations. No one, therefore, will quarrel with Sir Basil Blackett's satisfaction at their disappearance, more especially as this has been largely due to his own successful management of the Central finances. The relief so generally felt, however, may in itself be a cause of misunderstanding; and we already hear of the abolition of the provincial contributions being described as "the end of the Meston Settlement." That settlement was admittedly somewhat unhappy, though it is sometimes forgotten that it was always intended to be provisional. It is, however, necessary to point out that, unless this settlement is replaced by another, its mere abolition will not remove the inequality of the present financial arrangements as imposed on the various Provinces: it will, on the contrary, increase that inequality.

It is necessary to refer briefly to the circumstances of the present division of revenues between the Central and the Provincial Governments. It was rightly decided to aim at complete separation between the finances of the respective Governments. It was accordingly laid down by the Central Government that it should receive the whole of the Customs, Postal, Railway, Salt and Opium receipts, as well as those obtained from taxes on Income and from non-Judicial Stamps: while the Provincial Governments should retain the receipts from Land Revenue, Irrigation, Excise, and Judicial Stamps. Since, however, the sources of revenue reserved for the Central Government did not appear sufficient for their needs as then calculated, it was further decided that the Provincial Governments should from their own receipts contribute varying sums in cash. It is interesting and necessary to set down the sums taken from each Province, which were as follow, in lakhs of rupees:—Madras 348, United Provinces 240, Punjab 175, Burma 64, Bengal 63, Bombay 56, Central Provinces 22, and Assam 15. It is at once apparent that these sums bear no proportion to the relative area, population, or wealth of the various Provinces. It is equally obvious that the separation of the sources of revenue took larger sums from some Provinces than from others, and at the same time left them smaller sums from the remaining sources. Let us take, for example, Madras. That Province obviously provided less in Customs and Income Tax receipts for the Central Revenues than Bengal or Bombay did: while, at the same time, its large extent and, it may be added, its excellent revenue system left a larger amount of Land Revenue with the Local Government than the Government either of Bengal or of Bombay enjoyed. Obviously, therefore, the cash contributions imposed under the Meston Settlement must have been calculated on the sums otherwise extracted from the Provinces, and on the revenue which remained with their Governments for the Provincial needs. If, therefore, these cash contributions are simply wiped out without a revision of the remainder of the Settlement, their extinction, however popular, will merely perpetuate the injustice of that Settlement, and will in particular be an unfair handicap to the Governments of Bengal and Bombay.

We are far from suggesting that the financial policy of these Governments, dependent as it now is on the wishes of the local Legislative Council, is not open to criticism. The comparatively low revenues of the naturally rich Province of Bengal is, for example, due to the Permanent Settlement, and to the unwillingness to tamper with it, or to introduce supplementary taxation. In the case of Bombay, though the Land Revenue in the Presidency itself is not capable of much expansion, yet the revision of settlements long expired has been indefinitely postponed in deference to the wish of the Legislative Council. It may be doubted, moreover, whether the Bombay Government in its Province of Sind obtains the same legitimate revenue from Irrigation as is collected in very similar conditions by the Punjab Government. In matters of Excise, moreover, the Government of Bombay, alone of the Governments of India, has proclaimed Prohibition as its goal, instead of adopting the more reasonable ideal of spreading true temperance among the people. It has, in consequence, involved itself in many difficulties, without any benefit to the people in general. A further objection is sometimes urged against the Bombay Government that its administration is unduly expensive by head of population. This criticism is, in our opinion, ill-founded. The Bombay Presidency contains many barren portions, and has not the teeming population of some other parts of India: and the necessary expenses of administration are accordingly higher, if population only is considered. In the main, however, the higher cost of administration is due to the higher standard of living and the payment of a wage consistent with honesty and efficiency. In this respect Bombay can only be said to be ahead of the other Provincial Governments.

If we consider the contributions made by Bengal and Bombay to the Central Revenues in the form of Custom Duties and Income Tax, it is apparent that they are far greater than those from other Provinces. It is, of course, obvious that the goods on which Customs duty is taken are consumed all over India: and almost equally clear that much of the income on which the tax is collected in Calcutta or Bombay is earned in other Provinces. These cities, however, at least deserve some practical recognition of the fact that they are the centres of commerce and industry. Their ports have been constructed at great expense, and their local charges are necessarily high: while the high tariff duties, from which the Government of India derive so much revenue, are restrictive of foreign trade, and therefore affect directly the prosperity of the chief Continental ports, Calcutta, Bombay, and Karachi. A good case, therefore, can be made out for returning to the Provinces at least a share of the Income Tax, and, as we think, of the Customs Duties, collected therein. It

Digitized by Google

is at any rate obvious that the abolition of the Provincial cash contributions has made the present settlement more inequitable for Bengal and Bombay. It is the arbitrary allocation of heads of revenue between the several Governments, without adequate regard to the considerations we have cited, and based, in many respects upon wholly incorrect data, not the system of contributions and remissions, which "has been a millstone round the neck both of the Central Government and of the Provincial Governments, poisoning their mutual relations and hampering their every action."

CURRENT TOPICS.

Roads in India.

The inquiries that are being made by the Roads Development Committee promise to yield results that will be distinctly interesting. It will be recalled that this Committee was appointed last year by the Government of India "to examine the desirability of developing the road system of India, and, in particular, the means by which such development can be financed." The Committee was also asked to consider whether steps should not be taken to co-ordinate road development, and research in road construction, by the formation of a Central Road Board. To judge by some of the evidence which has been tendered to the Committee in Bengal, it would appear that in that province there is no real road system at all. The whole of India is not in such a bad way as this possibly; but we imagine that in most parts of the country there are grievous deficiencies. In Bengal, however, according to the Bengal Chamber of Commerce—a competent authority—there is only one reasonably good main road, namely, the Grand Trunk. Except on this road it is difficult to go fifty miles in any one direction. There is no system of main roads; and the secondaries have been constructed to meet local needs only, without reference to any general plan. Furthermore the roads, being badly constructed and mostly unbridged and unmetalled, are altogether inadequate for motor transport and, in the rainy season, for even animal transport.

This is a fairly comprehensive indictment, and the Chamber consequently favours an extensive measure of reform. It recognises that, if the roads are to be developed on a sufficiently large scale, the establishment of a Central Road Board will be imperative. This seems to us to be indisputable, for obviously no large schemes of development will ever be undertaken except by a properly constituted central authority equipped with ample powers. A Central Board would be able to frame a general development policy for the country as a whole, and would also be in a position to co-ordinate the activities of the provincial authorities. As in all such matters the provision of the required finance will be, we take it, the main difficulty. And the only way by which the money can be obtained will be by the Government raising or guaranteeing or granting loans. For the service of these loans there could be allocated, the Chamber has suggested, a part of the existing excise duty on petrol. It would be, however, clearly inequitable to expect the owners of motor vehicles to provide all the money required for road development. For the general taxpayer will benefit by the new and improved roads, and he ought, therefore, to bear a share of the cost. The loans would be reproductive, and we agree with the Chamber that, this being so, the taxable capacity of the country for their service should be confined. Another suggestion, which the Chamber makes and which will be largely supported, is that all the funds raised by central and provincial taxation on motor transport should be devoted to the roads. Municipal taxation on motor transport is on a somewhat different footing, but a reasonable proportion of the proceeds of such taxes ought also to be spent on the roads. In an industrial province, such as Bengal is becoming, the development of motor transport will be practically unlimited. This development is now being retarded by the insufficiency and inadequacy of the roads and, as these are provided, so will it progress.

Bombay Finances.

The details now received of the Bombay Budget do not add anything to the impression obtained from the cabled summary. If anything, they make the picture somewhat more depressing. The final extinction of the cash contribution annually due under the Meston Settlement to the Government does, indeed, allow of the revenue for the new year being shown as likely to exceed the expenditure by the small amount of three lakhs. The stern fact, however, remains that the balance, excluding the Famine Fund, of the Government will have been reduced from 492 lakhs in April 1925 to 7 lakhs in April 1929. The Bombay Government, including of course the Legislative Council, has therefore been following the easy and pleasant course of living on its balances for the last four years, and, like most easy and pleasant things, this method of dalliance must come to an early end. Nor is this all. The contribution to the Famine Fund has been quite rightly reduced: and the cash payments to the Government of India have also come to an end. Yet the money thus saved is not available for the starved nation building departments, but is barely sufficient to bring the revenue on a parity with the ordinary expenditure.

It is true that the Bengal Government is in an almost equally melancholy financial condition, and it can hardly be a coincidence that these are the two Provinces most severely affected by the present inequitable system whereby the Central Government takes the whole amount of levy laid, in the form of income tax, on the industrial and commercial wealth of the community. Ultimately this inequality must be to some extent redressed. With the urgent need for revision we have dealt at some length in the leading article in this week's issue. Until, however, this is done, it is the duty of both Governments, and particularly of Bombay, to devise fresh sources of revenue, and to reduce their top-heavy overhead expenses. It is at least, satisfactory that the trade of Bombay shows signs of improvement and that the cotton crop, in spite of the disastrous floods over so much of the Presidency, promises excellently. It is therefore now up to Sir Chumlal Mehta to show that he can follow a more constructive policy than mere reliance on the balances so painfully accumulated by his civilian predecessors in office.

Business and Politics.

At a dinner given recently in his honour by Sir Dinshaw Wacha, the Grand Old Man of Indian politics and a consistent supporter of the British connexion, Sir Basil Blackett said that what had most appealed to him, when he was offered the post of Finance Minister, was the effort which was being made to establish the Parliamentary system of government in India. After testifying to the sincerity of His Majesty's Government, the Government of India and the officials of all grades in that respect, Sir Basil confessed, however, to a sense of grievous disappointment. He had found that their every effort was not only criticised but was regarded with suspicion as a part of a Machiavellian scheme to prevent India from attaining that goal of self-government which was, in fact, what Great Britain was most earnestly striving to help India to realise. The British Government and the Government of India, with all their failings and shortcomings, had been unitedly striving to make a success of the complete change from autocratic to democratic government in India. "If the Legislative Assembly had treated itself as a responsible Chamber," Sir Basil Blackett concluded, "no one, after 25 years, would have dreamed of treating it otherwise, but its persistent irresponsibility must inevitably and immeasurably retard the desired progress." We are forcibly reminded of the Finance Member's criticism of the attitude "of those upon whom new opportunities for service have been conferred" by

the events of the past few weeks at Delhi. Incidentally, they constitute a most effective commentary upon the timely and well-reasoned appeal by Sir Willoughby Carey in the letter reproduced elsewhere in this issue.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 1.

The Statutory Commission.

The decision of the Council of State with regard to co-operating with the Statutory Commission was known in Calcutta last mail day. That was not mentioned in my last letter, circumstances having compelled me to write my letter a day earlier in the week than usual. The debate leading up to the division was a short one, the chief speakers on the side of co-operation being Sir Maneckjee Dadabhoy and Sir Sankaran Nair, while the Swarajist leader, Mr. Ramdas Pantulu, did his best to make the worse appear the better reason. He did not obviously produce much effect on the minds of his fellow-councillors; for by thirty-four votes against thirteen, the unlucky number, the Council decided to appoint representatives to participate in the Joint Conference according to the procedure outlined by Sir John Simon in his now famous letter to the Viceroy. *The Times* is probably right in the opinion expressed in an editorial of yesterday, a summary of which is in our newspapers this morning; namely, that as soon as the Government of India requests the Council of State to elect its representatives to a Joint Conference, members of the Assembly who voted for the boycott may find good reasons for a more practical policy. The opinion expressed a few days earlier by the Paris *Temps*, that "it is difficult to understand why the Hindu advocates of autonomy should indulge in such excesses of anger and indignation," will have some weight with the public behind the Council and the Assembly.

Finally there is the very cold comfort for the boycotters of Sir Hari Singh Gour's letter to the Press, of which the following is the chief article:—"I can understand the attitude of the Congressmen who have clearly and unequivocally denounced the Commission, not because of its composition, but because it is a Commission at all. Their spokesmen . . . have made it plain that they repudiate the authority of Parliament to legislate for India, and that they are making their own constitution, which I presume they will proclaim and enforce in supersession of the existing constitution, thus establishing a rival Government, which can only function by the use of force. . . . I do not believe that we can bring England to her knees by the use of force, or that any constitution prepared by us will be accepted by Parliament without examination. And this is just what the Simon Commission have been appointed to do." That is sensible.

The Budget.

Sir Basil Blackett has presented his last budget. There is to be neither new taxation nor remission of taxation, but the Provincial contributions are to be permanently extinguished; so the road is clear for a remission of taxation at no very distant date. The Provincial contributions, remitted during the current financial year, but only temporarily, amounted to Rs.258 lakhs. With that amount taken into the accounts, the budget estimate for 1928-1929 showed a surplus of Rs.263 lakhs. So the Finance Member had enough in hand to wipe out the Provincial contributions once and for all, and that has been done. Whether a remission of taxation is seen in the near future will depend, of course, on a continuance of the prosperity that India is now enjoying and on Sir George Schuster's ability to keep down expenditure. What is wanted is that less of the revenue of India should be spent by the Central Government, and more spent by the Provincial Governments.

There is to be a rupee loan this year of Rs.32 crores, and no sterling loan. "The net proceeds of the rupee loan in the current year," said Sir Basil Blackett, "amounted to Rs.18½ crores only, while the total amount of debt redeemed amounted to 25.4 crores. . . . In our anxiety to guard the interests of the Indian taxpayer and in our desire not to disturb the market in Government securities . . . we did not make the terms of our rupee loan as attractive as we possibly should have done, and the fact that it was a short-dated loan seems to have militated against complete success. In the result, we had to tide over temporary difficulties by various expedients."

The Bengal Chamber of Commerce.

Sir George Godfrey is the new President of the Bengal Chamber of Commerce. The retiring President, Mr. Eddis, in presenting the report, made a point or two, chiefly on the subject of the Reserve Bank Bill, that are worth remembering. "The Reserve Bank," Mr. Eddis said, "if and when it is established, should be kept outside politics altogether, but there is a very definite opinion on the part of Indian politicians that it is right and proper for the Legislature as such to be directly concerned with the direction and control of the Bank and its functions, with the result that India has for the present lost her opportunity of getting the principles of the Reserve Bank Bill of 1927, but this Bill did not meet with the approval of the legislature; and the revised Bill of 1928 differed so essentially from the first Bill in important principles that the Chamber felt compelled to make it clear . . . that it could not receive the support of the Chamber unless material alterations were made in the proposed structure of the Bank."

The Untouchables.

Some good may come of the debate in the Legislative Assembly on Mr. Jayakar's resolution directing the Provincial Governments to provide facilities for the education of the "untouchables," and to throw all the public Services open to them. Mr. Jayakar would himself have inserted in the resolution a special reference to the police as a suitable Service for the "untouchables." Lala Lajpat Rai advocated the allocation of a crore for the uplift from central revenues. So practical a suggestion met with general sympathy, but the Government speaker proved the complete inability of the Central Government to allocate revenue for grants in aid of Provincial transferred subjects. The Central Government can only remit Provincial contributions.

Indian States Inquiry Committee.

The members of the Indian States Inquiry Committee have paid an informal visit to Alwar. The Maharaja entertained the members at a banquet, and in a speech proposing the health of Sir Harcourt Butler, the President, said that the first essential was to draw a line of demarcation somewhere inside the internal anatomy of what were loosely called Indian States. Many of them were relics of the time when the East India Company, in order to settle a country of which it did not take possession, gave guarantees, granted sanads, made engagements, and entered into treaties of alliance with thirty-eight States. The circumstances and position of the various States are so different, that it is not possible to deal with the matter as one whole. "It is essential to realise," His Highness said, "that while British India, which we always wish well, has had the goal fixed of responsible self-government, we have yet to discover and decide what is to be the goal before the Indian States, with their treaties, etc., to which has to be added political practice and usage. We have to extract from this mass the correct position of the States in relation to British India, the Imperial Government, and the Crown."

ANCIENT BIHAR AND ORISSA.*

BY SIR EDWARD A. GAIT, K.C.S.I., C.I.E.

I need hardly say that I feel much honoured by the invitation to deliver this year's "Birdwood Memorial Lecture." As the Royal Society of Arts has allowed me to choose the subject, I have decided to speak about the Province of Bihar and Orissa, in which I served for many years.

It would be impossible in the course of a short lecture to deal with all aspects of such a diversified province, which has an area nearly as great as that of the British Isles and a population equal to that of England and Wales. So I propose this afternoon to confine myself to an outline of what is known regarding the remote past of each of the three sub-provinces. I have selected this branch of my subject, partly because it is one which would have appealed specially to Sir George Birdwood, and partly because a great deal of fresh light has been thrown upon it by the Bihar and Orissa Research Society, which was founded soon after the Province came into existence and has proved itself a very active and efficient body.

For centuries before the Christian era India had a copious literature embracing such subjects as religion, philosophy, logic and grammar. There were great dramatists and epic poets, but no real historians, though dubious dynastic lists are to be found in certain religious books. Less than ninety years ago, when Elphinstone wrote his great pioneer history of India, he found no material for a connected account of events prior to the advent of the Muhammadans. Since his time, however, a mass of material has been, and is still being, collected from many different sources. The most valuable are ancient inscriptions on rocks, pillars, buildings, coins and copper-plate title deeds of land grants. The earlier of these inscriptions are written in archaic characters, the decipherment of which is due mainly to the genius of James Prinsep, who was, like Elphinstone, a servant of the East India Company. The amount of historical information now available varies greatly in different parts of India.

It is practically non-existent in the case of Chota Nagpur. On the other hand, this sub-province is exceptionally rich in prehistoric antiquities. It is the only tract in Northern India where palæolithic implements have been found. Neoliths are very common. A cave near Singanpur, near the Western border of the Gangpur State, contains paintings of hunting and other scenes reminiscent of those made by Aurignacian man in the limestone caves of South-west Europe. Copper axe-heads have been found in many places, in some cases in an unfinished state, indicating local manufacture. One find consisted of a number of copper bars shaped like ploughshares. It is curious that whereas in Europe the earliest known metal tools are made of bronze, in India they are made of copper: the difference may be due to the rarity of tin in India. Copper and bronze ornaments and utensils of a later date and phallic emblems in stone or terra cotta are frequently dug up; and in some places finely finished and bored beads of crystal, cornelian and other stones are often picked up after rain. Coins of the Kushan kings have been found. There are numerous remains of stone temples and sculptures and also of buildings made of bricks like those in use in Bihar more than 2,000 years ago. There are extensive burial grounds where massive sepulchral stones cover groups of earthenware jars. These jars contain calcined human bones, together with earthenware lamps and other vessels, and also copper and bronze bracelets, rings and other ornaments, crystal beads, etc. There are remains of ancient copper mines. Near one of them several hundred copper coins were recently found. They are a very rude imitation of the coinage of Kanishka, and had evidently been cast in moulds. Many of them were in an unfinished state, so that the place were they were found was probably a mint. The form of the letters suggests that they date from about the seventh century of our era.

These various relics show that the old idea that the present aboriginal inhabitants of the Chota Nagpur plateau have always been its principal occupants is no longer tenable, and that they must have been preceded, in some parts at least, by a more civilised race. In Ranchi there are widespread traditions of its former habitation by an ancient people called Asurs, to whom the present inhabitants attribute the burial places and ruins which I have just described. They are reputed to have been a tall and powerful race. It is impossible to say if they were identical with the Asuras of Vedic literature, but the facts that the latter were also worshippers of the Phallus and are said to have been expert in the working of copper suggests the possibility of some connexion. Rai Bahadur S. C. Roy finds some remarkable resemblances between the Asur sites in Chota Nagpur and the finds they yield and those of the ancient ruins of Harappa and Mahen-jo-Duro in the Indus valley, of which we are still anxiously awaiting a detailed account. According to another recent writer, the earliest known rulers of South Bihar were Vedic Asuras, and, if so, they might easily have spread thence into Chota Nagpur. Whether these ancient people were exterminated or absorbed by the newcomers, or were driven to other parts of India is a riddle that cannnot now, and perhaps never will be, solved.

That aboriginal tribes are prone to migration is shown by the eastward drift of the Santals within living memory, and by the fact that Oraons now inhabit villages where Mundas once lived. Similar movements may have been in progress from time immemorial. Unfortunately there is little or nothing to show their extent or direction. Some tribes, notably the Oraons, speak dialects of the Dravidian linguistic family, which are more nearly related to the Tamil and Kanarese languages of the extreme South of India than to the nearer Telugu. The Dravidian family has no known affinities with any languages spoken outside India. Other tribes, including the Mundas, Santals, and Hos speak dialects of the Austric family, the most widely diffused linguistic family in the world. It is spoken in many parts of South-east Asia and in islands of the Indian and Pacific Oceans as far as Easter Island off the coast of South America. The only other surviving members of it in India are Khasi in Assam and Mon and Talaing in Burma; but there are indications that cognate dialects were current over the greater part of the Gangetic plain before the advent of the hordes who brought the Ayran languages to India. The practice of erecting monoliths in memory of the dead, common amongst the Khasis and other more easterly tribes, prevails amongst the Mundas but not amongst the Oraons. These facts are suggestive, but it would be rash to assert that they afford any definite guide to their prehistoric migrations. Risley held, on the basis of head measurements taken by subordinates under his instructions, that whatever may once have been the case, there is now no physical distinction between the two groups of tribes. It is doubtful, however, whether the measurements in question were sufficiently accurate to be conclusive. Some competent observers consider that there is, in fact, a clear difference of type. A recent writer says:—"To one who has lived in a Mongolian country as I have, the semi-Mongolian appearance of the Hos is very striking." The traditions of the people themselves give us no help. In this connexion I may quote an experience of my own which shows how cautious one must be nowadays in placing any reliance on so-called traditions. When questioning some Hos on the subject of their past migrations, two intelligent headmen told me that their forbears had come from

* The Sir George Birdwood Memorial Lecture, read before the Royal Society of Arts (Indian Section) on February 11; the Right Hon. Viscount Chelmsford, G.M.S.I., G.C.M.G., G.M.I.E., G.B.E., in the Chair. (Abridged version.)

the North across snowy ranges. Their statements seemed to afford striking support to the late Colonel Dalton's views on the subject, but fortunately I happened to ask them whence they had obtained their information. Their answer was that they had learned it in their village school. Colonel Dalton's views had evidently found their way into the school "First Reader."

(To be concluded.)

CORRESPONDENCE.

THE FUTURE OF INDIA.

To the Editor of The Near East and India.

Sir,—Now that the Statutory Commission appear to be overcoming the initial difficulties of their reception and to be finding, as was to be expected, at least sections of the population of India ready to welcome them and to do their best to help them to come to conclusions, it may not be out of place to put forward one or two considerations which are not in the habit of being loudly voiced, because they concern sections of the population who are generally too busy to expend much time in talking about what they are doing; secondly, because the electoral representation under the original Reforms Act did not give much opportunity for their representation. I refer to the very large numbers of the Indian population who are engaged in industries within the continent and in commerce, both internal and external.

What this means to the country may be in a small measure estimated when one sees that the available figures for 1926-27 were the equivalent of £206,500,000 for companies registered in the country, which does not at all include the enormous amounts involved in the daily import and export trades of firms and private persons, or the probably equally large amount involved in internal trade. Out of this the same official reports inform us that some £80,500,000 is invested in railways and transport. Also, in addition to the figures and facts above mentioned, companies and interests representing £772,750,000 were daily concerned in working in India. All these figures are steadily increasing figures under the present régime set up by Sir Basil Blackett, and one would not wish to see any setback.

Trade cannot be developed unless the nations trading with India retain confidence in the stability of her revenues and financial administration. The central revenues are dependent largely on expansion of trade, because all the interests above mentioned are large contributors to the revenue of India, probably, next to land, the largest contributors. Whatever recommendations, therefore, may in due course be made by the Commission, they should include the complete safeguarding of this side of the country's life. Indian and European interests are both involved and, if anything, Indian interests more largely even than European, enormous though these latter are. The European commercial man has probably tried to work the reforms up to date as loyally as anybody, but he has made no concealment of the fact that, with increasing independence of government, increasing safeguards of revenue and law and order, in his opinion, become necessary.

The opinions were clearly stated before the Lee Commission by the Bengal Chamber of Commerce in the evidence of their witnesses, of whom I was one, and these opinions were supported widely. I am sure that the Indian merchant and industrialist are of the same mind and would not welcome, in the long run, any degree of independent government which did not fully provide for a solvent and well-regulated State, with the essential safeguards to enable them to carry on and improve their trade.

One is perhaps just now forced to these reflections by the untoward fate of the Reserve Bank Bill, recently slaughtered by the Legislative Assembly to provide an extremist holiday, even though it had been admitted by all parties to be a measure valuable to India's future trade. To the wise Indian no state of government, however independent, would be of any satisfaction unless it also provided for the solvency and progression of the State and the Government.—I am, etc.,

W. L. Carey.

Aldwynch House, W.C.2.

[Sir Willoughby Carey voices a point of view to which The Near East and India has always endeavoured to give the utmost prominence, and his appeal has never been more timely.—Ed.]

THE INDIAN STATES COMMITTEE.

The Harcourt Butler Committee, the constitution of which was announced in The Near East and India of December 29, has issued a *questionnaire,* in which it explains that it is not empowered to deal with past decisions of the Paramount Power except in so far as they illustrate or bear upon the relationship existing between the Paramount Power and the States. But the Committee does not desire to limit the evidence which the States may wish to bring forward in arguing their cases by referring to past decisions or present differences of opinion within the limits of the first part of the instructions, which refer only to the existing relationship. The *questionnaire,* therefore, deals with the second part of the instructions only, which is to inquire into the financial and economic relations between British India and the States, and to make any recommendations which the Committee may consider desirable or necessary for their more satisfactory arrangement.

The *questionnaire* relates to customs, railway jurisdiction, mints and currency, and dealings between Indian States and capitalists and financial agents, the manufacture and export of salt by States, post and telegraphs, the discussion of matters of joint interest to British India and the States, general financial relations, opium, excise, and generally in regard to customs. The States are asked whether they claim any share in the Imperial customs revenue and, if so, on what grounds, and whether the recent raising of customs duties has adversely affected the States or their subjects, and whether the States are prepared to abolish their own import and export duties on condition of receiving a share to be agreed upon of the Imperial customs revenue.

THE CHURCH IN INDIA.

The greater part of the recent session in Calcutta of the General Council of the Church in India, Burma, and Ceylon was occupied by consideration of the third revision of the Constitution first drafted early in 1923 as a preliminary to the legislation carried into law last year for severing the statutory association of the Church in India with the Church of England and making a self-governing daughter Church.

Important amendments were adopted, and explanations were given to meet criticisms of the third draft. Certain of the Declarations and Canons were re-drafted. The fourth revised draft Constitution will be issued within the next few months, and Diocesan Councils may submit further amendments not later than May 1, 1929. Such proposals will be circulated to the other dioceses for consideration before the General Council meets early in 1930, when the delegates from all the dioceses will be asked to adopt finally the Constitution, with the Canons and Rules. It will thus reach its final form when the date of severance from the Church of England is due to take effect.

The Standing Committee of the Diocese of Lucknow is appealing for Rs.50,000 (£3,750) to provide a fitting memorial to the late Bishop, Dr. G. H. Westcott. The bishop left Rs.5,000 in his will towards the completion of the nave of the Cathedral of Allahabad. Enough money has been collected for this purpose, but a porch and a rose window are still required at the west end, and these will form the proposed memorial. The committee feel that this would accord with the late bishop's wishes, because, when he learned that a presentation on his retirement was proposed, he asked that any recognition of his work should take the form of an addition to the Cathedral. The rose window will be appropriate, for the bishop was a keen rose-grower. Donations may be sent to the Secretary, Indian Church Aid Association, Church House, Westminster, S.W.1.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Sudan's Trade Progress.

Elsewhere in these columns will be found details of the trade figures of the Sudan for 1927. Considering the conditions obtaining during the period it can only be said that they make a remarkably good showing. Poor crops with the exception of cotton, low prices, and the necessity to import dura on a large scale all had their effect on the economic situation. In the last few months the position in the Sudan has tended to improve, and owing to an excellent harvest there will be no necessity to import dura in the current year. That means naturally that the natives will have more means at their disposal for the purchase of articles which have to be imported, and it is not without significance from the point of view of the future that even last year the imports of cotton piece-goods—an invariable index of the economic prosperity or otherwise of a region—tended to improve, a development for which the fall in prices no doubt had some responsibility. Taking a broad view, it can be said that the present state of the Sudan gives occasion for much optimism. The country has one great industry already well established in the Gezira, while satisfactory progress is being made with the growing of American cotton in the South Sudan. It is also happily not in the position of so many agricultural countries dependent in the main on only one crop; on the contrary, as its export list shows, its products are numerous and important, and while cotton is bound to be the mainstay of the country's activities the other products will help the country to maintain a satisfactory level of prosperity in times when, as is inevitable, cotton prices are ruling at a low level.

Roumania's Loan Negotiations.

The report that Roumania is trying to arrange a stabilisation and railway loan in America will scarcely come as a surprise. The obvious course for Roumania to obtain the financial accommodation of which she is in such need would be to approach the League of Nations as other Balkan countries have done; but this line of action is not regarded with favour in Roumania, and if it had been it is possible that the raising of the Hungarian question at the recent session would have been sufficient to bring about its abandonment. Unfortunately for Roumania it is an undoubted fact that it is much easier for a country in its position to raise a loan under the auspices of the League than otherwise. An indication of her credit at the moment is to be found in the yield on the four per cent. Consolidated Loan of 1922 which gives over eight per cent. That Roumania should turn to America for assistance is readily understandable For one thing America is outside the League which her former President created and for another she is the only country in the world so overburdened with wealth that its possession has become a positive source of embarrassment. But nothing America has done since the War ended has suggested that she is in any way imbued with philanthropic desires, and it is highly probable that Roumania will find than an American loan will not be obtainable on easy terms. Not that that would be the case under the auspices of the League, but it is probable that the terms would be somewhat less onerous.

The Cotton Trade and Advertising.

The cotton trade, as is unfortunately only too well known, is one of the three staple industries of the country which are still suffering from the effects of the depression in trade. An interesting question is being asked in the House of Commons this week as to whether some part of the surplus funds of the Empire Marketing Board could not be utilised for advertising Lancashire cotton goods abroad. It is a most timely suggestion, and if the Government approves of it it may be hoped that due attention will be paid to the great markets of the Near and Middle East which used to be one of the great outlets for Lancashire goods, but where greater enterprise on the part of our competitors has resulted in their obtaining the bulk of the trade in several of the markets. Admittedly prices and other factors have been against Lancashire, but on the other hand there is no doubt that so far too little has been done to bring the products of Lancashire to the notice of potential customers.

Suez Canal Traffic.

The figures for the Suez Canal traffic for January throw further light on the revival of trade. The number of transits during the month was 510, the net tonnage being 2,661,000 which is easily the best figure recorded for that month and only 6,000 tons below the best monthly total, which was for March, 1925. The increased tonnage as compared with January, 1927, was 262,000, and there was practically an equal distribution of this over the two streams of the Canal's traffic. Merchandise shipped through the Canal totalled 2,647,000 tons which represents an increase of 358,000 on the figures for the corresponding month in the previous year. The outward traffic totalled 983,000 tons, an increase of 94,000 tons, while the homewards traffic amounted to 1,664,000 tons, an increase of 264,000 tons. In the outward traffic railway material played an important part, while in the homeward traffic features were the shipment of soya beans totalling 138,000 tons and rice amounting to 75,000 tons.

The Bulgarian Loan.

Now that the authorisation of the League for a loan of £4,500,000 has been obtained it is to be presumed that no time will be lost in entering upon negotiations with the financial groups in the countries in which the loan is to be issued. The loan is destined, of course, for the financial reconstruction of Bulgaria, and the scheme arranged by the Finance Committee of the League and the Bulgarian representatives provides for the allocation of the loan as follows:—National Bank £1,500,000, Agricultural Bank £500,000, Central Co-operative Bank

BANK OF ROUMANIA LIMITED
(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET, LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors:
E. W. H. BARRY. Esq.
C. De CERJAT, Esq.
SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers:
BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Digitized by Google

£150,000, Budget arrears £1,100,000, and for roads and railways £1,250,000. It will be seen from this summary that the scheme is of a comprehensive character. The security for the loan will be a first charge on the Customs provided that this security can be released from reparation liabilities. It is interesting to note that the work on the roads and railways will be in accordance with a scheme which will be drawn up by a foreign expert, and the League Commissioner in charge of refugee work is to supervise the expenditure on this account and in respect of Budget arrears. It is noteworthy that for the current year it is anticipated that Bulgaria will have a balance on the Budget of 60,000,000 leva on a total of 660,000,000,000 leva, and it is anticipated by the Financial Committee that the Budget will continue to balance though at a slightly higher figure provided certain reforms are carried out. The difficulty in regard to Bulgaria is, of course, the trade position. The country's foreign liabilities are substantial, and will be notably increased by the issuing of the new loan, and its economic development must depend on the growth of a considerable export trade, as to which the prospects are not very promising. She has not the natural resources of her neighbours, and her products with the exception of attar of roses are common to the Balkans. It is a problem for which a solution must be found if Bulgaria is to progress.

The National Bank Reform.

It is somewhat difficult to understand why Bulgaria should have opposed the establishment of an independent bank of issue, and the change of front on this subject and their agreement to undertake the desired reform of the National Bank was clearly only due to the fact that otherwise it would be impossible to obtain a loan under the auspices of the League. The scheme of reform provides for the transformation of the bank into an independent central bank with shares. The capital of the bank will be 500,000,000 leva in shares of 1,000 leva, so that it will be possible for the shares to be well distributed among the population. The independene of the bank will be guaranteed by the Government, and a reserve of not less than 33⅓ per cent. will be maintained against the notes in circulation. As already recorded an adviser to the bank is to be appointed by the League, and he will continue in office until the scheme of reform is completed.

The Ottoman Railway.

While there was a slight decline in the receipts of the Ottoman Railway from Smyrna to Aidin for the second half of last year, for the whole year there was a net balance of £198,666 as compared with one of £164,681 for the previous twelve months. This improvement in the results has enabled the company to make an extra payment of two per cent. on the Second Debentures, bringing their return up to the full six per cent. for the first time for four years. The company is unfortunately still faced with difficulties in certain directions. Increased tariffs were to have come into operation on January 1, but while these tariffs were the result of an agreement made by a Commission representing the Government and the Company the decision had apparently to be transferred to Angora for ratification and this ratification has so far not been forthcoming. Then the company is still a creditor of the Greek Government for a substantial sum in respect of transport accounts.

Rubber Rising Again.

Commenting on the rubber position recently, I suggested that it would probably make a good deal of difference if for three weeks in succession there was a reduction of a thousand tons or so weekly. We have not quite had that, but for the past three weeks the total reduction is in the neighbourhood of 2,000 tons, and as I expected would be the case the market is now showing a much firmer tendency, a development which has been accentuated by the knowledge that the Prime Minister is to make a statement on the position before Easter. There is no doubt at all that the depression in the market went much too far, and indeed discounted the most serious possibility of the situation which would be the immediate removal of restriction. It is unlikely in the last degree that the Government would contemplate any such departure, and it seems most probable that there will be some modification of the scheme which will provide for its termination in the course of some months. If this view proves correct it will be surprising if by Easter rubber has not recovered much of its sudden decline, especially if, as seems certain, the weekly totals continue to show a steady decline in the London stocks. That is the immediate outlook, but admittedly it leaves the future still quite uncertain, but if the trade revival continues to progress as it apparently will do, then the position when restriction ends will be by no means so unpromising as it would now appear to be.

Commentator.

The traffic receipts of the South Indian Railway for the week ended February 18 amounted to Rs.11,77,227, making the total from April 1 Rs.5,47,38,145.

In January 66 vessels of a net tonnage of 201,306 entered Port Sudan harbour, as compared with 68 vessels of 237,802 tons in the corresponding month of the previous year.

It is estimated that the area under cotton in the Tokar area, Red Sea Province, the Sudan, is about 45,000 feddans, and the yield is expected to be about 50,700 kantars.

At an agricultural show held recently at Makwar, the Sudan, there were 806 entries for grain and 106 for vegetables in addition to sections for animals, agricultural implements, and cotton.

The British Overseas Bank, Ltd., announces that bonds of the Kingdom of Roumania 4 per Cent. Consolidation Loan, 1922, to the nominal value of £350,000 and 50,750 dollars, have been purchased for the sinking fund between October 1 and December 31. 1927. The bonds have been cancelled. The Roumanian Government has notified the British Overseas Bank, Ltd., that, independently of the provisions of the sinking fund, bonds to the nominal value of £1,786,840 and 418,500 dollars have been repurchased by the Government and have been duly cancelled.

A Circular has been issued by the Greek Ministry of Finance regarding the rules for determining the origin of merchandise imported into Greece after passing through a third country. The general rule is that the origin of goods remains that of the country where the goods were originally produced or exported. As from February 13, 1928, the fact that goods have been entered at Customs houses of intermediate countries, whether the goods have paid Customs duty (either less or more than that in force in Greece) or have entered duty free, will not be considered as affecting the origin of the goods. Exception to this rule is made in the case of goods originating in one country but manufactured in another country to the point of producing a new article, or of increasing the value of the goods by an amount exceeding 25 per cent. of the original value. In such cases, however, the fact of the increase of value or conversion of the merchandise must be certified by the Greek Consular Authority, or foreign State Service.

Motors and Motoring.

By G. B. B.

Mr. W. J. Brunell has written an interesting account of a journey he took from John o' Groats to Monte Carlo, in a Singer Junior Saloon. Altogether, a total distance of 1,582 miles was covered at an average speed of 21 m.p.h. in a total running time of 70 hours 24 minutes. The route lay through Inverness, Glasgow, Carlisle, Doncaster, London, Paris, Lyons and Avignon and part of the journey, at any rate, was over indifferent surfaces and under bad weather conditions, an exceptional amount of snow being met with, and the road over the Grampians being extremely treacherous. Mr. Brunell says that altogether the car covered about 4,000 miles during the three weeks, including preparations, getting to the starting point, and the test itself, and adds: "Our petrol consumption, using B.P., worked out at about 46 m.p.g. We were rather heavy on oil, Castrol XL, owing to the excessive engine racing we had to do at times. The K.L.G. plugs were never touched; neither were the Dunlop tyres, the road-holding qualities of these being simply marvellous." It seems that Mr. Brunell had hoped, secretly, to do even better than he did, but he says that the tour proved beyond any doubt that the Singer Junior is the ideal car for an ordinary tour. At the finish of its final spurt of 300 miles against time, it was running better than ever. That is, of course, high testimony to Singer quality and I am pleased to be able to place it on record.

Road Traffic Bill.

The Road Traffic Bill will probably pass into law shortly, although there is certainly a possibility that something may occur to prevent it. There has been a good deal of deliberation, in high quarters over some of the clauses and some difference of opinion still exists as to the advisability of letting the Bill go through as it stands. As more than one journal has pointed out, there is a good deal of scope for Government by bureaucracy in the Bill, which is full of such sentences as: "The Minister may," "if the Minister thinks it advisable, he can," and "The Minister may frame regulations," etc. The feeling is that in a bill of this kind everything should be laid down fairly and clearly and no individual, whether he be road user or Minister of Transport should have any power to alter even in the slightest respect, any of the provisions Parliament may lay down. The passing of the Road Traffic Bill, further would be nothing like so effective as an electioneering move as would a reduction of the tax on motor vehicles on lines suggested in recent editorial articles in the *Motor*. A tax reduction of 25 per cent. on private cars under five years old and of 50 per cent. on cars of five years old and upwards would be justified on the present yield, assuming that no further raids on the Road Fund are in contemplation, and it may be computed roughly that the difference in the yield from private vehicles would be round about two million pounds. Such a reduction is one to which motorists are entitled and it would go some way towards bringing about a lessening of the resentment felt by every road taxpayer against the unjustifiable depredations of the Chancellor.

Bodies.

There is no doubt about the number of fabric bodies now on the road. Indeed, so numerous are they that it has been asked whether this type is not steadily ousting the coachbuilt body from the position it has held for so long. A Press representative has had a chat with the sales manager of a very well known firm of light car dealers and it seems that his view is that the coachbuilt body has years of life yet. Fabric bodies are lighter and cheaper, and they are also pleasing in appearance, but there is something solid and durable-looking about the coachbuilt concern which will always attract a certain class of buyer. It will not be possible to say exactly how the public pendulum is swinging, nor how long it will continue to swing in that direction, but the next show will give us some indication. My own view, which I give for what it is worth, is that the fabric body will steadily grow in popularity.

Whilst on this subject of light cars, I may mention that the possibilities of four-cylinder, twostroke engines are receiving a good deal of attention. Indeed, the *Light Car* says that it is not at all unlikely that a new two-seater, having an engine of the type may make its appearance this season. Certainly the prejudice against two-stroke engines is dying a natural death and as a principle involved solves many problems which arise when the construction of a really simple type of machine is contemplated, there seems reason to suppose that the designers of the suggested new vehicle know what they are about, and that the new car will probably prove successful.

Motoring in the Balkans.

An interesting little brochure, entitled "Through Central Europe and the Balkans," has been prepared by Vauxhall Motors, Ltd., dealing with a 6,000-mile tour undertaken by Lieut.-Colonel P. T. Etherton, in conjunction with the Automobile Association, to investigate motoring conditions in Central Europe and the Balkans. The car used was the Vauxhall 20-60 model, and it proved admirably suited for a journey, half of which was over difficult terrain. "With our arrival at Calais," says the writer, "we had covered over 6,000 miles, 3,000 of them being extremely rough going, as they represent a road with countless potholes, running here in the bed of a stream, there on the edge of a precipice, as it winds its

tortuous way through the mountain passes of Serbia, Albania, or Bulgaria, and crosses the plains of Poland, or over the rock-strewn sides of the Carpathians. With it all we experienced no engine trouble of any kind; not even a sparking plug had been removed, and the carburretor had never failed us. What more could be said in support of the open road in distant lands on such a car?"

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Railway Sleepers.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 400,000 or 500,000 ordinary wooden railway sleepers. April 17.

Printing Plates.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of aluminium lithographic printing plates for 1928-1929. June 27; and for metal cabinets and safes for 1928-1929. July 14.

Loose Leaf Post Binders.—The Surveyor-General of Egypt, Giza, invites tenders for the supply of 3,500 loose leaf post binders. June 20. (D.O.T.)

Calico, Etc.—Tenders are invited for the supply of calico and shash required for the year 1928-9 by the Ministry of Finance, Survey of Egypt, Gira (Mudiriya). June 11. (D.O.T.)

Tents, Etc.—The Department of Public Health, Cairo, invites tenders for the supply of tents and accessories required for the year 1928-9. May 5. (D.O.T.)

Diesel engine-driven generating sets for Mansoûrah.—The Ministry of the Interior invites tenders for the supply and erection at Mansourah Drainage Air Compressing Station of two additional Diesel engine-driven generating sets. May 17. (D.O.T.)

Sensitive Paper, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of sensitive paper and chemicals for photostat for 1928-1929. June 4.

Asphalt.—The Egyptian Ministry of Public Works invites tenders for the supply of asphalt required during the year 1928-1929. May 1. (D.O.T.)

Swing Bridge.—Tenders are invited by the Municipality of Alexandria for the construction of a metallic swing bridge over the Mahmudia Canal of which the free passage is 18 metres wide. June 5. (D.O.T.)

Oils, Etc.—A/Officer Commanding, H.M.'s Nile Yachts, Bulaq, Cairo, invites tenders for the supply of oils, paints, timbers, cleaning articles, and electric articles necessary for the yachts during the year 1928-1929. April 14.

Cotton Waste.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 140 metrical tons coloured cotton waste. April 10.

Paper and Stationery.—The Egyptian Ministry of Finance invites tenders for the supply of paper and stationery required during the year 1928-1929. April 12. (D.O.T.)

Clothing, Etc.—The Director of Equipment and Finance, Ministry of the Interior, Cairo, invites tenders for the supply of clothing and necessaries required for the Police and Ghaffirs in 1928-1929. April 15.

Stores.—The Director of Stores, Frontiers Administration, Arsenal, Alexandria, invites tenders for the supply of consumable stores required for 1928-1929, such as ropes, oils, paints, leather, ironware and buildings material. April 10.

Terminal Strips.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 2,000 terminal strips for cast iron terminal boxes, 7, 14, and 28 pair to drawing for telephones. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

Sheets, Etc.—The Ministry of the Interior, Egypt, invites tenders for the supply of sheets, napkins, blankets, towels, socks, etc., required by the Department of Public Health during the year commencing May 1, 1928, and ending April 30, 1929. April 5. (D.O.T.)

THE SUDAN.

Generators, Etc.—The Inspector-General, Egyptian Irrigation Service in the Sudan, Khartoum, invites tenders for the supply of two De-Lavel steam turbo 4 kilowatt generators and one switchboard. April 5.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, in a report dated February 29, state:—

Arivals in Kordofan Stations, including Tendelti, were in January this year 2,828 tons against 1,917 tons (of which 137 were old crop) in January, 1927. Kordofan arrivals in February were 3,592 tons as against 2,221 tons in February, 1927. The large arrivals are attributed to abnormally hot weather for the time of the season following good rains. At the time of writing the weather is decidedly colder.

Taking El Obeid as the standard, during January local prices fell from the 1st to the 8th 1s. 6d. and thereafter remained level until the 24th, when prices were again easier by 6d. From February 1 to 14 prices fluctuated within 6d., after which there was a general fall to the 20th amounting to 1s. 3d. Remaining level until the 25th, prices have since shown a slightly firmer feeling. The total drop from January 1 to February 29 was 3s. Local prices are the lowest recorded for many years and are even low against pre-War prices.

Demand for January was much better than a year ago from all countries with the exception of Great Britain, Belgium, and Holland, the total increase of shipments being 40 per cent. Demand in February was probably much better than it was a year ago, and it was only the abnormally large arrivals which depressed prices.

Attention should be called to the fact that the natives have been inclined during the past two years to bring in their gum as collected, and thus we have seen a bigger proportion of arrivals during the first half as against the second half of the season. There is a very general opinion prevailing that the more the gum is brought in now the less the arrivals will be later, but in any case we must expect a large crop, though this may be lessened if the cold weather we are now getting is prolonged over a period of second tappings.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, March 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mokalla for Calcutta (Birkenhead, March 24).

Bibby Line.—S.s. Shropshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 4).

British India Line.—S.s. Hatimura for Bombay and Karachi (London, April 7); s.s. Masula for Colombo, Madras, and Calcutta (London, April 7).

Cunard Line.—S.s. Bosnia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Glasgow March 23, and Liverpool and Swansea March 24); s.s. Brescia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume (Liverpool March 31, and Swansea April 3.

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 24); s.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 31).

P. and O. Line.—S.s. Rajputana for Bombay (London, March 30); s.s. Trekieve for Colombo, Madras, and Calcutta (London, March 31).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (Manchester, April 5); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, April 7).

Ellerman and Papayanni Lines.—S.s. City of Milan for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 24); s.s. Mardinian for Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 17). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 20.

The principal feature of interest in the Stock Markets has been the excitement in Marconi shares and those of the cable group, on the announcement that a provisional arrangement between the Eastern and Associated Cable companies and the Marconi Wireless Telegraph Co. had been reached for a fusion of interests through the medium of a holding company. This arrangement is dependent on an agreement being made with the British Government and the Governments of the Dominions and India and on acceptance by the stockholders and shareholders of the companies concerned. In the earlier part of the week Marconi shares advanced rapidly, but later, when the announcement was made, the shares of the cable group also came into the limelight and advanced substantially, a large volume of dealings being done in the "Street" after the closing of the House. Further reference to the subject is made below. In other directions the industrial market has shown considerable irregularity and prices have suffered to some extent from profit taking. The gilt-edged market has remained tolerably steady, but home rails have been inclined to sag, from want of attention. A modest revival of interest in the home railway market is thought to be within the bounds of possibility when the traffics come to be compared with less abnormally good figures than at present, for in the early months of 1927 the railways were carrying an exceptionally large quantity of goods representing the overtaking of the arrears of 1926.

Cable and Wireless Fusion.

The official announcement made regarding the future of the cable companies and the Marconi Company will be received with the greatest satisfaction. An arrangement has been provisionally arrived at between the two parties for a fusion of interests through the medium of a proposed holding company, this arrangement being subject to the sanction of the parties interested. Co-operation was obviously the common-sense course. By this arrangement it should be possible to conserve the capital of the various shareholders, while at the same time ensuring efficient communications. The terms of fusion have been issued, and it is proposed that a new holding company, having a capital of £53,700,000, shall be formed. The new company will acquire from the Marconi Company the whole of its ordinary, preference, and debenture capital, the purchase of which will be satisfied out of the above allocation of the capital of the holding company. It will acquire from the cable companies the whole of their ordinary share capital, the prior charge stocks being left undisturbed. This is one of the most important industrial fusions of recent years.

Cement Companies' Prosperity.

The cement manufacturing industry is apparently passing through a period of marked prosperity. The report of the Associated Portland Cement Manufacturers for 1927 makes a very favourable comparison with 1926. Gross profits were £113,270 larger at £901,649, the net profit being £333,437, against £216,123. The dividend on the ordinary shares is doubled, this year's distribution being 8 per cent., as compared with 4 per cent. The production and sale of Portland cement in 1927, it is stated, constitute a new high "record" in the company's history. The ordinary shares are quoted at approximately 25s. The company holds a controlling interest in the British Portland Cement Company, which has also increased its ordinary dividend for 1927, the figure being 15 per cent. against 12½ per cent. On this basis the shares give a return of approximately £6 10s. per cent. The ordinary shares of both companies appear fair industrial investments. A favourable feature of the finances of these companies is the way in which they have redeemed debentures and so forth, for during the last four years a total of no less than £2,692,000 has been applied to the redemption of debentures, other loans, and depreciation.

A Giant Building Society.

This is an age of giants in the business world; there are giant banks, giant industrial undertakings, and giant commercial concerns. And the movement has not failed to leave its impress upon the building society community. This week there has been published the report of what is claimed to be the largest building society in the world—namely, the Halifax Building Society. This society, it will be remembered, is a combination of the Halifax Permanent Benefit Building Society and the Halifax Equitable Benefit Building Society as from January 31 last. The balance-sheet figures for January 31 are certainly impressive in their magnitude. Thus the assets total £46,981,482, there being 235,646 members. The balance-sheet indicates a liquid financial position; cash is more than £2,000,000, and investments in British Government securities, etc., exceed £5,000,000. The reports of the separate societies for the periods preceding the amalgamation reflect a healthy measure of progress, that in the case of the Halifax Permanent being especially conspicuous. Clearly building societies of this magnitude are national institutions bearing national responsibilities. There is the greatest need for this to be realised by the building societies in order that only those who are suitably qualified shall be called upon to guide their destinies. It is satisfactory to observe that several societies are acting on these lines.

Constable F. H. Reed, of the Palestine Gendarmerie, who was spending a holiday in Cairo, missed his footing while mounting the Great Pyramid on March 11, crashed to the ground, and was killed.

It will be proposed in Convocation at Oxford University to-morrow (Friday) to confer the degree of D.C.L. by diploma on the King of Afghanistan. The ceremony will take place in the Sheldonian Theatre.

Lord Plumer, High Commissioner for Palestine, on March 14 opened a new electrical department at the Church Missionary Society Hospital at Gaza.

Owing to the raising of the State and municipal taxes to 50 per cent. of their gross income, cinema theatres throughout Yugoslavia closed down on March 15. The proprietors demand a reduction of taxes to 20 per cent., failing which they declared that they will not reopen the cinemas.

COMPANY NOTES AND REPORTS.

COMMERCIAL BANK OF THE NEAR EAST.

The report of the Commercial Bank of the Near East, Ltd., for 1927 shows that the net profit for the year was £9,914 5s. 5d.; adding balance brought forward from the year ended December 31, 1926, £319 6s. 11d.—£10,233 12s. 4d.; deducting interim dividend at 5 per cent. per annum, less income tax, for the half-year ended June 30, 1927, which was paid on September 9, 1927, £4,000, leaving a balance of £6,233 12s. 4d. The directors recommend the distribution of this amount as follows:—To transfer to reserve fund, including the 5 per cent. required by the articles of association, £1,000; to payment of a final dividend for the half-year to December 31, 1927, at the rate of 6 per cent. per annum, less income tax at 4s. per £, making a total payment for the year of 5½ per cent., £4,800; to carry forward to the current year, £433 12s. 4d.—£6,233 12s. 4d.

CHARTERED BANK.

The report of the Chartered Bank of India, Australia, and China for the year ended December 31 last states that the net profit, after providing for all bad and doubtful debts, was £939,393 4s. 8d. inclusive of £215,354 5s. 3d. brought forward from the previous year. The interim dividend at the rate of 14 per cent. per annum, paid in September last, absorbed £210,000. The amount now available is therefore £729,393 4s. 8d., and the directors propose to pay a final dividend at the rate of 14 per cent. per annum, together with a bonus of 6s. 3d. per share, making 20½ per cent. per annum for the whole year, free of income tax; to add £100,000 to the officers' pension fund; to write off premises account £25,000; and to carry forward the balance of £206,893 4s. 8d.

OTTOMAN RAILWAY.

The report of the Ottoman Railway from Smyrna to Aidin for the half-year ended December 31, 1927, shows receipts £259,724 and expenses £133,325. The result for the complete year was as follows:—Receipts, £460,648; expenses, £261,982; balance, £198,666.

This improved annual result has enabled an additional payment of interest amounting to 2 per cent. to be made to the Second Debenture stockholders for 1927. The full 6 per cent. has thus been paid on the Second Debenture stock for the first time since the reorganisation in 1924.

A severe drought during the early summer affected crops as a whole, and especially the grain harvest. This latter was poor, and that fact is responsible to a great extent for the small traffics so far recorded during the current half-year. Weather conditions for the sowing of the new crop have been good. The increases in traffic referred to in the last report, which form an essential feature of the Reparations Agreement, were discussed by a Tariff Commission, which met in Smyrna last November. The Commission was composed of two representatives nominated by the Government and two by the company. After detailed discussion an award was signed that would give the enhanced earnings to which the railway is entitled under the Reparations Agreement. It was stipulated in the Agreement that these new tariffs were to operate from January 1, 1928. The decisions arrived at, however, by the Commission were unexpectedly referred to Angora for ratification, and the Council regret to report that so far this has not been granted. Negotiations are proceeding, and it is hoped matter will eventually be satisfactorily settled. It is regretted that the company should have had to suffer loss through the changes not having been put into operation at the stated date, and it is not clear why the decisions of the Commission which met in Smyrna with full powers should have been suspended in the manner indicated.

A substantial sum in respect of transport accounts still remains unpaid by the Greek Government. An undertaking was entered into in August, 1926, by which the Greek Government agreed to repay any outstanding indebtedness immediately in cash in the event of an external loan being arranged, the proceeds of which were not wholly earmarked for refugee purposes. A loan of this nature was raised in January last, but so far, despite repeated inquiries, the Greek Government has not carried out its promise.

NATIONAL BANK OF INDIA.

The report of the National Bank of India for the year ended December 31 last states that the net profits, after providing for all bad and doubtful debts, amount to £541,099, and adding £255,400 brought forward, the available total is £796,499. The directors recommend a further dividend at the rate of 20 per cent. per annum, making 20 per cent. for the year, and an addition of £50,000 to the reserve fund, raising it to £2,950,000. They propose to write £30,000 off house property account and to add £40,000 to the officers' pension fund, leaving £276,499 to be carried forward.

The directors of the Assam Railways and Trading Company have declared an interim dividend of 5 per cent. on the "B" stock.

The net profits of the First Croatian Savings Bank for 1927 amounted to 17,438,000 dinars, as compared with 16,589,000 dinars for 1926. The dividend is again 16 per cent.

WIRELESS IN AFGHANISTAN.

Afghanistan is a country which, owing to its broken and hilly character, is particularly adapted to the use of wireless, both for internal and external communication. This is fully recognised by King Amanullah and his Government, who have already made considerable use of wireless and have for some time been considering a complete scheme for its employment within the country and for communication with other countries.

The King himself is interested in wireless in all its branches, from commercial wireless telegraph stations to broadcast receivers, and he has already taken advantage of loud-speaking equipment when he has had occasion to address large numbers of his subjects.

During his tour King Amanullah has taken every opportunity of extending his knowledge of wireless. He examined with great care the wireless telegraph and direction-finding installation on the ship on which he sailed from Bombay, and while he has been on the Continent he has visited the big continental wireless stations. In England arrangements are being made for him to continue his inquiry. On March 20, during his journey by motor car from a military demonstration at Lulworth to another military demonstration on Salisbury Plain, he paid a visit to the Marconi Company's Main Beam Station at Dorchester, which is the latest and most up-to-date wireless installation in the world for long-distance telegraph communication.

Dorchester station has been built by the Marconi Company for communication with the United States of America, Brazil, the Argentine, Egypt, Japan, and the Far East by the beam system, which has provided such an excellent service between England, the Dominions, and India since the Imperial beam stations have been in operation. In the main wireless hall King Amanullah saw seven transmitters installed for these services, and in a small building two transmitters built for experimental purposes.

The aerials suspended on rows of 300 ft. masts were entirely different from those King Amanullah had seen in his previous visits to wireless stations, as the design of the short wave beam aerials is distinct from that of any other type of aerial. Instead of the usual wireless aerial, with which everyone is familiar, consisting of a number of horizontal wires suspended at a height from a line of masts and connected to the transmitting station by a down lead, the beam aerial system consists of a curtain of vertical aerial wires connected to the transmitter by metal conductors running just above the ground and feeding each aerial wire independently. This system, which has been designed by Senatore Marconi and Mr. C. S. Franklin, provides extremely efficient radiation, and from a spectacular point of view is very striking, particularly when the sun is shining on the wires and makes the white insulators appears like a flock of gulls hovering between the masts.

Yesterday the King of Afghanistan saw another of the most up-to-date wireless stations of its kind when he visited the London Air Port at Croydon. His visit to Croydon was happily timed with regard to wireless, the Marconi Company having just completed the re-equipment of the wireless station for the Air Ministry. Four separate transmitters, working on different wave-lengths, and receivers of the latest design, have been installed for communication with aircraft in flight and with other aerodromes. King Amanullah saw how wireless is used for traffic control on the air routes and how wireless direction-finding is used to determine the exact position of an aeroplane at any time during its journey between London and the Continent. Both in the aerodrome wireless station and on the aeroplanes he saw Marconi wireless apparatus, which is standard apparatus for the Imperial Airways and which is in regular use in many countries of the world.

JAFFA ORANGE EXPORTS.

The Empire Marketing Board reports that the total shipments to the United Kingdom up to March 8 amounted to 1,230,000 boxes, as compared with 1,370,000 boxes at the corresponding date last year. The total to all destinations, including transhipments (estimated at 150,000 to 200,000) probably exceeds 1,450,000 boxes, as compared with 1,380,000 boxes last season. It is estimated that less than 350,000 boxes will remain to be shipped as compared with 425,000 shipped after this date last year.

Six new Chambers of Commerce were established in Roumania in 1927.

The Yugoslav Bank, of Zagreb, made net earnings of 10,391,460 dinars for the past year.

The output of the Anglo-Egyptian Oilfields for the week ended March 16 was 4,734 tons.

The Chartered Bank of India, Australia, and China announce that an agency of the Bank has been opened at Harbin, North Manchuria.

The output of coal in Yugoslavia for the first nine months of 1927 totalled about 3,378,000 tons, of which the mines in Slovenia were responsible for 1,912,155 tons.

The traffic receipts of the Suez Canal from March 3 to 9 amounted to 4,500,000 francs, as compared with 3,600,000 francs for the corresponding period of last year.

It is announced that the Bank of England are prepared to receive the coupons due April 1 on bonds of the Greek Guaranteed £2 10s. per Cent. Gold Loan of 1898. The necessary lists can be procured on application at the dividend pay office.

The directors of the African and Eastern Trade Corporation have decided to recommend the payment on May 1 of a final dividend on the ordinary shares of 4 per cent., less income tax, making, with the 4 per cent. interim, 8 per cent., less income tax, for the year ended September 30, 1927.

Further reductions in the Roumanian export tariff include the following:—Boots, shoes, and other leather goods, 50 per cent.; compression oils, from 8,000 to 2,400 lei per 10 tons; paraffin, from 1,700 to 500 lei; soap, from 10,000 to 500 lei; milled products of all kinds, from 3,200 to 200 lei; and grain, from 5,000 to 2,400 lei.

The Egyptian State Railways has recommended the acceptance of the tender of Messrs. Watts Watts and Co. for the supply of 340,000 tons of Welsh steam coal at 26s. 8d. per ton (says a Reuter message from Cairo). Messrs. Watts Watts and Co. also tendered for North Country coal.

PACKING OF ORANGES IN PALESTINE.

The report of the Fruit Commission, appointed by the High Commissioner for Palestine, reference to which has already been made in these columns, devotes considerable attention to the important question of fruit packing. The following extracts are taken from the report:—

The Commission are of opinion that central packing-houses should be left to private initiative following on the development of co-operation. Meanwhile growers should be encouraged to use packing houses large enough to contain several days' supply of fruit, since certain flaws in oranges do not appear for two or three days after picking. Good lighting and ventilation are also important.

Two types of packing are in common use in Palestine. In the "local packing" fruit are not of uniform size, succeeding layers being smaller in certain counts. This leaves space, and makes it easier to clear a given crop. Dealers and retailers at home, however, show a preference for "American packing" where the contents of a given box are all of the same size. The result has been a steady increase in "American," as opposed to "local," packing.

The number of fruit or "count" in a case is marked on the outside, the largest sized fruit packing only 80 to the case, and the smallest 250. The commonest ranges for American packing are 100, 120, 150, 180, 210, 240, and for local 80, 88, 96, 128, 136, 144, 152, 160, 210, 250. The best prices are usually obtained for the smaller counts, particularly the 180 and upwards. In the very large sizes the fruit is often too dry. Sales would be facilitated if sizes were confined to standard counts, for which the Commission recommends American packing.

The "Valencia" type of case used in Spain is made of less expensive wood than the ordinary case used in Palestine, and leaves wide ventilation spaces between the boards. Examination of the condition of the fruit by the buyer is said to be possible without the necessity of breaking open the case and re-sealing before despatch to the retailer. For this reason it is possible that brokers' charges could be reduced were Valencia cases generally used. It is uncertain, however, whether fruit in these partially open cases would stand the rigorous demands of transport by camel, car and rail, and especially the exposed passage in an uncovered lighter to a steamer anchored in an open roadstead.

As pointed out by the Imperial Economic Board the high reputation of the industry is in danger, owing to the increasing export of consignments in bad condition.

Another result is that Palestine oranges are subjected to more careful inspection at the home ports. A large proportion of cases have to be opened and reclosed at great risk of deterioration of the fuit. Further, the whole trade has to bear the cost of this examination in the form of higher brokers' expenses.

In Jamaica a Produce Inspection Law has been framed, under which produce is branded as graded and the export of fruit in a bad condition prohibited. The Imperial Economic Board records its very warm support of any such action, and proposes that the Executive Commsision should encourage the inauguration of schemes of fruit inspection by moderate grants for a short term of years in Colonies needing such initial assistance. "The proposed grants might be on a pound-for-pound basis, and in appropriate cases might be allocated towards the engagement of experts as inspectors, both to supervise export and to advise and educate producers of fruit grown for the United Kingdom market. Such grants might take the form of contributions to cover half the cost of passages and half the salary and allowances for a term of years on condition that the scheme of inspection was approved after reference to the Executive Commission."

In South Africa compulsory Government fruit inspection is already established. The inspectors grade fruit as "fancy," "choice," or "standard," and refuse export to lower grades. In Spain an elaborate scheme of compulsory inspection has been inaugurated this season to prevent the export of fruit damaged by frost. There the total crop is about nine or ten times that in Palestine, and export takes place from four principal ports. District Boards carry out the inspection, with appeal to Harbour Boards at each of the ports. A Central Board decides policy and imposes the scale of fines. At present penalties range from 2,000 pesetas (about £P60) for the first offence, 5,000 pesetas (£P150) for the second offence, to complete prohibition of export for the whole season. In no case is the penalised consignment allowed to be exported. The Commission is informed that although these restrictions have probably saved the sale of this season's crop from the disaster threatened, objections have been so severe that compulsory inspection will probably be abandoned until the emergency is repeated.

The Commission consider that it would be valueless to issue any form of mark or certificate of good quality, since the conditions of transport are so full of risk that there is no guarantee that the quality will be preserved, or even that "choice" and "standard" grades will not be reversed, owing to varying rates of deterioration. The only certainty is that the condition of a given consignment will not improve. Hence the only means of protecting the reputation of the export as a whole is to refuse the shipment of bad fruit. The common interest of the growers and the importance of the premier export of the country appear to justify special legislation. Government inspectors acting under the Department of Agriculture should be empowered to examine all consignments of oranges arriving for export at Jaffa, Haifa, Kantara, and to prohibit shipment of fruit in a condition unfit for export. The inspectors should be selected by the Economic Commission from the experts employed by the trade in England. The funds necessary to provide three inspectors for six months, if not wholly available from the budget of the Department, should be covered by a small inspection charge on the cases exported, or by accepting assistance from the Economic Commission, or by both.

Even more important than inspection as an immediate means of protectng trade reputation is the identification mark on all exported fruit. Every case shipped already bears some mark. Owing to the expense of registering trade-marks, most of the brands employed are unregistered. One trade-mark may cost as much as £P15 to register, and a grower may use as many as eight different brands. The best fruit presents no difficulty, since the grower soon finds the value of registering a trade-mark to protect his reputation. The ordinary grower, however, who has not registered, and who receives a low price for one consignment is tempted to change his brand. Hence there is no incentive to correct mistakes, nor to raise standards of production and the buyer of Palestine fruit, confused by the multiplicity of changing brands, approaches his purchase in suspicious gloom.

In South Africa every box submitted for inspection must be clearly marked by the registered brand of the exporter, or his name or other means of identification. The Commission consider that similar provision should be made in Palestine with the addition limitation that any alternative means of identification employed must not be changed without express Government sanction.

THE SUDAN'S TRADE IN 1927.

Further Expansion.

For various reasons conditions during the past year were not favourable for the Sudan. The failure of the dura crop in 1925 was followed by another bad harvest in 1926, and this development naturally had it effect on the country's capacity to absorb imports to say nothing of the fact that it was necessary to import dura on a considerable scale instead of exporting it. Then the fall in cotton prices counteracted to some extent the increased production of cotton, and in the circumstances it must be accounted an extremely satisfactory result that the value of the total trade at £E11,631,810 showed an increase of 5.4 per cent. on the 1926 figures. Clearly if such a result is possible in the prevailing circumstances a considerable degree of optimism as to the future may be held to be fully justified.

The following table shows the trade via the Red Sea ports and Wadi Halfa in 1927:—

	1927. £E	Increase or Decrease on 1926. £E
Government imports ...	2,318,605	+ 523,292
Public imports	3,638,927	+ 114,541
Total	5,957,432	+ 637,833
Exports	4,940,192	+ 78,054
Re-exports	176,576	— 25,330
Transit	247,177	+ 9,181
Total	11,321,477	+ 699,738

The difference between the figures given above and the total trade are accounted for by the trade with Abyssinia, Eritrea, the Belgian Congo, and Uganda. The value of imports from Abyssinia was £E180,500, a decrease of £E57,961, while the exports and re-exports to Abyssinia at £E67,768 showed a decrease of £E27,973. The value of the total trade with Eritrea was £E20,966, much the same as in the previous year. Finally the value of the imports from the Belgian Congo and Uganda was £E2,670 as against £E800, while that of the exports was £E38,469 as against £E25,960.

Features of the Trade.

It will be noted that the principal change in the trade was the large increase in Government imports. This was due, of course, to the progress being made with works of development. Thus the chief alteration in the list of imports was the increase of £E457,086 in respect of metals and metalware, including iron railway trucks. The increase in public imports of £E114,541 is satisfactory, but it has to be borne in mind that the imports included dura to the value of £E227,511, representing 26,112 tons, as compared with 21,687 tons in 1926. Significant increases were recorded in the imports of cotton goods, metals and metalware, machinery, timber, and motor cars, cycles and accessories, bearing tribute to the gradual economic advance of the country and the expansion of its requirements. The principal decreases were in tea and sacks.

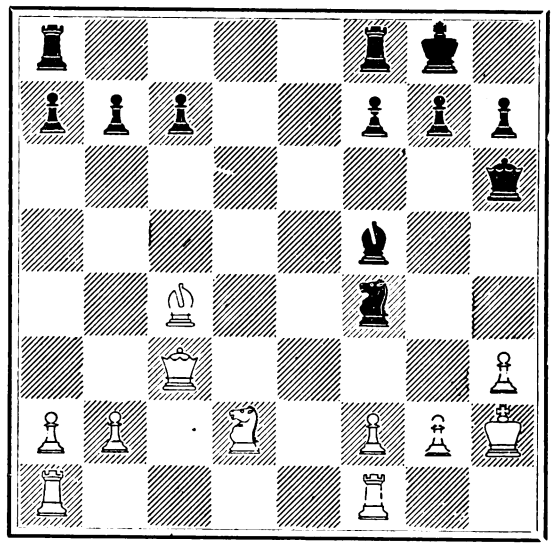
Cotton, of course, overshadowed the export list. The exports of this commodity increased by 149,257 kantars, the value of the trade being £E3,200,251, as compared with £E2,845,702 for the previous year. There was also a substantial increase in the value of the exports of cotton seed. Minor increases also took place in senna, dates, and hides, but the rest of the list of the Sudan's exports showed decreases, particularly pronounced declines taking place in gum, groundnuts, sesame, dom nuts, and cattle and sheep. This explains why, despite the increase in the exports of cotton and cotton seed, there was only a slight expansion in the value of the total exports.

CHESS.

By "CARO-KANN."

The current week is one of the most interesting in the chess year, for the combined University teams are meeting practically every day one of the leading London clubs. The annual visit began on Saturday with a match against the University of London, who won very easily, so that the tour has not had a very auspicious commencement. The inclusion of more past members in the team would have made all the difference. It will be interesting to see how the team fares in its matches this week.

The University match takes place to-morrow at the City of London Chess Club, and will no doubt be the occasion, as usual, for a large gathering of past members. The Cambridge team includes three players who have previously taken part in the match, while Oxford is in a similar position. As I have already indicated, the performances of the teams in their matches suggest another victory for Oxford, but with so many players new to the match the result must be more than usually uncertain.



In these days of solid chess one looks almost in vain for the rare examples of combinative genius which are to be found in almost all of Morphy's games. The diagram illustrates a position in one of his typical games. It is, of course, a win for Black as it stands, and its interest lies in the pleasing manner in which Morphy secures the win. Play ran as follows:—1 . . . QR—Q; 2, QR—Q, BxP; 3, PxB, R—Q6; 4, QxR, KtxQ; 5, BxKt, Q—Q3 (ch); 6, P—B4, QxB, and wins.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 14:—

Egyptian Futures.—Sakel Contract.—This contract has continued to show a very firm undertone with an advancing tendency; the main feature has again been supplied by the strength displayed by the Alexandria market, and this has encouraged further speculative buying at this side; trade support has also been on an increased scale, so that with these combined factors in evidence it is not surprising to record gains of 62 to 70 points for near and 60 to 67 points for distant position on the week. Persistent selling of new crop options by a local house has again been in outstanding evidence, and were it not for the quantity of contracts released from this source our market would probably have responded more sharply to the advances that have taken place in Alexandria. Local purchases of November against sales of the corresponding month on the other side still constitute a favourable straddle; at times during the week we have been 40 to 50 points below the overseas market; at anything like this figure we strongly recommend the operation, as in our opinion the difference must readjust itself during the later summer months.

The March position continues to be manipulated, and after showing a moderate amount of weakness early in the week it has now been again re-established at 15 points over May. The ultimate course of the difference between old and new crops is now in the hands of those who are in process of taking up the March dockets; the majority of these consist of undesirable cotton, and should re-tenders be made in May the establishment of premiums on near cotton will not be effected as readily as we were inclined to consider in our last report. Trade reports continue to be of a satisfactory character, but complaints are beginning to come in to the effect that the advance has been too rapid, and on this account fresh contracts of weight are rather difficult to book. The International Cotton Federation statistics for the half-year ending January 31, 1928, show the world's consumption of all varieties of Egyptian cotton to total 489,000 bales, against 487,000 bales for the same period last year; mill stocks are 183,000 bales, against 173,000 bales twelve months ago.

Upper Contract.—This option has not attracted much attention during the past week, but under the influence of steadier American markets prices have hardened somewhat, to-night's close being 25 to 35 points advance for near and 23 to 43 points for distant positions on the week.

Trade support generally has been rather disappointing, and in some quarters spinners are cutting out this variety and replacing same by other growths. On the whole, we still maintain a favourable opinion of the market, and consider that conservative purchases on weak markets will ultimately show moderate profits.

Egyptian Spot.—Business has been on the quiet side during the past week, and spinners have shown a disinclination to commit themselves. In spite of this, the "bull" campaign launched in Alexandria still continues, and we have to report yet another substantial advance in prices. Egypt maintains a tight hold on its cotton, and with Egyptian futures in the neighbourhood of 900 points over American, it requires a good deal of courage to pay the prices asked. With the exception of the better qualities, for which only a moderate inquiry has been experienced, the quality of the Sakel cotton held in Liverpool is of a very mediocre kind. The discounts at which Liverpool still runs below Alexandria prohibit the further consigning of shipments to our market, and it is difficult to see how the situation is to be eased unless it is by the sheer weight of the Sudan crop now heading to our port.

The local inquiry has shown little change. Sakel has been in more general request, but the tenderable qualities, say from 100 off to 100 on, have again remained rather neglected, although at from 50 to 100 on there have been signs of some improvement taking place. Low cotton at from 8d. to 14d. has again been much to the fore. The improvement in the inquiry for the better grades has been maintained, but very little seems to come of it. Uppers have again been in steady demand at from 13½d. to 14d., and here and there an inquiry for the "Best Uppers" has been met with. Pilion at from 13½d. to 14½d. has been in moderate request; other growths neglected. In Sudan Sakel a fair business has been done at steady rates. No Tokar Sakel has, as yet, arrived here, and first shipments are eagerly awaited.

C.i.f. business has been quiet to moderate. Forwardings to spinners for the week ending the 9th inst. were returned as 7,826 bales Egyptian and 1,083 bales Sudan. Estimated sales for the week, 1,300 bales Egyptian and 1,450 bales Sudan. Quotations of Sakel have been advanced 25 to 50 points, those of Upper and Pilion 15 to 20 points. F.G.F. Sakel to-day, 19.30d. F.G.F. Upper to-day, 13.90d. F.G.F. Pilion to-day, 14.30d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 8, state:—

Since our last report the Sakel futures market has been very firm and prices show a considerable advance on the week; Uppers, on the other hand, have been neglected and prices are more or less unchanged. The week's summary of price movements is as follows:—Sakellaridis: March, 36.15 dollars, 1.20 dollars up; May, 36.55 dollars, 1.12 dollars up; July, 36.85 dollars, 1.07 dollars up; November, 37.40 dollars, 1.22 dollars up; January, 37.30 dollars, 1.19 dollars up. Ashmouni: April, 25.62 dollars, 0.19 dollars up; June, 25.65 dollars, 0.02 dollars down; October, 25.75 dollars, 0.03 dollars up.

Sakel.—This week has been a series of advancing markets, with scarcely a setback. The rise seems to be purely speculative and the open positions must run into fairly large figures.

With reference to the Sudan Gezira crop, it seems that there has been some damage, but to what extent it is, as yet, difficult to estimate. A crop of 400,000 kantars is now mentioned, against 475,000 kantars last year; on the other hand, however, the Tokar Sakel crop looks like being about 20,000 kantars larger than the previous crop. As regards the Egyptian production, it is still impossible to establish any accurate figures owing to the uncertainty concerning the quantity held by growers in their own stores, but we do not think that an estimate of 6 to 6¼ million kantars will be far wrong.

At the first March tender, 3,750 kantars dockets were issued.

Uppers.—This market has been very neglected. The trade has bought a few contracts, but their requirements have been freely supplied by straddlers selling Ashmouni against purchases of Sakel. The straddle difference between Sakel and Ashmouni is now 10.50 dollars for the near positions and 11.65 dollars for the new crop; we consider these differences much too wide.

The week's receipts amount to 82,138 kantars, against exports 160,975 kantars; the stock in Alexandria stands at 2,906,234 kantars.

Spot: The past week has seen another series of quiet markets at Minet el Bassal. Demand from abroad has been about as last week. Sales amount to about 13,700 bales, of which we estimate 6,600 bales Sakellaridis, 5,850 bales Ashmouni and Zagora, 1,000 bales Pilion, and 250 bales other growths. The spot situation is about as last week and cotton continues to be generally firmly held.

Digitized by Google

Sakellaridis: A somewhat improved business has been done, covering all grades. Spot differences are generally slightly dearer than last week.

Ashmouni and Zagora: Have been in fair demand, with the medium and lower grades continuing to absorb the bulk of the business. Spot differences are generally rather stiffer.

Pilion: Continues in good favour with buyers and a good business has been done, chiefly in the medium qualities, at about last week's differences.

Other Varieties: In White a fair business has been done. Spot differences are slightly easier. Brown is neglected and no business is reported. A retail business has taken place in Nahda, Maarad, and Fouadi, a few scattered lots of each growth having changed hands.

Up-country: The advance in prices has slightly improved spot business up-country, but, even so, the quantity of cotton on offer is very small. New crop busines has slackened off; the most needy growers have already sold their crops and the others prefer to wait.

Crop, 1928.—Weather conditions have improved and ploughing and sowing are being actively pushed forward again. Re-sowing on a fairly large scale will probably be necessary in some districts. The river levels are more or less unchanged and the outlook is accordingly not favourable.

The value of Yugoslavia's exports for 1927 was 6,400,153.065 dinars, as compared with 7,818,180.994 dinars in 1926. The bad harvest was, of course, mainly responsible. Wheat exports fell from 846 million dinars to 196 million, maize exports from 1,339 to 337 millions, and those of prunes by 77 millions.

NEWS FROM ALL SOURCES.

The Assam Railways and Trading Company has declared an interim dividend of 5 per cent. on the "B" stock.

The North British Locomotive Company, Glasgow, has received a contract for 110 boilers for the Indian State Railways locomotives.

The contract for the supply of 10,000 tons of gas coal at 21s. 9d. a ton, c.i.f., April and May delivery, for the Athens gas works, has gone to Germany.

The Eastern Telegraph Company, Ltd., announce the payment on April 14 next of a final dividend for the year ended December 31, 1927, of 2½ per cent., free of income tax, on the ordinary stock.

The Athens Municipality has agreed to the conclusion of a loan of £600,000 with Hambros Bank, the proceeds of which are to be devoted to paying off the debt of 82,000,000 drachmæ of the National Bank and the execution of public works, including the extension of the sewage system and municipal road-making.

Two Arab overland motor convoys were held up in the Syrian desert recently by bandits in a large car. The passengers were robbed, and one Armenian seriously wounded. He was sent to Baghdad by air.

Egypt and Hungary have entered into a provisional agreement, which came into force on March 15. Egypt grants most-favoured-nation treatment to Hungarian products, except leaf tobacco, on the basis of perfect reciprocity.

Notes of the Week.

The Roumanian Cauldron.

There is much seething in the Roumanian political cauldron. The National-Peasant Opposition has decreed the death of the Liberal Government, but, with the refusal of the latter to commit suicide, is hard put to it to find means to carry out the sentence. Attacks in Parliament have failed to dislodge the Prime Minister from his inconvenient determination to remain in office as long as he possibly can; and he has shown as little inclination to be impressed by meetings in provincial towns or even by a monster demonstration in the streets of Bucharest. When Dr. Maniu, leader of the National-Peasant Party, conveyed to the Council of Regency the demand of these meetings that the Government should be dissolved, he received the guarded reply that the Regency will come to a decision when it considers that the time for one has arrived. This cold douche was so little to the liking of the Party that it decided that its representatives should absent themselves from both House of Parliament until further notice, and another National-Peasant congress has been summoned to meet at Alba Julia on April 22. Whether these tactics are likely to achieve the end in view is a matter on which no foreigner can pass judgment. Their cumulative effect is to create a certain nervousness in the body politic which may have untoward results. If the present Government were to be successful in negotiating a foreign loan, it might obtain a fresh lease of life. Its rejection of the scheme proposed by the Council of the League of Nations that the Mixed Arbitral Tribunal should be reconstituted with five arbitrators instead of three and then proceed to try the case of the Hungarian Optants has been endorsed seemingly by the nation at large; but there is a tendency to hold the Government responsible for a situation that ranges Roumania, as it were, against the opinion of Europe. The chief asset of the Opposition is the unsatisfactory economic condition of the country. The achievements of the Bratianu régime have been obtained at the expense of the well-being of the great bulk of the people, and the Liberals probably realise that a reversal of their economic policy must bring about the collapse of that great network of industries which is in their hands and has been carefully fostered by their policy. They are able to make good use of the bogy of inexperienced politicians, and urge the Roumanian people to bear the ills they have rather than to fly to others that they know not of.

The Duty of an Opposition.

Both in Roumania and in Yugoslavia the Opposition in Parliament would seem to interpret its duty as being not so much to oppose the Government as to upset it forcibly. Being admittedly in a considerable minority, the Roumanian National-Peasant Party has no hope of securing an adverse vote in the Assembly on any subject against the solid phalanx of the Liberals, and it is, therefore, reduced to denouncing the electoral practices that returned the Liberals to power and to calling upon the Government to resign, virtually because the Opposition does not like it. In Yugoslavia the parliamentary group headed by M. Raditch and M. Pribitchevitch is supporting its opposition by revealing what are alleged to be gross irregularities in one sphere and another of the public administration, and here, owing to the fluid state of parties, there is always the possibility that by bringing home to the Government a sufficient number of failures they may be able to break up the coalition that now gives M. Voukitchevitch his majority. In neither country, however, is there any indication of a tacit acceptance of the rôle of Opposition, and of an endeavour by constructive criticism or by original contribution to promote the better administration of the country. M. Venizelos appears to have detected the same weakness in Greece, where an attempt to drag him back into politics is never wanting for long. In a recent letter to one of his supporters he has pointed out that neither the country's interests nor those of the republican system of government can be served by implacable opposition, which does not confine itself to the prevention of mistakes and to the improvement of the situation, but advances the overthrow of the régime as its only objective. The lesson is one that needs to be driven home continually in the Balkans, where parliamentary inexperience must be held largely respon-

Digitized by Google

sible for a state of affairs that retards the whole administrative machinery. At the same time electoral abuses are much in evidence. The Roumanian Opposition, it would be thought, would deserve well of the country, if it merely concentrated all its efforts on insuring that in future no party should ever be allowed to tamper with the nation's honour at elections.

The Greco-Roumanian Pact.

The conclusion of a treaty of non-aggression and arbitration between Roumania and Greece is a satisfactory landmark in Balkan affairs in the absence of a general understanding between all the States of the Peninsula. There is certainly no need to read into the agreement any reflexion against Roumania's ally, Yugoslavia, for the latter's inability to come to terms with Greece. Roumania and Greece have no common frontier; on the other hand, there are historical links between the two countries, and an appreciable number of Greeks own land—or did own land before the recent introduction of agrarian reform—in Roumania. The possibility of Greece's adhesion to the Little Entente has often been canvassed, but it is to be hoped that, when the time comes for any scheme of general co-operation among the States of South-Eastern Europe, these will not be drawn into a Central European alliance. The strength of a Balkan federation will lie in its compactness as a geographical unity as well as in a community of interests, which will not be shared by a country such as Czechoslovakia with its Western commitments, whether actual or potential.

The Komitaji Trial.

It was inevitable that Kralyeff, who alone of the three *komitajis* implicated in the murder of General Kovatchevitch in Shtip was arrested after his companions had been shot in trying to escape, should try to save his own life by turning "King's evidence." He gave at his trial what purported to be a detailed account of the organisation which dispatch him on his mission, with the appropriate incrimination of the Bulgarian Government that he would expect his judges to desire. Not unnaturally the Yugoslav Press made the most of his allegations; but they do not seem to have impressed the Court to the extent of influencing it in his favour. Kralyeff, with three others accused of complicity in the crime, was condemned to death, and of the remaining prisoners a large number received severe sentences of imprisonment. The Bulgarian Government has issued a statement to the effect that it investigated the charges made by Kralyeff against various frontier officials, but it could find only two who had shown pro-Macedonian tendencies and they had been transferred to distant provinces. If the Yugoslav Government is anxious to maintain the improvement in Yugoslav-Bulgarian relations, it will, no doubt find means of expressing its satisfaction with the action of the Bulgarian Government.

Russia and the East.

At the moment when there is an apparent lull in the Bulgarian relations, it will no doubt find means of examine the degree of success which Bolshevist Russia has had in endeavouring to attach various Oriental States to her system, if not to her peculiar ideology. Now the three States upon which the greatest endeavours have been spent by the Russians are China, Afghanistan, and Persia. In China the Bolshevist prop may be said to have been dispensed with. Why this should have been so, after the Russians had had originally such success, is uncertain; probably it is due to the fact that, whereas the Commissariat of Foreign Affairs at Moscow, with its professions of "sympathy with awakening peoples," was greatly to the taste of the Chinese, the subsequent activities of the Third International (which is the obverse side of the Bolshevist Government) wrecked the political hopes of the Russians in China. That failure of Communism, coming after the success of Bolshevist political sympathy with Nationalism, was certain to have repercusions elsewhere in the East. Unless we are greatly mistaken, the prestige of the Soviets throughout the East has suffered a significant decline. In Afghanistan, although the Afghans' fears have by no means disappeared, little real headway has been made in the last year or two; nor can the Bolshevists be extremely satisfied with the course of events in Persia. The stating of this fact must not, of course, be taken to imply that there has been a corresponding readiness on the part of the Muslim States of the Middle East to rely for sympathy and help upon the Bolshevists' chosen rival in the East, namely, Great Britain; but the present stage in the transitional history of the "awakening" Middle Eastern States is worth noting. A remarkable opportunity exists for the West to have more influence upon their future history than appeared possible, say, but two years ago.

Arabia and British Subsidies.

We have referred previously to the eagerness with which sections of the British Press have suggested that the only thing which can hold Arab chieftains at peace is the policy of subsidies, and have hinted at the dismay which certain journals showed at the falsification of their theory of "Once a paymaster always a paymaster." It is regrettable now again to have to deplore a similar tendency in part of the Press, namely, to presume that the threatened *Jihad* in Arabia failed to materialise only because Great Britain hastily poured into the pockets of King Ibn Saoud the rich gold which he had been denied for some four or five years. Of such a transaction there is not a shred of evidence; and for our part we should certainly not be disposed to believe it. From the beginning we have taken the line that King Ibn Saoud's friendship with Great Britain far transcends any financial consideration; and we should be extremely surprised—we write without cognisance of the instructions which Sir Gilbert Clayton may be taking to the leader of the Wahhabis—if any return were made to the arrangement which was considered advisable from 1917 to 1923. The imbroglio in Arabia was manifestly the result of misunderstanding, of misinterpretation of the treaties which bind the Hijaz and Najd with the mandated Arab States. Had there been any other explanation of the reported "crisis," it would have been required before the year 1928. To suggest that the disbursement of moneys is the only possible policy in Arabia is, in effect, to play the Bolshevist game in regard to Great Britain's position in the Middle East, and does scant justice to the position either of King Ibn Saoud or of Great Britain therein.

EGYPT AND GREAT BRITAIN.

Although the 1928 draft of the Treaty that will ultimately regulate Anglo-Egyptian relations has been rejected by Egypt, there is no need for pessimism in either country with regard to the future. The certainty that a solution will be reached one day is accepted in Egypt; Nahas Pasha, the new Prime Minister, in his declaration of policy before the Legislative Assembly seemed to anticipate it in the lifetime of his own Cabinet. In view of the attitude towards the draft Treaty to which he gave expression this expectation may seem unduly optimistic; but any apparent contradiction in his words is an additional argument in favour of a refusal to regard the present situation tragically. Egypt has made up her mind that she must have and can get better terms for a treaty of alliance with Great Britain. She has been told very clearly that no better terms are available to-day, because the *quid pro quo* that she can offer does not conform to the standard that Great Britain is compelled to require. Now the Egyptians may claim to challenge the British estimate of British requirements, but their contention in no way affects the position. On the other hand, what has an essential bearing on the question is the *quid pro quo* that Egypt has to offer. The point at issue is the security of the communications of the British Empire and the safeguarding of foreign interests in Egypt. Every step that the Egyptians take to remove all possibility of doubt regarding these two matters will bring them nearer to the kind of treaty that they desire. In the draft Treaty now rejected they have abundant evidence that their representative was able to reassure the British Government on several points, and thus to obtain many concessions that the latter was not prepared to grant until it was convinced by the logic of Sarwat Pasha's arguments. The moral holds good equally for the future. It is just as much a mistake to regard Great Britain as irrevocably hostile to Egyptian aspirations as it is to imagine that her Imperial Defence experts will change their opinions at the bidding of the Wafd. Reasons of economy, as well as common sense and *amour propre*, predispose the British to the relationship with Egypt that Nahas Pasha holds out as the goal of his Cabinet's policy; but it should be clear to all Egyptians that the first step to that end must be the recognition by them that the British Empire has to remain the sole arbiter of what is necessary in the interests of its own security. To gain her own aims, it is surely a more reasonable course for Egypt to adopt to concentrate upon an attempt to meet British misgivings than to ignore their existence by insisting merely upon Egyptian wishes.

In some quarters it is urged that an instinctive dislike to the cut-and-dried provisions of a treaty will prevent the Egyptians from accepting any agreement which imposes explicit obligations to acquiesce in an indefinite occupation of the country by British troops to affixing their signature to an undertaking which legitimises that occupation for a much shorter period. If this estimate should represent the facts of the case, Great Britain's course is clear. An Anglo-Egyptian treaty can never occupy in the scheme of the British Empire the all-important position that it must have in Egyptian eyes; it will regularise for Great Britain an anomalous state of affairs, while for Egyptians it will assume the proportions of the indispensable foundation upon which the edifice of their dreams has to be erected. There can, therefore, be no occasion on Britain's part to press for the early conclusion of a treaty. In the light of what has happened it seems unfortunate that Sir Austen Chamberlain, who, together with Sarwat Pasha, had up to that point maintained a high standard of patience, should have allowed himself to be constrained, even by false reports of the terms of the proposed treaty, to force a decision from the Egyptian Government. The effect of this sudden application of the brake has been to stop the running of the engine, and there will inevitably be some difficulty in restarting it. Possibly the best that can happen is that both parties should take advantage of the stoppage to view the scenery and to take their bearings. For the moment the attitude of the Wafd appears to be that, having extracted so much from the British Government, it has only to wait a little longer before it will be able to extract yet more. There is, however, in this particular transaction of the diplomatic bazaar the novelty that the one party is anxious to give freely, as soon as the other is qualified to accept. This aspect is, for the moment, lost upon Egypt, probably because the Wafd has not had its full share of administrative responsibility. With the Wafd now officially in power, one of two things must happen; either it will find the task of administration under the existing conditions of Anglo-Egyption relations so irksome that its anxiety for a treaty becomes compelling, or British interference will be proved to be such an unsubstantial bogy that the Wafd will have to adjust its views on the reality of the independence that Egypt secures, even with British interests duly safeguarded.

It is evident from the statement of policy which Nahas Pasha read to the Legislative Assembly that the new Cabinet will be glad of an opportunity to study the situation thoroughly and deliberately. By declaring that, in taking office, his Government did not intend to accept or admit anything encroaching on the complete independence and sovereignty of the country, the Prime Minister can only have intended to convey to his audience that the Government's investigation of Egypt's position was to date from and to include the British Declaration of 1922. This is all to the good, as there has been a disposition of late to ignore the reciprocal character of that Declaration. Article 3 stated that "the following matters are absolutely reserved to the discretion of His Majesty's Government until such time as it may be possible by free discussion and friendly accommodation on both sides to conclude agreements in regard thereto between His Majesty's Government and the Government of Egypt. (Here follow the four Reserved Points.) Pending the conclusion of such agreements, the *status quo* in all these matters shall remain intact." At the time when this Declaration was made conditions in Egypt did not lend themselves to a dispassionate consideration of the reciprocal obligations entailed in the acceptance of independence, with a Constitution and the other insignia of independent sovereignty. To-day Nahas Pasha and the Wafd will be better able to bring to bear on the subject the "free discussion and friendly accommodation" to which Egypt pledged herself —in spite of verbal rejection of the Declaration—when she took action under the terms of the first two articles of the Declaration. So much progress has been made—in Egypt's favour—in regard to the *status quo* as it was before February, 1922, mainly owing to the belief that a treaty between the two countries would thereby be facilitated, that the Wafd, when it is able to give the matter its careful consideration, will realise that it is unthinkable that Egypt should by her own action set back the clock in this respect, and that concessions on her part may be worth while in order that the Egyptians may be confined in the lasting possession of the ground already won. This is the soundest point of view from which a treaty should be regarded and its terms examined, even if they leave something to be desired in the eyes of Egyptians.

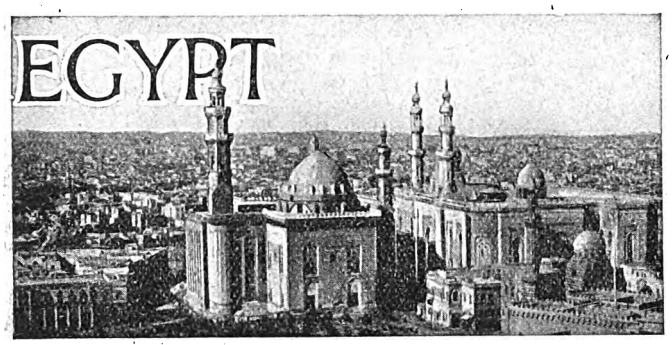
The Near and Middle East*

From Our Own Correspondents.



Cairo, March 17.

The Political Situation.

For once in a way the expected has happened in Egypt—the Wafd has agreed to form a Cabinet and its head has accepted the Presidency—but on the other hand there was an unexpected development in the decision of the Liberals to accede to the request of the Wafd and continue the Coalition and participate in the new Cabinet. The manner in which this decision was obtained from the Liberal Party, however, leads many to wonder how long the Coalition will last, or at any rate to what extent it will sincerely be carried out on the Liberal side, for with half the party against participation in the Cabinet—in fact, it is more than half the party, since there were several non-Coalitionist absentees from the meeting—it is not unreasonable to foresee that friction within the party itself may arise in the near future.

Generally speaking, the advent of the new Cabinet has been received with indifference by the public, and the general attitude is one of "wait and see." It is recognised that the position of the new Cabinet is no easy one, but with circumspection it should be able to avoid the breakers that lie ahead. There is, however, great fear that the pressure of the more extreme element and the desire to justify the existence of the Wafd may tempt its leaders to action which cannot fail to create the difficulties which it is the desire of every responsible Egyptian to see avoided at the present juncture.

The Passing of a Great Statesman.

The death of Hussein Rushdi Pasha was in the nature of a happy release, for he had been ailing for a long time and latterly had suffered considerably. It removes from the Egyptian scene one who played an outstanding part at a critical juncture in the country's history, a man of singularly attractive personality, capacity and courage. It was in great part thanks to him, in his capacity as Premier, that during the War Egypt rendered such great services to the Allied cause in general and to the British Empire in particular. Rushdi Pasha never hesitated to approve of measures, however much they might expose him to criticism, if he had come to the conclusion that they were in the interest of Great Britain, with whose lot he always recognised Egypt's fate was irretrievably bound up. I can speak in this matter from personal experience, for it repeatedly fell to my lot to have to wait on Rushdi Pasha to obtain his consent to action on the part of the Egyptian Government in certain matters connected with the military and economic situation, and on many occasions I had examples of the fearless and energetic side of that statesman's character. Moreover, until the apathy and blindness of the Foreign Office exasperated him, Rushdi Pasha was a fervent partisan of Egypt's inclusion within the British Empire. His idea was that, as Egypt was obviously so essential to the Empire, she should remain within its "elastic circle," but that in recognition of the services she had rendered to the Allied cause and consequently of her contribution to the Allied victory, she was entitled to enjoy more liberty in the matter of her internal affairs. It was in order to plead the case of his country in this connexion that he sought permission to go with Adly Pasha to London immediately the Armistice had been declared. The stupid refusal of the Foreign Office had for consequence Egypt's eventual exclusion from the Empire and all the troubles with which we had to contend during the past ten years, and it converted a warm supporter of the "inclusion within the Empire" doctrine into a bitter partisan of the independence movement. Notwithstanding his disappointment, however, Rushdi Pasha always remained a friend of England, and Englishmen who knew him will ever remember with grateful pleasure the many kind acts he did for them even after he had left office.

British Education in Alexandria.

Considerations of space prevented me last week from dealing with the important meeting of the British colony, which was held at Victoria College in connexion with a scheme for the creation of further British schools in Alexandria. The High Commissioner addressed the meeting, making with Lady Lloyd a special journey from Cairo for the purpose. With them on the platform were Mr. Ralph Carver, President of the community, Mr. Heathcote-Smith, the British Consul-General, to whose energy and initiative the launching of the scheme has been entirely due, Sir Henry Barker, President of the Council of Victoria College, which is associated in the scheme, and Mr. Bianchi, President of the Maltese community. Lord Lloyd delivered an eloquent address on the subject of the scheme as a whole, and Lady Lloyd made one of her appealing speeches on the subject of women's education. Both made a deep impression on the gathering, which comprised nearly a thousand members of the British colony in Alexandria.

Of the need for further educational facilities on British lines in Alexandria there can be no doubt. At the present moment we have Victoria College, affording an excellent secondary education of British public school type to the boys not only of the British colony but also of the other communities which go to make up Egypt's cosmopolitan population. In addition there are two primary schools, one for boys and one for girls, run by the Church of Scotland Mission to the Jews. But that is all, although there are over 1,500 Maltese and 200 Cypriot children as well as children belonging to the element of the English community which can afford neither to send their children home nor to pay the relatively high fees of Victoria College. The majority of these are being educated in the very fine educational institutions which the French and Italians have run in this country for many years now, and by means of which they have contrived to propagate their languages

***Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.**

EGYPTIAN MINISTRY OF EDUCATION.

EGYPTIAN UNIVERSITY.—The following vacancies will occur in the Faculty of Arts in October 1928:—

(1) The Professorship of GEOGRAPHY.

(2) The Professorship of MEDIAEVAL HISTORY.

(3) The Professorship of EGYPTIAN and ORIENTAL HISTORY, prior to Graeco-Roman Times.

(4) The Professorship of CLASSICS and GRAECO-ROMAN HISTORY.

The Salary in each case will be L.E. 1140 (approximately £1168) a year, and the appointment will be on contract for three years. The Contract may be renewed at the end of that period, if agreeable to both parties. One month's salary will be paid on arrival for travelling expenses.

Application should be sent to the Director, Egyptian Educational Office, 39 Victoria Street, London, S.W.1 not later than April 30th.

Applicants should state their age, academic qualifications, previous experience and other particulars as they think fit, and should give the names of not more than three persons to whom reference may be made.

Digitized by Google

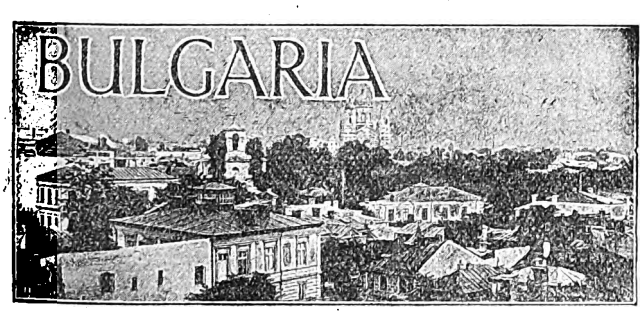
and their cultural ideas in a manner that puts to shame a nation like our own, which has such a stake in this country.

The scheme provides in the first place for a sum of £E10,000 to enable Victoria College to carry out certain necessary repairs and extensions, and secondly for a girls' secondary school, which will do for the girls of the community what Victoria College does with boys, and a boys' primary school which will enable the sons of British residents to enter a commercial career, and so will meet the demand for English-speaking personnel which exists in the commercial community.

The amount for which the appeal is being made, *viz.*, £E150,000, includes endowments, and neither of the schools will be started unless there is sufficient capital to provide for its endowment, so that, so far as can be foreseen, posterity will not be called upon to contribute anything further for the same object. Subscriptions, which may be spread over a period of five years, can be sent to Mr. S. S. Murray, Manager, c/o Barclay's Bank (D. C. and O.), Alexandria, who has kindly consented to act as honorary treasurer, and as the scheme has a very important Imperial aspect it is hoped that substantial support will be obtained from the old country.

Princess Mary.

Princess Mary stayed only a couple of days in Cairo, and is now on her way to the Sudan, but she will remain some little time in the capital on her return on the 31st instant. Although her stay was so short, Princess Mary found time to pay a long visit to the Museum, drive out to the Pyramids and inspect the work which Dr. Reisner is carrying out there on behalf of the Boston-Harvard Expedition, and to call on King Fuad and Queen Nazli at Abdin. On the day of their return to Cairo Princess Mary and Viscount Lascelles will be entertained to dinner by King Fuad. During their stay in Cairo they are the guests of the High Commissioner and Lady Lloyd at the Residency. The Royal party to the Sudan includes, in addition to Lord and Lady Boyne, Lady Lloyd, Mrs. Maclagan, Mr. and Mrs. R. E. More, Mr. Cradock Hartopp, Mrs. Scrivener, the Hon. T. W. Frankland, and Capt. Plowden, A.D.C.



Sofia, March 14.

The Cabinet Crisis.

The difficulties surrounding the Loan which has just been authorised by the League of Nations have embittered the already somewhat strained relations between the different factions comprising the Government party of the Democratic Entente, and has precipitated the latent crisis by which this more or less heterogeneous group has been impaired since its formation, which came about through the exceptionally favourable circumstances created by the *coup d'état* of June 1923. The unity which was momentarily re-established among the members of the Democratic Entente at its recent Congress, when its leaders pledged their trust and friendship in each other, was soon broken by disagreements on the question of the attitude to be observed in the negotiations with the Finance Committee at Geneva on the subject of the Bulgarian loan.

The Loan.

These differences were such that, on the eve of the departure of the Bulgarian delegates for Geneva, the President of the Council received a two-fold warning, one from an important group of Government deputies and a stronger one from an important group of Ministers, who informed him that they would in no circumstances consent to the proposed transformation of the National Bank into a private company. M. Liaptcheff had much difficulty in convincing his colleagues that the Government had in no way weakened its freedom of action. He stated that the working formula which had been elaborated with the help of M. Moloff, Minister of Finance, and M. Bouroff, Minister for Foreign Affairs, only provided for a simple adherence in principle to the shareholder system in the organisation of the National Bank, without any time limit for the application of this system, which was difficult to adapt to the economic conditions of the country. He added that Bulgaria could not, as had been asked of him, refuse to be represented at the Finance Committee at Geneva, having herself asked for the business to be postponed from December to March. He only half succeeded since, the same day as the Bulgarian delegates, who carried away with them only a slight hope of gaining their point, left for Geneva, one of the most refractory members of the Cabinet, M. Kimon Gheorghieff, Minister of Railways, tendered to him his resignation, which was openly designed to provoke a Ministerial crisis.

The Government, as a result of this state of affairs, ran a great risk, weakened internally by bitter discord, and externally by the increasing defections of its partisans in the Sobranye. M. Liaptcheff has played his part bravely and identified his own fate with that of the loan. If he had to fall he preferred to do so on a question of this importance, and not as a result of intrigues behind the scenes. For these intrigues were not lacking, and at bottom, for many of those who resumed the struggle against him, it was much less a question of preserving the National Bank from a "fatal reform," than the overthrowing of the Cabinet, and notably its all-powerful leader. Already understandings to this effect were being established between certain groups and sub-groups of the Party and certain members of the Council of Ministers. Now it so happened that the Bulgarian delegation to Geneva, composed of MM. Bouroff and Moloff, obtained an unhoped-for victory and succeeded, with the kindly help of a number of influential people at Geneva, in securing the authorisation of the Loan by the Finance Committee, and ultimately by the Council of the League of Nations. The re-organisation of the National Bank was postponed to an unspecified date, by which time it was hoped that a state of economic and social order will show signs of being established—a condition indispensable to the realisation of this big banking reform. The Bulgarian Government recognises the usefulness and even the necessity of this reform.

Meanwhile the political independence of the National Bank will be assured by the nomination, by the Finance Committee, of a technical adviser, whose duty will be to superintend the correct working of that institution, notably with regard to trust funds, it being understood that in cases of litigation arising between this technical adviser

EGYPTIAN MINISTRY OF EDUCATION.

EGYPTIAN UNIVERSITY, CAIRO.—The following vacancy will occur in the Faculty of Science in October 1928.

The Professorship of Geology.

The salary of the post is L.E.1140 (Approximately £1168) a year, and the appointment will be on contract for three years. The contract may be renewed at the end of that period if agreeable to both parties, but it can be terminated at any time by either party, by giving three months' previous notice in writing. One month's salary will be paid on arrival at Cairo for travelling expenses.

Applications for the post should be addressed to the Dean of the Faculty of Science, Egyptian University, Cairo, and should reach him before May 1st, 1928.

The candidate appointed will be expected to take up his duties at Cairo towards the end of September 1928.

Intending applicants can obtain information with regard to the form of contract from:— THE DIRECTOR, EGYPTIAN EDUCATIONAL OFFICE, 39, VICTORIA STREET LONDON, S.W.1

Digitized by Google

and the Administrative Council of the Bank, the President of the Bulgarian Court of Cassation will arbitrate. The net proceeds of the authorised loan will be £4,500,000 sterling, of which £1.500,000 will be deposited with the National Bank for part payment of the advances to the Treasury; £1,250,000 will be devoted to works of public utility, roads, railways, etc., £1,100,000 will be used to wipe off the floating debt, consisting of budgetary and other deficits; and £650,000 will go to strengthen the capital of the Agricultural Bank and the Co-operative Bank. The immediate result of the loan will be the stabilisation of the rate of the lev and an appreciable alleviation of the grave economic crisis which is troubling the country.

Success of M. Liaptcheff.

This undeniable success has completely changed the aspect of things, and M. Liaptcheff again became master of the situation at the moment when, the financial problem having been settled—at least in principle—there remained for settlement the political problem. For some time now the group of "malcontents" has been insisting on a re-organisation of the Government. This he had always refused them, giving as a reason that there could be no question about it before a firm decision had been arrived at, good or bad, on the demand for a loan from Geneva. Now that this was done, he intended to keep his word. But he did not mean in the future to allow a continuance of the divisions and rivalries which had so often in the past weakened the Government in the face of the Agrarian and Communists. On the contrary he wished to form a Cabinet of reconciliation, embracing all factions and all prominent personalities in the Democratic Entente.

It is interesting to state that when the matter was thus presented, the important leaders of the party outside the Cabinet refused to join it in order to arrive at the formation of a big Democratic Entente Government and the ministerial change which has been awaited so long will reduce itself to a simple re-shuffling by which certain of the more retiring members of the Cabinet will be replaced by others who will, nevertheless, have the advantage over their predecessors of better pleasing the different factions composing the Democratic Entente.

CYPRUS.

Nicosia, March 8.

"Union with Greece."

There will probably be little to say before the Legislative Council meets in April. The papers repeat *ad nauseam* the threadbare arguments for union with Greece, and say that efforts must now be redoubled towards the "one and only" goal. They practically ignore the fact that the matter they discuss is closed, and speak as if a "question" were pending between the British Government and Cyprus. There has, of course, never been a "question," except in the language of agitators. A reply has been given to all the numerous petitions, memorials, deputations, and missions, that the Government has no intention of handing over Cyprus to any other Power, and has more recently stated definitely that the matter is to be regarded as closed. The local Greek Press does not regard the occasion as one of flogging, or trying to resuscitate, a dead horse. The horse, they say, far from being dead, is very much alive, and will continue to run with increased vigour.

The Swedish Excavations.

The Museum Committee at Nicosia has received a letter expressing the thanks of the Crown Prince of Sweden for the aid given to the Mission. It has been decided to invite the Crown Prince to visit Cyprus, and to witness in person the work of the excavators.

A Notable Cypriot.

The death has occurred, at over 100 years of age, it is said, of Hajji Kyiákos, a leading inhabitant of one of the hill villages of the Limassol District. A great benefactor to his own village, he was a considerate and hospitable landowner, and agriculturist, and a type of all that is best in the country Cypriot. Respected and beloved widely in and beyond his own district, he was regarded with high esteem by several successive High Commissioners. His eldest son, who studied for some time in England, and was for many years one of the foremost and ablest of the elected members of the Legislative Council, is living.

The Tourist Trade.

Cypriots are still singularly backward in advertising the many attractions of their island, notwithstanding recent encouragement from shiploads of flying visitors. The formation of a Pan-Cypriot Committee is advocated by one paper, with a view to more active propaganda. It is, of course, urged that the Government should contribute liberally towards better organisation. The shortage of good hotels in the chief towns, and perhaps in some hill districts, presents drawbacks, and it is essential that this should be satisfied before any great influx of visitors, except those for a day, can be expected.

General News.

The growth of athletic sports is a very good feature in the forward movement; but the need of better training and better direction at Pan-Cypriot and other meetings is observable. An increase of interest in football is also praiseworthy. Many Cypriot youths would make excellent players.

Bitter cold, snow, and frost have succeeded the unusually mild weather that had been prevailing for some time. Agricultural prospects are good.

Tirana, March 15.

The Civil Code and the Tithe.

The two Houses reassembled to resume their labours on March 1. The most interesting topic of discussion was that pertaining to the Civil Code which ought to *bury* (for that is the word used by Members of Parliament) the Turkish *mejelle*, which will be replaced by a Code more in accord with the necessities of present-day existence. The second reading of the new Code was passed without opposition yesterday, and it has now been sent on to the Senate.

Another important question concerns the tithe. As is known, the most prominent direct tax, and therefore, the biggest factor in the revenues of Albania, derives from the tithe, that is, the tenth part of the produce of the land, a system since abandoned by Turkey herself. Now it has been evident for some time past that the tithe ought to be

Digitized by Google

replaced by a tax fixed on the land itself. This would result in the cultivators being free from all kinds of annoyance. According to the Bill before the deputies, the new system will be "tried out" first of all in the prefectures of Shkodra (Scutari) and of Kortcha (Koritsa), and subsequently extended to the rest of the country.

It should be noted that with the passing of the new Civil Code personal status is made uniform for all Albanians, without distinction of creed, and that as a consequence, the efforts of the Catholic clergy to suppress the clauses relative to divorce, have been vain. The Archbishop of Scutari, Mgr. Myeda, came to Tirana and had interviews with the President of the Republic on the subject of divorce; but without result.

The Albanian Loan.

On the loan of fifty million gold francs advanced by the Italian company Svea, interest amounting to nearly ten per cent. has to be paid each year. So far no annual payment has been paid, either for interest, or for amortisation.

Last week an official *communiqué* announced the conclusion of an agreement between the Albanian Government and the Italian Government according to which Albania will begin to pay off her arrears only at the end of 1930. It is beyond doubt that payment has only been postponed, not remitted, and so is established, naturally, a heavy heritage to liquidate between the two countries.

At the same time as this agreement was reached the Italian Government promised to pay in the future the salaries of Italian officers who are at present in the service of Albania as organisers of the Army.

The President's Palace.

Until now Ahmed Bey Zogu has lived in a very small house, next to another house which he has used as an office. But two weeks ago he moved into property belonging to Zia Bey Toptani, which had been used hitherto as the Chamber of Deputies and the Ministry of Foreign Affairs. This building has been set in order and decorated with taste, so that it can justly be called a little palace.

Relations with Greece.

The delegation to Athens, which consisted of MM. Xhafer Villa and Milto Tutulani, has returned to Tirana without having obtained any practical result.

Over a year ago, the two countries concluded a Treaty comprising five conventions, relating to commerce, extradition, citizenship, consular matters, and settlement. The Albanian Parliament, after eleven months, ratified all these conventions, while on the Greek side only the first three have been ratified, and none has been put into force, seeing that the documents have not yet been exchanged. Greece is making difficulties over ratifying the consular convention and that relating to settlement, on account of the clauses on property and the impossibility of expropriation without compensation which they contain.

On the other hand, the situation of the Albanian minorities in the Shameria remains precarious, no measures for the improvement of their lot having been taken by the Greek Government.

The Persian Foreign Minister, who has recently been conferring in Warsaw with M. Zaleski, the Polish Foreign Minister, predicts the conclusion shortly of a Polish-Persian Commercial Treaty.

Field-Marshal Lord Plumer, British High Commissioner for Palestine, together with a distinguished gathering, attended the Sunday service of the International Missionary Council on the Mount of Olives on March 25.

The cruise in Egyptian waters of H.M.S. Chrysanthemum, Commander H. V. Hudson, O.B.E., which was to have begun on March 24, has been postponed for a week, and the programme altered to allow of the ship visiting Alexandria first. She will be there from April 3 to 12, and from April 13 to 24 will be at Famagusta. The ship is due back at Malta on April 28.

Book Reviews

THE HISTORY OF ISLAM.

"ISLAM." By E. Denison Ross. (London : Benn's Sixpenny Library.)

This sixpenny series which Messrs. Benn are regularly publishing is one of the marvels of our time. That the history of Islam should have been compressed into a small book of about 30,000 words is a feat that few students of the Muslim polity would have thought possible. Sir Denison Ross is one of the very few men who could properly be approached for the task.

It has been accomplished—that goes without saying of any work of the Director of the School of Oriental Studies, but it was not in the nature of things that a very readable summary should have been made. To follow this sketch of the history of the Muhammadan world needs, in the first place, some acquaintance with the various stages in Islam, and, secondly considerable concentration and determination to see, so to speak, the wood through the trees, or, rather, the trees through the dates.

Sir Denison skillfully guides his readers through the different chapters on the Prophet and his Mission, and on the first four Caliphs—in which he makes clear the use of force in the original propagation of Islam in Arabia; on the Ommayad and Abbasid Caliphs—in which he rightly lays stress on the failure of the Muslims to take Constantinople, on the Persian influence on Islam, and on the rise of the Turkish military influence; on the dynasties of Spain, North Africa, and Egypt, and on the Eastern Provinces and the Rise of the Turks—in which he shows the beginnings of a "forward" Christian movement in Spain, and the reuniting by the Seljuqs of Middle Asia from Afghanistan to the Mediterranean; on the Mongols, the Safavids, the Dynasties of India, and the Atabegs, the Mamluks, the Ottoman Turks and Afghanistan—in which are well emphasised the difference between the Arabs' conquests and other world conquests ("the dismemberment of their empire did not mean the collapse of their sytem,") the greatness of Akbar, and the significance of the "last great conqueror in Islamic history," Nadir Shah.

In a short review it is impossible to do much else than draw attention to just a few points in Sir Denison's survey which seem to have been excellently made. There is, of course, much else in this little volume, despite the fact that no attempt has been made to treat the independent histories of particular Islamic countries. Quite obviously it provides an admirable *point de sauter* for a comprehensive study of one of the most fascinating periods in the history of the world.

BRITISH MALAYA.

"MALAYA." An Account of its People, Flora and Fauna. By Major C. M. Enriquez. (London: Hurst and Blackett. 21s.)

The only fault that we have to find with this book is its title, which might well lead the reader to anticipate a learned work on the whole Malayan area. As a matter of fact it consists, as those who know Major Enriquez' earlier books on Burma will guess, of an eminently readable, well-informed and interesting series of talks on the subject. But the area discussed is seldom outside British Malaya, while detailed accounts are confined mainly to the Western States of the F.M.S. Within its limits it is worth attention. It is also well illustrated; the pictures of the author's entomological specimens are specially good. It is, perhaps, a mistake to divide a book of this kind into paragraphs numbered consecutively throughout. This sometimes leads to absurd results, as when we find the following appearing in all solemnity as para. 152:—

If the good Professor says that all this is so, we suppose it must be—but it is very mixed.

Readers of THE NEAR EAST AND INDIA will be interested to read that Islam came to this area as the result of trade with Arabia and that it was not till considerably later that it developed militancy. He tells us that

Not even the Malays themselves are very strict observers of Islam. In some places pork is eaten: in other the "Ramzan" is not observed: and nowhere is there the extreme bigotry. Mohammedanism has "happened," but it by no means suits the Malay temperament. . . . Islam is accidental and is not at home in the Indo-Chinese Peninsula: is moreover singularly unsuited to the Malay temperament.

C. S-W.

MISSIONARY REVIEWS.

The April issue of *Word Dominion* contains some articles which will be of peculiar interest to readers of THE NEAR EAST AND INDIA. For example, "An Interview with the Iraq Diplomatic Agent," in which it is suggested that religious toleration is to be an early feature of Iraq; "An Audacious Journey in Arabia," in which is given an account of the recent attempt of American missionaries to "evangelise the Hijaz"; and "In Persia—The Old Order Changeth," in which hopes are held out that the material changes to be witnessed in Persia have coincided with a weakening of Islam and a consequent opportunity for Christian missionary effort.

The April issue of the *International Review of Missions* contains notable articles by Sir Frederick Whyte on "Honolulu and Jerusalem," and by L. Richmond Wheeler on "Islam in Malaya."

RECEPTION AT THE EGYPTIAN LEGATION.

Sesostris Sidarouss Bey, Egyptian Chargé d'Affaires, held a Reception on the evening of March 26 at the Legation in South Audley Street, in honour of the sixtieth birthday of King Fuad. More than seven hundred guests had accepted invitations, and the many reception rooms of the Legation were thronged throughout the evening. Those present included, in addition to the members of the Diplomatic Corps, the following:—

Prince Sirdra Singh, the Rajah of Bijuwa, Prince and Princess Wiasemsky, Prince and Princess Nicolas Galitzine, the Duchess of Norfolk, Violet Duchess of Rutland, the Marquess and Marchioness of Winchester, the Earl of Meath, Viscount and Viscountess Bertie of Thame, Comte and Comtesse de La Chapelle, Baron and Baroness d'Erlanger, Baron and Baroness Quaries van Ufford, Lord and Lady Jessel, Lord and Lady Strathspey, Lord Lugard, Lord and Lady Newborough, Lady Cable, Lord Waring, Lord and Lady Danesfort, Lord and Lady Lawrence, Lord and Lady Monkswell, Lord and Lady Inverforth.

Field-Marshall Viscount Allenby and Viscountess Allenby, Sir Edward Wallington, Sir Harry and Lady Joan Verney, Major-General Sir John Hanbury-Williams and the Misses Hanbury-Williams, Mrs. Stanley Baldwin, Sir William and Lady Joynson-Hicks, Mr. and Mrs. Amery, Sir Laming and Lady Worthington-Evans, Sir Samuel and Lady Maud Hoare, Viscount Peel, Lieutenant-Colonel and Mrs. Wilfrid Ashley, Sir Philip Sassoon, Colonel Sir Wyndham Murray and Miss Garford, Sir Frederick Butler, Admiral Sir Lionel Halsey, Sir John and Lady Newman, Annabel Lady de Freyne, Sir George Armstrong, Colonel Sir William and Lady Smith, Sir William Soulsby, Sir Felix and Lady Helen Cassel, Sir Malcolm McIlwraith, Brigadier-General Sir William and Lady Horwood, Sir Humphrey and Lady Leggett, Sir Charles Ballance, Colonel Sir Henry and Lady Lyons, Sir Richard Gregory, the Hon. Lady White-Thomson, Sir Richard and Lady Clayton, Sir Rowland and Lady Blades and the Misses Blades, Sir Clifford Cory, Sir Thomas and Lady Callender, Sir Denison Ross, Sir John Cockburn.

Sir Fortescue Flannery, Field-Marshal Sir George and Lady Milne, Sir Arthur and Lady Colefax, Lady Huntington, Kathleen Lady Falkiner, Lady Beecham, Lady Arnold, Lady Norton, the Dowager Lady Boyle, Lady Warren, Sir Frank and Lady Newnes, Sir Arnold Lawson, Sir Edward and Lady Boyle, Sir Murdoch and Lady Macdonald, Lieutenant-General Sir William and Lady Pitcairn Campbell, Sir Henry and Lady McMahon, Sir James and Lady Connolly, Sir Grey Shipwith, Sir Egerton and Lady Hamond-Graeme, Sir Albert Seymour, Sir Henry and Lady Rothband, Lieutenant-General Sir George MacMunn, Sir Israel and Lady Gollancz, Lady John Kennedy, Lady Hirst, Sir Rennell Rodd, Mr. G. Mounsey, Mr. R. G. Vansittart, Mr. John Murray, Mr. and Mrs. G. R. Warner, Mr. and Mrs. J. W. Headlam-Morley, Mr. J. B. Monck, Mr. R. G. Leigh, Mr. and Mr. G. N. M. Bland, Mr. C. M. Patrick, Mr. Eric Crowe, Mr. Geoffrey Herbert, Mr. Hubert Martin.

Mr. and Mrs. Rhuvon Guest, Mrs. Stewart Erskine, Lieutenant-Colonel H. S. Turnbull, Mrs. and Miss Duncan Campbell, Mr. and Mrs. Robert Mond, Mr. and Mrs. Percival Foster, Dr. Cyril Horsfrod, Mr. and Mrs. Egbert Goddard, Mr. and Mrs. Philip Bence-Jones, Mr. W. H. McLean, Mrs. Wesley Watson, Mr. T. C. Macaulay, Dr. Ernest Griffin, Captain and Mrs. Cunliffe-Owen, Mr. and Mrs. C. Culworth Danvers, Commander and Mrs. Cecil Harcourt, Miss Adelaide Townshend Pierce, Colonel J. W. Peters, Mr. and Mrs. Ernest Parker, Mr. Samuel Samuel, Mr. and Mrs. Alfred Bossom, Dr. and Mrs. Campbell McClure, Mr. and Mrs. F. W. Emmett, Dr. and Mrs. McDonald Douglas, Mme. de Château Thierry, Mr. Blumenfeld, Mr. Charles Nicholas, Mrs. and Miss Orrell-Kelly, the Mayor and Mayoress of Chelsea, Rear-Admiral and Mrs. Charles Royds, the Hon. Donough and Mrs. O'Brien, Mr. and Mrs. Pyke, Mr. A. E. Leonard, Mr. Maurice Ruffer, Brigadier-General and Mrs. Fuller.

Mrs. Balfour and Mr. David Balfour, Mr. Pybus, Brigadier-General and the Hon. Mrs. Warner, Major and Mrs. Brackley, Mr. and Mrs. John Aspinall, Mr. and Mrs. Harvey, Dr. and Mrs. Madwar, Judge and Mrs. Harington, Mr. and Mrs. Charles Robertson, Mrs. Charles Hancock and Mr. C. C. Hancock, Mr. and Mrs. Percy Westacott, Mrs. Sherwood-Kelly, Colonel and Mrs. Thomas, Mr. P. K. Hodgson, Mr. and Mrs. Spender, Mr. and Mrs. Lee Cooper, Mr. and Mrs. John Dormer, Mr. Hugh Fraser, Captain Crookshank, Mrs. Newton Robertson, Brigadier-General and Miss Blakeney, Dr. and Mme. Lèon, Mr. Hamilton Lamplugh, Professor and Mme. Laurat, Mr. Gordon Selfridge, Mr. Charles Watney, Dr. Andrew Balfour, Mr. and Mrs. MacCallan.

Mrs. Scott Nelson, Lieutenant-Colonel and Mrs. Phillips, Mr. and Mrs. Charles Ricard, Captain R. Gordon Canning, Dr. and Mrs. Charles Box, Mr. and Mrs. Temple Richards, Mr. J. B. Aspinall, Mrs. Alec Tweedie, Mr. and Mrs. Seymour Chalk, Mrs. Carey Clements, Mrs. Davidson, Mr. and Mrs. A. L. Edgecumbe, Mr. and Mrs. Montague Bell, Mrs. Halahan, Mrs. Claude Beddington, Professor and Mrs. Elliot Smith, Dr. and Mrs. Edward Mahon, the Hon. Patrick Balfour, and Mr. and Mrs. Ismay.

GREEK INDEPENDENCE DAY.

The 107th anniversary of the Independence of Greece was celebrated in London by a Reception at the Greek Legation on March 25, when M. Caclamanos, the Greek Minister, was At Home to the members of the Greek community, and by a Service at the Greek Church, Bayswater.

A Dinner was also given in honour of Independence Day under the auspices of the Anglo-Hellenic League on March 26 at the Rembrandt Hotel, South Kensington. Earl Beauchamp presided, and among those present were:—

The Greek Minister, Sir Rennell Rodd, Vice-Admiral Aubrey Smith, Sir John and Lady Stavridi, the Archimandrite Constantinidis, Dean Inge, Dowager Lady Boyle, Sir Edward Boyle, Sir Arthur Crosfield, Sir Harry Lamb, the Hon. Mrs. Tatton-Bower, the Hon. Anne Lytton-Milbank, Sir St. Clair Thomson, Lady Meiklejohn, the Hon. Katherine Thring, Mr. and Mrs. John Drinkwater, Mr. and Mrs. A. J. B. Wace, Mr. and the Misses Agelasto, Commander and Mrs. Alexandris, Mr. and Mrs. Montague Bell, Mrs. A. E. Benachi, Captain and Mrs. S. H. Byron, Dr. and Mrs. A. P. Cawadias, Colonel and Mrs. G. Crosfield, Mr. and Mrs. S. Eumorfopoulos, Dr. D. R. Fotheringham, Mr. and Mrs. A. W. Gomme, Mr. and Mrs. C. S. S. Guthrie, Mr. and Mrs. F. A. Hook, Mr. and Mrs. G. E. Kulukundis, Mr. and Mrs. E. Lambrinudi, Mr. and Mrs. G. Loutsis, Mr. and Mrs. Lykiardopulo, Mr. and Mrs. J. Mavrogordato, Mr. and Mrs. B. M. Mavroleon, Major G. Melas, Mr. and Mrs. M. Pnevmaticos, Mr. and Mrs. J. Romanos, and many others.

In a speech eloquent with emotion and poetic imagery Sir Rennell Rodd proposed the toast of "The Welfare of the Greek Nation." He sketched in trenchant terms the outstanding features of the history of Greece since the War of Independence and of Anglo-Greek relations, and passed in review the great names of the earlier years, each with a happy epithet or descriptive touch that brought them vividly before his hearers.

H.E. Monsieur Caclamanos paid a tribute to Sir Rennell Rodd's oratorical effort, and gave an impressive comparison between the Greece of the early days and the Greece of to-day—the Greece for which two omnibuses plying twice a day catered for the needs of Athens and the Piræus and the Greece of to-day, with electric trains running every ten minutes between the two centres, with ten thousand motor cars as well.

In proposing the toast of the Anglo-Hellenic League, Vice-Admiral Aubrey Smith referred to the naval and maritime ties between Greece and Great Britain and referred to the objects of the League. In his reply Sir John Stavridi pointed out that he had been reminded that evening by the references to Anglo-Greek relations of the fable of the lion and the mouse. There had been times when the mouse had been able to help the lion; it did its small share in the Boer War, and he recalled the part played by the Greek mercantile marine in the Great War. At a time when the British authorities were wondering whether the stern exigencies of the situation might not compel them to lay hands on the Greek ships—a step which would have inevitably turned Greece against the Allies and which Sir John Stavridi worked hard to prevent—the Greek companies of their own free will placed all their ships with their crews on charter to the British.

The toast of "The Chairman," proposed by Mr. John Drinkwater, and Lord Beauchamp's reply brought the proceedings to a close.

The latest addition to the stamps of the Anglo-Egyptian Sudan, printed on the new paper watermarked S.G. in multiple, is the 10 piastres mauve and black. Next month the Indian postage stamps supplied to the postal agency at Kuwait (Persian Gulf) will cease to carry a distinguishing overprint of the name of the Sultanate, as has been the custom during the past five years.

The submarine depôt-ship Hvar, and the submarines Hrabri and Neboyaa, the first vessels of their type to be completed for the Yugoslav Navy, are due to call this month at Gibraltar and Malta. The submarines have been built on the Tyne by the Armstrong firm, and are 975 tons (1,164 tons submerged), with an armament of two 4 in. guns and six 21 in. topedo tubes. They recently spent some time at Devonport and Portland.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.

THE WEEK AT HOME

London, Tuesday Morning.

The Naval Scandal.

A painful example of the evil effect of our sensational Press is provided by the affair of the Royal Oak, in connexion with a recent incident on which a court martial is to be held at Gibraltar. At first all sorts of noxious rumours were spread about "mutiny in the Royal Navy"—the sort of thing which is peculiarly offensive in that the Navy is Great Britain's pride.

It is now believed, happily, that the issue on the Royal Oak was no more than a personal one, not involving a general condition. Certainly we want to know the sort of difference which caused the feeling between senior officers, but to suppose, as one might suppose from the sensational Press and from the foreign journals which were only too eager to imitate them, that mutiny was rife and that the Admiralty has deliberately been hushing up a terrible blow to our prestige, is ridiculous and unworthy.

The Zinovieff Letter.

The debate in the House last week upon the notorious "Red Letter" made good reading, and provided more excitement than do six months of normal Parliamentary routine; but it did not advance the matter very much further, and since there is to be no inquiry into the origin of the document, we of this generation shall probably never know the indisputable truth.

One fact, however, the Prime Minister did disclose: that the copy of the document was given to the *Daily Mail*, not, as some of the Labour Party had thought, by a Civil Servant, but by a private man, Mr. Conrad Donald im Thurn. There is no legitimate reason for doubting Mr. im Thurn's story, and, once its accuracy is granted, it is obvious that Mr. MacDonald's thesis of a sinister plot falls entirely to the ground. The whole weakness of the Labour Prime Minister's position lay in the fact that he would not decide whether the letter was a forgery or not. Those observers were apparently right who stated that a debate would do the Labour Party no good, and it seems very improbable that any more will officially be heard of this mysterious but not malign episode in our national life.

Roads and Railways.

It now appears certain that the railway companies will secure the powers on the roads which they want. But there is a body of opinion of growing intensity which believes in the desirability of a public inquiry into the whole future of transport. To treat the Railways' case now as an urgent one, is, in the opinion of many men, rather ridiculous.

The Association of Chambers of Commerce, for example, profess satisfaction that public interests will be protected by the safeguards which the Ministry of Transport is affixing to the Railways' privileges, but why not have an inquiry before those safeguards are affixed? The opinion is so general that railways are an industry which, if not dying, must at least be circumscribed in its activities, that when one remembers that the Railways themselves want an inquiry into the relations between rail and road transport, and that the Prime Minister has promised an inquiry into the regulation of road transport, it really does seem that a general and comprehensive, rather than a piecemeal, survey is what is called for.

Female Diplomatists.

One had become so accustomed to the thoroughness of the female invasion into haunts which had hitherto been exclusively male preserves, that it was quite refreshing to be reminded last week, by a question in the House of Commons, that England is still reactionary enough to confine her diplomatic secrets to the male mind—if they thence overflow before the female artificer's charms it is no fault of our system.

Sir Austen Chamberlain, in reply to a question on the possibility of appointing women to the Diplomatic Service, gave a rigid negative, adding that "it is a matter of expediency, and our rules are the best in the present circumstances." There is room for dismay in the last phrase, which seems to admit that a day may come when woman's work will be held to include diplomatic work.

But it is a delicate subject, upon which I will not be so ungallant as to disclose an individual opinion.

The New Lloyd's.

Lloyd's has become in the process of time nothing less than a national institution, and it was quite fitting that the King himself on Saturday should formally have opened the new building. In its way the growth of Lloyd's, from being a coffee-house at the end of the seventeenth century, to its present world position is in miniature the story of the growth of England. Originally, of course, Lloyd's dealt solely with marine insurance, and it still is the chief representative of such insurance, but it has since spread its comfortable wings to cover many other things.

It was a happy touch on the part of His Majesty to connect the new palace in Leadenhall Street with Roman London.

Nature and Nurture.

Often a more illuminating light is thrown upon the social habits of a nation by an expert's reasoned survey than by hundreds of statistics, and Sir George Newman, who is the Chief Medical Officer to the Ministry of Health and the Board of Education, gave, in a lecture last week, some stimulating facts on the fundamentals of health.

He posed, after stating that human life was a balance between nature and nurture, as the six elements of nutrition, food, fresh air and sunlight, exercise of the body, warmth, cleanliness, and rest. Dietetically speaking, he stated that the great mass of workers were unwise and unthrifty. The workers' tale was one of ham and beef, of beer and bread, of tea and pickles, of tinned meat and proprietary foods, or a weary round of bacon and herring and cheese—and of an unstable digestive system and an impaired physique.

He went on to emphasise what is so often forgotten by more than one class of the nation—the difference between nutrition and mere feeding. Nearly everyone eats too much nowadays; over-feeding is particularly common, according to Sir George, with persons over forty. Of course there is no more fatiguing man than the dietetic theorist, but when we think of the irritations suffered and supplied by what is nothing more than faulty digestion, there is something to be said for a study of the relations of nature to nurture.

The Prayer Book.

I have heard few reports of the progress which advocates of the Revised Prayer Book are making in the country, but from the other side there is considerable evidence that opposition to it will be bitter.

For instance, the Free Churches, which on the former occasion were divided in their attitude, appear to have stiffened unitedly against this re-revision. They will not have continuous reservation in any shape.

In the last week or so, moreover, High Churchmen and Evangelicals have added to the opposition, and, of course, the English Church Union is dead against the proposals. But it is still extraordinarily difficult to gauge the real chances, because, although not all this opposition was in opposition on the first occasion, it is at least conceivable that the new proposals have won over some Churchmen who dread the consequences of another rejection by Parliament.

Alter Ego.

Mr. A. G. Bather, whose death occurred at Winchester on March 18, was a scholar and Fellow of King's, Cambridge, who won firsts in the Classical Tripos; a student at Athens, and later and acknowledged authority on Greek archæology, he paid repeated visits to Greece.

PERSONAL AND GENERAL

TO-DAY

March 29, 1928 (New Style).
March 16, 1928 (Old Style).
Shawall 7, 1346, A.H., of the Muslim Calendar.
Nisan 8, 5699, of the Jewish Calendar.

Lord and Lady Inchcape left Port Said on March 26 in the Razmak for Marseilles.

Lady Mary Bevan joined the P. and O. steamship Rawalpindi at Marseilles on March 24 for Egypt.

Viscount and Viscountess Devonport, who have been touring in Egypt and Palestine, will return to London at the end of the month.

Mr. and Mrs. Robert Williams returned to London on March 26 on the conclusion of their visit to Egypt and the Sudan.

The Bishop of Manchester left England on March 21 to attend the International Mission Council at Jerusalem. He will return on April 21.

Mr. and Mrs. Cecil Harmsworth have left London for a tour in Greece, and expect to be away for seven or eight weeks.

Mr. and Mrs. Rudyard Kipling, who have been on a visit to the Naples district and Sicily, left Naples on March 21 on board the Orvieto for Gibraltar.

Mme. Ivan Stancioff left London on March 23 with her two infant children, to join her husband at Sofia, where he is now Secretary at the Ministry of Foreign Affairs.

The Egyptian Chargé d'Affaires held an afternoon reception on March 23, on the occasion of "Ramadhan Bairam," for all members and friends of the Egyptian Colony.

Sir Kay and Lady Muir will leave London on March 29 for the South of France and Corsica, and will return to Blair Drummond, Perthshire, in mid-April with Monsieur and Madame Dimitri Stancioff.

Sir Logie Watson, Sir Trevredyn Wynne, and Sir Ernest Bell arrived at Marseilles on March 23 in the P. and O. s.s. Kaisar-i-Hind from Bombay. Sir Charles and Lady Low and Lady Robertson are passengers in the vessel to London.

Mr. Dudley Heathcote will address the Near and Middle East Association to-morrow (March 30) at 8.30 p.m., on "Hungary and the Balkans." The meeting will be held, by kind permission of Lady (Edgar) Bonham-Carter, at 17, Radnor Place, Hyde Park, W., and the Rt. Hon. Lord Danesfort, K.C., will preside.

The Greek Minister in London held a reception on March 25 at the Legation in Upper Brook Street, to celebrate the 107th anniversary of the Greek Independence. The guests, mostly members of the Greek community in London, included Sir Lucas Ralli and Mrs. Peter Ralli, the Archbishop of Thyateira, the Great Archimandrite, the Very Rev. M. Constantinides, the Archimandrite, the Rev. Agathangalos Moscovakis, Dr. Caivadias, Mr. A. Stathacopoulo, M. and Mme. Jean Romanos, Captain Papalexopoulos, Mr. Emmanuel Th. Aronis, Mr. S. Delyannis, Mr. J. Corbettis, Dr. Angelis, Mr. N. Eumorfopoulos, Miss Wheeler Ryan, Mlle. Kephala, Mr. Colla, Mr. J. Topali, Mr. and Mrs. Lambrinudi, Mr. Loutis, and Mr. G. Saldji.

The Turkish Ambassador and Mme. Ferid gave a dinner party on March 20 at the Embassy in Portland Place. The guests present included Sir Austen Chamberlain, the German Ambassador and Frau Sthamer, the United States Ambassador and Mrs. Houghton, Baroness Matsui, Viscount Peel, Viscount and Viscountess Churchill, Lord and Lady Huntingfield, Lord Hardinge of Penshurst, Lord and Lady Jessel, Lady Maud Hoare, the Right Hon. W. Ashley and Mrs. Ashley, Sir Hubert and Lady Montgomery, Lady Peacock, Mrs. Amery, Madame Vahid Bey, Feridoun Bey, and Orhan Tahsin Bey.

THE PERSIAN NEW YEAR.

The following guests were invited to the reception, held on March 22, by the Persian Minister, Hovhannes Khan Mossaed, to celebrate the Persian New Year at the Legation in Bramham Gardens:—The Princesses Malcom Khan, the Spanish Ambassador and the Marquesa de Merry del Val, the eGrman Ambassador and Frau Sthamer, the French Ambassador and Madame Fleuriau, the American Ambassador and Mrs. Houghton, the Brazilian Ambassador and Madame Regis de Oliveira, the Turkish Ambassador and Madame Férid, the Japanese Ambassador and Baroness Matsui, the Portuguese Ambassador, the Italian Ambassador, the Belgian Ambassador and Baroness de Cartier de Marchienne, the Argentine Ambassador and Madame and Mlle. Uriburu, the Swedish Minister and Baroness and Baronne Margareta Palmstierna, the Danish Minister and Countess Ahlefeldt-Laurvig and Countess Ingegerd Ahlefeldt, the Venezuelan Minister, the Estonian Minister.

The Polish Minister, the Colombian Minister and Madame and Mlle. de Cuervo Márques, the Greek Minister, the Bulgarian Minister and Mlle. Hadji-Mischeff, the Hungarian Minister and Baronne Rubido-Zichy, the Latvian Minister and Madame Vesmans, the Afghan Minister, the Czechoslovakian Minister, the Cuban Minister and Madame Patterson and Mlles. Zoe and Alga Patterson, the Serbs-Croats-Slovenes Minister, the Mexican Minister and Madame Valenzuela, the Finnish Minister and Madame Saastamainen, the Peruvian Minister, the Siamese Minister, the Chilean Minister and Madame Huneeus and Mlle. Huneeus, the Liberian Minister and Madame Dresselhuys, the Nicaraguan Minister, the Paraguayan Chargé d'Affaires and Mme. de Galeano, the Salvadorian Chargé d'Affaires and Mme. de Reyes-Guerra, and the Chargés d'Affaires for Roumania, Egypt, Ecuador, the Netherlands, and Switzerland.

The Lord Mayor and Lady Mayoress, the Rt. Hon. Sir William and Lady Joynson-Hicks, the Rt. Hon. L. S. and Mrs. Amery, the Rt. Hon. Sir Samuel and Lady Hoare, the Marquis and Marchioness of Reading, Lord and Lady Greenway, Lord and Lady Strathspey and Hon. Joan Grant, Sir Edward and Lady Boyle, the Dowager Lady Boyle, Sir John and Lady Bland-Sutton, Sir Edward and Lady Lechmere, Sir Charles and Lady Wakefield, Sir John Hanbury Williams, Sir Thomas and Lady Arnold, Sir Hugh and Lady Barnes, Sir Bindon and Lady Blood, Sir Percy and Lady Cox, Sir Ian and Lady Malcolm, Sir Henri and Lady Deterding, Sir Charles Marling, Sir John Cadman, Sir Henry and Lady McMahon, Sir Herbert and Lady Richmond, Sir Arnold Wilson, Lady Beecham and Mr. A. Beecham, Sir Harry and Lady Foster, Sir Israel and Lady Gollancz, Sir Denison Ross, Lieut.-Colonel and the Hon. Mrs. Dalzell Hunter, Lieut.-Colonel and Madame Uggla, Captain A. L. Rogers.

Mr. and Mrs. R. G. Vansittart, Mr. and Mrs. F. Ashton-Gwatkin, Mr. and Mrs. Sydney Rogers, Mr. and Mrs. and Miss Sen, Mr. and Mrs. Said-Ruete, Mr. and Mrs. Montague Bell, Mr. and Mrs. Kenneth Williams, Mr. and Mrs. Herbert White, Mr. and Mrs. A. P. Hacobian, Mr. and Mrs. A. Apcar, Mr. J. D. C. and Miss Pavry, Mr. and Mrs. E. Goddard and Misses Goddard, Mrs. Alec Tweedie, Mrs. Oscar Campbell, Mrs. Gibson Smith, Mrs. and Misses Anquetil, Mrs. Charles and C. G. Hancock, Madame Rafael Zaldivar, Mrs. A. E. Cooke and Miss Cooke, Mrs. and Miss George, Mrs. and Miss Stuart-Browne, Mr. J. B. Monck (Foreign Office), Mr. J. H. Amshewitz, Mr. Nubar Gulbenkian, Mr. H. A. Gwynne, Mr. Hamilton Lamplugh, Mr. C. E. Mackay, and the following members of the Anglo-Persian Oil Company: Sir Basil Kemball Cook, Sir George Barstow, Dr. M. Y. Young, Dr. A. E. Dunstan, Colonel Medlicott, Mr. J. B. Lloyd, Mr. A. G. Bell, Mr. H. R. Cooke, Mr. J. C. Clarke, Mr. John Clark, Mr. Hearn, Mr. Norman Napier, Mr. G. C. Whigham, Mr. R. T. Watson, and Mr. W. D. Braithwaite.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

ROUMANIA AND HUNGARY.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I hope that you will allow me a word or two of protest against certain assertions of M. Vukitch, published in THE NEAR EAST AND INDIA of March 15.

He states, among other things, that "Hungary is the only European country in which mediæval feudalism still reigns supreme and peasants continue to be serfs"; and then accuses the same country of being the main culprit for the War, these two statements showing such an astounding ignorance of actualities that I cannot allow them to pass unchallenged.

In pre-War Hungary, property was divided in the following manner, according to the statistics of 1895. (I have the figures of 1910, but they are not so complete, though even more favourable to my contention).

	Number of Holdings.	Area. (Cad. yokes).
Dwarf holdings (0-5 yokes)	1,280,000	... 2,155,000
Small holdings (5-100 yokes)	1,085,000	... 17,137,000
Medium holdings (100-1,000 yokes) ...	20,000	... 11,901,000
Large estates (over 1,000 yokes) ...	4,000	... 20,000,000

Which, in other words, shows that 60 per cent. of the land was held by peasants and small farmers.

In Hungary to-day, we find no less than 840,000 landowners, not all of whom are squires. In fact, 57 per cent. of the agricultural land of the country (i.e. 13,000,000) is held by "La petite et moyenne culture." Under the Land Reform Act of 1920, 1,500,000 acres of expropriated lands have been divided among 344,000 small proprietors, 348,363 homesteads have been created, of a total area of 717,939 acres and a further 144,000 acres converted into small holdings. Strange as it may appear to M. Vukitch, the Hungarian peasantry are so contented with their lot that many of them refused to take advantage of the offer of land made to them, on the ground that they could not possibly be better off than they were.

As for the accusation which your Yugoslav Correspondent makes against Hungary in connexion with the War, it is absolutely opposed to reality. Hungary was never actually hostile to the Western Powers, and documents recently brought to light in Vienna, in the time of the Socialist trouble in that city, clearly prove that Count Tisza opposed the War as long as possible, and that his country engaged in it only because it could not do otherwise.

To plead, moreover, that Hungary also contributed to the coming of the War by her oppression of subject peoples is also a misrepresentation of facts. If this were the case, how, pray, can M. Vukitch account for the Slovaks and Ruthenians' undoubted yearning for a return of the régime that perpetrated so iniquitous a thing? Let him only read the *Ceske-Slova* of January 29, 1926, in which M. Igor Hrusovski, one of Dr. Benesh's closest friends, dilates on the alarming fact that 95 per cent. of the intelligenzia of Slovakia, and the preponderating majority of her people have remained Hungarian in feeling and sentiment. If this is true of the Slovaks and Ruthenes, it would appear as if these misguided races were anxious to renew the "enslavement" of which M. Vukitch complains so energetically.—I am, etc.,

SERVICE IN IRAQ.

The King has given orders for the appointment of Colonel (temporary Colonel Commandant) John Gilbert Browne, C.M.G., D.S.O., Commandant Iraq Levies, to be a Commander of the Military Division of the Most Excellent Order of the British Empire in recognition of valuable and distinguished services rendered while in command of the force employed on the military operations in the Panjwin area of Iraq between April 18 and May 7, 1927.

The King has approved of the following award in recognition of gallant and distinguished service rendered in the operations in the Panjwin area of Iraq during the period April-May, 1927:—

D.S.O.—Squadron Leader Francis Henry Coleman, Royal Air Force.

The King has also approved of the following awards in respect of operations in Iraq during April and May, 1927:—

M.C., for gallant and distinguished services in action.—Lieutenant Tom Cuthbert Hobbs, 3rd/6th Dragoon Guards, attached Iraq Levies; Rab Kamshi Eshu Sapar, 3rd Battalion, Iraq Levies.

M.M., for bravery in the field.—No. 333193 Corporal George Henry Beauchamp, No. 30 (Bombing) Squadron, Royal Air Force; No. 65347 Company Quartermaster Sergeant Baito Mako, 4th Battalion, Iraq Levies.

The names of the following have been brought to notice in a report dated June 16, 1927, from Air Vice-Marshal Sir Edward Leonard Ellington, K.C.B., C.M.G., C.B.E., Air Officer Commanding, British Forces in Iraq, for distinguished services rendered in connexion with the operations in the Panjwin area of Iraq during the period April-May, 1927:—

ROYAL AIR FORCE.

Flight Lieutenant Guy Murton Moore, M.C.
Flight Lieutenant Richard Harrison, D.F.C.
86025 Sergeant (Pilot) Frederick William Newman.
335992 Leading Aircraftsman Basil Henry Reeves.

IRAQ LEVIES.

Major and Brevet Lieutenant-Colonel Charles Reginald Barke, C.B.E., T.D., 5th Bn. The North Staffordshire Regiment (Territorial Army) and Iraq Levies.

Major Eric Thornburgh Horner, M.C., The Norfolk Regiment and Iraq Levies.

Captain and Brevet Major Ralph Havelock Lewis Fink, M.C., The Cheshire Regiment and Iraq Levies.

Lieutenant Edmund Graham Buckley, The Rifle Brigade and Iraq Levies.

55416 Corporal Barkhu Bobo.

IRAQ ARMY.

Captain John Valentine Adair, M.C., Regular Army Reserve of Officers, 12th Lancers and Iraq Army.

Muquaddam Mahdy bin Saleh, M.C.

Al-Rais Muhammad Zaki bin Mahmud Al Wara.

5460 Jundi Amin bin Qawar.

IRAQ POLICE.

Captain C. H. Shepherd, Inspecting Officer, Iraq Police.

H.C. 190 Hussein Asad.

NEAR AND MIDDLE EAST ASSOCIATION.

The following message of welcome was addresed to the King and Queen of Afghanistan by the Near and Middle East Association:—

"To their Majesties the King and Queen of Afghanistan a respectful and cordial welcome is extended by the members of the Near and Middle East Association, a Society which has ever placed among its principal aims the maintenance of good will and co-operation between Great Britain and the Islamic nations of the world." (Signed) Henry Bentinck, President; Lamington, Vice-President; E. N. Bennett, Chairman; Ameer Ali, Constance Boyle, Emily L. Cobham, C. F. Dixon-Johnson, John Foster Fraser, E. H. Griffin, John Prescott Hewett, and E. Denison Ross, Executive Committee.

NOTES OF THE WEEK

(Continued from page 386.)

The Jerusalem Conference.

The representation of fifty-one countries at Jerusalem, in the International Conference which began on the Mount of Olives on March 24, is a fact which must strike the imagination. Protestant Christendom has assembled in the Holy City for the purpose of so shaping Protestant missionary effort that the whole impact of the West upon the East, whether in professional, cultural, industrial, or social sphere, should have a Christian character. Without question there is the opportunity for very beneficial lessons to be learned from such a Conference, because, on the one hand, much of the Western impact upon the East has been disfigured by un-Christian features, and, on the other hand, much Protestant missionary effort in the East has been misguided and in vain. It is significant of the chance that is now provided to the Protestant Churches that this meeting should be taking place in the Holy Land. Whether the ultimate ideal is increased understanding between the followers of other Oriental religions than Christianity and Christians, or the actual "conversion" of Muslims, Hindus, and others, is a matter on which, perhaps we should find some differences with the International Conference at Jerusalem. But upon the good intentions and the possibilities of doing good of this Conference we have no doubts.

CYPRUS JUBILEE YEAR.

A telegram from the Greek Press Bureau, Cyprus, dated March 25, states:—

The Jubilee festivities in celebration of the fiftieth anniversary of the British occupation of the Island began today without the participation of the Greek population.

The Greek Independence Day was observed with great enthusiasm throughout Cyprus. In more than six hundred churches on the Island prayers were offered for union with Greece.

[The British occupation of Cyprus took place on July 12, 1878. The fiftieth anniversary is being marked by no formal celebrations on a special date. It is not the case, therefore, that "festivities" began on March 25; but this day was not unnaturally chosen by a section of the Greek community, which controls the Orthodox Church on the Island through the Archbishop, to indicate that the material advancement of Cyprus during the last fifty years is of less interest to the Greeks concerned than the political advancement in the matter of office emoluments that would accrue to them from union with Greece.—ED.]

By a large majority the Albanian Senate on March 20 accepted the new Civil Code.

M. Vlaiko Kostitch, Yugoslav Minister of Posts and Telegraphs, died on March 25, following an operation.

NEWS IN BRIEF.

When a box of oranges from Jaffa was opened at a Totnes grocer's shop, a snake, 34 in. long, came out.

The Bishop of Jerusalem dedicated on March 20 a new Anglican Church at Es Salt (Trans-Jordan).

Greyhound racing in Egypt was inaugurated on March 22. There was a large attendance in Cairo.

President Kondouriotis opened the French Commercial Exhibition in the Zappeion in Athens on March 20. It will remain open until May 20.

The R.A.F. airmen engaged on the annual service flight from Cairo to the Cape arrived in Cape Town on March 25, according to programme.

A "Te Deum" was sung in the Greek Church of St. Sophia, Moscow Road, W., on March 25, in commemoration of the Greek Independence Day.

Mr. H. M. Gibbs has presented to the vicarage of Barrow Gurney, near Bristol, Canon J. C. Penley, of Calcutta Cathedral, who has spent over twenty years in India.

Mr. H. M. Gooch, general secretary of the World's Evangelical Alliance, has left London for Eastern Europe. His engagements include a visit to Transylvania.

A gale which had been raging for a week at Constantinople developed on March 20 into a blinding snowstorm. All shipping activities had to be suspended, navigation being impossible.

The railway workshops at Betchkerek, Yugoslavia, were completely destroyed by fire last week. No one was injured, but the damage is estimated at 6,000,000 dinars (about £21,600).

Dr. Sydney Smith, the Egyptian Government's medico-legal expert, left Cairo on March 25 to take over the Chair of Forensic Medicine at Edinburgh, in succession to the late Professor Littlejohn.

Earthquake shocks were felt on March 20 at Zagreb and in the neighbourhood. In the region of Leipik and Pakratz several houses were damaged and chimneys collapsed. No one was injured.

Four mountaineers and numerous cattle were last week reported to have perished in the Daghestan mountains in the Caucasus during an avalanche. The roads were covered with snow, and many villages were isolated.

In Convocation at Oxford on March 20, the Vice-Chancellor presiding, it was resolved to affix the seal of the University to an address to the Faculty of Medicine at Cairo on the occasion of its centenary.

Captain R. H. L. Bevan, D.S.O., M.V.O., R.N., has been appointed Naval Attaché to H.M. Missions in Italy, Greece, Yugoslavia, Roumania, Bulgaria, Albania, and Turkey, with headquarters at Rome, to date April 28.

Wissa Bey Wassif, former Egyptian Vice-President, was elected President of the Chamber on March 20. Before the sitting Mustapha Pasha Nahas, the new Prime Minister, called on Lord Lloyd, British High Commissioner, at the Residency.

M. Michalakopoulos and M. Titulescu, the Foreign Ministers respectively of Greece and Roumania, on March 21 signed in Geneva a ten years' treaty of non-aggression and arbitration on the lines approved by the Security Committee in its recent debates.

Princess Mary is not going to Khartoum owing to the heat in the Sudan. Her Royal Highness and Viscount Lascelles are returning from Wady Halfa by river to Luxor and travelling thence by train to Cairo, where they are due on March 31.

THE VICTORIA MEMORIAL: CALCUTTA.

COMMERCE AND POLITICS.

It is greatly to be regretted that at the end of the current session of the Central Legislature Sir Walter Willson will resign his seat as the representative in the Assembly of the Associated Chambers of Commerce. It will be remembered that when the Reforms scheme was introduced no provision was made for the representation of European interests in the Assembly. This was admittedly a serious error which has occasioned much dissatisfaction, and one which the Statutory Commission ought to correct. Lord Reading recognised the need for representation; and in 1923-24 he accordingly permitted the Associated Chambers of Commerce to recommend a member for nomination by the Government. The Chambers recommended Sir Walter Willson, who quickly proved himself to be a thoroughly capable and efficient representative. He was again nominated, by the unanimous vote of the Chambers, when the present Assembly was constituted, and he has since continued to serve. His loss will be severely felt by the Chambers, who will not find it easy to choose an equally able and enthusiastic successor. At their meeting last December they warmly thanked him for his services; and at a dinner at Delhi last week his European non-official colleagues also expressed their acknowledgments of his work.

Political conditions in India are changing and it is of far greater importance now than it formerly was for European commercial and industrial interests to be adequately represented in the legislatures, and especially in the Assembly. Under the system of administration which was in operation before the Reforms the Executive was for all practical purposes supreme. It was consequently sufficient for the Chambers to submit their views, on matters affecting their interests, to the Executive. This has been for many years, and still is, the practice. When the Government of India contemplate any new legislative project of importance they usually refer it to the Local Governments after they have themselves studied it. They may or may not send a draft of a Bill; but they ask the Local Governments for their views and suggest that before these are framed divisional and district officers and local public bodies should be consulted. If the question raises financial, commercial or industrial isues the Chambers of Commerce are referred to by the Local Government as being public bodies. The opportunity of influencing legislation which is thus presented has always been fully taken advantage of by the European Chambers and mostly by the Indian Chambers also. And the reports, memoranda or letters which they submit have always expressed their considered views on the questions so brought before them. The system has advantages, and in practice it has worked well. But, as Sir Walter Willson made clear to the Associated Chambers at their meeting last December, it no longer suffices. The Executive does not now occupy that supreme position in which it was formerly placed. If the Chambers want their opinion on any legislative project to prevail they must nowadays convince the Assembly: it is not enough to convince the Executive. And, like most popular bodies, the Assembly is not disposed to give overmuch attention to letters and memoranda, however ably and conclusively they may be framed. It will listen to the Chambers' opinion if these are voiced in its debates. But it does not, and will not, give to written statements that consideration which they receive from the Executive. It is consequently of the first importance that European commercial interests should be strongly represented in the Assembly. For it must not be forgotten that it is in the Central Legislature, and not in the provincial legislatures, that most of the questions which affect these interests are discussed. For example, currency, banking, railways, posts, telegraphs, customs, compensation, factories, and trade union Acts and shipping legislation are all central subjects. And although it may be admitted that the Council of State is an influential and important Chamber, the decisive debates on the great majority of central subjects take place in the Lower House.

In these circumstances the need for adequate representation is manifest, and it is made even more necessary than it would otherwise be by the attitude of the Indian political leaders towards European commerce. Racial bitterness and antagonism are greatly in evidence where the interests of Europeans are concerned. Indeed, Sir Walter Willson by no means overstated the case when he told the Associated Chambers in December that all the divergent and conflicting parties in Indian politics find a common rallying ground in their policy of anti-European discrimination and expropriation. And, as he indicated, they present a formidable list of demands. They ask, among other things, for the reservation of the coasting trade to vessels owned and controlled by Indians with liberal State aid for the initiation and development of shipbuilding in India; for the speedy Indianisation of all the higher appointments in the various Port Trusts, the Development or Improvement Trusts, the Imperial Bank, the Railways, the Posts and Telegraphs, the Irrigation Department, the Customs, the Income-tax Department, the Bengal Pilot Service, and the addition of an Indian member to the Railway Board; for an increase in the duty on cotton piece-goods; an excise duty on the products of "foreign" match factories in India; a rebate on salt entering Bengal, the elimination of the alleged measure of Imperial preference contained in the Steel Industry (Protection) Act of 1927; a tightening-up of the Stores Purchase Rules in favour of Indian products; the restriction of mining concessions to Indian licensees; and more generous representation of Indian commercial interests in the central and local legislatures. This is not an exhaustive list, but it is an indication of certain of the directions in which European interests are to be attacked in the near future. It would be foolish to expect that the Government of India will be specially concerned to safeguard and to defend European commerce and industry. On the contrary, the policy of the Government is rightly to promote Indian commercial interests. It may be trusted to be just to European commerce but, as its policy of discriminating protection and of nationalising the railways

Digitized by Google

shows, its first concern is for the development of Indian defence and protection of its own interests; and it is to this duty that the Chambers should, as Sir Walter Willson suggested, specially devote themselves. What is required is, as he said, that British firms engaged in business in India should not merely permit, but should definitely encourage, their representatives there to take an active part in the work of municipal corporations and of the provincial and central legislatures. There would then be no difficulty in finding qualified representatives willing and able to give effective expression in the Assembly to the opinions of the European commercial and industrial community. And we would add, in conclusion, that the Chambers should urge the substitution of the principle of election for that of nomination; and that they should be elected, and not nominated, because members elected by a constituency are, as a rule, in a stronger position in a democratic body than members nominated by the Executive.

CURRENT TOPICS.

The Simon Commission.

By the time these words appear in print Sir John Simon and his fellow-members of the Statutory Commission will be *en route* for Bombay, whence they sail on Saturday for England. They are expected, therefore, to be back in London on or about April 14 next. In its preliminary tour of investigation, now virtually concluded, the Commission has experienced various kinds of reception in the different parts of India which it has visited. The boycott so loudly advertised before the Commission's arrival, and so laboriously engineered has, it is true, been in evidence but, as we anticipated, the movement found its most marked expression in the Legislative Assembly's adverse vote. In the Punjab and in the Madras Presidency, in particular, the results must have been singularly disappointing to the organisers. Only in a few centres has the *hartal* been observed to any appreciable extent and, on balance, there is no doubt but that the reception which the country as a whole has given to the Commission has been favourable and cordial. Where there has been opposition it has been carefully organised, whereas the welcome has been spontaneous. "When we stopped at wayside stations and met people by surprise," Sir John Simon observed, on the conclusion of the Commission's stay in the Punjab, "I think they were genuinely pleased to see us." "It can confidently be said that the preliminary tour has been a success," the Delhi correspondent of the *Sunday Times* remarks, "and augurs well for the next visit of the Commission." The latter will be of a more extended nature, and the preparations therefor, as is evident from the formal notification issued shortly before the Commission's return to Delhi, and reproduced on another page of this issue, are already far advanced.

India and Prohibition.

At first sight India appears an admirable country for the application of the form of compulsory temperance known as Prohibition. More than one-fifth of the whole population is Muhammadan, bound by the tenets of their religion to abstain from spirituous liquor. Although the Hindus, whether we consider the Aryan invaders or the peoples they converted, assuredly drank and enjoyed strong waters, many of the leading and educated classes have abjured them, and, like the rest of mankind, are ready to

"Compound the sins they are inclined to
By damning those they have no mind to."

The belief that the European in India cannot forgo his liquor has undoubtedly increased in some minds the zest for Prohibition. Unfortunately, however, there are other considerations which render the problem more complicated. There have always been and still are large drinking classes in India, to be found especially, though not exclusively, among the aboriginal tribes and the outcastes, both of whom are outside the pale of orthodox Hinduism. Moreover raw material for alcoholic preparations are to be found practically everywhere throughout the subcontinent. Even where distillation of the raw material can be prevented, recourse to other and more harmful means of intoxication, such as drugs, is not difficult, and carries little religious or moral stigma. Moreover prohibition cannot be enforced except by inquisitorial methods carried out by subordinates. Such methods cannot safely be entrusted anywhere in India to subordinate establishments, and of all the Government departments, the petty officers of the Abkari, or Excise Department have the worst name, and enjoy the greatest unpopularity. Finally, there is the difficulty caused by the existence of nearly 700 Indian States, whose lands are interlaced among British villages. The rulers of these States do not for the most part share the enthusiasm for prohibition when it entails a serious loss of Revenue, nor have they the establishments to prevent distillation and smuggling into British territory.

These considerations might perhaps be regarded as sufficient to require that methods aiming at prohibition should, however desirable in themselves, be introduced with extreme caution. The Bombay Government, however, decided to rush in where other administrations, possibly no more angelic, but certainly more prudent, were chary of treading. In spite of the polite sarcasm of the Government of India, Bombay has persisted in its course, and it is interesting to observe the results after seven years of trial. The Bombay Government seeks to attain its object by an enhancement of prices, and a system of rationing each shop. As the ration is seldom worked up to, since the shopkeeper is afraid of exceeding it, it is possible to restrict the amount of liquor annually to an ever diminishing quantity. It remains, however, to be seen whether the cause of temperance is thereby served. In the past year, the income received by Government from country liquor decreased by over 28 lakhs. The receipts are now 53½ lakhs less than they were seven years ago in spite of higher prices. It is true that, on the other hand, the receipts from foreign liquors have increased by 11½ lakhs, in spite of a decreased consumption among Europeans. This increase is undoubtedly disquieting, since the effect of foreign liquors, mostly of inferior description, is likely to be more deleterious than that of the indigenous article. In the same period, the consumption of opium has decreased from 53,000 to 30,000 sers, with a decrease of Revenue of 6½ lakhs. Now the loss of so much revenue is a serious matter to a Government like that of Bombay, living on its balances, and unwilling, or unable, to impose fresh taxation, though, according to the Prohibition hypothesis, the increased wealth due to compulsory temperance should render such taxation easily bearable. That, however, is a matter for the Bombay Government, and we may agree that the loss of Revenue is not the primary consideration. Let us consider, however, the other side of the picture. The report of the Excise Department of the Government of Bombay shows that the number of offences against the Abkari Law has greatly increased. There is stated to have been much smuggling of country liquor, especially from native States, with an enormous increase in illicit distillation. The Bhils in particular, always a hard-drinking and lawless race, whom generations of British officers have been endeavouring to attract to more civilised customs, are stated to have been generally demoralised, and it is ominously added that there are similar prospects in other districts. A further disquieting statement is that the habit of ganji smoking has been newly acquired in the Deccan, where the particularly sturdy and independent population formerly consumed country liquor in moderate quantities. Even the peculiarly poisonous mixture known as denatured liquor is now said to be drunk by the people. Altogether the results of forcing prohibition on the people in Bombay do not seem particularly happy. Such experience as has been acquired elsewhere points to a similar conclusion. Bhopal, a State with a Muhammadan ruler, adopted prohibition but has been compelled to abandon

Digitized by Google

it. In the Punjab, a local option act has given Municipalities the power of enforcing prohibition in their limits. Only two municipalities have availed themselves of this power, and we are informed that in one of them, Lahore, the capital of the Province there has been an enormous increase in illicit distillation and smuggling. We believe that there is great room for a true temperance movement in India. Old connexions of caste and custom are being relaxed, people are crowding into the towns, and industrialism gives the worker more ready money to spend. It would be lamentable if the drinking habit were to increase. But the cause of true temperance will hardly be served by nominal restrictions, which, not being capable of adequate enforcement, only serve to bring authority into contempt.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta March 8.

The All-Parties Conference.

The All-Parties Conference, after sessions extending from February 12 to 22, adjourned until to-day. In a statement published last mail day it was announced that the Conference had unanimously agreed that the Swaraj Constitution should provide for full responsible government in India the Indian States included. Unanimity ended there apparently, for the representatives of the Hindu Mahasabha did not agree to a reservation of seats; Messrs. Kelkar and Chablani dissented from a resolution that simultaneously with the inauguration of the Swaraj Constitution a redistribution of the province, such as Andhra, Utkal, Sind, Karnatak, C. P., and any others demanding separation on a linguistic basis, should be undertaken. Further, Mr. Jinnah, Raja Ghaznafar Ali, and Nawab Muhammand Ismail Khan, while ready to agree to all the other proposals, stated that they must consult the Council of the All-India Muslim League regarding the creation of new provinces and reciprocal representation. (I do not understand what manner of thing reciprocal representation may be. That is the phrase we were given to read. "Reciprocal" may be a mistake for some other word.)

We had only a day or two to wait for what was given out as an "expression of opinion" by Dr. Moonji, President of the Hindu Mahasabha. He was said to hold that, if the Lucknow Pact divided India into political water-tight compartments, the All-Parties Conference proposals would permanently divide India, communally, into Hindu India and Muslim India. He would prefer to leave the Muslims to choose between separate and joint electorates, declaring that no one has the right to force them to abandon separate electorates, if they regard them as a valuable right. He could not agree to the separation of Sind, for which, he said, no case had been made out.

A day later it was announced from New Delhi that the Council of the All-India Muslim League had rejected the proposals of the All-Parties Conference on the question of joint representation, and had adopted the resolution passed by the League in Calcutta in December. A representative committee had been appointed, it was further stated, to press the acceptance of this resolution upon the other organisation. The resolution, stated briefly, was that the Muslims should not give up separate representation in favour of joint representation unless Sind was separated and reforms introduced in the North-West Frontier Province and in Baluchistan.

The Indian States have not yet been heard regarding so much of the All-Parties Conference deliberations as concerns them. When they are heard from, said the *Statesman* in commenting on the matter, "it may be imagined that what they will have to say will appear unreasonable and even rude to those who are disposing of their future by resolutions at Delhi." It may all be described as a pretty kettle of fish, if that phrase has not become obsolete.

Lord Sinha.

Calcutta, and more than Calcutta, but nowhere else in India was he so familiar a figure, have been deeply stirred by the sudden death of Lord Sinha at the age of sixty-four. A crowd of several thousands, representing every phase of Indian life in the city, assembled at Sealdah to pay their tribute to their most illustrious countryman. There was a hushed calm over the dense throng as the train bearing the dead statesman's body drew alongside the platform, and it continued while the body was removed from the wreath-strewn van and laid on the bier. As the cortège moved along the platform, there was every manifestation of sorrow at the passing of the great figure. Published tributes from friends, such as Mr. N. N. Sircar and Mr. Bepin Chandra Pal, have filled columns in our newspapers. To judge from the cablegrams the event has called out hardly fewer tributes in England.

Irrigation in Bengal.

Sir William Willcocks, the great irrigation expert, is conducting a private investigation of Bengal's irrigation problems at the request of a group of persons interested in raising the standard of life of the people. His is not an official mission. It will be for officials, however, to adopt or to reject his views. They are revolutionary. Sir William made as much plain at a lecture that he delivered three days ago at the British Indian Association Hall. He then challenged the present method of irrigation in Central and Western Bengal in its entirety, claiming that the poverty of much of the land is due to misunderstanding of the ancient system, to the embanking of rivers, and to the treatment of the canals as if they were rivers. He would return to the ancient manner in which the waters were handled, with those modern improvements which experience in Egypt and India has shown to be practicable. The system now followed, Sir William contends, in addition to being bad for agriculture, has gravely interfered with the drainage of Calcutta. That part of the argument can only be followed when one has a large map before one, and more than a slight knowledge of a host of detail. It cannot be dealt with here. It is possible (so much may be said) that the more important half of the question is not Bengal's agricultural future, but Calcutta's drainage. But the question of the people is of high importance. If the men of such a district as Nadia are of the stature of English schoolboys, and if the cattle are little bigger than big dogs, it is because the men have only rice to eat, and the cattle only rice straw.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, March 10.

The Skeen Report.

The announcement of the Government of India's decision on the Skeen Committee's report was awaited with some apprehensions as it was believed that the recommendations of the Committee had been totally rejected, and that Government had delayed the announcement of their decision lest it should prejudice political leaders in the country against the Royal Commission on Indian Reforms. To the Indian mind the decision of the Government of India is disappointing principally because it was expected that the unanimous report of the Indian Sandhurst Committee would be accepted by Government. The Commander-in-Chief made the long awaited announcement on Thursday and a heated debate followed in the Legislative Assembly. The decision of the Government of India is considered to be disappointing because the three main recommendations of the Committee have been virtually rejected. First, Government, while recognising that a further measure of Indianisation is necessary, declares that the rate of progress in these matters cannot be the subject of an automatic inquiry. It also rejects

Digitized by Google

the proposal for an Indian Sandhurst on the ground that it is not necessary at present and declared that the principle of the existing units scheme would be maintained. It it clear therefore that the three vital points in the recommendation of the Skeen Committee have been rejected as too drastic.

Opposition in the Assembly.

It is not strange therefore that the decision was greeted with protests in the Assembly. Pandit Motilal Nehru, speaking as the leader of the largest party in the House, denounced the conclusions in the most unmistakable terms. He hated the word Indianisation; it was Europeanisation which must be got rid of. Mr. Jinnah's speech was less aggressive but was tinged with biterness. "We want to turn this garrison into a national army," he said. "I am convinced that the British Government does not wish to help us. Let me tell the Commander-in-Chief that by turning down this report he has completely shattered my faith in the bona fides of the Government." Never has the Assembly been so strong in its attitude of condemnation except perhaps on the question of the boycott of the Simon Commission.

Indian States Inquiry.

The Indian States Committee which has been set up side by side with the Simon Commission has issued a questionnaire after a certain amount of preliminary work. It makes it clear that it is not empowered to deal with the past decisions of the Paramount Power or the present differences between it and the States; a very necessary explanation as several Princes hoped to get certain decisions reversed and certain points of difference settled. Nevertheless the Committee does not seek to impose any retrictions on the States in preparing their case. The questionnaire deals with the financial and economic relations between the States and British India and is based on the records of the Political Department. Customs, Railway jurisdiction, Posts and Telegraphs, Excise. The States are asked whether they were prepared to abolish their own import and export duties on condition of receiving a share to be agreed upon from the Imperial Customs revenue. The most important aspect of the question, however, and one which has been exercising the minds of the Princes of India ever since the announcement of the Simon Commission, is the future relations of a democratic Government in British India with a Native State.

The Simon Commission.

Even though the Simon Commission is dry as dust for real news the constant changes in the situation help to revive the flagging interest. The latest development is, of course, in Madras whence the Commissioners departed for the Punjab early this week. Everything was apparently quite all right until suddenly it was announced that the two Ministers had submitted their resignations to the Governor on being told that the failure of the vote of censure on Dr. Subbarayan was tantamount to a negation of the boycott resolution passed previously. The resignations have been submitted under protest as the Ministers do not agree that the boycott resolution is in any way affected. But this is not all. Sir A. P. Patrao and the Raja of Panagal, two ex-Ministers and members of the Justice Party who voted with the boycotters, are now seriously contemplating joining Dr. Subbarayan. As an indication of this change of front the Justice Party is busying itself with the task of preparing a memorandum for submission to the Simon Commission.

Lord Sinha's Death.

The sudden death of Lord Sinha has cast a gloom over the country. Although Lord Sinha was not in agreement with the political opinions held by his own party during the latter part of his life he was held in high esteem as a man of noble character and dignity. He was above all calm and unruffled and never allowed himself to be carried away into controversies which did not serve any useful purpose. Since the conferment of the peerage he was cut off from his own people, but he showed untiring enthusiasm in introducing reforms in his native village where he made provision for education and medical relief. But all this was done quietly without any desire for praise. His long absence from India was perhaps responsible for his being out of touch with his political friends in the country, but he certainly appreciated the British attitude from a better understanding of the British mind.

THE STATUTORY COMMISSION.

The Statutory Commission has issued a statement inviting the submission of statements and memoranda from all sources, official and non-official. The hope is expressed that the evidence in question will be prepared and forwarded as expeditiously as possible in order that the Commissioners may be in a position to appreciate the main issues and proposals to be placed before them on their return to India in October.

The text of the statement, which appears over the signatures of Mr. J. W. Bhore and Mr. S. J. Stewart, the Joint Secretaries, is as follows :—

The Indian Statutory Commission invites the submission of written statements or memoranda, both from official and non-official sources, from representative associations, local bodies and responsible individuals on any of the subjects which fall within the limits of the inquiry which it is about to undertake.

Before the Commission returns to India in October, the programme of its sittings in various centres will have to be drawn up.

Written statements or memoranda now called for should be prepared and sent to the offices of the Commission as soon as possible in order that the Commission may appreciate the main issues to be raised and the proposals to be urged before it hereafter and in order that it may make arrangements beforehand for the orderly conduct of its subsequent inquiry.

Such written statements or memoranda as are ready before the Commission leaves India on March 31 should be sent by registered post addressed to the Indian Statutory Commission Camp, India.

After this date the Commission will maintain its own office in India, where further memoranda will be received on its behalf. They should be sent by registered post addressed to the Indian Statutory Commission, New Delhi Office, New Delhi, from which office they will be transmitted to the office of the Commission in England.

Two copies of each memorandum are required in the first instance. Further copies may be called for hereafter if the proposed Indian committees are set up in time.

It is most desirable that these memoranda should be delivered to the office of the Commission as soon as possible and in any event not later than June 1.

The Commission will be glad to be informed of the circumstances and will do its best to deal with them, but the organisation of the Commission's inquiry makes it essential that written material, much of which has doubtless already been prepared, should be promptly presented.

Under authority of a Warrant under His Majesty's Royal Sign Manual, the Governor-General of India, on February 20, at an Investiture held at Viceregal Lodge, Delhi, conferred the honour of Knighthood on the following:—

Mr. Justice Zahhadur Rahim Zahid Suhrawardy; Mr. Mammohandas Raji Hora; Mr. Sultan Ahmad; Khan Bahadur Sheikh Abdul Qadir; and Mr. Sorabi Bezanji Mehta, C.I.E.

(His Majesty's approval of these Knighthoods was signified on June 3, 1927.)

Mr. Brojendra al Mitter; Mr. Edwin Hall Pascoe; Mr. Byramjee Jeejeebhoy; Mr. Jahangir Cooverjee Coyajee; and Mr. Shapurji Bomanji Billimoria, M.B.E.

(His Majesty's approval of these Knighthoods was signified on January 2, 1928.)

ANCIENT BIHAR AND ORISSA.*

By Sir Edward A. Gait, K.C.S.I., C.I.E.

Orissa is noted for its great temples which were constructed in early mediaeval times. The most remarkable are the Saiva temples at Bhubaneswar, in number about one hundred, the so-called Black Pagoda, or Sun temple, at Konarak, and the Vaishnava temple of Jagannath at Puri. The last-mentioned is famous for its car festival, when wooden effigies of the God Jagannath and his brother and sister are dragged by many thousands of excited pilgrims from the temple to the garden house in huge wooden cars. That of Jagannath himself is 45 ft. high and 35 ft. square and is supported on sixteen large wooden wheels. Many prostrate themselves in front of the car, and in former days, when less care was taken, accidents sometimes happened. These gave rise to the widespread but unfounded belief that self-immolation was a recognised practice at this festival.

The Orissa temples consist usually of a suite of four connected buildings in line. They disclose the evolution of what Ferguson called "one of the most complete and interesting styles of Indian architecture." Their special features are the profuse and minute ornamentation, the grandeur of the general plan and the gigantic size of the stones and iron beams used in their construction. The coping stone of the Sun Temple at Konarak is 25 ft. thick, and is estimated to weigh 2,000 tons, while one of its iron beams is about 23 ft. long and 10 in. square.

Of still greater interest are the caves—sixty-six in number—with which the hills of Udayagiri and Khandagiri are honeycombed. These caves, which are 2,000 years old and upwards, range from natural caverns slightly improved by man, which served as the abode of Jain ascetics, to very elaborate and highly-decorated mansions. The most remarkable is that known as the *Rani-gumpha,* or Queen's Palace, which has sixteen rooms arranged on two stories. In front of it are long verandas with figures of men and animals carved in high relief. There are numerous sculptured friezes. One of them is 60 ft. long; the bas-reliefs run in nine panels and appear to represent a connected story.

But with all this wealth of archæological remains, indicating an advanced state of civilisation, there is a remarkable dearth of historical information. Orissa has a very extensive literature, and it is estimated that in Puri alone there are still over 200,000 palm leaf manuscripts. An examination of these manuscripts is in progress, but so far not one of an historical character has been found. The thirteenth edict of Asoka describes how this great Emperor conquered Orissa about 261 B.C., taking 150,000 prisoners, and killing 100,000 in battle, while many times that number perished in consequence of the devastation caused by his army. But apart from this account of a terrible disaster, there is only one record containing detailed information regarding events in ancient Orissa. This is an inscription on a rock in the *Hathigumpha,* or elephant cave, at Udayagiri. It was first noticed in 1825.

An eye-copy was made by Prinsep in 1837, but no workable reading was put forward until half a century later. This held the field until 1917, when, after careful local inspection and the taking of a number of impressions, Mr. K. P. Jayaswal—a most able and ingenious member of the Bihar and Orissa Research Society—published a reading of almost the whole of the inscription, which he has again recently revised in the light of further squeezes of doubtful letters and the comments made by other epigraphists on his original rendering. The inscription in question was incised under the orders of a king named Kharavela, who, according to Jayaswal ascended the throne about 183 B.C., and contains a detailed account of the occurrences in each of the first thirteen very eventful years of his reign. Though no mention even of his name is to be found in extant Hindu literature, this king was a great and powerful ruler. He ruled over a country called Kalinga, which included the northern part of Madras and the southern part of Orissa. He carried his victorious arms westwards to Berar and northwards across the Ganges. He twice invaded Bihar and on the second occasion brought back much valuable booty, including the image of a Jain saint which had been carried off from Orissa by the Bihar King Nandavardhana about 300 years previously. Kharavela executed numerous public works, including a palace, temples, forts and the cave dwelling known as the Queen's Palace which I have already mentioned. He repaired certain old irrigation tanks and extended a canal which had been constructed (*pace* Jayaswal) in the 4th century B.C. This shows that irrigation in Orissa dates from very ancient times. Kharavela carried on an extensive seaborne trade and imported elephants from the south of India in specially made ships. He was a devout Jain, but also performed Vedic ceremonies and made valuable gifts to Brahma. He was a patron of music and other arts. He led out in procession the wooded statue of a king who had ruled the country 1,300 years previously. That King's name was Ketu, and it is interesting to note that in the Mahabharata Ketuman is given as the name of the son and Commander-in-Chief of the King of Kalinga, who was killed by Bhim in the great battle of Kurukshettra. According to the chronology of the Puranas, this battle took place about 1424 B.C., or about hal fa century after the date of Ketu, according to the round figure given in this inscription.

After this brief illumination, we know practically nothing of the progress of events in Orissa until late mediaeval times. It is one of the strangest anomalies in the whole course of history that we should have this full account, year by year, of the events of less than half a generation in the second century B.C., and scarcely another scrap of information for over a millennium. Considering how much lost history has been recovered elsewhere, we may hope that the discovery of forgotten manuscripts and inscriptions of various kinds, together with excavations at Dhauli and elsewhere, similar to those which have been so fruitful at other ancient sites in India will yet enable some part at least of the lost history of Orissa to be revealed.

From an historical point of view Bihar presents a complete contrast to Chota Nagpur and Orissa; we know more of its ancient history than that of any other part of India. Though far earlier kinds are named in Hindu literature, the first dynasty which can claim historical reality is that founded in Magadha, or South Bihar, by Sisunaga about the seventh century B.C. This king's capital was at Rajgir, in the south of the Patna district, the traditional capital of Jarasandha, one of the heroes of the *Mahabharata.* Apart from the quite recent discoveries at two sites in the Indus valley, the ruins of this ancient city are the earliest structural remains yet found in India. The outer walls are about 17½ feet thick and are faced on both sides with massive undressed stones carefully fitted together without the use of mortar. During the reign of Bimbisara, the fifth king of this line, Gautama Buddha proclaimed the religion which, though it has disappeared as a recognised creed from the land of its birth, is still the faith of 500 millions of people in other parts of Asia. Buddha obtained enlightenment at Gaya, but he had commenced his studies at Rajgir, and he afterwards often preached and taught there. The first Buddhist Council to fix the tenents of the faith was held there after his death. Another great religion, that of the Jains, was founded about the same time by Mahavira, the son of a nobleman of Vaisali, north of the Ganges, and a near relative of one of Bimbisara's three queens. Thus Bihar was the birthplace of the two greatest Indian religions which intervened between the cult of the Vedas and modern Hinduism.

(To be continued.)

* The Sir George Birdwood Memorial Lecture, read before the Royal Society of Arts (Indian Section) on February 11; the Right Hon. Viscount Chelmsford, G.M.S.I., G.C.M.G., G.M.I.E., G.B.E., in the Chair. (Abridged version, the first extracts from which appeared in the issue of March 22.)

INDIA IN PARLIAMENT.

By Sir Frank Nelson, M.P.

Last week's debates on the Army and Air Force votes brought India, as usual, into the limelight on one or two occasions, though in each case the main points of Indian interest had recently formed the subject of earlier statements by the Ministers concerned. I refer, of course, to the Secretary of State for War's recent visit, and the Secretary for Air's announcement that a beginning is to be made, some time this year, with the proposed weekly air mail service between London and Delhi and Calcutta.

In a characteristic distortion of the history of British rule in India Pandit Madan Mohan Halaviya, during the recent debate on the Indian Finance Bill, is reported to have vehemently demanded the gradual elimination of the Army in India, on the ground, first, that it had failed to preserve order; and, secondly, that nothing seriously untoward had occurred to call for its services since the Mutiny. The Pandit also presumably indulged in the usual diatribes about the supineness of the Government of India in agreeing to every demand made by the home authorities in the matter of the Indian establishment of which we heard so much during the Sandhurst Committee debates. That so far from imposing its will upon the Indian Government the reverse is actually the case was made plain by Sir Laming Worthington-Evans in reply to Brigadier-General Clifton Brown, who hoped that the authorities in India were in agreement with the progressive reduction of the number of British troops in the country from 75,000, which was formerly considerd the absolute minimum, to 64,400. "In that respect," the Secretary for War explained, "the British Army is the Servant of India. India is the paying authority. She pays the price and calls the tune, and the reduction of the British Army in India was not a voluntary reduction by the authorities at the War Office, but was asked for by the Indian Government in order to relieve the country's finances. I would willingly have continued to have the infantry in its old establishment. I should have preferred it to the new one but, of course, it was for the Indian authorities to decide."

It was somewhat surprising to find that the main, if not the only, criticism of Sir Samuel Hoare's earlier announcement of the projected route between London and India, which the Air Minister explained, is intended only as "the first instalment of a bigger and more ambitious programme, the immediate object of which will be to make a weekly service between London, Karachi and Calcutta" came from a fellow Anglo-Indian member. The argument can perhaps best be summarised in Sir Samuel Hoare's own reply:—

"The Hon. Member for Penryn and Falmouth (Mr. Pilcher) asked me some pertinent questions with reference to the details of this route. I promise the House that I will lay a White Paper as soon as the details are finally settled, and I hope there will be no undue delay in laying this White Paper. Meanwhile let me deal with the two main criticisms he has made against me. He said first, will not the discomfort of travelling from seven to eight or nine days in an aeroplane be so great as to make it unlikely that many passengers will use it? He has had experience of flying, and so have I, and so far as I am concerned, whilst I have always been sick on the sea I have never been sick in the air, and I have not noticed the discomforts of which he seems to have had so vivid and unpleasant an example. Even if there are many passengers who will feel these discomforts I believe there will be a demand from a sufficient number of people, to whom the increase of speed will be so great an advantage in travelling between England and India, that they will face a certain limited number of uncomfortable hours. But if I am wrong, I still think there will be a substantial demand for the carriage of mails.

"I think it is quite possible that a route of this kind will begin perhaps with mails, and when it has been tried out and found to be punctual the demand will grow on the part of passengers. When we were making careful inquiries into the whole question we discussed the matter with the General Post Office, and the experts of the Post Office were definitely of opinion that, provided the service can be run punctually and regularly, in a comparatively short time there would be a substantial amount of mails carried. We also consulted business men on the subject, and they were of opinion that although the British community in Calcutta and other great Indian centres, may be comparatively small, yet there will be sufficient demand for the quicker transsport of mails, which will mean letters going twice as quickly between England and India as they are now, and that every year will bring an increasing revenue to the company which operates this service. I agree with my hon. friend to this extent, that a service of this kind must be decided by actual experience. To back our view we have the experience of the European services where year by year the revenue has increased, and we have also the experience in particular of the Cairo-Basra service, where in the space of a few months the traffic carried has gone up two, three and four fold."

In reply to Mr. Mardy Jones the Under-Secretary of State for India said that his Majesty's Government did not intend to contribute more than the £20,000 already voted towards the expenses of the Simon Commission. Lord Winterton added that the balance would be defrayed from Indian revenues by the exercise of the special powers vested in the Government of India, in view of the adverse vote of the Assembly. As a matter of fact the rejected grant has since been restored by the Viceroy.

In view of the great play made by critics of our rule in India of the illiteracy of the masses the request by Mr. Wellock for information as to "the total amount spent on education in India during the past financial year, and the proportion contributed by the Central Government, the Provincial Governments and by local organisations or authorities, respectively" is of more than momentary interest. As I have previously explained the especial significance of the last Budget statement lies in the additional resources whicsh it makes available to the local Governments for expenditure on education and other nation-building activities which are "provincial transferred subjects" in the charge of Indian Ministers.

The latest year for which details are readily accessible, Lord Winterton explained, is 1925-26, for which period the relative figures were as follows:—

Out of total expenditure of Rs.22.78 lakhs (£17,084,000) Rs.10.58 lakhs (£7,936,000), or 46.5 per cent. was provided from provincial Government funds. Rs.8.62 lakhs (£6,472,000), or 37.9 per cent. derived from fees and other sources not separately specified, Rs.1.19 lakhs (£1,492,500), or 8.7 per cent. from Local Boards' funds, Rs.1.27 lakhs (£955,400), or 5.6 per cent. from Municipal unds, and Rs.30 lakhs (£288,200) only, or 1.3 per cent. expended from funds in the hands of the Central Government.

Another query, of less general interest was obviously designed to commit his Majesty's Government to acquiescence in the Legislative Assembly's recent "vote of censure" on the Indian Government for the non-appointment of an Indian member as the head of the Indian delegation to the League of Nations. Lord Winterton very properly refused to be drawn, but he added that the composition of the Indian delegation to this year's Assembly of the League was at present under discussion between the Secretary of State and the Viceroy and that their decision would be announced in due course.

Lady Irwin sailed on March 24 from Bombay with Lady Worsley and the Hon. Richard Wood for England. Lady Irwin will be presenting her daughter, the Hon. Anne Wood, at Court during the forthcoming season, and she will be returning to India in October.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Roumanian Loan Negotiations.

There seems no doubt that Roumania is basing her hopes for a loan on the negotiations in New York. In the event of their breaking down, or if the terms offered are such as Roumania feels it impossible to accept, then the only alternative seemingly will be to approach the League of Nations with a view to the issue of a loan under its auspices, and that, as I have already pointed out, is what the Bratianu Government does not desire to do. The reason for the institution of the present negotiations is clearly that the Roumanian Government is of the opinion that the time has now come to follow the example of other countries and stabilise the currency, while money is of course required for the purpose of placing the communications in proper order. For some time now the leu has fluctuated within relatively narrow limits, and while the level at which it can be stablised will compare very unfavourably with the rates at which other countries less favourably situated than Roumania have achieved that end it is obviously a case of Hobson's choice. It would be impossible to contemplate stabilisation at a level which would imply further fluctrations as bad as those which have gone before, the effect of which would simply be to retard the country's progress and to reduce its commercial activities to a state of chaos. Once the leu is stabilised and the country has the necessary funds at its disposal for the development of the railways, it will again be in a position to take advantage of its unique resources.

Conditions in Egypt and the Sudan.

At the general meeting of the National Bank of Egypt Sir Bertram Hornsby, the Governor, briefly reviewed the general economic position in Egypt and the Sudan. He pointed out that the effect of the decreased acreage under cotton in Egypt would be a much smaller crop for the present season, the estimate being six million kantars. Prices since September have been remunerative to producers, and as a result, he stated, the economic position of the country improved in the later months of the year. At the present time the price of Sakellaridis is tending to advance, and therefore, provided there is no unforseen development, the current year should be a good one for the country especially as the tourist season, which is Egypt's second great standby, has once again been all that could be desired. Comparative trade figures for the past five years were given by Sir Bertram Hornsby, the year in each case terminating on August 31. For 1926-27 there was an adverse trade balance of about £E2,500,000, but in his view the invisible items on both sides of the account have considerably reduced this amount. For the whole of 1927 Egypt had a favourable trade balance which emphasises the improvement in the later months of the year to which he referred. As regards the trade of the Sudan Sir Bertram Hornsby pointed out that the increased imports in 1927 were accounted for by imports of machinery and material for works such as the bridge at Omdurman and the Kassala Gedaref railway. This is a feature which is likely to make its influence felt for some years to come, for the development of the Sudan is so far only at its beginning, and while much has been done a very great deal remains to be accomplished.

Future British Fairs.

It was to be taken for granted that once the British Industries Fair was an established success various suggestions would be forthcoming for its development. While the Birmingham section has expanded enormously it is scarcely necessary to point out that it is by no means as yet a complete representation of the heavy manufactures of the country. Many well known Sheffield firms, for instance, have not been among the exhibitors, and to this fact is no doubt due a suggestion that the sectional aspect of the fair should be still further developed. Personally, I hope that nothing will be done in this direction. The ideal solution would be to hold the Fair in one section only in London, but that has proved to be impracticable, but to go further on the path of division and to establish one or more further sections would simply detract from the value of this annual institution, for while overseas buyers will go both to the London and Birmingham sections, it is extremely unlikely that they would be willing to visit more sections. It is possible to regard with much greater sympathy a suggestion for a change in the date. For various reasons the last month of the official winter is not the most propitious time to hold the Fair. The autumn would be much more suitable, preferably when one or other of the leading exhibitions is being held. Even better would it be if it were possible to hold all the London shows and exhibitions at the same time.

Need for Continued Enterprise.

While on the subject of the Fair I think it worth while once again to emphasise the point that participation in this event, while of itself accomplishing much must not be regarded as the beginning and end of enterprise, as

BANK OF ROUMANIA LIMITED
(FOUNDED 1866).

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Digitized by Google

far as the overseas markets are concerned. The past Fair has been a very great success, owing very largely no doubt to the fact that world trade is now beginning to revive. Very large orders were booked and the total business done constituted a very satisfactory advance on the totals recorded at any of the previous fairs. If, however, the fullest advantage is to be taken of the new business relations established it is essential that participation in the Fair must be followed up by a campaign in the countries concerned, by extensive advertising, by the appointment of agents, and in such ways as taking part in any exhibitions, etc, that may be held in the territories in question. In the Near East many fairs and exhibitions are held in the course of the year, and it has only too frequently been a cause of complaint that British representation has been on a painfully small scale. Our rivals recognise the value of this means of commercial penetration to the full, and never fail to take advantage of them, and the natural result is that they obtain the business that is going, business that would go to this country if only our firms were on the spot to seize the opportunity. That is undoubtedly one of the reasons why British trade has played so small a part in some of the Near Eastern countries. The fact that the trade has been allowed to pass to our rivals is no reason for despondency, but on the contrary it should serve as a stimulus to our traders to recover the ground which should never have been lost. For obvious reasons it is impossible to show even a small replica of the British Industries Fair in the Near and Middle East, but our traders can do individually what is collectively out of the question.

The Anglo-International Bank.

The first report of the Anglo-International Bank is naturally of special interest. This bank, it will be recalled, was established in September, 1926, to amalgamate the businesses of the Anglo-Austrian Bank and the British Trade Corporation. The report, which has now been issued, covers the fifteen months to December 31 last, a period which, it is pointed out, has been one of reorganisation which has necessarily been a slow process in view of the extensive nature of the interests of the amalgamated banks on the Continent. The bank's sphere of business includes Austria, the Succession States, and Germany, and it is encouraging to learn from the report that the current business is developing satisfactorily. For the period in question the profits amounted to £80,448, and it is proposed to utilise this amount to write off the preliminary expenses and to carry forward the balance of £52,447.

The Rubber Market.

Another substantial decrease in the London stocks yesterday brought the total well below 60,000 tons. Normally, this development would have given a pronounced stimulus to the market, but in the prevailing conditions the reverse was the case, and the anomaly was witnessed of a fall in the price of spot rubber of ¼d. per lb. This condition of things is likely to continue until a statement of Government policy is forthcoming, which, it is understood, will be on Monday next. It is to be hoped that the statement will result in clearing up the situation completely. If, as is to be presumed, the restriction is to be maintained in a modified form and after a suitably long interval brought to an end we are likely to see a sharp recovery in the price of the commodity.

Improved Cunard Results.

The shipping position is generally regarded as an infallible index to the trade position generally, and the great improvement in the earnings of the Cunard Steamship Company, Ltd., for 1927 will be taken as a further indication of the revival of commercial activities. The company made increased profits for that period of over £143,000, and it is proposed to pay a dividend on the Ordinary shares of 7½ per cent. as compared with 6 per cent. last year and 5 per cent. for the three previous years. This result suggests that the shipping industry is at long last emerging from the depression from which it has been suffering.

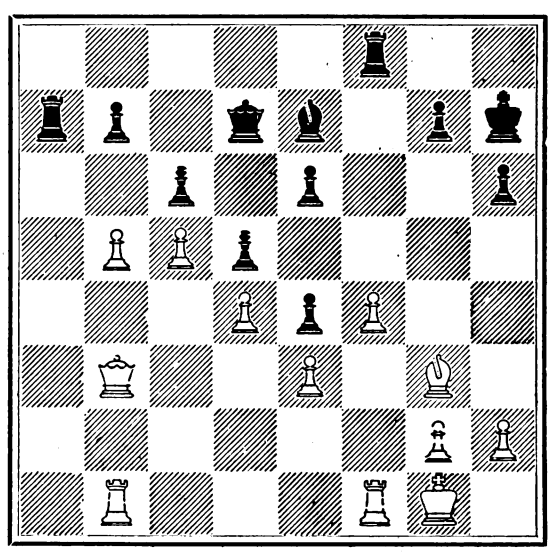
COMMENTATOR.

CHESS.

By "CARO-KANN."

Very rarely have the combined Universities made such a poor showing in their matches against the London clubs as has been the case this year. I have already referred to the initial loss of their tour against London University. Subsequently the team lost against Hampstead, while against the City of London Chess Club, who, as usual, put a very powerful team in the field, the score was 4—14. On the first twelve boards in this match the Combined Universities scored four draws. The explanation, in my view, is not that the Universities are particularly weak in chess talent this year, but that far too little use was made this time of past members.

Expectations as regards the University match were not fulfilled, for Cambridge won by 4½ to 2½. On the play they were fortunate, I think, in doing so, for at one board the Oxford player could have had a pawn for the taking, and he ignored this chance and ultimately lost.



The diagram shows a position in one of the games in the match between the Universities and the City of London Chess Club. White, who played a variation of the Stonewall, has to make his 26th move. Play continued:—26, PxP, PxP; 27, Q—Kt6, KR—QR; 28, B—B2, B—K; 29, Q—Kt3 and the game was drawn. The position is interesting as showing that the Stonewall does not always belie its name and lead to dramatic situations.

There were over 10,000 exhibitors at the Leipzic Fair, 23 countries being represented.

It is announced that the Bucharest branch of the Banque Belge pour l'Etranger is increasing its capital from 50 to 80 million lei.

The Greek Chamber of Deputies has voted the revenue Budget for the current year. The Finance Minister in his speech said that Greece had avoided the precipice, had not a penny of floating debt, and would balance this year's Budget and stabilise the currency.

A Reuter message from Belgrade states that with the object of covering mortgage credit requirements, the State Mortgage Bank has decided to issue mortgage bonds bearing 7 per cent. interest redeemable in thirty years with coupons payable every six months. Such bonds will be taken in payment of debts to the State Mortgage Bank.

Engineering Topics.

By G. B. B.

Renewed attention is being given in engineering circles to the production and and use of magnesium alloys. Magnesium is generally made by electrolysis of the fused chloride, which gives a practically pure metal, and some of the new alloys can be cast or forged and used for purposes where a metal that is tough, ductile, and resists corrosion is required. It appears that in the making of these alloys the added metal or metals are alloyed first with a little magnesium, and this mix is then added to the molten metal. During pouring, sulphur is used to prevent oxidation, and either metal, dry sand, or green sand moulds can be used. It is claimed that on exposure to the air the alloys become coated with a film of oxide which prevents any further atmospheric effect and that the forged or cast parts can be effectively protected by coatings of lacquer, varnish, or ordinary lead-base paint. The authors of a paper recently read on the subject suggest that in the replacement of steel and light aluminium alloys by the new alloy a saving of three-quarters and one-third respectively of the weight is possible. It remains to be seen whether the new alloys bear out in practice all that is hoped for them by the theorists.

Oil Engines.

At one time engineers were very doubtful as to the value of the oil engine on shipboard. To-day, not only are large numbers of vessels fitted with internal combustion engines, but the introduction of the oil engine has led to an increase in the speed of cargo vessels that would a few years ago have been thought impossible. At present the average speed of cargo boats is from 10 to 11 knots, but there are over forty motor-driven cargo boats under construction and on order specified to maintain a speed of at least 14 knots fully laden. Of these, six are to have a speed of over 16 knots, seven are to run at 15 to 16 knots, eight are to average 14½ knots, and 17 are to average 14 knots. All of these vessels are of large size, ranging from 5,000 to 10,000 tons gross and four of them are to be fitted up to carry passengers as well as cargo. There is an impression that before this decade is out the 20-knot oil-driven cargo vessel will be actually in commission.

Opinion is still divided as to the future of low temperature carbonisation, but if pertinacity and a dogged determination to succeed count for anything, the process should shortly be a commercial success. Already there are five plants, each designed for dealing with about 100 tons of coal per day or more, in working order in this country and there are some six of eight further systems in operation with a capacity of 10 tons a day or over. These include the type developed at H.M. Fuel Research Station, of which type a 100-ton-a-day plant is being erected by the Gas Light and Coke Company. The Secretary for Mines, who, of course, has exceptional facilities for obtaining information, says that the results from these plants are such as might be expected. According to information supplied to the recent conference on carbonisation, about 1,500 tons of coal are being carbonised weekly at the plant at Barugh, near Barnsley, a plant which I had the pleasure of inspecting when it was in little more than the experimental stage. This quantity of coal yields about 1,100 tons of smokeless coal, 28,000 gallons of oil, 3,750 gallons of benzol, and over 7,000,000 cubic feet of rich gas. All of which goes to show that the progress made in low temperature carbonisation is more substantial than many engineers imagine.

Foreign Buyers' Directory.

I was pleased to find that the Council of the British Engineers' Association has become impressed with the need for a new engineering directory and for more effective polyglot propaganda to stimulate and facilitate the purchase of British plant, machinery, and accessories in the markets of the world. Some of our foreign competitors have been more active and enterprising in this respect than ourselves, and the Council, I am informed, has recently had under review several excellent examples of their publication in several languages.

The Council has therefore decided that the Association shall undertake the publication of a comprehensive Foreign Buyers' Directory which shall cover the whole of the British engineering and allied industries. I understand that the classified headings will appear in the one volume in English, French, German, and Spanish. The directory has been planned on novel lines which will ensure ease of reference. Its four main sections, comprising the language, indexes, lists of products, and names and addresses of manufacturers in the various languages will make a volume of about 850 pages, and the question in my mind is whether it will not be rather unwieldy. However, I presume the Association has gone into that matter thoroughly and I have certainly no wish to criticise so excellent a project. Only British firms will be eligible to appear in the directory, and every engineering and allied firm or company possessing the necessary qualification as a manufacturer of the products included, in Great Britain and Northern Ireland, will be entitled, free of charge, to a short entry giving the name of firm, office and works addresses, telegraphic and cable address, and a short description of the manufactures.

Exports and Imports

For the guidance of its customers the Westminster Bank issues a booklet dealing with the many ways the man of commerce may utilize the Bank's services in the development of his business; how he may avail himself of documentary credits, whether he is interested in exports or imports; and how he may take the fullest advantage of rates of exchange, rebate, or discount, and may best collect his bills with a maximum of safety and a minimum of delay

The Secretary will be pleased to send a copy on application to him at the Head Office

WESTMINSTER BANK

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Printing Plates.—The Survey of Egypt invites tenders for the supply of 1,550 aluminium lithographic printing plates, required during 1928-29. June 27. (D.O.T.)

Metal Cabinets and Safes.—The Survey of Egypt Department of the Ministry of Finance invites tenders for the supply of 120 filing cabinets and 12 safes. July 4. (D.O.T.)

Railway Sleepers.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 400,000 or 500,000 ordinary wooden railway sleepers. April 17.

Loose Leaf Post Binders.—The Surveyor-General of Egypt, Giza, invites tenders for the supply of 3,500 loose leaf post binders. June 20. (D.O.T.)

Calico, Etc.—Tenders are invited for the supply of calico and shash required for the year 1928-9 by the Ministry of Finance, Survey of Egypt, Gira (Mudiriya). June 11. (D.O.T.)

Tents, Etc.—The Department of Public Health, Cairo, invites tenders for the supply of tents and accessories required for the year 1928-9. May 5. (D.O.T.)

Diesel engine-driven generating sets for Mansourah.—The Ministry of the Interior invites tenders for the supply and erection at Mansourah Drainage Air Compressing Station of two additional Diesel engine-driven generating sets. May 17. (D.O.T.)

Sensitive Paper, Etc.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of sensitive paper and chemicals for photostat for 1928-1929. June 4.

Asphalt.—The Egyptian Ministry of Public Works invites tenders for the supply of asphalt required during the year 1928-1929. May 1. (D.O.T.)

Swing Bridge.—Tenders are invited by the Municipality of Alexandria for the construction of a metallic swing bridge over the Mahmudia Canal of which the free passage is 18 metres wide. June 5. (D.O.T.)

Oils, Etc.—A/Officer Commanding, H.M.'s Nile Yachts, Bulaq, Cairo, invites tenders for the supply of oils, paints, timbers, cleaning articles, and electric articles necessary for the yachts during the year 1928-1929. April 14.

Cotton Waste.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 140 metrical tons coloured cotton waste. April 10.

Paper and Stationery.—The Egyptian Ministry of Finance invites tenders for the supply of paper and stationery required during the year 1928-1929. April 12. (D.O.T.)

Clothing, Etc.—The Director of Equipment and Finance, Ministry of the Interior, Cairo, invites tenders for the supply of clothing and necessaries required for the Police and Ghaffirs in 1928-1929. April 15.

Terminal Strips.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 2,000 terminal strips for cast iron terminal boxes, 7, 14, and 28 pair to drawing for telephones. Firms interested should communicate with the Chief Inspecting Engineer, London, for information.

TURKEY.

Pontoon Bridge.—Tenders are invited for the construction of a pontoon bridge across the Golden Horn at Oun Kapan. A minimum delay of three months as from January 31 last has been fixed for the receipt of offers. (D.O.T.)

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

‡ASSYRIA ... March 30 *ELYSIA ... May 11
*†CIRCASSIA ... April 13 *CASTALIA ... May 25
*First class passengers only. Specially low fares. †Calls Port Sudan
‡Carries 1st and 3rd Class.

SPECIAL NOTICE.

NEW T.S.S. CALIFORNIA, 17,000 TONS,
carrying 1st. 2nd and 3rd class passengers, sails from LIVERPOOL, October 24; MARSEILLES, October 30. All 1st and 2nd class state rooms are fitted with Punka Louvres and with Fans.
This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

Shipping Intelligence.

P. & O. SHORT SEA TOURS.

Two little brochures issued by the Peninsular and Oriental Steam Navigation Company, Ltd., give particulars of the short sea tours provided by this company, and also of its summer services to and from Gibraltar, Tangier, Marseilles, and Egypt. Among the short sea tours are trips to Port Said for Cairo, the Syrian coast, etc., and to Port Sudan, the latter passage occupying thirteen days. The brochure in question give all the information that passengers taking short sea tours are likely to require. A third brochure, admirably illustrated, is designed as a guide for summer travellers. It deals in a most interesting and vivid manner with the various places at which the tourist will touch and should be of the greatest value to travellers who want to make the most of their tour by seeing everything of historical importance.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, April 12). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Birkenhead, March 31); s.s. Mahanada for Calcutta (Birkenhead, April 16).

Bibby Line.—S.s. Shropshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 4).

British India Line.—S.s. Hatimura for Bombay and Karachi (London, April 7); s.s. Masula for Colombo, Madras, and Calcutta (London, April 7).

Cunard Line.—S.s. Brescia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Ancona, Venice, Trieste, and Fiume (Liverpool March 31, and Swansea April 3); s.s. Cypria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, April 28).

Johnston Line.—S.s. Aviemore for Galatz and Braila only (Liverpool, April 5); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 5).

P. and O. Line.—S.s. Rajputana for Bombay (London, March 30); s.s. Trekieve for Colombo, Madras, and Calcutta (London, March 31).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (Manchester, April 5); s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, April 7).

Ellerman and Papayanni Lines.—S.s. Mardinian for Algiers*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 7, Swansea April 7); s.s. Fabian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, April 11); s.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume* (Liverpool April 14, Swansea April 19); s.s. Assyrian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool April 18, Glasgow April 26. * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The chief countries importing from Yugoslavia in 1927 were Italy, Austria, Czechoslovakia, Germany, Greece, and Hungary.

A commercial treaty between Greece and Germany has been signed, based on the most-favoured-nation clause. The treaty provides for the reduction of the duty on Corinth currants imported into Germany from sixteen to five marks.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received the following telegram from their Alexandria office: The Statistical Department of the Ministry of Finance announces that the total imports of Egypt for the month of February were £E3,772,893, against £E3,277,985 for the corresponding month last year, and exports totalled £E4,049,624, against £E3,465,058 last year. Of this total cotton exports accounted for £E3,394,694, against £E2,849,087. Total imports of Egypt for the year 1927 were valued at £E48,685,128 and the total exports £E48,340,503, of which cotton amounted to £E38,999,192.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 27.

Business on the Stock Exchange has again been active apart from the fact that the settlement which had to be arranged was the largest for a long time past. Gilt-edged stocks have shown more firmness than of late, presumably on prospects of re-investment of surplus funds after the turn of the quarter. Chief attention, however, has again been focussed on the industrial market, where great activity continues, although there are still signs of profit-taking in some directions. Cable stocks and Marconis have naturally attracted a great deal of attention since the publication of the proposals for the formation of a holding company, and the former have scored a considerable rise on balance. The Gramophone group is still the centre of much speculative interest, and the oil market has picked up considerably in the last few days. The excellent results disclosed in the report of Vickers has called attention to the possibilities of the iron and steel share market. The present account which has a duration of three weeks has certainly opened under cheerful conditions.

International Protection for the Investor.

The problem of protecting the investor is engaging serious attention in many quarters. In this country, for instance, a Bill is now before Parliament which aims at placing greater obstacles in the path of the share-swindler and the fraudulent company promoter. But the problem of protecting the investor is not merely a national problem; it is an international problem. This point was forcibly made by Mr. E. H. H. Simmons, President of the New York Stock Exchange, in the course of an important speech in London this week. He pointed out that share-swindlers move from America to Britain and vice versa. "As far as financial swindling is an international problem," he said, "naturally it can be effectively met only by international methods of co-operation." He sincerely hoped that such methods would be adopted and added: "Certainly I can unreservedly pledge the wholehearted assistance of the New York Stock Exchange in any such effort." This move will be cordially welcomed, especially as London and New York have co-operated to good purpose in the past. Indeed, the basis of co-operation might be extended to include other countries, for the share-swindler's opportunities cannot be made too few. In these days when the popularity of dealing in stocks and shares is rapidly increasing the responsible authorities cannot be too anxious to give the investor the maximum protection.

A Shipping Recovery.

The Cunard Steamship Company has this week announced that it is paying a dividend of 7½ per cent. for the year 1927. This compares with 6 per cent. for 1926 and 5 per cent. for the preceding year. The directors are again placing £100,000 to reserve. It would thus appear that the earnings of the Cunard Company for the past year are considerably higher than in 1926. The Company is apparently making a satisfactory recovery from the difficulties of recent years and is tending to justify the price at which the shares have recently been standing. The current price is approximately 28s. 6d. It seems reasonable to assume that earnings will show a further expansion for the present year. The Company's 5 per cent. Cumulative Preference shares give a return of £5 8s. 6d. per cent. A week or two ago, it will be remembered, we commented upon the views of the President of the Chamber of Shipping regarding the shipping outlook. The President appeared very optimistic, and, though we doubted whether this opinion would meet with general acceptance, we pointed out that shipping prospects are now brighter than they have been for some time past. But all is not yet plain sailing for the shipping industry; the position merely shows an improvement upon that obtaining in the recent years of exceptional depression.

Brazilian Bonds.

During the past week Brazil has been conspicuous as a borrower in the London market, the State of Minas Geraes and the Bank of the State of San Paulo having appealed for funds. Brazil's credit has lately been advancing in the London market. Last July the Government resumed purchases on acount of sinking funds and consequently the prices of Brazilian stocks have recently shown a marked upward tendency. But even so a number of Brazilian bonds still give returns which are not without attractions for those prepared to incur the degree of risk inseparable from investments in this part of the world. The 5 per cent. Loan of 1903, finally redeemable 1951, gives a return of £6 5s. per cent. A yield of £6 6s. per cent. is obtainable on the 4 per cent. Loan of 1911, finally redeemable 1940. The 7½ per cent. Loan (Coffee Security) returns £6 18s. per cent., the final redemption date being 1952. The prices of these stocks reflect the increased confidence in the future of Brazil.

The Bulgarian Government is to make large purchases of agricultural machinery through the Agricultural Bank, including 6,000 ploughs, 6,000 harrows, 5,000 drilling machines, 1,000 rollers, 5,000 cultivators, and 10 tractors.

Sir David Miller Barbour, K.C.S.I., K.C.M.G., of Tiltwood, Crawley Down, Sussex, lately chairman of the East Indian Railway Company, and formerly financial member of the Governor-General's Council in India, who died on February 12, aged 87, left estate of the gross value of £71,132, with net personalty £70,710.

The British Government has sent an official intimation to King Ibn Saoud that it is prepared to dispatch Sir Gilbert Clayton to confer with him on any outstanding differences between himself and Great Britain or British Mandated Territories. The Wahhabi King is asked to suggest a time and place for the proposed negotiations.

The recently founded Yugoslav Society of Great Britain has received telegrams of greeting and good wishes from the Yugoslav Minister of Education, Dr. Milan Grol; from the President of the Yugoslav Chamber, Dr. Peritch, as member of the newly constituted British Society of Yugoslavia; and from General Tasker Bliss, Mr. Kingsburgh and Mr. Hamilton Fish Armstrong in the name of the already existing Yugoslav Society of America.

Near East Markets

NEXT SEASON'S PALESTINE ORANGE CROP.

The Empire Marketing Board reports that the total shipments of oranges from Palestine to the United Kingdom up to March 17 amounted to 1,354,000 boxes, as compared with 1,534,000 boxes at the corresponding date last year. The total to all destinations, including transhipments (estimated at 150,000 to 200,000) probably exceeds 1,600,000 boxes, as compared with 1,543,000 boxes last season. It is estimated that less than 200,000 boxes still remain to be shipped, and a further 9 or 10 sailings up to April 2 are expected to complete the season.

Although it is too early yet for any definite indication to be given regarding next season's orange crop, it is reported that blossoming is everywhere good. In some districts the early shoots have been slightly nipped by recent cold weather, but it is not anticipated that this damage will affect the ultimate crop, which is confidently expected to reach a minimum of 2,500,000 boxes.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows under date March 15:—

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 47,100 tons, and the sales to dates are put at 45,400 tons. Closing prices, Smyrna, per cwt. c.i.f., type 12 36s. 6d.; type 13, 38s. 6d.; type 14, 41s. 6d.; type 15, 46s. 6d.; type 16, 53s.

Since our last report issued on December 31, 1927, sales on the market have increased by 5,700 tons, say from 39,700 tons to a total for the season to date of 45,400 tons. Total exports since January 1, 1928, amount to about 4,200 tons, but a large proportion of this quantity was already held in stock by shippers against their January-March engagements, so that, of the 5,700 tons new purchases since January 1, it must be reckoned that much the major portion has been bought for local consumption by the Alcohol Monopoly. The Monopoly in its purchases takes no heed of qualities. It buys for distilling into alcohol and quality is of secondary consideration. It has practically established a bottom price on the market which works out to the parity of 40 to 41 Fls. c.i.f. Hamburg, according to exchange fluctuations, which represents the current marketable value of the lowest grade fruit.

Remaining stocks in the country are variously estimated at between 3,000 and 4,000 tons. The market, however, is quiet as apart from Monopoly purchases, demand from consuming centres abroad is very slow. With four months, however, to run until the new crop is available the stocks on this side are likely to be entirely cleared before the new season. It is too early as yet to make any reliable forecast about the coming season's prospects, but weather conditions have been favourable so far and justify good expectations provided we escape spring frosts and rain or extreme heat during the harvesting period.

CYPRUS TRADE IN JANUARY.

The report on Cyprus trade for January states that the year began well, imports being £139,770 as compared with £110,760 in January, 1927.

The only item of note, however, is the importation of some 10,000 sacks of seed potatoes from Ireland and Scotland. This is nearly double the quantity imported last year and is a good indication of a large crop for the coming potato season.

The export trade was also good, being £107,261 as compared with £87,581 in January, 1927. The price of raisins went up from 1s. 11d. per stone in December to 2s. 6d., over 7,000 cwt. being exported. Carobs realised 25s. per kantar as against 22s. in December, 1927, principally owing to the partial failure of the Portuguese and Cretan crops. Over 5,000 tons of carobs were exported. Some 1,200 tons of potatoes and 443 cwt. of tobacco were exported.

CYPRUS CROP PROSPECTS.

The following report has been issued on Cyprus crops in January:—

Cereals.—The weather has been favourable and rain was plentiful. Crops are now growing normally, although delayed by late rain. "Sirividhi" (Oecophora temperatella) has appeared as usual, but the damage caused so far is not very serious. The current price of wheat is 8s. to 9s., barley 4s. to 4s. 6d., oats 3s. to 3s. 4d. per bushel. The price of straw, on account of the lack of early grass and extensive exports, has gone up to 5s. 6d. per camel load.

Vetches, Chickling vetch, Ochrus vetch, and Chick Peas.—Sowing continues and it is anticipated that a larger area will come under these crops.

Broad beans.—Normal except that the florescence of early beans was affected somewhat by frost.

Onions.—Sowing continues with great activity. A good crop is expected if the weather is favourable.

Potatoes.—Planting of potatoes continues. A very large area is being sown this season owing to the good demand for export. The price is 1s. 1d. per stone. About 700 tons of English seed was imported and sold at the high price of 2s. 9d. to 3s. 4d. per stone.

Oranges.—Planting of orange trees is increasing on a large scale. There is a good demand for oranges for export and the current price is 40s. to 50s. per 1,000.

Carobs.—A poor florescence, which does not promise well for next season's crop; it is hoped that the disease known as "Vrachycarpia" will not be serious. Prices unchanged.

Almonds.—Now in flower; it is hoped that the recent frost will not affect them.

Flax.—A normal year. A good yield may be expected.

The output of the Anglo-Egyptian Oilfields for the week ended March 23 amounted to 4,676 tons.

The giant electric locomotive built by Hawthorne Leslie and Co., Newcastle, for the Great Indian Peninsula Railway, weighing 111 tons, has been removed from the builders' works to the works of the North-Eastern Marine Engineering Company, Wallsend, prior to shipment to India.

A Reuter message from Sofia states that the preparations for the creation of the new mortgage credit bank with the assistance of foreign capital are nearly complete, and the new credit establishment will start operations very soon. Subscriptions for the share of the capital to be supplied by Bulgarian insurance companies met with success and the amount—one million Swiss francs—was covered more than three times. The distribution of the 1,000 shares offered to Bulgarian capitalists will be arranged on the basis of the subscriptions.

BRITISH CHAMBER OF COMMERCE OF TURKEY.

Annual General Meeting.

At the annual general meeting of the British Chamber of Commerce of Turkey, held recently at the British Sports Club, Pera, Constantinople, Mr. R. H. Hoare, C.M.G., Counsellor of the British Embassy, presided, in the absence of H.M. Ambassador to Turkey, Sir George Clerk, K.C.M.G., C.B., the Honorary President of the Chamber.

Mr. F. Douglas-Watson, the Chairman of the Council, in his address, said:—Gentlemen,—This is the first time the Chamber of Commerce has had either a lunch or its annual general meeting in the British Club. I would just like to say that I am sure you all share the feeling I have myself of pleasure and satisfaction that we have such a club in existence in Constantinople, and that you are all prepared to second my own expression of best wishes for the success of the club and our hopes that it may more and more become a rallying point for the British Colony. I think the club has to be congratulated in not having attempted to start on too ambitious a scale. Our friends, the Germans and the French, have each well-equipped and useful centres in their own buildings, the "Teutonia" and the "Union Française," and although I am afraid at the moment the British Colony is not one that is growing in numbers, we are not without hopes that this may yet come about, in which event the club would no doubt play a more and more important part in the useful life of the Colony.

The past year has not been particularly eventful. The Chamber has continued quietly and steadily to do a good deal of solid work, helpful to our compatriots who are members here, and, not less, but perhaps rather more, to our members, business men, in the old country. We have managed to clear up the difficulties which at one time seemed very serious in connexion with the very existence of the Chamber, the threatened alteration of its name to "Union" or "Club," and our registration by the Government authorities is on the point of conclusion.

We, as a Council, have done our best in the course of the year to assist wherever we could the work of representatives of the Claims Commission and have received a very handsome acknowledgment from these representatives here in the shape of a letter of thanks and also, which at least is as important, a substantial cheque in aid of our funds. The work of the Commission drags its weary length alone. There are a good many of us here who are personally interested in this. From time to time the Council has done its best to expedite the payment of the claims and in these efforts we have been ably seconded by one of our Vice-Presidents, Mr. Silley, in London, but as year succeeds year without any further payment being forthcoming, hope deferred is apt to make the heart a little sick. But in this connexion I am reminded of the old lady who made it a nightly duty to beseech the Almighty for his pardon for the sins of everybody she knew. She left nothing to chance, but named them and specified their sins, and she was in the habit, at the end of her orisons, to wind up by saying, "Even I myself, O Lord." My remarks in this connexion regarding the claims might be very fitly closed by a similar remark. *I* also have a claim. (Laughter.)

I was asked by a business friend who paid a visit to this country what the Chamber of Commerce did, and I found it a very difficult question to answer, not, needless to say, because the Chamber does nothing, but rather because it does so much. Its work, as you know, consists in a multitude of items, not one of which, taken by itself, would seem to be of great importance, but which *in cumulo* constitute a mass of solid effort to facilitate business generally between our own country and Turkey, giving advice to exporters in the old country and importers and exporters here, and not by any means always confining our efforts to firms and individuals who are members. Our secretary tells me that it is by means an unusual experience to get a refusal from a business firm at home to join the Chamber and a few days or weeks afterwards to get an inquiry from the same firm asking for some information to assist them in their business.

I do not seriously suggest even the possibility of the British Chamber of Commerce closing its doors, but if such a thing were possible, I am certain it would be a disastrous thing to happen in the interests of British trade in this country. It may be that in some individual cases membership of the Chamber does not seem to bring any distinct advantages in return for the subscription. But this may be said of similar organisations the world over, and there can be no doubt, I think, that any little sacrifice on the part of individuals in this respect is thoroughly compensated by the satisfaction one has in supporting a national institution, which over all is of value to the British community here and to their correspondents in Great Britain.

Mr. Douglas-Watson concluded by congratulating Mr. Hoare on his appointment to Egypt and in expressing his regret at his departure.

Mr. Hoare, in responding, said: The Embassy seems to me to stand midway between the Government at home and the community in the country concerned. By this I mean the Government is mainly preoccupied with general tendencies and capital issues, and is physically so far removed as barely to be able to see details and to understand when, where, and how hardly the shoe pinches; the community, on the other hand, is so close to the trees as hardly to be able to see the wood, and in this country the trees are often hung with festoons of picturesque but embarrassing thorns; it is for the Embassy to try to adjust the focus of the two outlooks, and also when necessary to defend your interests on the spot. It is not an easy task at any time, and here it has been, and will probably be for some little time, a particularly difficult task. But I would ask you to believe that we do make it our constant endeavour to explain your outlook and difficulties to His Majesty's Government.

The reasons why the Embassy's task especially in this respect is difficult are obvious enough. Throughout Europe officialdom's sense of proportion was gravely upset by the War, by the enforcement of the peace treaties, by the Bolshevik revolution. Turkish officialdom has received all these shocks. There have, moreover, been tremendous upheavals in this country; tremendous exertions have been made in the War, in the long struggle which led to the re-birth of Turkey, and, greatest effort of all perhaps, in the attempt which is being made to create a modern State. It is only the biggest minds which can be expected to keep a sense of proportion through all this. The great mass of officialdom is left gasping for breath as it attempts to adapt to new principles the handling of daily routine. It cannot be expected to grasp more than one or two basic ideas—"slogans" is the rather descriptive word dear to communist manifestos—and it will tend, because it is bewildered, to apply them to all circumstances regardless of ordinary rights of others, even of rights definitely specified and sanctified by treaty. It also has an unfortunate tendency to regard a perfectly legitimate intervention as an encroachment on sovereign rights and savouring of the capitulations. A "Turkey run by Turks" and dealing with the rest of the world on a footing of equality in all matters political, economical, industrial, commercial is, roughly, the high ideal which H.E. Ghazi Mustapha Kemal Pasha set before his compatriots when he initiated the revolution which we see before us. I say that it is a high ideal and one at which we, as a race will be the last to cavil. Our troubles—yours as a business community rather than ours as diplomatic representatives—have lain largely—I do not mean entirely—in its application by officialdom. I need not go into details. My meaning is clear enough. But in all these circumstances Turkish officialdom cannot be asked yet to evolve regulations governing our daily life which are entirely wise, or entirely fool-proof if essentially wise, not always to interpret, in accordance with the dictates of the highest wisdom, enactments hastily drafted to fill a void. There is, in fact, much to discourage you, especially as your personal welfare is directly and unfairly affected; but need we despair? May we not rather hope that the practical wisdom which guides in its broadest lines the conduct of Turkish foreign policy will gradually leaven the lump? May we not look forward to the day when the sharp edges of "Turkey for the Turks," a not quite true and rather crude condensation of the ideal set before the nation, will gradually be rounded off, when the idea will be found to be fully compatible with the true development of foreign enterprise in Turkey?

The outstanding event of the year has been, I think, a very great effort in the matter of railways. Some of us may have thought

sceptically enough, and I have seen the thought uttered in a local paper, that railways are little use where there is nothing to carry. Comparisons and analogies are not always sound, but in the present case I think it is not amiss to quote the experience of the Wei-hei-wei territory. It had the reputation of being the poorest corner of China —the extremity of poverty. His Majesty's Government did not err on the side of lavishness in providing for its development. The disposal of the available funds was the subject of anxious discussion. Finally it was decided to build roads. A strong body of opinion, British as well as Chinese, contended throughout the discussion that it was a pure waste of money to build roads in a district that did not possess a single cart or horse and of which the population was and always would be too poor to possess either. Well, less than a generation later the cart tax was a substantial source of local revenue and the peasant's houses were, as I can personally testify, substantial stone buildings, most of them with brand new roofs. This being strictly true of that barren bit of land, it seems reasonable to hope that in Turkey improved communications will automatically increase wealth and employment, of which we as a community mainly engaged in facilitating exchanges will inevitably get a share. The result should be that officialdom, if I dare mention it again, will automatically be less disposed to see an intruder in every foreigner engaged in business here.

Of greater immediate importance than this potential development is the question of the commercial treaty to be negotiated next year. It is all to the good that Turkey will acquire full tariff autonomy, and I will even say, though emphasising the fact that I say it without a vestige of "*Schadenfreude,*" that it is well for Turkey and well for us that she has already experimented with monopolies and has, I believe, satisfied herself that they are a cumbrous fiscal implement. I have no doubt that you are already examining your position and formulating a statement of your requirement with a view to these negotiations, and I will conclude by expressing my earnest hope that a treaty will emerge which both in form and in its subsequent application will remove any feeling that our community here are the unwanted heirs of a past, in which the Capitulations and foreign protection played a too conspicuous part—more conspicuous perhaps in retrospect than in reality—and that you will be restored to your rightful position as an essential factor in maintaining our general political relations with Turkey. The corollary of general friendship is friendliness in detail.

Before sitting down there are two points of detail which I should like to touch on: I have heard it said that, in view of the strict steps taken to prevent foreigners competing for employment in England, we are the last people who can fairly grumble at the steady increase in the number of occupations from which foreigners are excluded. But there is a big difference. In spite of our 1,000,000 unemployed in England, we do not think of turning a foreigner out of a job—we do prevent him coming into the country to look for one, but we do not suddenly throw a man into the street. It is the retroactive effect of the measures taken here that we dislike because they inflict hardship on individuals who are frequently too old to begin life again.

The other point, which I have kept to the last because it is a small but definite indication that the Turkish Government wish Anglo-Turkish trade to develop, is that we have recently learnt of the appointment of several Honorary Consuls in Great Britain and elsewhere in the Empire. This is a satisfactory response to the representations made regarding delays in issuing Certificates of Origin.

The following extracts are taken from the report of the Chamber for 1927:—

The law concerning the compulsory use of the Turkish language came into force on January 1, 1927. This law can be briefly summarised as follows:—All books and documents which serve as a basis for control by the fiscal authorities for the purpose of assessment of taxation must be kept in the Turkish language. All traders of whatever nationality are required to correspond with Turkish Official Departments and with Turkish nationals in the Turkish language. Likewise, all invoices, contracts, specifications, advices, receipts, etc., with a Turkish institution or firm must be written in Turkish. Foreign firms and institutions are permitted to use a supplementary foreign language, but such translations must be entirely separate and distinct from the originals, they must not be signed and have no legal value. Turkish institutions may likewise attach a separate and distinct translation of their communications to foreign clients, but such translation must bear no signature and has no legal value.

A very recent circular of the Direction of Commerce to business institutions points out an incorrect interpretation of this law in so far as permission to use a foreign language is concerned. The Turkish language must occupy the first and preponderant position on letter headings and envelopes. To give merely the name of a firm or company in Turkish and then in a foreign language to mention all the firm's branches, offices, capital, etc., is a misinterpretation. There is, however, a serious project to adopt latin script, which would remove many of the difficulties which foreign firms have at present to face.

This Chamber has received complaints through the London Chamber of Commerce and from its own members of the high rates of premium demanded for goods shipped to this port, owing to the many claims for pilferage. The matter has received the attention of the Council and it was discussed with the delegates of other foreign Chambers of Commerce.

A letter was addresed to the Chamber of Commerce and Industry of Constantinople on the subject, and an official of that organisation called and stated that his Council was investigating the matter. The Chamber's dossier on the subject was shown to this official, who, we understand, also visited Lloyd's agents and firms of surveyors and collected information.

The thefts are almost entirely from "cased" goods and not "baled" goods and particularly of high-class piece-goods, woollens, hosiery, leather, and fancy goods. In one particular instance brought to the Chamber's attention the rate was 15s. per cent. W. A. and leakage on tallows and greases for Italian ports, Salonika, and Piræus, whereas for the same goods a rate of 50s. was being paid for Constantinople. In the case of textiles we have heard of £5 per cent. being paid.

There is in the minds of underwriters a great prejudice against Constantinople owing to the very many large claims that have been paid for stolen goods, and, under these circumstances, and while the present unsatisfactory conditions continue, the increase in British companies' rates is not surprising and is in our opinion justified.

The Chamber received complaints of *bona fide* trade samples, as also parcels of books sent by book post having been returned by the Turkish Postal Authorities to the senders. Dutiable articles cannot be imported into the country by ordinary post, but in this case the samples were genuine trade samples and auction teas. As a result of the Commercial Secretary's intervention with the Postal and Customs Authorities, samples not exceeding 50 grammes each in weight are being freely admitted. Following the ratification of the Turco-German Commercial Convention, printed books bound in cloth or paper, under Tariff No. 255 and Statistical No. 353 described as (b) *autres livres* are now exempted duty. It is unfortunate and anomalous that under the preceding Tariff No. 254, Statistical No. 351, catalogues, price lists, and advertisements are subject to a duty of 45 piastres per 100 kilos with a 5 times coefficient. Leather-bound books, music, albums, picture postcards imported for sale are dutiable articles and should not be sent by book post.

The Turkish Consul in London requested the Association of British Chambers of Commerce under date of August 27 to inform all Chambers of Commerce in the United Kingdom that as from September 1 all certificates of origin for goods shipped to Turkey would be refused by the Customs Authorities unless legalised by his Consulate. This was the first intimation received of the reversing of the decision of last year to the effect that where there was no resident Turkish Consul the certification by the local Chamber of Port Authority would be sufficient. Shortly afterwards notices in the local Press called attention to this requirement, although for a time the Customs did not enforce it. However, there have since been very many complaints of the long delays in obtaining the return of authenticated documents sent for the Consul's visa. As the result of representations made through the Commercial Secretary we are informed that it is the intention of the Turkish Government to appoint Consular Officers at Liverpool, Manchester, and Bradford, and we understand that such an appointment has already been made at Liverpool.

With a view to meeting the wishes of the Turkish Authorities in the matter of the registration of the Chamber, the Council have remodelled the Memorandum and Articles of Association of the Chamber in the form of the Statutes of the French Chamber of Commerce. These have now been translated into Turkish and will in due course be submitted to the Turkish Authorities.

The Council views with concern the continued shrinkage of members and consequent decrease in revenues. During the trade boom following the War the number of members exceeded 600 and the total revenue was over £3,400. During the leaner years which followed these figures have gradually come down to their present level of 359 members and £1,330 total revenue. By special effort during the past two years 75 new members have been secured, but unfortunately the number who have retired in the same period has been in excess of this figure.

Several local circumstances contribute to this unfortunate position. We have had losses by death and by members leaving the country.

An important factor is the compulsory membership of the Chamber of Commerce and Industry. The effect of this law on the membership has been aggravated by the fact that many of the non-British members formerly subscribed also to the Chamber of their own nationality; while willing subscribing to two Chambers they have not found it possible to support three.

Between 300 and 400 Muslims gathered at the Woking Mosque on March 23 to celebrate the Id-ul-Fitr. This festival brings to an end the thirty days' fasting observed during the month of Ramadhan between sunrise and sunset. Muslims from India, Egypt, Malaya, Burma, Afghanistan, Turkey, and Persia were present.

The interim report of the Bengal Dooars Railway Company states that the approximate net earnings for the six months ended September 30, 1927, after allowing for Indian taxation, amounted to £40,339, plus £47,196 brought forward from March 31, 1927, and £1,286 interest, making £88,821. Deducting £83 loss on exchange, and £7,200 six months dividend on the preference stock, there remains £81,588. The board has declared an interim dividend of 4 per cent. on the ordinary stock, subject to British tax (less relief in respect of Dominion tax), leaving £65,538 to be carried forward.

Company Meetings.

NATIONAL BANK OF EGYPT.

Cotton Crop and Prices.

The twenty-eighth ordinary general meeting of the shareholders in the National Bank of Egypt was held at the head office of the bank in Cairo on March 21.

Sir Bertram Hornsby, C.B.E. (the Governor), presided.

The Governor, addressing the shareholders, said:—Gentlemen,—You will see from the report of the directors which is in your hands that the gross profits for 1927 were £1,132,216, an increase of £120,426 as compared with 1926. On the other hand, expenses at £518,116 have increased by £146,044, so that the net profit comes out at £25,618 less than a year ago.

In considering the figures you must bear in mind that they include for the first time the profits and charges for a period of 13 months of the business we acquired from Lloyds Bank on December 1, 1926. I am happy to say that this business has given the results which we expected, and we hope that with the completion of our plans for its reorganisation we shall be able to effect a reduction in general expenses.

The decrease in the net profits is more than accounted for by the new arrangement which we have made with the Government for the division of the profits of the note issue. In the terms of this arrangement we received in 1927 some £52,000 less than the old arrangement would have given us. If allowance be made for this fact it will be realised that we have continued to make steady progress.

The Balance-Sheet.

Turning to the balance-sheet you will find that the total of our advances of various kinds amounts to nearly £12,000,000, against a total of nearly £10,000,000 a year ago, the difference arising chiefly from an increase in advances against merchandise.

There is an increase of £600,000 of deposits from the public, whilst those of the Government show a decrease of £3,500,000, due to the Government having invested a part of its balance. These various changes are reflected by a decrease of £2,700,000 in our Government securities and of £2,500,000 in bankers accounts. The item of buildings, etc., has been swollen by the acquisition of the premises of Lloyds Bank in Cairo and Alexandria and by the new building now in progress at our head office. We had also acquired from Lloyds Bank ginning factories at Wasta and Benha, but in the course of the year we were able to sell them on satisfactory terms. The increase in the item of sundry securities arises from the purchase of a block of debentures of a local company: since the closing of our books we have realised the larger portion of them at a profit.

By reason of the diminution ordered by the Government of the area under cotton, the crop of the current season is considerably less than last year and is estimated at 6,000,000 kantars. Prices generally since the month of September, though they have been subject to considerable fluctuation, have been remunerative to producers, and the economic situation of the country has thereby improved in the later months of the year.

Egypt's Trade.

The following table of imports and exports for the last five years shows that in 1926-27 there was, as in the previous year, an excess of visible imports over exports of about £E2,500,000, due, of course, to the unfavourable state of the cotton market during the season 1926-27. But even then there is reason to think that the invisible items on both sides of the account have considerably reduced this apparent adverse balance. The marked appreciation in the value of almost all the securities quoted on the local Stock Exchanges shows very plainly that there are abundant funds seeking employment even at comparatively low rates of interest.

September 1 to August 31.	Imports.	Exports. (including re-exports).
1922-1923	£E44,453,116 ...	£E53,561,778
1923-1924	47,440,590 ...	64,109,696
1924-1925	56,257,511 ...	67,952,808
1925-1926	55,973,075 ...	52,855,630
1926-1927	48,230,223 ...	45,823,035

The Note Issue.

The note issue has fluctuated throughout the year in response to the seasonal requirements and calls for no particular comment. The average of the issue during 1927 was £E28,600,000, against an average of £E30,000,000 in 1926. As already stated, the conditions governing the division of the profits are now less favourable to the bank; our desire to arrive at an amicable settlement of this question with the Government has led us to agree to terms involving considerable sacrifices on our part.

The following figures give the maximum and minimum reached by the issue during each of the last five years:—

1923	£E38,700,000 ...	£E24,000,000
1924	42,400,000 ...	26,900,000
1925	41,900,000 ...	28,700,000
1926	35,300,000 ...	25,300,000
1927	33,600,000 ...	24,400,000

In the course of the year the Palestine Government established its own currency, and our notes are no longer used in that country. It is difficult to estimate with any accuracy the amount which was in circulation, but probably it was something between £E1,500,000 and £E2,000,000; whatever it may be, the result is a permanent reduction in our circulation of an equivalent sum.

Trade of the Sudan.

There is nothing of particular interest to report regarding the Sudan. The increased figure of imports shown below is accounted for by imports of machinery and material required for various public works, such as the new bridge at Omdurman and the extension of the Kassala-Gedaraf Railway. Exports show a small increase; on the one hand, the Gezira cotton crop was larger, but against this has to be set a reduction in the export of gum and cereals and a comparative failure of the cotton crops at Tokar and Kassala.

	Imports.	Exports (including re-exports).
1923	£E4,669,004 ...	£E2,758,425
1924	5,474,910 ...	3,830,171
1925	5,437,727 ...	4,168,364
1926	5,574,401 ...	5,190,505
1927	6,155,314 ...	5,229,419

We are glad to inform you that during the year H.E. Adly Pasha Yeghen accepted our invitation to resume his directorship, which he resigned on becoming Prime Minister in 1926. This nomination requires your confirmation.

The directors retiring by rotation this year are Sir Henry Barker and Mr. Rolo, who offer themselves for re-election for a further period of five years.

We take this opportunity to thank the sub-governors, the managers, and the staff for their services during the year.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

The report of the National Bank of Egypt for the year ending December 31 states that the gross profit for the year, after providing for depreciation on the Bank's buildings and furniture, for rebate of discount, and for doubtful debts, amounted to £1,132,216 3s. 5d. After deducting from this sum: for directors' fees £13,500, for current expenses £504,616 5s. 5d.—£518,116 5s. 5d., there remains £614,099 18s. In conformity with Article 49 of the Bank's Statutes a dividend of 4 per cent. is payable on the share capital, £120,000. After this distribution there remains £494,099 18s. Adding to this the balance brought forward from last year, £206,072 12s. 4d., the amount available is £700,172 10s. 4d. The directors consider it prudent to allocate to special reserve for contingencies a sum of £100,000, which leaves £600,172 10s. 4d. From this amount the directors recommend the payment of an additional dividend of 13 per cent. on the share capital, which will absorb £390,000, and to carry forward the balance of £219,172 10s. 4d. The total dividend for the year will thus be at the rate of 17 per cent., equivalent to £1 14s. per share. An interim dividend of 8s. having been paid on September 1, 1927, there remains to be distributed the balance of £1 6s. per share.

DIALA COTTON PLANTATIONS.

An extra-ordinary meeting of Diala Cotton Plantations will be held on April 2 at Bank Buildings, 16, St. James's Street, S.W.1, to pass resolutions:—(1) Changing the name to Latifiyah (Iraq) Estates. (2) Reducing the capital from £500,000, divided in £1 shares, to £250,000 in 400,000 shares of 10s. each and 50,000 £1 shares. The reduction is to be effected by reducting the nominal amount of the 400,000 partly-paid issued shares numbered 1 to 400,000 (inclusive) from £1 to 10s. each and extinguishing the liability in respect of uncalled capital on those 400,000 shares to the extent of 10s. per share. (3) On the reduction taking effect, each of the 15,000 fully-paid shares of £1 each, numbered 400,001 to 415,000 (inclusive) and each of the 35,000 unissued shares of £1 each are to be sub-divided into two shares of 10s. each.

There was an increase of 119 in the number of industrial concerns in Bulgaria in 1927.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 21:—

Egyptian Futures.—Sakel Contract.—Considerable activity has been witnessed throughout the past week in this market and values again show a strong advance. The upward movement has at times met considerable opposition from those taking profits on their earlier purchases, and on this account periodical reactions have occurred; the undertone, however, remains firm, values at to-night's close registering gains of 91 to 100 points for near and 79 to 100 points for distant positions since we last wrote. It is rather difficult at the moment to anticipate any developments likely to cause a permanent set-back. It is true that in many quarters the heavy appreciation that has taken place during the past two weeks is attributed entirely to speculative activities, this being especially the case as far as Alexandria is concerned. In our opinion there is something more behind the movement than this, as trade support is on the increase and consumers are beginning to show considerable anxiety regarding their requirements during the summer months. Later reports from Egypt are to the effect that there has been no change for the better in the Nile level and that the outlook is not favourable. Some improvement is reported in weather conditions and new crop preparations are now proceeding normally; however, owing to earlier adverse climatic conditions, resowing on a fairly large scale will probably be necessary in some districts.

Further appreciation in the premiums for any desirable cottons has again been a feature, and apparently exporters on the other side are finding holders there very difficult to trade with. Sakel arrivals since September 1 total 1,888,743 kantars, whilst exports for the same period amount to 1,573,853 kantars; general doubts are now entertained as to whether the earlier crop estimates will be realised, and on the whole the statistical position looks like becoming very strong at a slightly later date in the season. As a result of this week's advance our premium over the American market has widened out to 1,000 points, November Egyptian now standing at just double the price of October American. For some time past American houses have been selling our market against their long-stapled cottons; so far, their experiences have been rather disastrous, but we still notice in certain quarters a tendency to follow up operations by further commitments at the wider difference ruling to-day. This constitutes a weak short interest that may be forced to cover should a further material rise take place. Trade reports still remain of a satisfactory character, but erratic price movements in the raw material have evidently disorganised business somewhat for the time being; however, the inquiry is still there and active trade demand will probably develop as soon as prices stabilise. Near positions here continue to gain strength and all old crop differences have moved up closer to new crop values. No selling of a hedge character has been in evidence and at times when Continental buying orders have come into the market it has been distinctly difficult to get hold of any weight of cotton without causing a certain amount of caution on the "Bull" side, and we still consider that those who have good profits would be well advised to liquidate at least a part of their holding. For a long view, however, we maintain our recently expressed "bullish" ideas and consider that purchases on any reactions will ultimately be realisable at satisfactory profits.

Upper Contract.—More active trade has been witnesed in this option during the past week and values under the influence of good Alexandria advices, coupled with the advance in American markets, have hardened 55 to 63 points for near and 57 to 62 for distant positions since we last wrote. Whilst our premium over the American contract appears somewhat prohibitive, it must be borne in mind that other competitive growths are equally dear, East African especially being practically unobtainable at the moment. Trade support generally has only been moderate, but there is a good deal of inquiry about which will probably materialise once prices stabilise. Even bearing in mind the recent appreciation that has taken place, we have a favourable opinion of the market and think prices will work to a still higher level.

Egyptian Spot.—A considerable amount of activity has been witnessed in this department during the past week. Business has certainly been of a somewhat patchy description, but it seems fairly certain that a proportion of the mills which have been fighting the advance for some time commenced a covering movement during the past few days. This last sudden advance has indeed taken most people by surprise, and a curious aspect of the situation is the equanimity with which it has been received by the trade generally. This would seem to point to the fact that there has been more business doing up-country than has been apparent of late. On the face of things, current prices, particularly for the top grades of Sakel cotton, appear alarmingly high, but, if the present "Bull" fever continues (particularly in Egypt), it may yet be that there is still some way to go before the highest point of the season is reached.

The local inquiry has been of fair extent without in any way being remarkable, except for the fact that there has undoubtedly been a larger demand for Sakel cotton. As heretofore, a large proportion of the inquiry has been for the inferior qualities at from 8¾d. to 14¼d. Cotton at round about the value of the contract has again been comparatively ignored, but there has been a fair inquiry for cotton grading Strict F.G.F. to Good, and Good to Fine cotton has also been in improved request. The basis for the very best Sakel has eased substantially.

Uppers have continued to be in good request at from 14d. to 14.75d. The top qualities have been rather neglected, but some searching of the market for "low" cotton has been in progress at prices ranging from 12¼d. to 13¾d. There is, however, only a very poor selection of this low cotton available. Pilion has met with an improved offtake within a fairly wide range. Sudan Sakel cotton has moved off steadily, and the basis has eased by 25 points.

Better reports regarding c.i.f. business have been received from several quarters, but this improvement has been by no means general. Forwardings to spinners for the week ending the 6th inst. were returned as 6,307 bales Egyptian and 630 Sudan. Estimated spot sales, 2,300 bales Egyptian and 1,450 Sudan. Quotations of Sakel have been advanced 10 points for Extra Fine, 130 points for Fine, Good, F.G.F. and G.F., and 100 points for Fair. Upper and Pilion have both been advanced by 55 points. F.G.F. Sakel to-day, 20.60d. F.G.F. Upper to-day, 14.45d. F.G.F. Pilion to-day, 14.85d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 14, state:—

Since our last report the Sakel futures market has been extraordinarily firm and active; the Ashmouni market, on the other hand, has been quiet. The week's summary of price movement is as follows:—Sakellaridis: March, 36.89 dollars, 0.74 dollars up; May, 37.48 dollars, 0.93 dollars up; July, 37.80 dollars, 0.95 dollars up; November, 38.52 dollars, 1.12 dollars up; January, 38.20 dollars, 0.90 dollars up. Ashmouni: April, 25.88 dollars, 0.26 dollars up; June, 26.20 dollars, 0.55 dollars up; August, 26.25 dollars, 0.40 dollars up; October, 26.28 dollars, 0.53 dollars up.

Sakel.—This market has been very lively during the week and prices show a further advance of a dollar all along the line. As we have previously mentioned, the movement must be considered purely speculative. The commercial houses are taking no interest whatsoever in the market except, from time to time, selling against fixings of their summer and autumn up-country purchases; these fixings, which is the normal course, would have been effected in November or January, have been delayed, for the most part, at the request of the sellers.

Digitized by Google

Certainly the statistical position of Sakel is stronger than at this time last year, but, on the other hand, prices are about 50 per cent. higher, and this fact may reduce spinners' takings. Another factor which is generally overlooked is the extension of the use of artificial silk which, in spite of anything said to the contrary, is bound to have some effect on Sakel consumption, seeing that both the cotton and artificial silk industries in many instances manufacture the same class of goods.

The local newspapers have lately been publishing reports anticipating the early sale of the Government cotton; this would be a wise measure and in the interests of the country, but we do not see how any decision on the subject can be taken pending the settlement of the present Ministerial crisis. The rise has slackened the inquiry from spinners and this falling off is reflected in the reduced turnover on the spot market.

At the second March tender, 4,750 kantars dockets were issued, making a total for the month to date of 8,500 kantars.

Uppers.—This market has been featureless; it has participated only to a very limited extent in the Sakel rise, and, as a consequence, the straddle difference has widened still further. The trade demand has been only moderate, but existing stocks are very firmly held and any improvement in the offtake would, we think, induce a sharp rise in prices.

The week's receipts amount to 111,111 kantars, against exports 129,109 kantars; the stock in Alexandria stands at 2,888,236 kantars.

Spot: During the past week we have had quiet markets at Minet el Bassal and spinnners' interest in our cottons can only be described as very moderate. Sales for the five business days (there has been one day holiday) amount to about 10,550 bales, of which we estimate 5,000 bales Sakellaridis, 4,750 bales Ashmouni and Zagora, 625 bales Pilion, and 175 bales other varieties. The spot situation continues the same as last week technically. Cotton is very hard to buy, sellers are very difficult to deal with, and such sales as may be made abroad can only be covered with difficulty in all qualities.

Sakellaridis: Has met with a moderate demand covering all grades. Spot differences are very firm and inclined to stiffen. Offerings are scanty, especially in the grades below Fully Good Fair.

Ashmouni and Zagora: All grades have been dealt in, but only a moderate business has resulted, chiefly in the medium styles. Cotton is firmly held generally and offerings are on a very moderate scale. Spot differences are unchanged but very firm.

Pilion: A fair business has been done, but demand has not been so good as last week. Spot differences are rather dearer than last week.

Other Varieties: In White a moderate business has been done at last week's spot differences. Some small lots of Nahda and Maarad have changed hands.

Up-country: Spot business up-country has improved with the rise, and arrivals, as a result, show an increase. New crop business has been quiet and few transactions have been concluded.

Crop, 1928: Weather conditions have become quite normal again and field work and planting are progressing actively. In some districts of Upper Egypt and in the South and Central Delta, a fair amount of resowing has been necessary. Water prospects are unchanged.

M. Jean Lapedato, a former Finance Minister in the Averescu Government, has been co-opted as a director of the National Bank, in place of the late M. Capitanovici (says a Reuter message from Bucharest).

Notes of the Week.

Egypt and Britain.

The new Egyptian Government has replied to the Note delivered to Sarwat Pasha shortly before he resigned office in which the British Government expressed its misgivings regarding certain legislative proposals introduced into the Egyptian Parliament that might weaken the hands of the administrative authorities responsible for the maintenance of order in Egypt. It is, perhaps, unnecessary to examine too closely the Egyptian Roland sent in reply to a British Oliver. There has been no time yet for any fresh orientation of the position created by the events leading up to the change of Government in Egypt, and, if a lasting improvement is to take place in Anglo-Egyptian relations, it must come gradually. Nahas Pasha and the Wafd require time to take stock of the general situation as the rejection of the draft Treaty has left it, and there is no need to expect any immediate adjustment of divergent views. The location of the British Army in Egypt remains the crux of the problem. For the two parties to reach the agreement that both desire it is necessary for the Egyptian authorities to show that British Imperial interests and foreign interests in Egypt can be protected as adequately by the transfer of the British troops from the Cairo citadel to some other part of the country, and for the British Government to satisfy itself that a political compromise on a military matter can be effected without actual prejudice to the security of British communications. If each Government is prompted by a desire to meet the other half-way, an understanding need not be indefinitely postponed, and then the wording of all Notes exchanged between the two will become exemplary.

The Situation in Roumania.

In spite of the bold front that the Roumanian Cabinet is offering to the attempts of the Opposition to bring about its downfall, the situation in the country can hardly be to the liking of any of the political parties or responsible politicians. The tactics of the National-Peasant Party are based on the fact that the Constitution gives the King—or at the present time the Regency—the power to dismiss a Government without waiting for it to resign; hence the view that if, apart from an adverse vote in Parliament, which in existing circumstances is impossible, it can be clearly shown that public opinion is opposed to the Government, the Regency will not be able to avoid dismissing the latter. So far nothing has happened to dissolve the understanding between the Regency and the Bratianu Ministry, for Dr. Maniu, the leader of the National-Peasant Party, received as little encouragement from the former as he had from the latter. There would seem, however, to be a growing realization that the Opposition "mean business," and the Council of Regency is likely to find itself in an embarrassing position, if it can make no more helpful contribution to the problem than to act as an echo of the Prime Minister. If things are allowed to drift until the congress of the National-Peasant Party at Alba Julia on April 22, that meeting will have to decide whether it will disown its leaders for having brought about a deadlock or whether it will follow them to the logical conclusion of their action. In the latter case Roumania may find herself confronted with a *coup d'état* or with civil war, if the Government can compel the Army to take the field against the Transylvanians. The country will have to admit itself bankrupt of statesmanship, if no effort is made to bring about an understanding between the protagonists before the situation reaches danger point.

COMPANY MEETINGS.

This week's issue of "THE NEAR EAST AND INDIA" contains reports of the annual meetings and/or Balance-Sheets of the following Companies:—

Chartered Bank of India, Australia and China
National Bank of India
Agricultural Bank of Egypt
Eastern Bank
Commercial Bank of the Near East
Anglo-International Bank
Diala Cotton Plantations.

A Roumanian Frontier Incident.

It will be necessary to hear both sides of the question before judgment is passed on the action of Roumanian frontier authorities in detaining the General Secretary of the Zionist Organisation in London and in seizing his official papers and correspondence on the ground that they were of political interest and required to be examined. Anyone who has travelled widely will know how easily "incidents" arise at a frontier station which might have been avoided by the earlier appreciation of local customs by the traveller. There will remain, however, a number of cases where the frontier official is resolved to show an excess of zeal, perhaps with the idea of bringing his services to the notice of his superiors. It is the test of an efficient and disciplined Administration that these cases should be reduced to a minimum. In Roumania unfortunately there have been instances in the past where frontier officials have even sought to open diplomatic bags; but it is unnecessary to state that such action has been adequately discountenanced from above. In the present case, in view of the publicity given to it, the Roumanian Government will do well to issue a full explanation of the action of the frontier police and of the steps that it has taken in the matter. If the officials were justified, it would be advisable to make this clear for the benefit of other foreigners travelling in Roumania. If such an explanation is not given, the Opposition in the country is reinforced in its contention that there can be no real reform of the administrative services until the old régime with its loopholes for bribery and corruption has gone out of power, and foreigners are led to suppose either that anti-Semitism is regarded as a virtue among officials or that Roumania is a country to be avoided if peaceful and agreeable travel is a desideratum.

The End of the Afghan Visit.

This week the King and Queen of Afghanistan bring to an end their memorable visit to England. Their Majesties, we may hope, have stayed long enough to be able to gain some understanding of the British character. Offical receptions in different countries may not vary to any considerable extent; but it is the essence of British hospitality that our distinguished guests should feel at liberty to come and go as they like, and to see what they desire, without being the victims, even with the best intentions on their hosts' part, of too much stage-management. For this reason the programme of the Royal visit—strenuous as it was, in keeping with the King's own energetic nature—has included some of the more homely aspects of the national life. Their Majesties, for instance, have seen a steeplechase in which forty out of forty-two horses came to grief, and a boat-race in which one crew paid so little consideration to their Majesties' presence that it arrived very late at the winning-post and quite unable to do justice to the occasion. If it had been characteristic of the nation to strive after effect, all the horses with their riders in the Grand National would have completed the course, and Oxford would have pressed Cambridge all the way from Putney to Mortlake. From these two instances it is to be hoped that our Royal guests will be able to gather that what they have seen in other directions has invariably represented the nation and its affairs as they are and not as specially prepared for their benefit. The moral applies in the political sphere; for Afghanistan may know with equal certainty that, if she takes the British Empire as she finds it, she need never imagine that she is to be the victim of ulterior motives.

Egypt and the Hijaz.

With the approach of the Pilgrimage Season—it falls next May—the question of the recognition of the Hijaz by Egypt becomes more obviously urgent. There is no need to recapitulate the differences that arose between Egypt and the Hijaz when it was under the control of ex-King Husain, nor to recall the unhappy incident which arose later between the bearers of the Mahmal and the Wahhabis. King Ibn Saoud has never moved from his position that an armed escort to the Holy Carpet can in no circumstances be permitted in the Hijaz, and there appears to be considerable ground for stating, as Wahhabis state, that the whole conception of the Mahmal is an accretion upon Islam. However that may be, it is fairly obvious that an increased contact as between Egypt and the Hijaz is desirable in the interests of both countries. Certainly the enlightened Hijazis welcome the learning and superior arts of their brothers in Egypt, and it seems probable that an increasing number of Egyptians will be attracted to the Holy Land to aid in some advisory capacity the Arab renaissance therein. In the reports that are now to hand of an early recognition by Egypt of the Hijaz there is, therefore, reason for congratulation on both sides. After all, official recognition is an infinitely more important thing than a decision on whether or not the Mahmal should be sent, for, as happened last year, devout Misris will attend the *haj* whether the Mahmal be sent or not. If in the near future the Egyptian Government decide upon official recognition of the new régime in the Hijaz, capital praise should be accorded to the Wahhabi representative in Cairo, Shaikh Hafidh Wahba.

The Arabian Scare.

The Arabian scare is now, we take it, over. The wadis are dried up of the imagination even of Basrah and of Jerusalem; scarcely a trickle of alarmism now reaches the thirsty lips of the disillusioned ignoramuses in this country. Basrah, admittedly, is more fain than Jerusalem to continue the unequal struggle against facts, and only last week sought to revivify interest by a completely misleading report concerning the Royal Air Force in Iraq. It was amusing to notice, concerning this particular "story" of hurried increases of the R.A.F. strength in Iraq, of the sending of air-experts in desert-warfare, of the weak state of the Hinaidi staff, and so on, that some newspapers published it together with a completely different interpretation of the facts which Reuter's had been able to obtain in London. In the all-important matter of headlines, however, it was the Basrah message which gained the distinction of being "splashed." So that one still may hear the brave music of the distant drum. But on the whole, as we have said, the scare may be said to be over; the "special correspondents" who were appointed in or despatched to Iraq to ensure to well-insured newspaper readers a complete war news-service, have folded their tents; and even those who are thus disappointed are looking forward with equanimity to the forthcoming meeting (at least we hope that it is forthcoming) between the King of the Wahhabis and Sir Gilbert Clayton.

THE EXPERIMENT OF TRANS-JORDAN.

The Treaty between Great Britain and Trans-Jordan which we reproduce elsewhere in this issue, is an instructive commentary upon the groping, day-to-day policy of Great Britain in Arabia. It has been an extraordinarily long time in being promulgated; it gives to the State of the Amir Abdullah an "independence" of the kind which is more relished by realists than by idealists; it seems to imply that Great Britain even yet has not envisaged the final form of her influence in Arabia. Let us recall briefly the history of this curious State of Trans-Jordan. It was created, as everyone will remember, partly because of general British promises to the Arabs during the War, and partly because of alleged gratitude to the Amir Abdullah for the work which the Sharifian family performed during the Great War against the Turks. This son of ex-King Husain was installed in Amman in 1921. His first activities against the French Mandatary in Syria are not yet forgotten, nor are his free financial methods which resulted, notably, in the vain revolt of the Adwan tribe in 1923. A year previously the Amir Abdullah had come to London, as a result of which visit he was promised conditional independence. Now this promise has taken six years to be formally realised. Why? The answer is probably to be sought, first in the general state of Arabia, particularly of the mandated States of Palestine, Syria, and Iraq, and secondly in the character of the Amir Abdullah himself. It is notorious that this Hashimite scion is no hoarder of moneys, and during these intervening years there has, in effect, been a struggle between the extravagant personal habits of the ruler of Trans-Jordan and the desire of the British Mandatary that he should exercise his power in a democratic, "constitutional" manner. But the "constitutional manner" is no easy thing in the East to acquire; it is even more difficult to conceive in Amman than in Baghdad; and it is not greatly to be wondered at, therefore, that only in 1928 should it have been found possible for the British authorities to assure themselves that constitutionalism in a country with no unified traditions, and no natural boundaries, would henceforth be respected. The early years of the experiment in Trans-Jordan, when an attempt was made to run it as a wholly Arab State, were not happy, but after 1924, when Colonel Cox was appointed to be chief British Administrator, the inter-dependence of Palestine and Trans-Jordan was more clearly seen, and it is essentially as a part, though a separate part, of the experiment in Palestine that the State of Trans-Jordan has to envisage its future.

The Treaty in itself is not a particularly interesting document. For the most part it takes after the agreements with Iraq; questions of finance, justice, defence are in the main reserved for the Mandatary's final decision. It gets notably ahead of the published Iraq agreements, however, in Article 11, in which it is stipulated that Trans-Jordan, as soon as her financial resources permit, shall bear the excess of the cost of the British forces stationed in Trans-Jordan over the cost of such forces if stationed in Great Britain. This is a point which will not escape the attention of those who are awaiting official decision upon the Military Agreement as between Iraq and Great Britain, for unless Conscription is to be introduced into King Faisal's State, some such arrangement as this to which the Amir Abdullah has shown ready adherence is apparently inevitable. It would be foolish, however, to push the parallel between Iraq and Trans-Jordan any farther. There is, properly speaking, no public opinion in Trans-Jordan; there is no Majlis, no culture, no *amour propre*, scarcely any political ambition. That this buffer State to Palestine should have so endured and prospered is, in fact, a most remarkable testimony to the work of British officers therein. This Treaty with Trans-Jordan is not—what it might otherwise appear—a mockery of independence, precisely because there is no independent feeling to mock. The tribes, so long as their taxes are correctly and not erratically extracted, submit to the present régime at Amman with no ill-grace; the *fellahin*, so long as they enjoy security to sow and gather in their crops, hope only for the continuance in office of the British officers who make this possible; and the non-Muslim communities are, of course, only too grateful for the Mandatary's decree and observance of toleration. It is, then, superfluous to jeer at this Treaty with Trans-Jordan as being hypocritical, "imperialistic," or what not, for it is exactly what it purports to be—the regularising of a wholly anomalous or even artificial position. It is, in short, an endeavour to define at once the obvious strategic necessities of the situation and the less obvious nature of British intentions towards that section of the Arabs between the desert and the Jordan.

But if this Treaty inevitably emphasises the strategic aspect of Trans-Jordan—the necessity of having a buffer between "civilised" Palestine and the ageless apprehensions of the desert—it should not be forgotten that very definite progress has been achieved under the dual direction of the Amir and of the British Resident in Amman. Public security in Trans-Jordan is a fact; roads and bridges have been made; modern, that is, Western, conveniences are being introduced; British subsidies are decreasing; foreign enterprises are increasing. The capital itself, which but two or three years ago was a collection of huts, is now a town. The letters from our Amman Correspondent are in themselves evidence that the stability and the progress of Trans-Jordan are no imaginary things. Naturally, the country is very poor at present—except in archæological remains—and it may be long before it boasts a sufficient surplus in its Exchequer to enable it to devote capital to its undoubtedly considerable agricultural resources. Trade, however, is increasing, and it is gratifying to observe, in the relevant Articles in the Treaty, that no political considerations have been allowed to stand in the way of Trans-Jordan in this respect. The present régime in Trans-Jordan, in short, bears all the marks of being an excellent one. The country, having been saved from self-ruination through personal ambition and misgovernance, is now also safe from degeneration into a mere dependent upon Palestine. Lord Plumer, it is true, is High Commissioner of Trans-Jordan, but of the Zionists' ever being permitted to settle across the Jordan there is no chance at all, unless it be at the express wish of the Arabs of Trans-Jordan themselves. The more one looks at the recent history of the administration of Trans-Jordan, in fact, the more impressed one is, both by British honesty in observing duties to the Arabs and to the neighbouring French Mandatory Power, and by the Arabs' sense of responsibility and willingness to fulfill their obligations. The gratitude and co-operation of the peoples of Trans-Jordan are, indeed, the best measure of British integrity in that country and provide the best hope of its developing and enduring. And in the justification of such vague, indefinite hope, lies the key to what we referred to above—the apparently illogical, shapeless nature of British policy in Arabia.

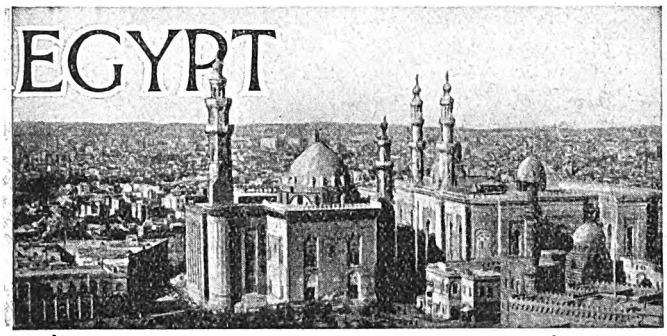
The Near and Middle East*

From Our Own Correspondents.



Cairo, March 24.

The Political Situation.

The new Cabinet is now well in the saddle, and every one is awaiting anxiously to see it at work. The declaration made by Nahas Pasha on the day he and his colleagues first met the Chamber was enthusiastically received by the members, but in many Egyptian circles outside the tone was frankly deplored. It can, of course, be understood that Nahas Pasha found it difficult to say less with regard to Egyptian aspirations than Zaghloul had said. On the other hand, circumstances are now very different from those existing when those aspirations were first given expression. ' Beyond perhaps a transient increase of prestige among the students and the more fanatical element of the population, little practical advantage can be obtained to-day by the reiteration of slogans which it is now evident can never reach fruition. Among the more far-seeing element of the population there has been for some time a growing realisation that the old tactics of encouraging the public to indulge in exaggerated aspirations have been a mistake, and that much more satisfactory results would have been, and could still be, obtained, if something more approaching the truth were told by those responsible for directing not only the affairs of the nation but also local public opinion. The declaration contained assertions of a friendly disposition towards Great Britain and towards the idea of an agreement settling the outstanding questions. And if, as is asserted in certain Wafdist circles, the tone of the declaration was dictated, as frequently with similar declarations in other countries, solely by internal political considerations, and the Cabinet intends to inform its national policy by a real spirit of conciliation towards Great Britain, no one will be more pleased than the British community and the large element of the population which is tired of the repeated incidents between the two countries and is longing for a settlement.

The Case of Ahmed Effendi Maher.

This week an event took place which would seem to reflect a more reasonable frame of mind on the part of the Wafd than the declaration of its head might be held to indicate. The nomination of Wissa Wassif Bey to the presidency of the Chamber in the place of Nahas Pasha left one of the Vice-Presidencies vacant. It was currently stated—and the persistence with which the assertion was made gave it credence—that the Wafd's candidate for this vacancy was Ahmed Effendi Maher, who was one of the principal men accused in the political murders case, and whose acquittal in the summer of 1926 in scandalous circumstances was followed by the presentation of a strong Note of protest by the British Government. The Egyptian authorities have throughout been fully aware of the disapproval with which the British Government very rightly regarded the appointment of any of the men acquitted in that case to any posts of importance. The news that Ahmed Effendi Maher was the official candidate of the Wafd for this post made a very unfavourable impression in British and foreign circles and among the more instructed element of Egyptians, who regarded it as a veritable blunder.

The subsequent public renunciation, when the election was about to take place, by Ahmed Effendi Maher of his candidature and the ready acceptance of his decision by the Wafd show an inclination on the part of the latter to take into account the realities of the present-day situation, and if it can inform its future actions with a similar spirit of conciliation and good sense, it will go a long way towards proving the sincerity of its assertions that it is desirous of a friendly understanding with Great Britain.

Switzerland and Egypt.

Switzerland is about to conclude a commercial treaty with Egypt. Exactly why that country has suddenly desired to put into official form its commercial relations with Egypt is not quite clear, for it is gaining nothing material by the Treaty, seeing that commercial relations have always been based on the most-favoured-nation clause under the Capitulations, which are extended to the Swiss in virtue of their protection by France, Great Britain and Italy, the latter two of whom have taken the place of Germany and Austria, who before the War shared with France the protection of Helvetian subjects. There is, however, a shrewd suspicion that the idea of a commercial treaty is based on the hope that it will prove to be the first step towards a political treaty between Egypt and Switzerland, giving the latter the representation in Egypt which she has long desired. Some time ago negotiations were opened with this object, but they were shipwrecked over the question of the jurisdiction of the Swiss Consular Courts which would come into being as the result of such a treaty. The Egyptian Government very rightly objected to according those Courts any jurisdiction other than that which has been given to the German Consular Courts, which now administer justice by delegation from the Egyptian Government instead of in the name of the German Republic.

The recent visit of the Swiss Minister in London, M. Charles Paravicini, was thought to be in connexion with this question, but I understand that it was merely of a private nature, and that the discussion of a treaty giving Switzerland diplomatic representation has been left in abeyance for the present.

The Senate.

The question of the four vacant seats in the Senate, the delay in filling which aroused so much criticism, has now been satisfactorily settled. One of the vacancies goes to Ahmed Mazloum Pasha, who together with Abani Pasha, is the sole survivor of the famous Cabinet which, under Mustapha Pasha Fahmy, held office from 1885 to 1908. He should long ere this have found a seat in the Upper House. The new Senator is unfortunately lying dangerously ill at present, and his health is causing much anxiety to his friends.

Equally fitting is the nomination of Aziz Izzet Pasha, whose outstanding services to his country during the past four years in London entitled him to a place in the higher councils of his country. The other two vacancies have been filled by Sayed Abdel Hamid El Bakri of the Koreish Family, who is the head of the "Sufi" rite, and Kamel Bey Sidky, a notable Coptic lawyer. In

Digitized by Google

addition, the vacancy left by the death of Hussein Rushdi Pasha has been filled by the nomination of Ibrahim Bey Fahmy, the Minister of Public Works.

Greyhound Racing.

This week the first greyhound race meeting ever held in this country took place at Zamalek. The Syndicate, which has been organising this enterprise, has managed to do wonders with the old pigeon shooting ground which it acquired for the purpose of these race meetings. Everything possible has been done to ensure the comfort of spectators; extensive quarters have been erected for the kennels and for the training and exercise of the dogs, and a very fine sand track with grass centre has been laid out. The inaugural meeting, in spite of a drop in the temperature and the existence of other attractions—due to the Bairam feasts—attracted a very good audience, and it is hoped that, as the weather gets warmer, this attempt to provide Cairo with another centre of amusement in the evening will meet with the continued success which it deserves.

Belgrade, March 29.

The Political Situation.

After two months' stubborn fighting the Yugoslav Budget was passed on March 26. The main body of the Opposition, led by M. Pribitchevitch, declared that it would take no responsibility for the Budget, nor for the changes made in the Finance Act, and left the Skupshtina as a mark of protest just before voting began. This action allowed the Budget to be passed by 194 votes against 11.

It was generally expected in political circles that the passing of the Budget would be the sign for the renewal of internal political upheavals, but the Government announces that it is stable and that it intends to continue its work right up to the Easter recess. It proposes to bring forward a number of important Bills dealing especially with agriculture, agricultural credits, forestry, water control, etc. The Government's position has certainly been considerably strengthened by M. Raditch's repeated indiscretions, his alleged insult to the King, his deliberate insults to various Ministers and his statement, explained away and withdrawn almost immediately, that Serbia brought on the War in order to get to the sea. This last *faux pas* led to a renewal of the old sterile discussions on War guilt in all the Belgrade papers. However, the Government's difficulties would seem steadily to be growing. Not only have they to contend with the continuous, fierce and many-sided attack of M. Raditch and M. Pribitchevitch, but they are threatened again with division in their own ranks, this time from the activities of the Central Council of the Radical Party. The Central Council was against M. Voukitchevitch at the beginning of the election campaign, but was completely outplayed. They were unwilling helpers in his first Coalition Cabinet, helped to produce the last great crisis, and now declare themselves thoroughly dissatisfied owing to the fact that M. Voukitchevitch, although only elected temporarily to the Presidency of the Radical Club, in order to give him additional strength in bargaining with the Democrats, refuses now to relinquish that office and, although repeatedly asked to do so, refuses to call a meeting of the Club or to inform the members of his Party of his plans and activities. It would seem probable, therefore, that while the Government may remain unchanged until the Easter vacation and pass a number of urgent measures through Parliament, after the Easter recess there will be important changes.

Rumours of Changes in the Constitution.

Last week great interest was aroused by a series of audiences granted by the King to important political leaders, M. Marko Trifkovitch, M. Krsta Miletitch, and other Radicals and M. Liuba Davidovitch, the Democrat leader. These gave rise to rumours of impending changes in the Constitution. The *Vreme* published a long leader on this subject, suggesting that a change would be made in the regulations for the appointment of a Regent in case of the King's death or abdication before the Heir to the Throne is of age, that an Upper Chamber would be appointed, and that the frontiers of provinces would be revised. It suggested that, instead of Parliament's appointing a Regency Council of three, the King would be authorised to appoint Regents himself, in his will in case of death or by declaration in case of abdication. The *Vreme* strongly supports the suggestion of the appointment of a Second House, claiming that this would give greater stability and would act as a regulator in the too stormy political life of the country. The *Trgovinski Glasnik,* on the other hand, is against this proposition and points out that in a purely peasant country, such as this, where there is no natural aristocracy, such a Second Chamber would serve no useful purpose, would merely duplicate the work of the Skupshtina and cause additional complications without giving any guarantees of greater stability. The redivision of the country into provinces is proposed in order to bring the present frontiers into line with economic, geographical and social frontiers. But great opposition would probably be encountered on historical grounds and by those who fear that the present voting strength of solid racial blocks might be destroyed. The Government issued a categorical denial of the truth of the suggestion that any changes in the Constitution were contemplated. Rumours that the changes in the Regency provisions are made necessary by the state of the King's health are considered here to be without foundation.

General News.

It is announced that the Government has decided, in view of its desire to conclude considerable loans abroad, legally to stabilise the rate of exchange of the dinar, which has in practice remained perfectly stable for the last three years at 9.13 Swiss francs per 100 dinars. It is reported that with this object an agreement has been made with the National Bank for the repayment by the State of a loan of 1,500,000,000 dinars, which would make the Bank's reserves adequate to meet any emergency.

On March 26 M. Vl. Kotzitch, Minister of Posts and Telegraphs, died. His place in Parliament will be taken by the next candidate on his list, who happens to be M. E. Nadja, a member of the Hungarian Party which fought in the last election with the Radicals. It is reported that the vacancy in the Cabinet will be filled at once, and it is believed that M. Krsta Miletitch will be appointed.

On Friday and Saturday last the Dramatic Section of the Anglo-Jugoslav Club in Belgrade produced A. A. Milne's "The Dover Road." The play was excellently staged and Mr. W. A. Morrison had a great success as Mr. Latimer. Prince Paul and Princess Elisabeth

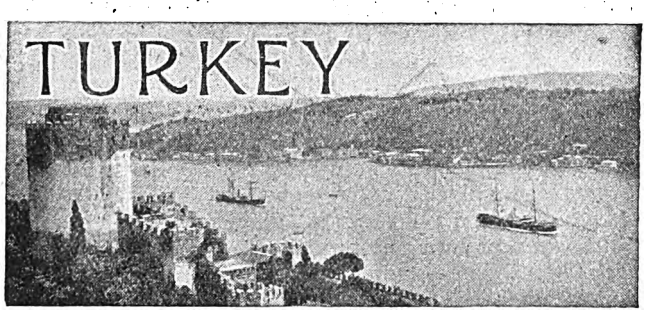
attended and seemed greatly to enjoy the performances. Nearly sixty pounds was raised in aid of the Anglo-Serbian Children's Hospital in Belgrade, which is run by Dr. McPhail and is rendering most valuable services to humanity and serving to maintain the bonds of affection established between the Yugoslav and British peoples during the War, which are in danger of rusting away now that the troubles of peace are causing Europe to forget the sacrifices of the War years. Friends of the Yugoslav people in England cannot show their friendship in any more fitting and more profitable way than by giving this hospital, the only Children's Hospital in Yugoslavia, their full support.



Constantinople, March 28.

Inspection of Films.

Uncalled-for and out-of-place officialdom has again been the cause of trouble here. Officials of the Public Prosecutor's office some days ago entered the Opera Cinema and demanded a box, gratis, stating that they wished to inspect the film. The director of the cinema naturally requested to see the written order of the Attorney-General, and on learning that these officials had no such order informed them that he was unable to submit to their demand. The officials in question thereupon reported the affair to the police station, and the cinema director was eventually arrested and imprisoned and put on trial on a charge of contempt of authority. According to the local Press there exists a law which stipulates that all cinema and theatre proprietors shall permanently hold a box at the disposition of the police or vilayet authorities to permit them to inspect plays, operettes, films and so forth. Sureya Pasha, cinema proprietor and Deputy for Constantinople, declares, however, that no such law exists and refuses permanently to attribute to the Authorities a box in his cinema. As films are submitted to censor before projection it is difficult to understand why they should be submitted to a further control at the expense of the cinema. Films very often pass through four cinemas in the town and it is absurd to think that they may, in the fourth cinema, be again inspected by police officials of the Public Prosecutor's office. No purpose whatsoever is served by such procedure—if one excepts that of obtaining free entertainment for officials—and the proprietor of the Cinema Opera is to be congratulated for his courage in standing up to the Authorities and exposing still another form of abuse.

The Impunity of M.P.s.

A Turkish satirical journal recently warned its readers by publishing an article which had for its title something like an interpretation of "Hands off Deputies." This was writen as a result of some unfortunate individuals having come off badly in an altercation with a member of the Grand National Assembly. To-day's papers report, however, another incident which would seem to justify a further article entitled "Deputies! Hands off the People!" Apparently a Deputy was incommoded in one of the Galata cafés by someone passing his table, and he rebuked the disturber in terms to which the latter took the strongest exception. On his intimating that the words employed by the Deputy could not be truthfully attributed to him the distinguished Member settled the dispute by asserting that he was a Deputy and, as if to be more convincing, struck the unintentional offender with his walking stick.

As it happened, the unfortunate man and the fighting Deputy met a little later on one of the ferry-boats and the quarrel was resumed. Police intervened, but the magic word "Deputy" left the aggressor free, while his victim was despatched to hospital under escort. Why the mere fact of being a Member of Parliament should be sufficient to frighten off the police is a point which remains obscure, and if such things are to be allowed to continue, the least that could be done in the interests of the ordinary public would appear to be to issue some distinguishing badge to Members likely to take undue advantage of their position and so give the people a chance to steer clear.

The Turkish and Foreign Press.

Yesterday the Association of the Turkish Press gave a tea in honour of the visit of Erjumend Ekrem Bey, Director General of the Press, and to this all foreign correspondents in Constantinople were invited. This is the first occasion on which all members of the Turkish and foreign Press have been able to get together, and it is to be hoped that such gatherings will be continued as they are doubtless to the benefit of all concerned.

A State Bank.

There has been much recent talk about the establishment of a Turkish State Bank and discussion on whence the funds required for it shall be found. According to declarations of Ismet Pasha the creation of a State Bank will be an accomplised fact before the end of this year. The Crown Jewels will doubtless be sold in the near future and these are expected to provide at least 50 million liras. Negotiations are said to be already in progress for the sale of the marvellous throne of Ismail, the pearls of which will make scores of necklaces whose equals it will be hard to find. The disposal of the great diamonds, emeralds and rubies which constitute the most valuable portion of the remaining treasures, will, however, encounter more difficulties, as they are too large for use in their present state, and with cutting they will lose much of their value. Nevertheless, they will be quite useful in swelling the coffers of the Treasury.

Queen Marie of Roumania.

Queen Marie of Roumania, with Princess Ileana, *en route* for Cyprus, arrived here on Monday and spent two days in seeing the sights of the town. The royal party left yesterday afternoon in the s.s. Regele Carol.

Queen Marie is travelling strictly *incognito*, and it is officially reported that the voyage is being undertaken solely for the benefit of the health of Princess Ileana. There are persistent rumours that ex-Prince Carol is to meet his mother at Cyprus, but Captain Kiliatchesko, who is accompanying the Queen, stated that there was no truth in these reports.

PERSONAL AND GENERAL

TO-DAY

April 5, 1928 (New Style).
March 23, 1928 (Old Style).
Shawall 14, 1346, A.H., of the Muslim Calendar.
Nisan 15, 5699, of the Jewish Calendar.

Prince Ali Khan arrived at the Ritz Hotel last week from the country.

Sir John Simon left Delhi for Bombay on March 29, on his way to England.

Sir Valentine Chirol returned last week to 34, Carlyle Square from South Africa.

Viscount and Viscountess Devonport have returned to London from their tour in Egypt and Palestine.

The Maharaj-Kumari Devi, younger daughter of the Maharajah of Burdwan, gave birth to a son on March 27, at 20, Kensington Gore.

Sir John and Lady Stavridi and the Misses Stavridi left London on March 29 for Florence, and will be away until the beginning of May.

Abul'l-,Ala Afifi has been appointed Lecturer in Arabic and 'Abdu'l-Qadib Zafir Effendi Lecturer in Turkish at Cambridge University as from January 1, 1928, to December 31, 1928.

Jaafar Pasha al Askari has arrived in London to take up his post of Iraq Diplomatic Agent in London, at 51, Queen's Gate Gardens. The Secretary of the Legation, Atta Beg Amin, has arrived with him.

Princess Mary and Viscount Lascelles, during their stay at Luxor, spent a morning in the Valley of the Kings, under the guidance of Mr. Howard Carter. On April 10 the Princess will leave by special train for Palestine.

The King has been graciously pleased to approve the appointment of Mr. William Seeds, his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Durazzo, to be his Majesty's High Commissioner on the Inter-Allied Rhineland High Commission at Coblenz, in succession to the Earl of Erroll, who died in February. Mr. Seeds entered the Diplomatic Service in 1904 and became British Minister to Albania in 1926.

HONORARY CONSULS FOR TURKEY.

The following have been appointed Honorary Consuls for Turkey: Mr. John Birrell Bower, Liverpool; Mr. Fredrik Karl Gollcher, Valetta, Malta; Mr. M. P. Rowan, Dublin; Mr. Charles E. Siddal, Sheffield; Mr. Frank Hawker, Birmingham; Mr. Daniel Th. Williams, Cardiff; and Mr. J. Burns Cameron, M.A., LL.B., Glasgow.

THE RESIDENCY OF ADEN.

The Colonial Office announces that the King has approved the appointment of Lieutenant-Colonel George Stewart Symes, C.M.G., D.S.O., Chief Secretary to the Government of Palestine, to be Resident and Commander-in-Chief at Aden, in succession to Major-General Sir J. H. K. Stewart, K.S.B., D.S.O., who is vacating the office. The appointment is the first to be made under the new arrangements for the administration of Aden, whereby the responsibility for political and military matters is vested in His Majesty's Government in Great Britain, while the internal muncipal administration of the settlement of Aden remains the responsibility of the Government of India. Lieutenant-Colonel Symes, who has already had military experiences in Aden, entered the Army in 1900, and after serving in the South African War was attached to the Egyptian Army in 1905 and the Sudan Government in 1908. In the Sudan he served in the Blue Nile Expedition, 1908, and rose to be Secretary of the Governor-General's Council before leaving for service in the Great War in 1916. He was on the Staff of the High Commissioner for Egypt in 1917, and was attached to the Ministry of the Interior in 1919-20. In September, 1920, he went to Palestine as a District Governor, and became Chief Secretary in succession to Sir Gilbert Clayton in 1925. He represented Palestine before the Permanent Mandates Commission at Geneva in 1926.

Sir Denison Ross has been invited by the Hungarian Academy in Budapest to lecture before it on April 13. His subject will be the services rendered to Oriental studies by Hungarian scholars, especially Cosma de Körös.

Miss Young's Camp, Troodos.

There are summer quarters, for a limited number of paying guests, on Troodos (Miss Young's) in the midst of forests, 6,406 ft. above the sea—the summer resort of the Troops and Government Officials. 20 hours from Port-Said.

Pitched in the pine forest in a lofty and secluded situation, on the upper slopes of Mount Olympus—25 minutes from the summit. Perfect climate, dry, cool and bracing air, enchanting panoramas; no mosquitoes; completely equipped with every comfort and convenience.

Troodos is 35 miles from Limassol and 45 miles from Nicosia. From both towns there are good carriage and motor roads. The summer climate is dry and healthy. The nights are often rather cold after the end of August. As regards dress, Ladies should be provided with washing skirts, as there is a good deal of red dust on the hills; white is much worn, but dust-coloured costumes are advisable. A warm woollen coat and skirt are essential. Riding and motor excursions, Tennis and croquet are the chief occupations of the Visitors. An English Club provides Newspapers, Telegrams (Reuter's) and Books. The water supply is good, and there is plenty of fresh milk. Inclusive terms £3 10s. a week. *Open June 15.*

Apply to Miss Young, 38 Victoria Street, Nicosia, Cyprus.

THE WEEK AT HOME

London, Tuesday Morning.

The Extension of the Franchise.

No one could suppose that the second reading for the Bill enfranchising women between the ages of 21 and 30 would not be passed in the Commons, but few can have anticipated that only ten members would vote against it and about two hundred indulge in wistful, perplexed abstinence. As a matter of fact, the affair provided a most readable debate, in that certain supporters of the Bill soared to fine heights of eloquence and a rodent rump bit delightfully into the more tender portions of their opponents.

Of enthusiasm over the extension of the franchise it would be extravagant to say that there is any considerable amount. Not that any serious notice is taken of the Die-Hards' ghastly fears that the immemorial male will in future be swamped by an emotional female electorate—actually the percentage of idle, unmarried women under twenty-five whom the chivalrous journals delight to call "flappers" is, of the 5,500,000 women to be enfranchised, only four. But the truth is that the hollowness of the vote is now clearly seen, that mass electorates merely provide a mist through which the Executive can more darkly work its will, that the multiplication of the vote means, in effect, the decreasing of the individual member's enterprise and scope.

On theoretical grounds, as I have said before, nothing can be offered against giving the vote to the woman as to the man, except biological prejudices. But to the doughty ten who indulged in these prejudices in the House of Commons last week, hats should be taken off, for these benighted knights put up a very dazzling show. They certainly deserve—what the Conservative Party agents certainly reckon upon—the allaying of their apprehensions by the demonstration that these additional female votes will be cast at the next General Election in favour of the Conservative Party.

You still can hear, in unexpected quarters, dark fears that these newly enfranchised females will vote as a sex, that women are more fanatical than men, and so awfully on. For myself, I think that that is rubbish, that the "sex-war" is a myth, that no opponents of women are so strong as other women, and that, on the whole, women's votes will be cast in favour of stability. That women can be revolutionary is admitted; but revolutions are not achieved through constitutional means, and you certainly do not make women more revolutionary by giving them a vote.

Political Changes.

The death of Lord Cave last week added pathos to his retirement from the Lord Chancellorship, to which Sir Douglas Hogg has succeeded. Sir Douglas is a most able, likeable man, however much one might disagree with the expression of his political views. The appointment is a popular one.

He is succeeded as Attorney-General by Sir Thomas Inskip, who is pre-eminently a "sound" figure. In the common mind he is associated with the representation in Parliament of the Evangelical point of view in the Prayer-Book controversy.

And Sir Thomas is succeeded by Mr. F. B. Merriman, a Mancunian K.C. who had not achieved much political fame. The new Solicitor-General also has a niche in the common mind for his work for the plaintiff in the recent libel action, Wright *v.* Gladstone.

Liberals' Activity.

Whatever else may be said of the Liberal Party, it must at least be conceded that it is active. A Liberal Industrial Conference was held in London last week; those "political breakfasts" which used to be the delight of Mr. Lloyd George and the road to ruin of impressionable journalists have been started by the League of Liberal Trade Unionists and Co-operators; and a grand attempt is being made now to represent the Liberal Party as essentially the "young man's party."

Is there really a Liberal revival? The question is yet being asked, now anxiously, now hopefully. Obviously the personality of Mr. Lloyd George still counts for something, particularly with those small minds who are worried by certain actions of the present Administration and have not sufficient courage boldly to support the main Opposition to the present Government. Is it true that the Liberals have discovered a new policy which is, as Mr. Lloyd George claimed for it last week, a practical alternative both to Socialism and to Conservatism? I can find little evidence of it; certainly among young men there is little enthusiasm for the Liberal Party. It is still a fact that, if Mr. Lloyd George's character is not a stumbling-block, what enthusiasm there is centres round that rather than round new Liberal proposals.

The Prayer Book.

The first and least important round in the struggle of the re-revised Prayer Book was won last week, when the Lower Houses of the Convocation of Canterbury and York agreed with the resolution of the Upper Houses that the Measure should be laid before the Church Assembly for final approval. There were 176 votes cast against 67. The special session of the Church Assembly begins on April 26.

Even now it is impossible to speculate upon the ultimate result. It was obvious during the debates last week that, as I had hinted previously, some voted for who had voted against on the first occasion, and *vice versa*. The general opinion appears to be that opposition to the new Measure is more varied than it was for the original Measure, but whether it is more solid it is difficult to say.

Sport.

The last few days have been days of glory for Cambridge men, for the Light Blues in one week triumphed over Oxford in the Sports, in Golf, and in the Boat Race. The first two events were by no means easy victories, but over the third Oxford men are hanging their heads in shame or wagging them in direst perplexity. For the Dark Blues since the War have won the Boat Race but once, and there really seems little hope of staving off the important victory next year of Cambridge unless something radical is done in rowing at Oxford.

But if Cambridge are all smiles over last week's

Book Review

AFGHANISTAN.

"AFGHANISTAN OF THE AFGHANS." By Sirdar Ikbal Ali Shah. (London: The Diamond Press, Ltd' 21s. net.)

"THROUGH THE HEART OF AFGHANISTAN." By Emil Trinkler. Edited and Translated by B. K. Featherstone. (London: Faber and Gwyer. 15s. net.)

In view of the paucity of modern works on Afghanistan the simultaneous appearance of these two books may safely be attributed to the prompting given by King Amanullah's decision to pay a visit to Europe. They are, accordingly, *felices opportunitate*, for the King's object would be only half accomplished, if a quickening of interest in his country did not follow his—for Afghanistan—epoch-making tour. On the other hand it is probable that one at least of the books has suffered from the urgency imposed on the author to have it ready in time for the Royal Afghan visit. There is a patchiness about "Afghanistan of the Afghans," which suggests that the writer has drawn on his acquired knowledge rather than written from the fullness of his personal experience. It may be that time and distance (the Preface is dated from Angora) have dimmed impressions; but from an Afghan pen the reader would have expected a book that would at least have put the "Afghanistan" of Angus Hamilton into the shade. Sirdar Ikbal Ali Shah, however, seems to be not sure enough of himself, despite his profound and scholarly knowledge of English and his travel record. Between the two brief opening chapters on the geography and the history of Afghanistan and the penultimate chapter entitled "Progress and Policy," which essays a hurried sketch of present conditions, there is so much that could usefully be told about Afghanistan for European enlightenment that the reader is inclined to regret the space given to matters interesting enough, but of little moment. The history of a well-to-do Afghan is followed from the cradle to the grave in regard to customs, ceremonies and beliefs, with a great wealth of detail. Witchcraft, charms, and divination and the supernatural are dealt with interestingly, and the mind of the Afghan is interpreted to the reader by chapters on songs and sayings, hero tales and legends. A long chapter is devoted to Pan-Islamism. The author sets out to deal with the part which Afghanistan has played in the Pan-Islamic movement; and the reader is taken to India, to Turkey and to Mecca, but only to find that, strictly speaking, Afghanistan played no part in the movement, whatever plans others had for her. When we come to present-day conditions in Afghanistan it is a bad start to be told on the first page that King Amanullah, who is ignorant of both languages, speaks English and French, and we are left wondering whether in other directions, where he cannot be so easily checked, our author's kindly disposition prompts him to see things as they should be rather than as they are. His book, however, is essentially readable, and the large type of 250 pages (to which are added 22 pages of the texts of treaties) ensures that the pleasure will pass all too quickly for twenty-one shillings.

Dr. Emil Trinkler's book, admirably translated by Mr. B. K. Featherstone, provides a striking contrast to Sirdar Ikbal Ali Shah's. Here we have the cheery, personal touches of the traveller recording his first impressions. The author had occasion in 1923 to undertake a journey to Afghanistan as geologist to the newly-founded German Afghan Trading Company at Kabul. The book describes his experiences and impressions, and as he entered the country from Kushk and proceeded right across it *via* Herat to the Khyber Pass, he covered a fair amount of ground. Owing to delays in Russia, Dr. Trinkler did not reach Afghanistan until November, and his three weeks' trek to the capital had to be performed under winter conditions. His description suggests that it will still be a long time before a railway joins Herat and Kabul, and that a more probable route, if ever India is to be reached by rail from Russia, will be by way of Termez and Kabul rather than by Merv, Kushk and Herat. Unfortunately, the scientific side of Dr. Trinkler's expedition is reserved for a separate volume, so that we are not told his opinion of Afghanistan's mineral wealth which is reputed to be great. There is, however, a graphic account of every-day conditions in the country, and the reader is carried interestingly through the author's experiences. Incidentally, there is a full account of the Piperno incident, which ended in the execution of the Italian of that name.

From Afghanistan, Dr. Trinkler went on to India, and here he finds an even more inspiring subject for his pen. His descriptions are simple and vivid, and the chapter devoted to "India's Magic Beauty" shows him as good a descriptive writer as he is an artistic photographer. That he was profoundly attracted by India is apparent: "I was able to enter into the spirit of India undisturbed. What I experienced and saw was the true India, the India of the old songs, about which one reads in books." But Dr. Trinkler was not blind to the other side:—

> I was impressed at every turn with the might and the power of England and of the colonising powers of this country, for where the Union Jack flies, there is peace and good order. One is astounded when one sees what England has done for India, and I am quite certain that many of us would have different views about India, if we spent a longer time there."

An important archæological discovery has been made by a peasant at Kytheraea, in the island of Cyprus, of a bronze statue of heroic size and in an admirable state of preservation.

As the result of torrential rains last week many rivers in Southern Serbia overflowed. Railway communication on the Belgrade-Salonika line between Skoplye and Guevegueli was interrupted by the flooding of the Vardar.

The Roumanian "C.I.D." recently discovered a band of dollar forgers, two of whom were stated to be lawyers. The police have made many searches and arrests, and are reported to have found evidence of extensive correspondence with Moscow.

The Jerusalem correspondent of *The Times* states that investigators sent on behalf of a British company have discovered a bed of phosphate deposits, estimated to contain 18,000,000 tons, near Es Salt, in Trans-Jordan. The company has already opened preliminary negotiations for exploiting the discovery.

The gold medal of the Institution of Mining and Metallurgy has been awarded to Sir Alfred Mond, M.P., "in recognition of his scientific and industrial services in the development of the mineral resources and metallurgical industries of the British Empire." The medal will be presented to Sir Alfred at the annual general meeting of the institution at Burlington House on May 17.

GREAT BRITAIN AND TRANS-JORDAN.

The text of the Agreement between Great Britain and Trans-Jordan was issued last week as a White Paper by H.M. Stationery Office (Cmd. 3069, price 2d.). The text is as follows:—

Whereas His Britannic Majesty, in virtue of a Mandate entrusted to him on July 24, 1922, has authority in the area covered thereby; and whereas His Highness the Amir of Trans-Jordan has set up an Administration in that part of the area under Mandate known as Trans-Jordan; and whereas His Britannic Majesty is prepared to recognise the existence of an independent Government in Trans-Jordan under the rule of His Highness the Amir of Trans-Jordan, provided that such Government is constitutional and places His Britannic Majesty in a position to fulfil his international obligations in respect of that territory by means of an Agreement to be concluded with His Highness.

Now therefore His Britannic Majesty and His Highness the Amir of Trans-Jordan have resolved to conclude an Agreement for these purposes, and to that end have appointed as their plenipotentiaries:—

His Majesty the King of Great Britain, Ireland and the British Dominions beyond the Seas, Emperor of India,

For Great Britain and Northern Ireland: Field-Marshal the Right Honourable Lord Plumer, G.C.B., G.C.M.G., G.C.V.O., G.B.E.

His Highness the Amir of Trans-Jordan: Hassan Khalid Pasha Aboul Houdy,

who, having communicated their full powers, found in good and due form, have agreed as follows:—

ARTICLE 1.

His Highness the Amir agrees that His Britannic Majesty shall be represented in Trans-Jordan by a British Resident acting on behalf of the High Commissioner for Trans-Jordan, and that communications between His Britannic Majesty and all other Powers on the one hand and the Trans-Jordan Government on the other shall be made through the British Resident and the High Commissioner aforesaid.

His Higness the Amir agrees that the ordinary expenses of civil government and administration and the salaries and expenses of the British Resident and his staff will be borne entirely by Trans-Jordan. His Highness the Amir will provide quarters for the accommodation of British members of the staff of the British Resident.

ARTICLE 2.

The powers of legislation and of administration entrusted to His Britannic Majesty as Mandatory for Palestine shall be exercised in that part of the area under Mandate known as Trans-Jordan by His Highness the Amir through such constitutional government as is defined and determined in the Organic Law of Trans-Jordan and any amendment thereof made with the approval of His Britannic Majesty.

Throughout the remaining clauses of this Agreement the word "Palestine," unless otherwise defined, shall mean that portion of the area under Mandate which lies to the west of a line drawn from a point two miles west of the town of Aqaba on the gulf of that name up the centre of the Wady Araba, Dead Sea, and River Jordan to its junction with the River Yarmuk; thence up the centre of that river to the Syrian frontier.

ARTICLE 3.

His Highness the Amir agrees that for the period of the present Agreement no official of other than Trans-Jordan nationality shall be appointed in Trans-Jordan without the concurrence of His Britannic Majesty. The numbers and conditions of employment of British officials so appointed in the Trans-Jordan Government shall be regulated by a separate Agreement.

ARTICLE 4.

His Highness the Amir agrees that all such laws, orders, or regulations as may be required for the full discharge of the international responsibilities and obligations of His Britannic Majesty in respect of the territory of Trans-Jordan shall be adopted and made, and that no laws, orders, or regulations shall be adopted or made in Trans-Jordan which may hinder the full discharge of such international responsibilities and obligations.

ARTICLE 5.

His Highness the Amir agrees to be guided by the advice of His Britannic Majesty tendered through the High Commissioner for Trans-Jordan in all matters concerning foreign relations of Trans-Jordan, as well as in all important matters affecting the international and financial obligations and interests of His Britannic Majesty in respect of Trans-Jordan. His Highness the Amir undertakes to follow an administrative, financial, and fiscal policy in Trans-Jordan such as will ensure the stability and good organisation of his Government and its finances. He agrees to keep His Britannic Majesty informed of the measures proposed and adopted to give due effect to this undertaking, and further agrees not to alter the system of control of the public finances of Trans-Jordan without the consent of His Britannic Majesty.

ARTICLE 6.

His Highness the Amir agrees that he will refer for the advice of His Britannic Majesty the annual Budget law and any law which concerns matters covered by the provisions of this Agreement, and any law of any of the following classes, namely:—

(1) Any law affecting the currency of Trans-Jordan or relating to the issue of bank notes.

(2) Any law imposing differential duties.

(3) Any law whereby persons who are nationals of any States members of the League of Nations or of any State to which His Britannic Majesty has agreed by treaty that the same rights should be ensured as it would enjoy if it were a member of the said League, may be subjected or made liable to any disabilities to which persons who are British subjects or nationals of any foreign State are not also subjected or made liable.

(4) Any special law providing for succession to the Amir's throne, or for the establishment of a Council of Regency.

(5) Any law whereby the grant of land or money or other donation or gratuity may be made to himself.

(6) Any law under which the Amir may assume sovereignty over territory outside Trans-Jordan.

(7) Any law concerning the jurisdiction of the Civil Courts over foreigners.

(8) Any law altering, amending or adding to the details of the provisions of the Organic Law.

ARTICLE 7.

Except by agreement between the two countries there shall be no Customs barrier between Palestine and Trans-Jordan, and the Customs tariff in Trans-Jordan shall be approved by His Britannic Majesty.

The Government of Palestine shall pay to the Trans-Jordan Government the estimated amount of Customs duties levied on the part of the goods entering Palestine from territory other than Trans-Jordan which subsequently enters Trans-Jordan for local consumption, but shall be entitled to withhold from the sums to be paid on this account the estimated amount of Customs duties levied by Trans-Jordan on that part of the goods entering Trans-Jordan from other than Palestine territory, which subsequently enters Palestine for local consumption. The trade and commerce of Trans-Jordan shall receive at Palestinian ports equal facilities with the trade and commerce of Palestine.

ARTICLE 8.

So far as is consistent with the international obligations of His Britannic Majesty no obstacle shall be placed in the way of the association of Trans-Jordan for Customs or other purposes with such neighbouring Arab States as may desire it.

ARTICLE 9.

His Highness the Amir undertakes that he will accept and give effect to such reasonable provisions as His Britannic Majesty may consider necessary in judicial matters to safeguard the interests of foreigners.

These provisions shall be embodied in a separate Agreement, which shall be communicated to the Council of the League of Nations, and, pending the conclusion of such Agreement, no foreigner shall be brought before a Trans-Jordan Court without the concurrence of His Britannic Majesty.

His Highness the Amir undertakes that he will accept and give

effect to such reasonable provisions as His Britannic Majesty may consider necessary in judicial matters to safeguard the law and jurisdiction with regard to questions arising out of the religious beliefs of the different religious communities.

ARTICLE 10.

His Britannic Majesty may maintain armed forces in Trans-Jordan, and may raise, organise, and control in Trans-Jordan such armed forces as may in his opinion be necessary for the defence of the country and to assist His Highness the Amir in the preservation of peace and order.

His Highness the Amir agrees that he will not raise or maintain in Trans-Jordan, or allow to be raised or maintained, any military forces without the consent of His Britannic Majesty.

ARTICLE 11.

His Highness the Amir recognises the principle that the cost of the forces required for the defence of Trans-Jordan is a charge on the revenues of that territory. At the coming into force of this Agreement, Trans-Jordan will continue to bear one-sixth of the cost of the Trans-Jordan Frontier Force, and will also bear, as soon as the financial resources of the country permit, the excess of the cost of the British forces stationed in Trans-Jordan, so far as such forces may be deemed by His Britannic Majesty to be employed in respect of Trans-Jordan, over the cost of such forces if stationed in Great Britain, and the whole cost of any forces raised for Trans-Jordan alone.

ARTICLE 12.

So long as the revenues of Trans-Jordan are insufficient to meet such ordinary expenses of administration (including any expenditure on local forces for which Trans-Jordan is liable under Article 11) as may be incurred with the approval of His Britannic Majesty, arrangements will be made for a contribution from the British Treasury by way of grant or loan in aid of the revenues of Trans-Jordan. His Britannic Majesty will also arrange for the payment of the excess of the cost of the British forces stationed in Trans-Jordan, and deemed by His Britannic Majesty to be employed in respect of Trans-Jordan, in so far and for such time as the revenues of Trans-Jordan are insufficient to bear such excess.

ARTICLE 13.

His Highness the Amir agrees that all such laws, orders or regulations as may from time to time be required by His Britannic Majesty for the purposes of Article 10 shall be adopted and made, and that no laws, orders or regulations shall be adopted or made in Trans-Jordan which may, in the opinion of His Britannic Majesty, interfere with the purposes of that article.

ARTICLE 14.

His Highness the Amir agrees to follow the advice of His Britannic Majesty with regard to the proclamation of martial law in all or any part of Trans-Jordan and to entrust the administration of such part or parts of Trans-Jordan as may be placed under martial law to such officer or officers of His Britannic Majesty's forces as His Britannic Majesty may nominate. His Highness the Amir further agrees that on the re-establishment of civil government a special law shall be adopted to indemnify the armed forces maintained by His Britannic Majesty for all acts done or omission or defaults made under martial law.

ARTICLE 15.

His Britannic Majesty may exercise jurisdiction over all members of the armed forces maintained or controlled by His Britannic Majesty in Trans-Jordan.

For the purposes of this and the five preceding articles, the term "armed forces" shall be deemed to include civilians attached to or employed with the armed forces.

ARTICLE 16.

His Highness the Amir undertakes that every facility shall be provided at all times for the movement of His Britannic Majesty's forces (including the use of wireless and land-line telegraphic and telephonic services and the right to lay land-lines), and for the carriage and storage of fuel, ordnance, ammunition and supplies on the roads, railways and waterways and in the ports of Trans-Jordan.

ARTICLE 17.

His Highness the Amir agrees to be guided by the advice of His Britannic Majesty in all matters concerning the granting of concessions, the exploitation of natural resources, the construction and operation of railways, and the raising of loans.

ARTICLE 18.

No territory in Trans-Jordan shall be ceded or leased or in any way placed under the control of any foreign Power; this shall not prevent His Highness the Amir from making such arrangements as may be necessary for the accommodation of foreign representatives and for the fulfilment of the provisions of the preceding articles.

ARTICLE 19.

His Highness the Amir agrees that, pending the making of special extradition agreements relating to Trans-Jordan, the Extradition Treaties in force between His Britannic Majesty and foreign Powers shall apply to Trans-Jordan.

ARTICLE 20.

This Agreement shall come into force so soon as it shall have been ratified* by the High Contracting Parties after its acceptance by the constitutional Government to be set up under Article 2. The constitutional Government shall be deemed to be provisional until the Agreement shall have been so approved. Nothing shall prevent the High Contracting Parties from reviewing from time to time the provisions of this Agreement with a view to any revision which may seem desirable in the circumstances then existing.

ARTICLE 21.

The present Agreement has been drawn up in two languages, English and Arabic, and the Plenipotentiaries of each of the High Contracting Parties shall sign two English copies and two Arabic copies. Both texts shall have the same vitality, but in case of divergence between the two in the interpretation of one or other of the Articles of the present Agreement, the English text shall prevail.

In faith whereof the above-mentioned Plenipotentiaries have signed the present Agreement.

Done at Jerusalem, this twentieth day of February, one thousand nine hundred and twenty-eight.

(Signature in Arabic.)
HASSAN KHALID ABOULHOUDY.
PLUMER, F.M.

* The Agreement has not yet been ratified.

NEWS IN BRIEF.

The Yugoslav Parliament adjourned last week for Easter. The new session will begin on April 20.

King Amanullah of Afghanistan has given the Lord Mayor of London £1,000 for London's poor.

The contract with the British Naval Mission, consisting of six officers, has been renewed till March 14, 1929.

Flights of locusts were reported on March 27 to be in the neighbourhood of Semakh and Jericho, in the Jordan Valley.

Teheran wireless station, having received a set of new valves, is now in working order, and in communication with Beyrout, Angora, and Kabul.

An earthquake occurred at Smyrna on March 31 in which 55 people were killed and 146 injured. The earthquake was felt at Oushak, Magnesia, Konia, Afion-Karahissar, and Constantinople.

As the result of an accident near Amman (Trans-Jordan) to a D.H.9A machine of No. 14 (Bombing) Squadron, Amman, on March 28, Flight-Lieutenant George McCormack, pilot of the aircraft, and 349781 Leading Aircraftsman James Kimberley were killed.

Persian troops last week gained control of the situation in Luristan, according to *The Times*, and the Lurs have retreated into the mountains. The work on the new road is making good progress now that interference from the tribes has ceased.

The Turkish Minister at Berne has informed the Swiss Government that his Government desires to conclude a treaty of arbitration with Switzerland and also would like Switzerland to create a Legation in Turkey. A conference on the subject has taken place at Berne.

Queen Marie of Roumania, accompanied by her daughter, Princess Ileana, arrived at the Piræus on March 28 on board the Roumanian steamer Regele Carol *en route* for Cyprus. As her Majesty is travelling privately no official reception was given to her, and she did not land to visit Athens.

It is unofficially stated in the Polish Press that the Polish Legation in Angora and the Turkish Legation in Poland are about to be raised to the rank of Embassies, and that M. Kasimir Olszowski, the Polish Minister in Berlin, will be transferred as first Ambassador to Turkey.

The Estimates for Foreign and Imperial Services for 1928 show that this year £296,000 will be required for defence in the Colonies and the Middle East compared with the £510,000 of 1927. Assistance to maintain the Iraq Army will require £73,125, and the maintenance of the Iraq Levies £221,250. Iraq will altogether consume £620,000.

The Bishop of Manchester, addressing the missionary conference in Jerusalem on March 29, said that the fundamental divisions of the Christian Church had hitherto depended not on doctrine, but on geography. Care was necessary lest the movement towards national Churches for India, China, Japan, and elsewhere should lead to the separation of Christians.

The Jerusalem correspondent of *The Times* states that the local Arabic Press bitterly attacks the terms of the Anglo-Trans-Jordanic Treaty as being humiliating and resembling rather those of a contract between a workman and his employer. *Al Falastin* recommends the people of Trans-Jordan to decline to ratify the Treaty through their representatives.

Mr. Abbosh, of Baghdad, who was with the convoy of cars raided by rebels in the desert, near Rutba Wells, on March 13, was seriously injured. An S.O.S. was sent out from Gaza to the Imperial Airways liner City of Delhi, asking if Mr. Abbosh could be accommodated. The liner rushed the injured man to hospital in Baghdad, where he is now recovering.

THE DELHI SESSION.

It would be idle to suggest that the Indian Legislative Assembly has enhanced its reputation, as a responsible and self-respecting deliberative body, by its proceedings during the session which came to an end last week. On the contrary it has again shown, and in increased measure, that sense of irresponsibility, and that indifference to the interests of India, which have unfortunately characterised more than one of its previous sessions. Some useful work it has certainly accomplished, but it has thoughtlessly rejected important measures designed to promote the well-being of the people, and to advance them on the path to self-government. And the Swarajists—having in mind no doubt their tactics of 1924—attempted to bring about the rejection of the Budget. But luckily for the reputation of the Assembly this absurdity did not succeed. It is impossible to believe that any Indian politician could sincerely wish to reject a Budget which provided for the final and complete remission of the provincial contributions. The proposal could therefore have been made merely for obstructive purposes with the knowledge, of course, that the Viceroy would exercise his powers of certification. The only logical sequel to the rejection of the Budget in 1924 was a revolution. But the Swarajist party is in no better position to-day to bring about a revolution than it was then. There was thus no object in endeavouring to overthrow the Budget.

The worst blunder which the Assembly made during the session was, of course, its endorsement of the policy of boycotting the Statutory Commission. For it thereby exhibited its inability to take a broad view of a great problem, and its eagerness to attach more importance to imaginary insults than to the advancement of India. It is satisfactory to see, from the latest news, that the country generally is not disposed to follow the lead of the Assembly in the matter. The Council of State, and the Legislative Councils of the Punjab and Burma, have expressed their willingness to co-operate with the Commission. And the attempt to organise hostile demonstrations on the arrival of the Commissioners at the various centres has been largely unsuccessful. In Calcutta for instance the reception was good, as it was in Madras also, although the Madras Legislative Council had previously supported the policy of boycott. Nor does it appear that the many other places visited by the Commission have shown much or any of that bitterness and resentment which the political leaders have talked about so volubly. It may be urged, of course, that the boycott will be renewed with greater intensity and more concentrated bitterness on the return of the Commission to India. But, as we have said several times before, we do not believe that the people of India will endorse and persist in so foolish a policy. And at the moment the indications certainly are that the opposition will slowly melt away as the aims and intentions of the Commission become more and more clearly understood. The extreme party, the Swarajists, will not be reconciled. No Commission, except one consisting of themselves, would be acceptable to them. But they are not truly representative of the Indian people; and it would now appear, as we have previously anticipated, that the reasonable and moderate men of all castes and creeds are beginning to appreciate the fact that the Commission presents to them a great opportunity for furthering the interests of their country.

In its treatment of the Indian Navy Bill the Assembly was as ill-advised as it was in regard to the Commission. The decision of the Government to establish a Royal Indian Navy was announced by Lord Reading in 1926; and the necessary legislation was undertaken by Parliament last year. But Indian legislation is also required in compliance with the provisions of the Government of India Act 1919. A Bill was accordingly brought into the Assembly last month. The scheme, of which this Bill was to be part, contemplates the reconstruction of the Royal Indian Marine as a combatant force to enable India to enter upon the first stage of her naval development, and ultimately to undertake her own naval defence. At the present time the Marine consists of about fifty vessels large and small, and about 150 commissioned officers. Its reconstruction would be entrusted to the existing personnel; and Indians would be admitted as commissioned officers in the proportion, at the outset, of one-third. This would seem to be a liberal proportion to begin with, seeing that there are no Indian naval officers at present; and that it is doubtful whether Indians with the necessary qualifications will devote themselves to a naval career. It was surely not unreasonable to anticipate that the scheme would be acceptable to Indians generally; and it was in fact understood almost to the time of the introduction of the Bill that there would be no serious opposition. But the Assembly rejected the Bill by a majority of one. The objections taken by its opponents were that under the scheme the Indian legislature would not control the Navy; that it might be used outside India by order of the Governor-General; that England would not necessarily pay for using the ships; and that the proportion of Indian officers to be admitted was too small. What these objections really amount to is, of course, that if the Indian Navy cannot be independent of Great Britain the Assembly would rather not have it. But what is so curious about this attitude is that those who favour it are presumably content that matters should remain as they are at present. There clearly cannot be an Indian Navy, such as the politicians profess to want, without Indian officers. But, as we have mentioned, there are no Indian naval officers at present, and there are no means of bringing them into existence. The scheme offered to a few Indians a prospect of a naval career. It was, that is to say, a beginning in the direction of the creation of an Indian Navy. But as in so many other cases the Indian leaders utterly failed to seize the opportunity. Because they were not offered all that they wanted they refused to have anything.

The Reserve Bank Bill affords yet another instance of the same weakness. Admittedly this measure has been objected to, as regards certain of its provisions, by critics other than the Bombay financial magnates and the Swara-

Digitized by Google

jists. But it indisputably proposed to give to India precisely that freedom from the financial control of the Secretary of State that Indian politicians have for years past loudly demanded. Self-government, whether in India or in any other country, is impossible without financial freedom; and that freedom was offered by the Bill. But once again the Indian leaders failed to rise to the occasion. Merely for the paltry purpose of embarrassing the Government they sacrificed a chance which, even in their most sanguine moments, they could scarcely have expected to get. By rejecting the clause which provided the Bank with a Board of Directors they made the Bill impossible, and the Government had no alternative but to withdraw it. Thus for the third time in one session the Assembly refused to accept a proposal the adoption of which would have certainly advanced India on the road to self-government. It is not an encouraging record, and the Assembly cannot expect to be regarded as a serious legislative body if it continues to act with so little sense of responsibility.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 15, 1928.

All-Parties Conference.

On Sunday the All-Parties Conference considered the report of a sub-committee that had been appointed, and an official summary of the report was given to the public. It is desired that it should be clearly understood that the report is only the result of informal discussions, and is not meant to be a formal document, or to contain final decisions. Such as it is, it begins with a comprehensive Declaration of Rights, a leaf out of the book of the English Parliament. The Declaration was agreed to with almost unanimity, such dissenting notes as there are relating to but minor matters, or to additions that the writers of the notes desired should be made.

The clauses relating to the Indian States lay down that they must form part of the Indian Commonwealth, and cannot be separated from the rest of India. The Commonwealth Government, to begin with, will assume all the rights and obligations of the present British-India Government; then, while respecting treaty rights, will negotiate with each State for a closer union. This closer union should be an agreement between the Commonwealth Government and the Government and people of the State in question. The States may have the fullest autonomy, but the Commonwealth Government must be the suzerain power, and must control foreign relations, defence, and such matters.

The sub-committee has recommended that Hindustani be the language of the Commonwealth, written either in Devanagri or the Urdu script. Other languages, including English, will be permitted. In the Provinces the local languages will naturally take pride of place, "but Hindustani and, if necessary, English can be used."

The All-Parties Conference could not have succeeded better, had their deliberate aim been to devise the most unworkable Constitution. If what they were engaged in elaborating had really to be acted on, instead of being largely make-believe, India would be heading for civil war. The Indian States have no intention whatever of listening to dictation at that rate from such as Pandits Motilal Nehru and Madan Mohan Malaviya. The Pandits, of course, know that as well as anyone.

The other important political news of the week all comes from Madras. Calcutta is too far from Madras for any controlling of the news received thence. Accordingly I must give the news as published in our own newspapers. It was that the Justice Party had decided to abandon its policy of boycotting the Statutory Commission, and desired a dissolution of the Council, and a general election, for an opportunity to fight the Swarajists. Sir A. Petro, it was reported, had had to put up a stiff fight with his own Party men, such as the Raja of Panagal and Mr. Ramaswamy Mudaliar, but he had ended by carrying them with him.

The Indian States Commitee has issued a questionnaire dealing with the financial and economic relations between British India and the States. This does not cover all the Committee's terms of reference, the explanation of this being that the Committee is of opinion that Part 1 of those terms is not such as could be dealt with in a questionnaire. Part 1 has regard to the rights and obligations arising from treaties, sanads, and engagements, matters upon which a large number of the Princes have obtained legal assistance. The Butler Committee will deal with them separately, deriving benefit from that assistance.

Indian Sandhurst Committee's Report.

The Commander-in-Chief's statement to the Assembly last mail day on the subject of the Skeen Report showed how baseless was the belief that the main recommendations of the Skeen Committee had been turned down by Government. The Government, the Commander-in-Chief said, had accepted the initial recommendations that the number of direct vacancies at Sandhurst open to Indians should be increased from ten to twenty a year, and five to ten vacancies in addition are to be reserved for Viceroy's Commissioned Officers. As regards the further expansion of vacancies, the Government could not accept the Committee's proposals, which amounted to a mere time-table from the years 1929 to 1952, irrespective of whether efficient and suitable candidates were forthcoming. The Committee had produced a programme that was liable, according to its own admission, to be corrected in measure with the availability of candidates. The Government would frame the later stages of the scheme in the light of actual experience. The ten vacancies now open to Indians do not produce ten Indian King's Commissioned Officers a year.

Calcutta Health Exhibition.

"A healthier Bengal is a wealthier Bengal" is the keynote struck insistently throughout the Calcutta Health Exhibition, which is now open to the public. The exhibition is a striking revelation of the advance made within recent years in the development of forceful methods of public instruction in the principles governing good health. An hour spent at the exhibition is a fascinating experience. While the scientific aspect has not been neglected, stress has been laid on the popular aspect, experience having shown the latter to be the most effective means of instilling the principles of health and hygiene into the minds of the masses. Brightly coloured posters depict happy, contented people at work and at play, with less cheerful posters by their side depicting the other side of human things. An interesting section is one organised by the Ramkrishna Mission, a Hindu body. That may be mentioned at a time when, it is reported, "Mother India" is still selling in America at the rate of three thousand copies a week. It is a pity that the exhibition cannot remain open for half the year instead of for only one short week.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, March 17.

The Skeen Debate.

Strange things have happened at Delhi this week. It began with the Commander-in-Chief's announcement on the Government of India's decision on the Skeen Committee Report. True that it had been in a large measure anticipated, but nevertheless the realisation came as a shock to the Assembly. The tone of the speeches reflected the temper of the House on hearing the decision; and not all the speakers were members of the Congress Party. That it was not a mere passing storm was indicated by the fact that Mr. Jinnah, speaking immediately

Digitized by Google

after the Commander-in-Chief, declared his intention of moving the adjournment of the House or a reduction of the Army grant. Discussions in the lobby seem to have pointed to the former course as a more emphatic way of expressing the Assembly's resentment at Government's declaration of policy. On Saturday, therefore, the adjournment motion was moved and once more the Opposition, to a man, stood together irrespective of party differences. Thus Government suffered a defeat which was the signal for a series of defeats during the week. One fact, however, emerges clearly, that the Government benches did not join the fray with any real zeal. The Commander-in-Chief was absent and the Leader of the House deserted his post in a sudden fit of temper; all of which only served to make the defeat more ignominious, the Opposition securing a majority of 29 votes. That this is not a biased version will be apparent from the fact that the *Pioneer*, which is essentially a Civil Service paper, felt called upon to comment on the curious behaviour of the official group. I quote at length from the article as, besides being a frank statement of facts, it signifies a change of policy in one of the oldest papers in India.

The Pioneer's Indictment.

The Allahabad newspaper deplores the ignorance of the Government members regarding the ordinary procedure of the Legislative Assembly. "Not to do so argues one of two things," says the writer. "Either these men are incapable of acting as politicians or else they so despise and feel so superior to the Opposition parties against whom they have to argue, that they simply do not take the trouble to learn the ground work of their job. If they are incapable of accommodating themselves to the rapier thrust and the interplay of opposing blades of a parliamentary assembly, they have no right to be where they are and no amount of expert knowledge can excuse their failure. . . . If, on the other hand, their attitude is one of benevolent arrogance, they deserve all they get in the way of parliamentary rebuff, and they are criminally culpable for exhibiting a phase of the British régime in India which all right minded people would like to see abolished immediately." Commenting on the sudden departure of Sir Basil Blackett, the paper writes: "His attitude seemed to be that Mr. Patel was guilty of some obscure kind of blasphemy in venturing to criticise the Commander-in-Chief. The *Pioneer* has never agreed with the doctrine that the great responsibilities of a man's office and the importance of his position should render him immune from criticism. It would point out that the history of Army Headquarters in India is not one to encourage even friends of the Administration to hand them a blank cheque of confidence. There was such a thing as the Mesopotamia Commission, whose report every high army officer ought, for humility's sake, to read once a week, and we cannot subscribe to the idea that Sir William Birdwood is to be immune from criticism, even from the criticism of the Swarajist members of the Assembly." There is more in this strain, all of which goes to show that the writer brings a fresh and unbiased mind to bear on the question. Indians are surprised to find support where they are accustomed to expect opposition and the Anglo-Indians are obsessed by the same perplexed wonder with which the callender's horse regarded John Gilpin.

The following members of the House of Lords have been appointed to serve on the Standing Joint Committee on Indian Affairs, viz., Earl of Midleton, Viscount Chelmsford, Lord Harris, Lord Lamington, Lord Ampthill, Lord Islington, Lord Hardinge of Penshurst, Lord Southborough, Lord Clwyd, Lord Meston, and Lord Olivier. The members of the House of Commons nominated to the same Committee are: Brigadier-General Charteris, Sir Robert Hamilton, Colonel Howard-Bury, Sir Alfred Knox, Mr. Wardlaw-Milne, Sir Frank Nelson, Mr. Geoffrey Peto, Mr. Pilcher, Mr. Scurr, Mr. Snell, and Mr. Wallhead. The appointment of a Chairman is a matter of mutual arrangement, five members constituting a quorum.

INDIA IN PARLIAMENT.

By Sir Frank Nelson, M.P.

In view of the fact that the delay in arriving at a final decision on the major issues arising out of the Indian Sandhurst Committee's report was largely occasioned by its reference to the Committee of Imperial Defence, the account given last week by the Prime Minister of the constitution, personnel and functions of that body and of its various sub-committees may not be without interest to readers of the The Near East and India. The occasion, of course, was the debate on the third reading of the Consolidated Fund Bill, when the question of the desirability of setting up a Ministry of Defence again came up.

The main point to be borne in mind in this connexion, as Mr. Baldwin explained, is that the responsibility for defence rests to-day, as it has done for several years past, with the Cabinet. "The defence policy is a part of Government policy, and it cannot be considered apart from the foreign and Imperial policy for which the Cabinet, as the Executive of Parliament, is and must be responsible."

But since the creation of the Committee of Imperial Defence, the Government of the day have been advised by that Committee, which is a purely advisory and consultative body. The Committee have also been invited to assist the Governments both of India and of the self-governing Dominions, and they are in fact always ready to examine any matters referred to them for opinion. All recommendations on questions of policy are referred to the Cabinet, but purely departmental issues are dealt with under ministerial authority.

The regular members of the Committee are the Lord President of the Council, the Lord Privy Seal, the Secretaries of State for Foreign Affairs, the Colonies and Dominions, War, India, and the Air, the Chancellor of the Exchequer, the First Lord of the Admiralty, the Chiefs of Staff of the three Fighting Services, and the Permanent Secretary to the Treasury as the official head of the Civil Service. Other ministers, officials and experts are summoned *ad hoc*. Except for a short interval after the War the Prime Minister has invariably presided at the meetings.

In addition to the main body there are at present over 50 sub-committees, some of which are more or less permanent and some appointed *ad hoc*. So far as the Empire Overseas is concerned India has always been represented on these committees, of which the most prominent are possibly the Chief of Staffs Sub-Committee, and those on man-power, disarmament, censorship of all kinds, Imperial communications, oil fuel, and war emergency legislation. The Secretary of State for India either attends in person or is represented by his Military Secretary or one of his permanent officials, and the present Commander-in-Chief in India and his predecessor and the Chief of the General Staff have all attended meetings of the main Committee.

Questions on Indian affairs, even on Mondays, during the past few weeks have been noticeably fewer than usual. I hope this means that "the attack" on the India Office to which I have previously referred has failed of its purpose. I yield to no one in my desire to foster and maintain public interest in the "moral and material progress" of our great Dependency, but I cannot believe that the methods pursued by Major W. Graham Pole and his associates are in any way likely to achieve that very desirable result.

In a statement to the Press prior to his departure from Bombay last week Sir John Simon said that the Commission had never underestimated the difficulties and complexities of its task. He and his colleagues believed that their confidence had been justified by the results already achieved. They had establishd contact with all communities in the various parts of the country which they had visited, and they were leaving India with renewed confidence in the ultimate success of their mission.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Ottoman Debt Settlement.

In the report of the Council of the Corporation of Foreign Bondholders for 1927, which has just been issued, considerable attention is paid, as was to be expected, to the long-drawn out negotiations over the Ottoman Debt. It is pointed out that in spite of over two years' negotiations no final agreement has been reached over the question. Frequent conferences have taken place in Paris with the Turkish delegation since April, 1927, and large concessions have been made by the bondholders, but "the Turkish Government has continued to make further demands which have successively deferred the possibility of immediate settlement." A further cause of difficulty has, of course, been the disagreements among the delegates of the bondholders, but in February last an *ad referendum* agreement was drafted for submission to the Turkish Government. A number of alterations to be made before submission have, however, been proposed by the Turkish delegation in Paris, and the Council remarks that "it is to be hoped that there are no more to follow before this tedious and most unsatisfactory affair is closed." As I have emphasised several times, Turkey's interests demand the settlement of this long outstanding question; and any further delay on her part would be incomprehensible, particularly in view of the great sacrifices made by the bondholders.

Coming Near Eastern Loans.

It seems probable that the next few months will see the appearance of quite a series of Near Eastern issues. Of these which are on the tapis, one which will make its appearance shortly will be that for the Greek Land Bank. Then there is the Bulgarian Loan, which is being issued under the auspices of the League of Nations, which may be expected shortly, for experience has shown that negotiations for this type of issue are quickly completed. It will be very interesting to see on what terms the loan will be raised. Those of the last Greek Loan constituted a great improvement on those of the previous issue, but then Greek credit stands at a particularly high level, and it would seem doubtful if, making every allowance for the general improvement in conditions, Bulgaria will be able to obtain a loan on anything like as good terms, for however important the approval of the League is lenders are bound to take cognisance of the position in the borrowing country, and that of Bulgaria cannot be compared with that of Greece. A third Near Eastern issue that is to be anticipated in the near future is a stabilisation loan for Yugoslavia. Thus the London market will have an opportunity in all probability of participating in issues for three of the four Balkan countries. The fourth—Roumania—prefers to try to obtain a loan on the other side of the water. There has been some talk also of a loan for Albania, whose financial position tends to become more difficult, but whether anything will come of it remains to be seen.

Stabilisation in the Balkans.

Two of the loans in question, those for Yugoslavia and Roumania, are for the purpose of stabilisation. So far, although we are now in the tenth year from the Armistice, not a single one of the Near Eastern exchanges has been stabilised, as was appositely pointed out at one of the meetings which are reported in our pages this week. Other currencies have fluctuated much more violently than those of the Near East, but they have been stabilised, and it is difficult to understand why at least one of the countries has not taken the plunge before now. One can only assume that the authorities have been hoping against hope that stabilisation would be possible at a level much more closely approximating to the pre-War parity, though it has long been obvious that any idea of this kind must necessarily be quite futile. At any rate the way is now reasonably clear for stabilisation in the various countries, for in recent months, as I had occasion to remark early in the year, the Near Eastern exchanges as a whole have been remarkably stable, and it may be hoped that the present year will see this important step in reconstruction taken throughout the Balkans. Then traders will know exactly where they are, and there will be a real prospect for the development of commerce on substantial lines.

Competition in India.

In his speech at the meeting of the Chartered Bank of India, Australia, and China, Sir Montagu Turner, the Chairman, touched on a number of matters of outstanding importance. One was the position of this country in India's import trade. The situation of Lancashire to-day is, of course, the result of what has been taking place in India, China, and other great outlets. In India as in other markets we have had to suffer from competition with countries like Japan which are in a position to sell much more cheaply than we can, and unless we can compete on equal terms it is difficult to see how much improvement can be looked for in the near future. In the latest report to be issued on India it was pointed out that the British share of India's imports has declined from 61 to 48 per cent. Apart from cotton goods a decline in railway plant has been a contributory factor, but as Sir Montagu Turner suggests this is not an alarming feature. Our manufacturers in this line have shown themselves perfectly capable in the last year or two of competing on equal terms with their foreign rivals, and it may be taken for granted that they will spare no effort to obtain a satisfactory share of the large orders that must inevitably be placed for railway material in the near future. The real problem, as I have indicated, is the problem of Lancashire, and the question of cost, which is the crux of the whole situation brings in a number of factors which cannot possibly be passed in review in the limits of a note. Let it suffice to say that the heavy taxation, both Imperial and local, is one of the main causes which make it so difficult to compete on fair terms with other countries like Japan, which have not to meet prodigious American debt instalments each year and other obligations of a like nature.

Motors and Motoring.

By G. B. B.

At the last monthly executive committee meeting of the Automobile Association 3,700 new members were elected, all of whom had applied for membership during the previous four weeks. The figures for the corresponding period of last year were 2,850, a substantial increase thus being shown. This may be taken as an indication of the continued popularity of the "A.A.," which now has a total individual membership of over 355,000, and it may also be taken as an indication as to the number of new motorists coming on the road this season.

The New Ford.

I have been able to examine at leisure and test a new Ford and have nothing but praise regarding it. I admit that I thought Mr. Ford would find it difficult to turn out a car to compete with modern British productions, but I fancy he has done it, and I may say that I am not at all sorry he has done so. Competition is the finest thing in the world for stimulating the faculties, and with the Ford competition behind them again our British firms may be trusted not to loiter in the path of progress.

The brakes on the new Ford are of the mechanical, internal expanding shoe type and are self-centring, and all adjustments can be made from the outside without it being necessary to remove any part, and another point is that no special tools are necessary for the work. Uniform and correct adjustment on each wheel is quickly and easily obtained. I notice that all brake working parts are plated with cadmium, so as to render them absolutely rust-proof.

The gears are of the selective sliding type with standard control, there being three forward speeds and reverse. The main shaft runs on ball bearings and the counter-shaft on roller bearings and the gears are made of heat-treated chrome alloy steel. The oiling system is a combination of pump, splash, and gravity feed. The pump delivers the oil to the valve chamber, from which it flows by gravity feed to the main bearings of the crank-shaft. An oil dipper is provided on each connecting-rod bearing cap, so that the force of rotation of the crank-shaft drives oil into the connecting-rod bearings as well as splashing oil over all working parts within the engine. The engine, by the way, is of 14.9 h.p., which means only a £15 tax. At 2,600 r.p.m. it will develop 28 h.p., and it is quite possible to travel at a speed of from 50 to 55 m.p.h. with this car, on a petrol consumption of about 35 miles per gallon.

Eight Cylinders.

The attention of automobile engineers has been turned, for some little time, to the question as to whether any advantage is or is not gained by the use of eight cylinders. Whoever made the first 8-cylinder engine, whether an Englishman or an American does not matter; it is the American who is developing that type of engine and who is, apparently, firmly convinced it is the engine of the future. I would like to be certain that our engineers are viewing this question in all its bearings. Mr. Warwick Wright, who knows something about the motor trade, says that we are not treating the manufacture of motor cars for world consumption as the exact science that it ought to be. (I fancy he means "that it is"; but no matter.) Whatever may be the fundamental reason for this bad state of affairs I do not know. It may be the influence of the horse-power tax; it may be merely apathy; but I am certain of this, that until we give up our insular standpoint and until we learn something of what the Americans have to teach us, our cry of "Buy British cars" will be made in vain.

JAFFA ORANGE EXPORTS.

The Empire Marketing Board reports that the total shipments to the United Kingdom up to March 25, amounted to 1,459,000 boxes, as compared with 1,659,000 boxes at the corresponding date last year. The total to all destinations, including transhipments (estimated at 150,000 to 200,000) probably exceeds 1,700,000 boxes, as compared with 1,668,000 boxes last season.

An order has been given by the Bombay Steam Navigation Company, Bombay, for a 1,500 ton single-screw passenger and cargo steamer to Bow, McLachlan and Co., Paisley.

The General Accident Fire and Life Assurance Corporation recommends a final dividend of 2½ per cent. (making 5 per cent. for the year) on the preference shares and one of 6s. per share on the ordinary shares (making 40 per cent. for the year.

The production of the Anglo-Egyptian Oilfields for the week ended March 30 was 4,403 tons.

The accounts of the Bank of Athens for 1927 show a balance available of 46,692,423 drachmæ. The proposed dividend for the year is 27 per cent., plus a bonus of 1s. 6d. per share.

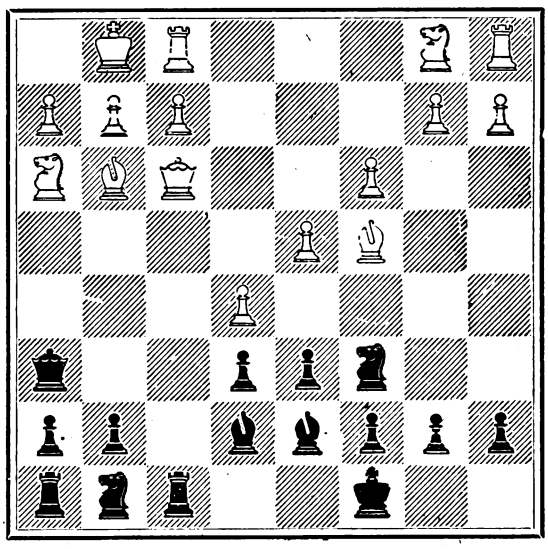
CHESS.

By "CARO-KANN."

Some of the liveliest games are played in handicaps. The following game, in which White received the odds of pawn and two moves, was played last week in the Murton Cup at the City of London Chess Club. 1, P—K4; 2, B—B4, P—K3; 3, P—Q4, Q—R5; 4, Q—B3, Kt—QB3; 5, P—B3, P—Q3; 6, B—B4, B—Q2; 7, Kt—KR3, B—K2; 8, B—KKt3, Q—R3; 9, O—O, O—O—O; 10, P—K5, R—B;



Position after Black's 10th move, R—B.

11, B—B, P—KKt4; 12, KtxP, RxB; 13, QxR, BxKt; 14, Q—Kt4, PxP; 15, B—Kt5, Kt—B3; 16, Q—K2, R—Kt; 17, PxP, B—B5; 18, P—Kt3, Kt—Kt5; 19, P—B3, KtxKP; 20, R—Q, BxP; 21, PxB, RxP (ch); 22, K—B2, Q—R7 (ch); 23, K—K, KtxP (ch); 24, resigns.

The interest in this game lies in the way in which Black, assisted by a series of weak moves by his opponent, brings the game to a speedy termination. After the series of exchanges giving the open Knight's file, though White is still level in material, having a Rook and two Pawns to set against two minor pieces, the game is irretrievably lost against the best play. 2, B—B4 was a poor second move, and in effect yielded the initiative. If at move 11 White had played Q—K2 instead of courting a series of costly exchanges, Black would have continued with P—Kt4, Q—Kt2, P—R4, etc., with an overwhelming attack.

The profits of the Temesvarer Bank und Handels A.G., Timisoara, amounted to 23,577,526 lei for 1927, as compared with 25,470,661 lei for 1926. The dividend has been maintained at 36 per cent.

This vessel has exceptionally fine 3rd class accommodation.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows under date March 18 :—

Market March 1 to 18. Arrivals in Kordofan Stations and Tendelti were 2,107 tons as against 1,246 tons for the same period last year. Prices at El Obeid have remained firm and without change. Demand has been steadily good and we should say balanced supply.

The undermentioned shipments January/February show that all those markets which took less gum last year with the exception of Great Britain are rapidly making up by increasing their imports this year. U.S.A. and France doubled their imports, Australia and Japan took three times, and Norway and Sweden took four times as much as last year. Germany took 30 per cent. more, whilst Great Britain, Belgium, and Holland took less.

Shipping Intelligence.

CONSTANTINOPLE OCTROI DUTIES.

The Constantinople Municipality has revised the octroi duties on certain articles with effect from March 1. The revision includes an increase of the duties on certain classes of cotton and woollen textiles and a reduction of the tax on rubber impregnated cloth and waterproof clothing and candles.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, April 12). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahanada for Calcutta (Birkenhead, April 16); s.s. Macharda for Calcutta (Birkenhead, May 3).

Bibby Line.—S.s. Herefordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 18).

British India Line.—S.s. Hatimura for Bombay and Karachi (London, April 7); s.s. Masula for Colombo, Madras, and Calcutta (London, April 7).

Cunard Line.—S.s. Cypria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, April 28); s.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Ancona, Venice, Trieste, and Fiume (Liverpool April 28, Swansea May 1).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 5).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, April 13); s.s. Tresillian for Colombo, Madras, and Calcutta (London, April 28).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, April 7); s.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 21).

Ellerman and Papayanni Lines.—S.s. Mardinian for Gibraltar, Algiers, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 7, Swansea April 7); s.s. Fabian for Malta, Alexandria, Jaffa, and Haifa (Liverpool, April 11); s.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona, Venice, Trieste, and Fiume (Liverpool April 14, Swansea April 19); s.s. Gitano for Gibraltar, Malta, Alexandria, Jaffa, and Haifa (Liverpool April 18, Glasgow April 26); s.s. Polo for Oran, Algiers, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 21). Cargo taken on through Bills of Lading to :—Algerian ports via Gibraltar; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The directors of the Dunlop Rubber Company propose a dividend of 25 per cent. on the ordinary shares for 1927.

The United States Senate has passed the War debt settlement made with Yugoslavia, which provides for the payment of 62,850,000 dollars (about £12,500,000) over a period of 60 years. The Bill now awaits the signature of President Coolidge.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 3.

The activity in the Stock Exchange has been slightly less this week, and it may be expected, in the light of normal experience, that no further ebullition of optimism will show itself until Easter and the Budget are over. There is, however, unusually little fear this year that the Budget will provide any influence seriously unfavourable to the investment world. It is perhaps time that a halt should be called in the rise of certain types of industrial shares; and since monetary prospects carry no visible threat and there is evidence of a great abundance of funds available for investment both in old and new securities, one may expect perhaps to see in the summer a broadening of interest with some shift in the centres of concentration. Rubber shareholders will have spent an anxious week-end awaiting the decision relating to restriction. But to those who take a long view and hold shares in really efficient plantation companies the anxiety need not be great. There has again been an avalanche of new issues this week, and the public appetite remains keen, but the pace in the new capital market will slacken shortly.

Gramophone Prosperity—A Moral.

During the past week or two there has been notable activity in the formation of gramophone record manufacturing companies. Last week, for instance, two prospectuses were issued. These developments suggest a moral of general application. In the past few months the shares of the older-established companies have been the centre of active speculation. The prices have advanced substantially and at the current level considerably discount the future. These companies—or some of them—are admittedly very prosperous and have already earned generous profits. This state of affairs generally has two consequences, and both of these are in process of development at the present time. In the first place, exceptional prosperity induces competition and the new producers often start by cutting prices. If the industry is not well organised this may be a matter of serious moment. In the second place, it results in the formation of companies which have little or no chance of success. Thus the investor should bear in mind two points: first, that it is unwise to reckon on the continuance of exceptional prosperity indefinitely; and secondly, that flotations coming out on the crest of booming conditions in an industry should be subject to the closest scrutiny.

A Good Public Utility Investment.

The annual meeting of the Newcastle-upon-Tyne Electric Supply Company, held this week, serves to call attention to the investment merits of the company's ordinary shares. It is the largest producer of electrical energy in the country and undoubtedly has considerable scope for development. At the meeting, the chairman, dealing with the short view, said that "so far their prospects for the current year were quite encouraging . . . they might hope for satisfactory progress being made during the current year." In 1924 and 1925 an ordinary dividend of 7 per cent. was paid, but for 1926, the year of the coal troubles, the distribution was reduced to 5 per cent. Last year—1927—the dividend was raised to 6 per cent., and the accounts showed a remarkable improvement. The profits rose from £576,421 in 1926 to £783,493. Moreover, the balance-sheet was materially strengthened by a decline in temporary loans and sundry creditors. At present the shares stand at approximately 27s. and have not participated in the recent sharp advance in electrical supply shares. They represent a good public utility investment with reasonable prospects of capital appreciation.

Crown Colony Loans.

The issue by the Government of Fiji this week of £765,000 5 per cent. inscribed stock, redeemable 1946-1953, at £101 per cent., was quickly subscribed, thus indicating the popularity of Crown Colony Loans issued at an attractive price. There are a number of Crown Colony Loans which merit the attention of the investor. They are trustee stocks and mostly give fair returns. The Ceylon 3½ per cent. inscribed stock, redeemable 1934-1959, can be obtained to yield £5 3s. 6d. per cent. A return of £5 5s. per cent. is given by the Kenya 6 per cent. inscribed stock, finally redeemable 1956. The 4½ per cent. inscribed stock of the Straits Settlements, finally redeemable 1945, yields £5 3s. per cent. A return of £5 1s. per cent. is given by the Gold Coast 4 per cent. inscribed stock, finally redeemable 1959. These yields, it will be seen, are higher than those given by many Dominion stocks, while the majority of the stocks are well secured. In the future there will doubtless be further loans of this description, for the various Commissions that are visiting the Crown Colonies are recommending development schemes which will involve the raising of funds.

DIRECTORS' REPORT.

(Presented at the Seventy-fourth Ordinary General Meeting, 28th March, 1928.)

The Directors have now to submit to the Shareholders the Balance-sheet and Profit and Loss Account of the Bank for the year ended 31st December last.

These show a net profit, after providing for all bad and doubtful debts, of £939,393 4s. 8d. inclusive of £215,354 5s. 3d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £729,393 4s. 8d. and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum together with a Bonus of Six shillings and threepence per share, making Twenty-and-a-quarter per cent. per annum for the whole year, free of Income Tax; to add £100,000 to the Officers' Pension Fund; to write off Premises Account £25,000, and to carry forward the balance of £206,893 4s. 8d.

Mr. Archibald Rose, C.I.E., Mr. Edward Fairbairn Mackay, and Mr. William Foot Mitchell, M.P., the Directors who now retire by rotation, present themselves for re-election.

The Auditors, Mr. David Charles Wilson, F.C.A. and Mr. Henry Croughton Knight Stileman, F.C.A., again tender their services.

The Dividend and Bonus will be payable on and after Wednesday, the 4th of April.

By order of the Court, ARTHUR SCOTT, W. H. SHINER } Secretaries.

Company Meetings.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

Trade Conditions in India.

Competition in Exchange Banking.

Internal Wealth of India.

Sir Montagu Turner's Review.

The seventy-fourth ordinary general meeting of the Chartered Bank of India, Australia and China was held on the bank's premises, 38, Bishopsgate, E.C., on March 28.

Sir Montagu Cornish Turner (the chairman) presided.

The Chief Manager (Mr. W. E. Preston) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—The less favourable results as compared with previous years disclosed in our report and statement of accounts now presented for your adoption to-day reflect the unfavourable conditions with which we have had to contend during the year 1927. We have experienced a want of real vitality and push in trade in certain directions, making it difficult to work on remunerative lines, with the result that we have been unable to maintain the high level of profits to which we have grown accustomed in the past. It must also be recognised that competition in Eastern exchange banking grows wider and keener every year, resulting in sharp competition for any passing business and in the acceptance of rates which show very meagre profits. Differences in exchange are now reckoned by sixty-fourths, or even worse, as compared with the fair and reasonable differences which prevailed in happier days. This is especially the case in India and Burma, where we certainly enjoy a good share of current business, thanks to the continued support of many old friends who can rely on our giving them the best rates ruling at the time.

Stabilisation of the Rupee.

In India, the fixing of the sterling value of the rupee at 1s. 6d. will make the year 1927 a memorable date in the financial history of that country. Now that stabilisation has become an accomplished fact and the rate is generally accepted as fair and reasonable, the rupee remains remarkably steady. The variations are very slight, about one-sixteenth either way, and the rate of exchange has ceased to worry the general trader.

During the early part of 1927, while the rate of exchange was still in the balance and the price of cotton very uncertain, piece-goods dealers in India were working with great caution, and later on in the year equal caution prevailed as the result of the shifting price of raw cotton and the changeable quotations from Manchester. The Manchester market was usually above the views of buyers in India and a set-back in business occurred. In one respect that is all to the good, for stocks have not accumulated and the cloth markets are in a fairly sound condition.

In wheat and seeds a moderate export from India has been put through, whilst shipments of jute and tea have been normal, with the result that the balance of trade in favour of India amounts to a substantial figure. The outstanding feature is the increased export of ground nuts, which it is expected will reach 950,000 tons this season.

Decline of British Imports into India.

In a recent report on the trade of India by Mr. Ainscough, Senior Trade Commissioner, Calcutta, it is pointed out that the decline of British imports into India has been from 61 per cent. to 48 per cent. of India's import trade. Imports from Germany, Italy, United States, France, and Japan have mainly accounted for this decline, especially in connexion with the supply of cheap manufactured articles, printed and dyed cloths, and grey goods, and, in addition to this cause, the demand for textile machinery and railway plant had fallen off. I do not think we need be alarmed at this, for it is more than likely India will require in the near future large quantities of railway material, and the orders should come to Great Britain. But the main point is the question of price. As long as Germany, Italy, and Japan can supply goods of sufficiently good quality and at a cheaper price than Great Britain, the advantage must be with those competing countries which can underquote our manufacturers.

Attention has recently been called in Bombay to the abnormal increase in imports of cloth from Japan, which has affected very appreciably the prosperity of the Bombay mills. The chairman of the Association of the Bombay Mill Owners recently remarked that, in spite of the fact that more and more machinery was being kept idle, stocks continued to be very heavy. It is indeed difficult to realise the fact that Japan is able to beat Bombay in the matter of price in yarn and cloths manufactured from the cotton exported from Bombay and made up in Japan and re-shipped to Bombay.

Bombay Mill Industry.

During the past three years the depression in the Bombay mill industry has resulted in the closing down of eight mills, while seven mills are being reconstructed. In the face of such active competition from Japan it is difficult to see how prosperity can return to the mill industry unless drastic remedies are adopted. In other respects internal trade has been good throughout India. Jute mills in Bengal are prosperous and tea continues to show very satisfactory results.

In Burma, the Straits, and Java the piece-goods business has been affected by Japanese competition. In fact, this remark applies to nearly all Eastern markets, and it is very evident that Japan, faced with an ever-increasing population, is following out the policy of pushing her exports into every possible corner of the consuming world where cheapness is the main consideration. In point of quality Japan cannot beat Lancashire.

India's Increased Wealth.

During the last five years the internal wealth of India must have increased very appreciably. The seasons have been quite good and crops on the whole excellent. Apart from occasional political effervescences the country has been peaceful and prosperous. It is perhaps interesting to note that the following internal loans have been floated in India and have been generally absorbed by a public which in days of old hoarded rather than invested their savings:—

May, 1926.—Government of India Four per Cent. Loan was floated—Rs.25 crores.

July, 1927.—A further Government Loan 4 per cent. was issued and taken—Rs.24 crores.

August, 1926.—Six per Cent. Debenture Loan for 125 lakhs of rupees was issued by the Commissioners of the Port of Calcutta.

March, 1926.—The same authority issued a loan of one crore.

September, 192(6.—The Port of Calcutta issued 5 per cent. Debentures rupee one crore.

September, 1925.—The Calcutta Improvement Trust issued a loan of Rs.50 lakhs 6 per cent. Debentures.

December, 1925.—The Port of Karachi issued a loan of one crore of rupees 6 per cent. Debentures.

The sum total is Rs.53¾ crores, or about 40 million sterling. Cash Certificates (or as we should call them War Savings Certificates) have been issued since 1917 to the extent of 40 crores of rupees, or £30,000,000, and this should be added to the 40 millions already referred to. It is interesting to note that shipments of gold coin and bar gold from South Africa to India direct in 1927 totalled £7,268,000, while shipments from London to India amounted to £2,500,000 only.

Shipments of silver from all quarters to India amounted in value to Rs.18,28,11,000, or, say, £13,710,000. About half of this amount represented direct shipments from New York to India.

In the Straits and F.M.S. the prosperity which has marked recent years in those countries has declined for the time being owing to present conditions of the rubber industry. Both the export and import trade is suffering rather severely in consequence, though the tin industry is holding its own. Whatever the decision may be as regards rubber restrictions, the fact has to be faced that the result of native-grown rubber is a very marked factor in the sale price of rubber, whether grown in the F.M.S. or in Dutch East Indies. It is perhaps unfortunate that this has not been recognised earlier.

The Far East.

As regards China generally it is extremely difficult to judge what are the actual conditions. They are certainly no worse than they were 12 months ago, and they seem to be a little better, but the deadly canker of civil war still exists with dire results to trade and

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance Sheet with the Books in London and the certified Returns from the Branches. We have obtained all the information and explanations we have required. In our opinion such Balance Sheet is full and fair, containing the particulars required by the Regulations of the Company, and is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

industry. We read of atrocities committed by the Communist bodies scattered about the country. These reports may be exaggerated, but in any case the masses of the people suffer so long as civil war continues. Certainly in the South conditions would seem to be better, especially in the relations between Hongkong and Canton, where the Moscow influence seems to have diminished to a very appreciable extent. I think we can say that the tendency both in the North and South is to adopt a conciliatory attitude towards Great Britain in place of the hostile anti-British feeling which prevailed last year. The difficulties of transit up-country and the enormous impositions that are levied on goods before they reach their destination have naturally reflected on the import trade both through Canton and in North China. The only marvel is that trade is feasible at all.

Our latest reports from Shanghai indicate that better business has recently been done both in imports and exports. At the same time we hear that robberies and kidnapping have become so frequent that the business section of the Chinese are afraid to go about their affairs. I think we may feel assured that no opportunity will be neglected by our Government to regain the good will and co-operation of our old friends, the Chinese, to make trade feasible and the country more settled than it is at present.

A striking result of the continuance of civil warfare has been the steady stream of migration during the past four years of the country folk (chiefly agriculturists) from the disturbed districts in North China to South Manchuria, where peaceful employment is offering. In this way the population of Chinese settled down in Manchuria, chiefly on the line of the Chinese Eastern Railway, has increased by 2,000,000.

In Japan the effects of the financial crisis early last year, when certain banks had to go into liquidation, are still felt, and she has to face the fact of a surplus of imports of 185,000,000 yen over her export business; but, as I mentioned elsewhere, Japan is fully alive to the fact that her export business must be increased to keep pace with the demands of a population which shows an annual increase of about 1,000,000, and it is only by an increase in her industrial output that the position can be met. The unrest in China must be a severe handicap to Japan's trade with that country.

The Balance-sheet.

Referring to the balance-sheet, you will notice that the entry cash in hand and at bankers, which appeared in our report of last year at £10,013,953 10s. 8d., now appears as £3,552,479 2s. 6d. The difference is partly represented by an increased holding in bills of exchange, including Treasury Bills, which stands on December 31 at £19,761,881 2s. 10d., as against £17,382,620 0s. 10d. in 1926, and by the purchase of 190,059 shares in the P. and O. Banking Corporation. That transaction represents the acquisition of a controlling interest in the P. and O. Bank. Your directors, after careful consideration, decided that this investment was desirable and justified on several grounds. We regain control of valuable business connexions which had rather passed away when the P. and O. Bank came into existence, such business covering India, Burma, Ceylon, China, and Japan, and we prevent the business from getting into other hands. Further, we have a well-established business working in harmony with ourselves and ceasing to function as active opponents. To make effectual our control of the bank our good friend Mr. W. E. Preston, in whom we all have the greatest confidence and of whom we have a very high opinion—(hear, hear)—has become vice-chairman, while Viscount Inchcape remains chairman of the P. and O. Bank. Of our directors, Messrs. Bateson, Colin Campbell, and Mackay have joined the board, of which I was already a member. I am confident that the step thus taken will lead to the ultimate benefit of both the Chartered and the P. and O. Bank.

On the liabilities side of the balance-sheet current and other accounts show a drop of some three millions, but this is chiefly due to adjustments in our book par rates of exchange (China). Fixed deposits show a drop of 1½ millions, which is also mainly due to the same cause.

As regards the profit and loss account, while maintaining the usual dividend and bonus, the directors thought it advisable to strengthen the officers' pension fund by a substantial grant of £100,000, having in view the probable retirement of some members of our Eastern staff who have done good and faithful service and have well earned a retiring pension. It is only right and proper the pension fund should be kept on a sound basis. (Hear, hear.)

Tribute to Management and Staff.

In conclusion, I desire, on behalf of the court of directors, to express our great appreciation of the conduct and management of the business of this institution by our chief manager, Mr. Preston, and his colleagues at head office. (Cheers.) We also tender our thanks to the managers and to the staff generally at home and abroad for their devotion and loyalty to the interests of the bank. (Cheers.)

I now move:—"That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted."

Mr. L. A. Wallace seconded the resolution, and after some congratulatory remarks by shareholders it was carried unanimously.

The Dividend.

The Chairman next proposed:—"That a dividend at the rate of 14 per cent. per annum for the half-year ended December 31 last, together with a bonus of 6s. 3d. per share, free of income-tax, be now declared payable on and after the 4th proximo."

This was seconded by Mr. W. Foot Mitchell, M.P., and unanimously approved.

The retiring directors, Mr. Archibald Rose, C.I.E., Mr. E. F. Mackay, and Mr. W. Foot Mitchell, M.P., were re-elected on the motion of the Chairman, seconded by Mr. Colin F. Campbell.

The auditors, Mr. D. C. Wilson, F.C.A., and Mr. H. C. K. Stileman, F.C.A., were reappointed, and the proceedings terminated with a cordial vote of thanks to the chairman.

NATIONAL BANK OF INDIA.

Increased Profits.

The Question of the Reserve Bank.

Sir Charles McLeod's Speech.

The ordinary general meeting of the National Bank of India, Ltd., was held at the Wesleyan Hall, Bishopsgate, London, E.C., on April 3, Sir Charles C. McLeod, Bart. (the Chairman), presiding.

The General Manager (Mr. Hegarty) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—The report of the directors and the accounts to December 31, 1927, have been in your hands for some days and I presume you will allow me as usual to take them as read. (Agreed.)

The directorate is unchanged since our last meeting, but, as you will see from our report, Mr. Nicoll resigned his appointment as general manager at the end of December. He has rendered great service to this institution for about 44 years, the last 6½ years of which he held the appointment of general manager. I am glad to say we have him on the Board, where his knowledge of the Bank's affairs and his ripe experience will be of great service to us. Mr. W. J. K. Hegarty succeeds him as general manager and Mr. W. Ross Munro becomes London manager.

The figures submitted to you to-day show that we have fully maintained the results of a year ago; in fact, our net profit of £541,098 is slightly in excess of last year's figures. If we add to this the amount brought forward of £255,401 we get a total available for disposal of £796,499 compared with £775,400 for 1926. The increase is, of course, accounted for by the higher net profits and by the larger amount brought forward from the previous year. I am able to assure you that these results have been obtained after fully providing, as usual, for all bad and doubtful debts, and I feel sure you will agree with me that the figures are satisfactory.

We propose again to place £50,000 to reserve fund, bringing the total up to £2,950,000; to write £30,000 off house property account; to add £40,000 to the officers' pension fund, and to pay a further dividend at the rate of 20 per cent. per annum, free of income tax, which, together with the interim dividend accounts for £400,000 and leaves a sum of £276,499 12s. 2d. to be carried forward.

The Balance-sheet.

The balance-sheet figures show an increase in the totals compared with a year ago, but I must remind you that at the last meeting I informed you that in due course we would be altering the rate of conversion of our rupee assets and liabilities from 1s. 4d. to the now statutory rate of 1s. 6d. per rupee. This change has taken place and the result is reflected in the balance-sheet figures now in your hands. The alteration in the rate, of course, only affects such portion of our balance-sheet figures as consists of rupee assets and liabilities, but naturally it makes a comparison with previous years difficult. Future balance-sheet figures will now be converted at 1s. 6d. per rupee, but we have ourselves made a careful analysis of the balance-sheet before you and I am able to say that on the whole our figures have been well maintained. Our current, fixed deposits, and other accounts, taken on a comparative basis, show little variation from the previous year, and the same may be said of the principal items on the assets side. Our sterling investments are still large. These show a reduction compared with a year ago and I may say that this is reflected to some extent in an increase in our advances which we are quite pleased to see.

Our cash and liquid assets consisting of securities and bills of exchange amount to the considerable figure of £25,724,080 against a liability in respect of current, fixed deposits, etc., of £33,655,120, admittedly a strong position from the depositors' point of view.

Our securities, amounting to £13,266,910, are all gilt-edged and stand in our books at under market value.

Owing to the change in the conversion rate, expenses of management naturally show an increase. This, of course, in no way affects the net profits, the difference in the rate simply increasing the gross profits on the other side. As a matter of fact, expenses actually show little change.

Generally speaking, whilst we cannot point to any great expansion in business, I think we can confidently claim that our position, both as regards balance-sheet figures and results, has been fully maintained.

With these explanations I trust that the figures are in every way satisfactory to you.

Indian Trade Position.

As regards the foreign trade of India during the period under review, the exports of merchandise have been a little less in value

than in the previous year, the figures for 1927 being 326 crores of rupees against 329 crores for 1926. On the other hand, imports show a considerable expansion, the figures for 1927 being 246 crores against 233 crores for the previous year.

The net imports of gold into India during the year amounted to £12,300,000 against £17,400,000 for 1926, showing a falling off of £5,100,000, whilst the imports of silver also show a decrease of £2,700,000, the figure for 1927 being £11,400,000 compared with £14,100,000 for 1926.

India may be said to have had a reasonably prosperous year. The monsoon was on the whole satisfactory, and crops, with few exceptions, good. As regards industries, the Bombay cotton mills, I regret to say, still continue in a depressed state. On the other hand, the jute industry in Bengal, thanks to a large crop and a sustained demand for the manufactured article, has continued to prosper. Producers of tea have also done well for the past season. At the present moment rain is wanted in most districts.

With an average Bank Rate in India of 5.732 per cent. against 4.825 per cent. in 1926 our funds in that country have been employed to better advantage. Early in August the Government offered Treasury Bills for tender and have continued to do so at intervals up to the present time. These have proved a useful method of employing surplus funds, particularly during the slack season.

As regards our branches in East Africa, the total exports from Kenya and Uganda are again lower, whilst imports are higher.

For the 12 months of 1927 exports totalled £5,401,074 against £6,000,000 in 1926, whilst for 12 months imports were £6,767,530 against £6,161,831. The cotton crop in Uganda was smaller than a year ago, shipments from Mombasa for 1927 amounting to 131,728 bales, valued at £1,690,836, compared with 180,859 bales in 1926, valued at £3,051,791. I need scarcely add that this contraction in the output and value of cotton has a direct bearing on the trade of Kenya and Uganda.

In the case of Tanganyika territory the figures show, I am glad to note, a satisfactory improvement in both imports and exports, imports for 1927 being £3,672,065 against £3,152,422 for 1926, and exports £3,295,461 for 1927 against £3,025,978 for 1926.

As most of you are aware, the question of the establishment of a Central Bank in India to give full effect to the recommendations of the Royal Commission on Indian Currency occupied much of the time of the Indian Legislative Assembly during the past year. Since the beginning of the current year the Bill, known as the "Reserve Bank Bill," for the establishment of this institution, has again come before the Assembly, and, owing to the apparent impossibility of obtaining a reasonable majority in favour of the measure as brought forward by Government, it has been withdrawn *sine die*. Proposals to establish such an institution may be made again, and possibly the delay which the withdrawal entails may prove all to the good.

Apart from the management of currency and the maintenance of the gold bullion standard, one of the chief objects of the proposed Reserve Bank was the control of credit. Whether or not control is possible in a country where so much of the finance of internal trade is in the hands of Indian private bankers is a matter of opinion. The necessity for a Reserve Bank in India may arise in time, but in the present state of banking development in that country my colleagues and I do not think that that time has yet arrived, or that some delay in its establishment can do any harm. If, however, in course of time it should be found to be essential that such a bank should be established, we consider it of the utmost importance that it should be a shareholders' bank and free from all possibility of political interference.

I have lately been in India and had an opportunity of conferring with our managers in Bombay and Calcutta to our mutual advantage I trust. The Bombay offices are now completely finished and are in every respect most satisfactory and worthy of our standing in that great city.

In conclusion, I desire to add on behalf of myself and my colleagues on the Board our great appreciation of the continued efficiency of our managers and staff. It is to their care and loyalty we owe our present strong and satisfactory position in the banking world.

The Dividend.

I beg to propose:—"That the report of the directors and statement of accounts for the year ended December 31, 1927, be received and adopted, and that a dividend for the six months to December 31, 1927, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income tax, on and after April 4, 1928."

After this resolution has been seconded by M. Stuart, and before I put it to the meeting an opportunity will be given to anyone who wishes to make any remarks or to ask any questions.

Mr. J. N. Stuart: I have much pleasure in seconding the resolution which has just been proposed.

Mr. G. R. Kyd: I should like to make a remark, sir. The net profit for the year 1903 was £125,461, the dividend was 12 per cent., free of tax, and the staff were granted a 10 per cent. cash bonus. From that date, I believe, to 1921 this Bank granted regularly a 10 per cent. cash bonus to the staff for the excellent services they had rendered and the staff looked upon this bonus as part of their salary. In 1922 this bonus was stopped, I believe, and since that date we shareholders have heard nothing about it at the annual meeting. Having heard the chairman read out a very excellent report, I should like to ask the directors to grant the staff a 10 per cent. bonus for 1927, and to continue to do this, and let them reap part of the harvest they gather. We shareholders reap our part in the way of a 20 per cent. dividend, free of tax.

Mr. D. C. Lee: Mr. Chairman, while I am fully in accord with the remarks of the last speaker as to the services of our splendid staff, I think this is a matter which should be left entirely to the discretion of the Board. (Hear, hear.) The Board have always been approachable by the staff as a whole and every member of it individually. Speaking from a long experience of this Bank, I know they have been treated very fairly indeed. I think we ought to hesitate before we butt into those domestic arrangements. (Hear, hear.)

The Chairman: I have only to say, in addition to what has been said by Mr. Lee, that the interests of our staff are our continual concern—(hear, hear)—and I think I may say that they can feel they are quite safe in our hands. (Hear, hear.)

The Chairman: If there are no other remarks I will put to the meeting the resolution which I have just read and which has been seconded by Mr. Stuart.

The resolution was carried unanimously.

Mr. J. N. Stuart: Gentleman, I have much pleasure in proposing: "That Sir Charles C. McLeod, Bart., Hon. E. Julian Hawke, and Mr. C. Nicoll be re-elected Directors of the Bank." It is not necessary for me to enlarge upon this subject; I would only remark regarding Sir Charles McLeod as being our chairman, that we realise how much time he gives to the bank. He spares himself not at all, and he has the respect of all his colleagues. As regards the other gentlemen, you know very well what they have done—more particularly Mr. Nicoll who, having retired from the general managership, now devotes himself as a director to the work of the company.

Mr. Robert Miller: I have much pleasure in seconding that.

The motion was pased unanimously.

Mr. Alderman Percy W. Greenaway: Mr. Chairman and gentlemen, I have pleasure in proposing: "That Messrs. Cooper Brothers and Company and Messrs. W. A. Browne and Company be re-elected auditors of the Bank for the ensuing year, at the remuneration of 400 guineas per annum each, free of income tax."

Mr. Alexander W. Martin: I beg to second that motion.

The motion was passed unanimously.

Mr. J. Irwin Davis: It is my privilege to propose to you: "A very cordial vote of thanks to the Chairman and Directors for the care and prudence exercised in conducting the affairs of the bank during the past year, and also to the general manager, managers, and staff for their valuable services."

It is a remarkable and significant fact that for a long series of years the Bank has always made steady and consistent progress. The sphere of its influence is gradually being extended and its position strengthened. At no time has it been stronger than at the present moment. During the past year the profits have again increased, and the reserve fund brought up to £2,950,000, against a paid up capital of £2,000,000, truly a very satisfactory state of affairs. That happy position has been brought about by many years of sagacious and prudent management and by the conservative policy pursued by our past and present directors. Whatever other shares or investments we may hold we can always look upon those of the N.B.I. with a sense of comfort and security. There is none of that sinking feeling about them, and so we are indebted to our directors not only for handsome dividends, but also for peace of mind. We are delighted to express our thanks and admiration to our distinguished chairman, Sir Charles McLeod, and his co-directors for such splendid results, and to our chairman especially for his cheering and excellent address. I think we can face the future with the greatest equanimity. As regards the managers and staff, it would be impossible to speak too highly. I can assure them that behind the somewhat formal words of the resolution lies a warmth of appreciation which we all heartily feel. We cannot allow this occasion to pass without placing on

record our great appreciation of the highly capable management of our late general manager, Mr. Nicoll, who has given us unsparingly of his best during the whole of his 44 years' service in the Bank, not the least important of those services being rendered whilst he held the position of general manager during the trying years of banking after the War. All his interests have been centred in the Bank. In fact, I believe he has always made it his hobby, and we are glad to think that his long and valuable experience will still be at the service of the Bank as a member of the board of directors. I would like to offer our congratulations to Mr. Hegarty and Mr. Ross Munro on their promotion to the very responsible positions to which they have recently been appointed. It seems to me to be a very happy combination, and I am confident that they will prove themselves worthy followers of the able men who have filled those positions in the past.

I am sure you will give the resolution which I have proposed your very hearty support.

Mr. J. D. Longmire: I have pleasure in seconding the resolution which has just been proposed.

The resolution was carried with acclamation.

The Chairman: Mr. Irwin Davis and Gentlemen,—On behalf of my colleagues and myself I thank you most heartily for the kind way you have received what has been said about the directors and the staff. We feel it, and we take it as a vote of confidence in us, which we very much appreciate, and I assure you we shall look forward to an equally prosperous year and to put in good figures before you when we meet again. (Hear, hear.) Mr. Hegarty is a shy man and has asked me on his behalf and on behalf of the staff to thank you for what you have said about them. We shall send those messages to the very large staff we have abroad, who, I am sure, will appreciate it as much as the staff at home. Just one word more. A shareholder wished to make a few remarks about increasing our pension fund, and I can only say that this will have our strong support, and that we are taking steps to do this as we go along in a very substantial manner, and he need have no fear that this will be put to one side.

Mr. Evan MacRury: Mr. Chairman, I should like to thank you very much for your remarks about the pension fund and to suggest that you should keep it in a foremost position on your agenda.

The Chairman: I will say, as I have said before, that we have all these matters very closely before us. I thank you very much, gentlemen, for your attendance here to-day.

The proceedings then terminated.

THE EASTERN BANK.

Developments in Iraq.

Mr. J. S. Haskell's Speech.

The eighteenth annual general meeting of the shareholders of the Eastern Bank, Limited, was held on March 28 at the office of the Bank, 2 and 3, Crosby Square, London, E.C.

Mr. J. S. Haskell (the chairman) presided.

The Secretary (Mr. R. Carter) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—You will have seen from the report and accounts that the bank has had another satisfactory year and the profits are up to the average of recent years, though not so high as we should wish to see them.

During the first quarter of the period with which the accounts deal there were hopeful indications of a general trade revival, especially in view of the large cotton crop in the United States and the cheapening of the commodity, but the low level of prices was of short duration, and the sharp advance to over 10d. a lb. caused importers of Manchester goods to hold back. The financial crisis in Japan also had an adverse effect on its imports of Indian cotton, and the China market has not been at all helpful; on the contrary, instead of taking considerable quantities of cotton yarn from India, as was the case in former years, China imported only to the value of Rs.750,000, against over Rs.113 lakhs in 1926, and exported to India a very large amount of yarn of their own manufacture, totalling 11,000,000 lb. in weight.

The Indian cotton mills have not done well and the situation there is very difficult, but in spite of this it is reported that eight new mills are projected in districts adjacent to Bombay, which shows that there is still a belief in the future of the industry. The crops have been generally good, particularly that of jute, and the Calcutta mills are running on profitable lines. The exports of raw cotton show a falling off of over £11,000,000, but exports of tea, wheat and seeds, and other commodities make up the shortage.

The outstanding feature of the year was the fixing of the rupee at a statutory rate of 1s. 6d., thus setting at rest the uncertainties which for some time had exercised a restraining influence on trade. This stabilisation on a gold standard basis is bound to have a beneficial effect.

The Indian Government from April last began making purchases of its sterling requirements by weekly tender, and this system has been working satisfactorily. Money was more employable in India during the year, except for the slack season, when from July 28 to September 8 the bank rate remained at 4 per cent., since when it was raised by successive steps to 7 per cent. in November.

I here wish to pay my tribute to the services rendered to that country by Sir Basil Blackett, who is shortly to vacate office as Finance Member.

The imports of merchandise into India amounted to £185,000,000, against £175,000,000 in the previous year, and the exports to £245,000,000, as compared with £247,000,000 in the year before and £305,000,000 in 1925. Gold imports £12,300,000, against £17,500,000. Silver £11,300,000, against £14,000,000.

Taking the imports of specie into account there was thus a balance of trade in favour of India of roughly £37,500,000, against over £41,000,000 in 1926 and £76,000,000 in 1925, the peak year.

The total exports from Lancashire of piece-goods and yarns have been in excess of last year, but they are still only a little more than half the pre-War year 1913; there is thus a considerable leeway to be made up. India has taken more in quantity but less in value compared with 1926, owing to the lower price of the raw material. Iraq has also absorbed a large quantity, and the value shows a marked increase from about £1,500,000 to £2,100,000.

Oil Discoveries near Kirkuk.

An event of some importance in that country was the striking of oil in paying quantities by the Turkish Petroleum Company near Kirkuk, and this will no doubt prove a source of great prosperity in time. Other schemes are in contemplation, such as a railway from Baghdad to Haifa and the development of the cotton-growing industry, which will all conduce to its economic advancement. Business in general has been comparatively satisfactory, although still rather restricted. The country itself appears to be quietly prosperous, and its Budget, though framed to balance, has yielded to the Treasury a welcome surplus.

His Majesty King Faisal arrived in London in October last as the guest of the British Government. Before leaving he paid visits to some of our great industrial centres and took a keen interest in everything he saw. I am sure you will agree with me that such personal contacts must be beneficial to all concerned.

His Majesty was attended by his Prime Minister, General Jaafar Pasha, who is shortly to resume his former post as Diplomatic Agent in London, where he will receive a warm welcome.

We watch with much interest and sympathy the progress of the ancient kingdom of Iraq, in the further development of which the Eastern Bank will continue to assist in every way.

The Balance-sheet.

Referring now to the balance-sheet, the figures, as you will have seen, do not vary a great deal from last year. On the assets side cash in hand and at bankers is a little lower. British Government and other securities show an increase of £400,000, and these are valued at or under current prices on December 31, the date the books are closed. The bulk of these investments are short-dated, and there is little risk of depreciation. Customers' liability for drafts against shipments, which is the *contra* to acceptances on account of customers on the other side of the balance-sheet, shows an increase of over £200,000, which is satisfactory. Loans receivable and advances also show an increase of £346,000. Premises account, after writing off the £10,000 apportioned to this account last year, is now just over £200,000. We consider we have almost written down this asset sufficiently and are recommending that £5,000 only be placed to the account this year instead of the usual £10,000.

To deal now with the liabilities, our capital remains at £1,000,000, and the reserve fund, increased by the allocation of £20,000 last year, stands in the balance-sheet at £400,000. Actually, with the £25,000 proposed to be placed to this account at this meeting, our reserve fund will stand at £425,000. Current and deposit accounts show an increase of over £200,000. Bills payable are a little lower. Loans payable against bills and securities amount to £2,360,000, an increase on last year.

The profit and loss account, including the balance brought forward, shows a profit of £160,351 9s. Out of this an interim dividend was paid in October last, absorbing £40,000, and we now recommend a final dividend of 5s. a share, less income-tax at 3s. 8.657d. in the £ (after allowing for relief in respect of Indian taxation), which is equal to a dividend at the rate of 9 per cent. for the whole year. This will absorb £50,000, and we propose to add £25,000 to the reserve fund and to write off £5,000 to premises account, as already mentioned, leaving a balance of £40,351 9s. to be carried to the next account. This is an increase of £1,910 14s. 6d. on last year's carry-forward.

Better Trade Prospects.

As for the future it is not wise to prophesy after the disappointments of the last few years, but having experienced seven lean years it is not unreasonable to hope that better times are ahead. There are many indications of improving trade in this country, which is bound to spread itself to the East.

It is once again my pleasure to express to the managers and the staff the appreciation of the board for their continued zeal and devotion to the interests of the bank.

I now beg to move the adoption of the report and that a final dividend of 5s. a share, less income-tax at 3s. 8.657d. in the £, after allowing for relief in respect of Indian taxation, be paid on March 31 to the members who are on the register on that date, out of the net profits of the bank for the year ended December 31, 1927.

Sir James Leigh-Wood will second the motion, and before putting it to the meeting I shall be happy to answer any questions that may be addressed to the chair.

Sir James Leigh-Wood, K.B.E., C.B., C.M.G. (deputy-chairman), seconded the resolution.

A Shareholder's Appreciation.

Mr. Joseph Nissim.—Mr. Chairman, I have no question to ask, but with your indulgence I should like to say that we on this side of the table will heartily endorse the adoption of this excellent report. So far as I can gather from your admirable survey the bank is maintaining its position and gaining ground. Considering the time, we are very satisfied with the modest appreciation in the more important items, like deposits, loans, and advances, in the total figures, and in the net profits. There is one matter of very great importance in the Budget of 12 months ago of the Government of India, and that is the definite removal of the duty upon cheques and bills of exchange payable on demand. That is intended to develop the banking habit, and we may be confident that in the Presidency towns and ports where we operate the banking habit will, under that stimulus, continue to develop. I notice Sir Thomas Strangman here fresh from his Indian experiences, and hope he will be able to bear me out when I say that we are on the eve of great educational progress, particularly in the towns where we are now operating. I wish to call the special attention of our officers out there to the trend of events so that they may take advantage of it. As regards Iraq, it is a matter of very great satisfaction indeed that one major problem after another has been satisfactorily settled, and particularly the Treaty of amity and close friendship between this country and Iraq which was signed last year under the inspiration of King Faisal. We are all of us very conscious of the severity of competition among the exchange banks in India, and we know it is not confined merely to English and Indian banks, but Japanese banks and banks representative of every important country in Europe operate in the places where we operate. That consciousness, Mr. Chairman, is the measure of our gratitude to you. (Cheers.)

The resolution was then put the meeting and carried unanimously.

The Chairman next moved:—"That Sir James Leigh-Wood, K.B.E., C.B., C.M.G., and R. E. Sassoon, Esq., M.C., the retiring directors, be re-elected directors of the bank."

Mr. G. Bromley Martin seconded the motion, which was unanimously adopted.

On the proposition of Mr. F. Salinger, seconded by Mr. C. H. Slater, the auditors (Messrs. Turquand, Youngs and Co., and Messrs. Lowe, Bingham and Matthews) were reappointed for the current year.

Sir Thomas Strangman proposed a vote of thanks to the Chairman, directors, and staff, which was seconded by Colonel G. R. C. Westropp, C.B., and was unanimously accorded, and after a brief acknowledgment by the Chairman the proceedings terminated.

THE ANGLO-INTERNATIONAL BANK.

Conditions in the Near East.

The second ordinary general meeting of the Anglo-International Bank, Ltd., was held at Winchester House, Old Broad Street, London, E.C.2, on March 30. General the Hon. Sir H. A. Lawrence, G.C.B. (the Chairman) presided.

The secretary (Mr. J. Back) having read the notice of the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: Before I give an account of the bank's activities during the period from its inception in October, 1926, until December 31 last, I must refer to the loss which we have sustained through the tragic death of our Vice-Chairman, Mr. Michael Spencer-Smith. The services which he rendered were invaluable, for he was one of those men who enhance the reputation of Englishmen in foreign countries, and both at home and abroad there were few who knew him who were not the better for the contact with his virile, yet lovable, character. We are fortunate in having as his successor Sir Otto Niemeyer. Sir Otto's knowledge of Continental conditions and the services which he has rendered in his capacity as Chairman of the Finance Committee of the League of Nations are well known to you, and his advice and co-operation will be of the greatest assistance to us.

Your Board has been engaged during the period under review in liquidating the affairs of the old constituent banks and in building up a business in accordance with the generally accepted traditions of English banking. In view of the widely spread Continental interests of our predecessors the process is inevitably a somewhat protracted one.

Your Board are following a conservative policy in the development of the bank's busines. The profits of the period amount to £80,448 5s. 10d., and, after writing off preliminary expenses amounting to £28,000 16s. 9d., there remains a balance of £52,447 9s. 1d., which your directors recommend be carried forward.

As the business of the bank depends to a great extent upon the economic conditions prevailing on the Continent, I am glad to be able to state that during the past two years an improvement has taken place in the general economic situation in Europe.

In the Succession States currencies have been stabilised, or are in process of being stabilised, budgets have been brought into equilibrium, and solid foundations have been laid for a sound financial administration. If it is premature to speak of a complete restoration of normal conditions, the progress achieved has more than fulfilled expectations, and justifies a reasonable optimism for the future.

While it is satisfactory to be able to record such a welcome improvement in general conditions in Central Europe, we shall be unwise if we underestimate the difficulties which have still to be overcome. Apart from the political complications which may threaten the stability of the Succession States, we have always maintained that their chief hope of permanent economic recovery lies in closer co-operation, and in the realisation that in spite of their political independence, which no one in this country wishes to assail, they are, and must always remain, to a great extent, economically interdependent. Not the least reassuring feature of the present situation is the growing tendency of the statesmen and business leaders in the Succession States to view their economic problems from this angle.

Largely on account of the bad harvest, Yugoslavia, which is still suffering from the economic crisis produced by the deflation of the dinar, has not had such a successful year as the other Succession States, and the foreign trade figures for 1927 do not make nearly such a good showing as in previous years. On the other hand, Yugoslav industry has shown welcome signs of recovery from the depression of the last three years. In most of the big enterprises a much-needed reconstruction has taken place, more particularly in the highly important timber industry, which now shows a greatly improved position and would seem to have surmounted the crisis. As far as the State finances are concerned, the country is still suffering from too high a budget and too heavy taxation. The Yugoslav Government, however, is now grappling with these problems with commendable energy. A feature of the financial year was the settlement of the Yugoslav War Debt to Great Britain.

For the Yugoslav banks 1927 has been a year of consolidation and recuperation from the losses arising out of the inflation period. In this connexion there has been a welcome tendency, by a process of amalgamations, not only to reduce the number of superfluous banks, but also to break down their narrow provincial character. With regard to our own banking interests in Yugoslavia, I may point out that the Croatian Discount Bank, in which we possess a considerable holding, has amalgamated with the Croatian-Slavonian Land Mortgage Bank, which is an affiliated institution of the Austrian Boden Credit-Anstalt. As the policy of the new bank, which is constituted by this fusion, will be to extend its activities all over Yugoslavia and, above all, to seek co-operation and contact with Belgrade, it should play a far more important rôle in Yugoslav finance than purely local institutions like the Croatian Discount Bank and the Croatian-Slavonian Land Mortgage Bank. The Anglo-International Bank retains an interest in the new institution and is represented on the Board of Directors.

For Roumania the past year has been a somewhat anxious one. The deaths of King Ferdinand and M. Jonel Bratianu within a few months of each other created considerable complications with regard to the succession. Fortunately, these difficulties have so far been successfully surmounted. Unfavourable weather conditions resulted in a bad harvest, but, as the trade balance shows a larger surplus in favour of exports than in 1926, the year was a more satisfactory one than might have been expected. In industry the timber trade has suffered from the heavy rates which still prevail for borrowed money and from the high cost of transport, while the oil industry, as in other countries, has found the past year a difficult one. Although the currency has not yet been legally stabilised, the leu was steady throughout the year, and legal stabilisation is now unlikely to be long delayed. Rates for credits have fallen from 20 per cent. to approximately 12 to 14 per cent. Roumania has still four main economic problems to solve before she can attain that prosperity to which the richness of her natural resources entitles her. These are the stabilisation of her currency, the compilation of a Customs tariff, which will not be subject to alteration with every change of Government, the flotation of a foreign loan for productive capital expenditure, and the reorganisation of her transport system. When these four problems have been solved, Roumania should have a successful and prosperous future. Our own branches in Roumania had a satisfactory year.

From what I have mentioned regarding the steadily improving conditions on the Continent, I think you will agree that our prospects are reasonably bright and that we can look forward to the future with confidence.

I now beg to move: "That the report and accounts, as audited and certified by the company's auditors, now before the meeting, showing the company's position as at December 31, 1927, be approved and adopted."

Sir Harry Goschen seconded the motion, which was carried unanimously.

The retiring directors, Mr. E. W. H. Barry, Lord Faringdon, Sir Harry Goschen, Mr. Ludwig von Neurath, and Sir Henry Strakosch, were re-elected, and Dr. Paul Hammerschlag and Sir Otto Niemeyer, who were appointed to the Board during the year, were also re-elected.

The auditors, Messrs. Deloitte, Plender, Griffiths and Co. and Messrs. Binder, Hamlyn and Co., were re-appointed, and the proceedings terminated with a vote of thanks to the Chairman.

DIALA COTTON PLANTATIONS.

Government Agreement Signed.

An extra-ordinary general meeting of the Diala Cotton Plantations, Ltd., was held on April 2 at the registered offices of the company, 16, St. James's Street, S.W., to consider the following resolutions:—(1) That the name of the company be changed to "Latifiyah (Iraq) Estates, Ltd.," and that Article 77 of the company's articles of association be altered accordingly by the substitution of the words and parentheses, "Latifiyah (Iraq) Estates, Ltd.," for the words "Diala Cotton Plantations, Ltd.," in the heading of the form of proxy contained in the said article. (2) That the capital of the company be reduced from £500,000, divided into 500,000 shares of £1 each, to £250,000, divided into 400,000 shares of 10s. each and 50,000 shares of £1 each, and that such reduction be effected by reducing the nominal amount of the 400,000 partly-paid issued shares numbered 1 to 400,000 (inclusive) from £1 to 10s. each and extinguishing the liability in respect of uncalled capital on the said 400,000 shares to the extent of 10s. per share. (3) That subject to the confirmtiaon by the Court of the said reduction of the company's capital, and on such reduction taking effect each of the 15,000 fully-paid issued shares of £1 each numbered 400,001 to 415,000 (inclusive), and each of the 35,000 unissued shares of £1 each be sub-divided into two shares of 10s. each.

Sir Edward Manville, M.Inst.E.E. (Chairman of the company), presided.

The Secretary (Mr. William S. Gregg) read the notice convening the meeting.

The Chairman, in moving the resolutions, said: Gentlemen,—You have already been informed that a settlement of all outstanding questions has been reached with the authorised representative of the Iraq Government, and that an agreement embodying these terms has been sent to Baghdad for formal signature.

In order to facilitate the legal and other procedure necessary, Lieutenant-Colonel J. H. Stanley proceeded to Baghdad, with the result that the agreement with the Iraq Government was signed on February 8, 1928, by the Minister of Irrigation and Agriculture on behalf of the Government, and the agreements were exchanged between the Government and Colonel Stanley on behalf of the company.

In accordance with the terms of this agreement, which will become effective after ratification by the Iraq Parliament, the Iraq Government undertakes to grant to your company a title in Hapu to the Latifiyah Estates, which have an area of approximately 100,323 misharas (roughly 60,000 acres). The purchase money payable by your company is £15,016 3s., being Rs.2 for every mishara of land, and provision has been made for the expropriation at the expense of the Government of all Uqr rights and any other charges or encumbrances.

In order to assist our operations, the Government of Iraq undertakes to construct and maintain a main irrigation canal, and all necessary ancillary works for providing a supply of water for the irrigation of the estate, which canal will derive its water from the Euphrates. The cost of construction of the main canal and ancillary works will be paid by the Government in the first instance, 10 per cent. being added for overhead charges. Your company will pay interest at the rate of 6 per cent. per annum on the outlay and overhead charges, and will repay the principal in twelve equal half-yearly instalments, the first of which will become payable on March 31, 1932. The amount of the debt due to the Government is to be secured by a charge on the property registered by a charge on the property registered in Tapu, and the taxation to which your company will be subject will be at the rate ordinarily in force in Tapu estates. The Government also undertakes to extend to your company in regard to water supplied treatment similar to that extended to other Tapu owners.

Agreements have been made with Eastern Irrigations, Ltd., providing that, upon the grant of the Latifiyah estate to your company, the latter is to be relieved of its liability to pay to Eastern Irrigations, Ltd., the sum of £37,500 now outstanding in respect of its holding of 50,000 shares in that company and that your company shall no longer be interested in such shares. Eastern Irrigations, Ltd., having been allotted £15,000 fully-paid shares in your company, to be utilised by it in settling the claim of the original concessionnaires under the concession, will be entitled to a further £15,000 fully-paid shares, or the equivalent of 30,000 fully-paid 10s. shares in settlement of all claims.

Eastern Irrigations, Ltd., has entered into an agreement for settlement with two of the original concessionnaires resident in Baghdad. A similar agreement has been approved by the solicitor of the remaining original concessionnaire, and it is anticipated that it will be signed by the latter without delay. It would no doubt have been signed already, but this gentleman was recently called away from Paris to Beyrout owing to the death of his father, and the agreement has had to be forwarded to him there.

Your directors propose, as soon as practicable, to begin the development of the estate and make the necessary arrangements for the building of the canal, with a view to letting out the land to cultivators as water becomes available. It is anticipated that there will be no difficulty in arranging for the cultivation of the estate, as several sheiks in the district in which the estate is situated have already indicated that they are prepared to take up large areas for their people as soon as water is available.

I should like to record our appreciation of the work done on behalf of your company by Colonel J. H. Stanley. I think we are all very much indebted to him for having undertaken the arduous task of representing your company in the negotiations with the Iraq Government, as it is largely due to his efforts that a satisfactory settlement of the many outstanding questions has been reached.

Sir Lionel Fletcher, C.B.E., seconded the resolutions, which were carried unanimously.

COMMERCIAL BANK OF THE NEAR EAST.

Trade and Currency Stabilisation.

The sixth annual general meeting of the Commercial Bank of the Near East, Limited, was held on March 29 at the offices, 4, London Wall Buildings, E.C., Mr. C. H. D. Moberly (Managing Director) presiding.

Mr. P. J. Bailey (pro Secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman said: I have to regret, and apologise for, the unavoidable absence of our directors, Messrs. Empedocles, Petrocochino, Merlin, and Cassavetti.

The report of the directors and the accounts for the year ended December 31, 1927, having been duly circulated, I propose, with your permission, to take them as read.

Business during the past year has been disappointing, and the revival of trade expected at the beginning of the year did not materialise. This was probably due partly to foreign exchanges not having been stabilised, but I think it was in a greater measure owing to the general poverty of the peoples, due to the results of the War and their slow recovery therefrom. Although the Near East exchanges have not been stabilised, they have not fluctuated to anything like the extent of previous years. The various Governments concerned have taken steps to steady them with a view to stabilising their currencies in the near future, and trade may be expected to improve when that has been done. At the same time, there has been a little improvement in business during the last two or three months, and it is to be hoped that it will continue.

Our profits for the year 1927 amounted to £9,914, as against £10,728 for the year before, and, considering the conditions of the year, I think they may be considered fairly satisfactory.

I now beg to propose:—"That the report of the directors and the statement of accounts for the year ended December 31, 1927, be received and adopted, and that a final dividend for the year 1927 at the rate of 6 per centum per annum, less income-tax, be paid on the shares of the company on and after March 30, 1928."

Mr. E. L. Lambrinudi seconded the resolution, which was carried unanimously.

The retiring directors (Mr. C. S. Merlin and Mr. D. J. Cassavetti) were re-elected, and the auditors (Messrs. Price Waterhouse and Co.) having been reappointed, the proceedings terminated.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended March 28:—

Egyptian Futures.—Sakel Contract.—Active and at times sharply fluctuating markets have been experienced during the past week. During the earlier days the advance made further progress, short covering and fresh speculative buying at times finding the market bare of contracts. At the peak of the movement, November touched 20.95d., but at this time it was evident that the class of buying coming into the market was of a rather poor character and in addition Alexandria began to show signs of wavering and started to send selling orders. To-day we have experienced a substantial reaction, general liquidation and stop-loss orders being mainly responsible for the sharp relapse that has taken place. To-night's close shows a poor tone with values 1 to 39 points down for near and distant positions unchanged to 18 up on the week. Whether a further material set-back is imminent remains to be seen, but it rather looks like it, as very little trade support is coming in, and all the factors exploited by the "bullish" element must be fully discounted for the time being by a premium of more than 100 per cent. over the American markets. It must be remembered that prices at the top had appreciated between 450-500 points since the beginning of February; on that date, no doubt, a very heavy short interest was open, but we consider that this has been to a great extent forced in and we will now probably have the reverse of the picture in a somewhat unwieldy "long" interest. Everything, of course, depends on the trade attitude; if the world's consumers of fine spinning cotton continue their hand-to-mouth policy we will probably have a further decline, but on the other hand if spinners show any decided signs of increasing activity, speculative holders may be encouraged to keep their cotton instead of being influenced to liquidate whilst they still have profits. Our own view of the market for the moment is that the present reactionary tendency has still to run its course. We further repeat our last week's advice to those who have profits on the "long" side to liquidate at least a part of their holding; on the other hand, should our anticipations be borne out and prices drop away materially to, say, 19d. to 19¼d. for the November position, we would advise purchases, as later on we think values will show renewed strength.

Upper Contract.—Quite a fair business has been transacted in this option during the past week, and whilst values have declined 7 to 19 points for near and 20 to 35 points for distant positions on the week, the tone has remained quite steady. For some time past we have noticed an increasing short interest being built up mainly on Alexandria account, and later on it appears probable that the repurchasing of this cotton will not be effected without materially altering the course of values. Rather more trade support has been in evidence and we notice a tendency in certain quarters for mills that have hitherto been using Sakels to take an increasing interest in the higher grades of both Uppers and Zagoras. We still maintain our favourable views of the outlook and consider that purchases on any decided reaction will ultimately prove profitable.

Egyptian Spot.—A fair business has again been done in spot Egyptian, although it has been unevenly distributed, and during the last two days particularly (as a result of the erratic movements in Sakel futures) the amount of buying power in evidence has dwindled considerably. A large number of spinners have been fighting the recent advance step by step, and on the first sign of a relapse in prices they have disappeared from the market altogether. Although on balance prices again show an advance on the week, fluctuations have been of an important character and there is, at the moment, an unstable appearance about the market.

During the early part of the week there was a fair inquiry for Sakel cotton at from 14½d. to 16½d. and from 125 to 200 on contracts. Very little interest has been shown in cotton at from 50 off to 100 on, but the customary inquiry has again been in evidence for the inferior qualities at from 8½d. to 12½d. The best qualities have been neglected. Uppers have been in good request at from 14d. to 15d., and this market, on the whole, has been steady, with an upward tendency. Low Uppers, 8½d. to 10d., have been inquired for here and there, but the demand is still very slow in coming on to the best qualities, which now stand at rather a forbidding premium, particularly when based on Alexandria.

Pilion has been in improved request at from 14½d. to 15½d. C.i.f. business has been quiet, spinners showing a great reluctance to commit themselves at the current level. Sudan Sakel cotton has moved off quietly at steady rates. Forwardings to the trade for the week ending the 23rd inst. showed a marked improvement at 10,746 bales Egyptian and 1,396 bales Sudan. Estimated sales for the week, 2,400 bales Egyptian and 1,000 bales Sudan.

Quotations of Sakel generally show an advance of 60 points on the week; Extra Fine, and Fair, however, show exceptional declines of 30 and 15 points respectively. Quotations of Upper and Pilion are 25 points higher on the week. F.G.F. Sakel to-day, 20.50d. F.G.F. Upper to-day, 14.50d. F.G.F. Pilion to-day, 14.90d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 22, state:—

Since our last report the futures market has been extremely nervous, but the feeling is distinctly bullish. The week's summary of price movement is as follows:—Sakellaridis: March, 41.00 dollars, 4.11 dollars up; May, 40.95 dollars, 3.47 dollars up; July, 41.27 dollars, 3.47 dollars up; November, 41.74 dollars, 3.22 dollars up; January, 41.40 dollars, 3.20 dollars up. Ashmouni: April 27.50 dollars, 1.62 dollars up; June, 27.80 dollars, 1.60 dollars up; August, 27.90 dollars, 1.65 dollars up; October, 28.00 dollars, 1.72 dollars up.

Sakel.—Speculators continue to dominate the market and during the week prices have been pushed up to over 41 dollars for May and 41.75 dollars for November. The movement seems to be entirely the work of the local speculators and the corresponding advance in Liverpool prices is more or less due to buying orders from the same source.

There are no new features to justify the recent rapid rise and the bulls still rely on a supposed shortage of Sakel. As we mentioned last week, the statistical position of Sakel is undeniably stronger than at this time last year, but a point which must not be lost sight of is the influence of price on consumption. Price, after all, is a powerful factor; we generally see a cut in consumption as prices rise, and the recent rise has, without doubt, diminished the importance of any possible shortage of supplies. Spinners using Sakel are resisting the advance in prices, and if present prices are maintained they will do all they can to curtail their takings.

Heavy and frequent fluctuations in cotton prices are very unsettling to the textile industry, but, evident as this is, the Egyptian Government fail to understand it. Government intervention and the law restricting the cotton acreage have reduced Sakel business to a speculation, and if this continues, spinners will cease to rely upon Sakel, with disastrous results to Egypt.

The continued holding off the market of the Government stock of cotton becomes more and more inexplicable. Present prices undeniably leave a good margin of profit to growers, and in endeavouring to push prices still higher the Government are running the very serious risk of turning spinners on to substitutes, to say nothing of the encouragement given to other countries to produce cotton which will enter into competition with Egyptian Sakel; Egypt at present has practically a monopoly of the best cotton, but the policy of the Government is giving every incentive to other cotton-growing countries to break in upon that monopoly and, if they succeed, it will be an absolute disaster for the Egyptian grower.

The rise has cut down the demand from the consuming cetnres, and we think that the good spot market is mainly due to purchases for stock by some of the export houses who think it prudent to pick up Sakel at present spot differences, hedging with November, the premium of which month over the near positions helps to pay the cost of carrying the cotton.

The atmosphere is so bullish that it is difficult to say where the rise will stop. The market may go higher, but, on the other hand, a serious break may occur at any time; real demand is the determining factors, and spinners' attitude is very antagonistic to the present movement, which they consider quite unjustified.

Uppers.—This variety has been neglected, but prices show some advance in sympathy with the rise in Sakel.

The straddle differences between the two varieties has increased day by day, and the present straddle between April and May is 13.45 dollars, against 11.60 dollars a week ago and 10.93 dollars a fortnight ago. Differences between new crop options have correspondingly widened.

The week's receipts amount to 148,042 kantars, against exports 145,445 kantars; the stock in Alexandria stands at 2,890,833 kantars.

Spot: The past week has seen a considerable increase in activity at Minet el Bassal, but it is doubtful if this reflects a proportionate improvement in spinners' demand—which continues on moderate lines—but rather buying for stock by merchants in view of a possible squeeze in actual cotton during the summer months. Sales amount to about 17,500 bales, of which we estimate 8,700 bales Sakellaridis, 7,450 bales Ashmouni and Zagora, 1,000 bales Pilion, and 350 bales other growths. Cotton continues to be generally well held, though the advance has brought out more actual offerings, but sellers have very big ideas and are very hard to deal with. A noticeable feature has been the greatly improved demand for Sakel of all qualities.

Sakellaridis: A considerably improved business has been done, in which all grades have had a share, and an increased turnover has resulted. With the exception of the low grades, which have not followed the full rise in contracts, spot differences have had a sharp rise and are generally distinctly dearer. The medium grades are especially hard to buy.

Ashmouni and Zagora: Here also all grades have been dealt in and a greatly improved turnover has resulted. Spot differences are generally unchanged, except for the very low grades which have not followed the contract market.

Pilion: Has been in good favour with buyers and an improved turnover has resulted. Spot differences are generally unchanged.

Other Varieties: In White a fair business has been done at about last week's differences. Some small lots of Maarad and Fouadi have changed hands. There has been a recrudescence in the demand for Nahda and a good business has been done, chiefly in good qualities.

Up-country: Spot business has been more brisk and arrivals in Alexandria this week total 148,042 kantars, a relatively high figure which does not confirm the reports circulated by some of the up-country merchants to the effect that there is no cotton held in the villages.

Crop, 1928—Temperature this week has been favourable and the crop is progressing normally. Sowing is in full swing, as also the re-sowing necessitated in some districts by the bad weather of a fortnight ago. Water supply prospects are not good and unless there is an improvement in the river levels in the near future the plant may suffer somewhat from shortage of water during the summer months.

H.M. Stationery Office has published as a White Paper (cmd. 3065, price 9d.) the Treaty of Commerce and Navigation between Yugoslavia and Great Britain and Northern Ireland, which was signed on May 12, 1927, and ratifications of which were exchanged on February 9 last. The text of the Treaty is printed in Yugoslav characters by the side of the British text.

The Franco-Roumanian War debt agreement was signed in Paris on March 28 at the Ministry of Finance. The total debt has been fixed at 527,635,877 gold francs (£21,984,828) payable in 62 years by graduated annual payments rising from 1,261,000 gold francs (£52,540) to 22,576,950 francs (£940,700). After the signature, M. Poincaré received the Roumanian delegation, headed by M. Antonescu, ex-Finance Minister, and congratulated them upon the successful completion of their work.

Notes of the Week.

The Anglo-Egyptian Notes.

The situation in Egypt has been clarified by the publication of the text of the Note addressed by the Egyptian Government to Great Britain in reply to the British Note of March 4 and of the further communication from the British Government. There is also the explanation of the Egyptian Note given by Nahas Pasha to journalists in Cairo with a view to correcting misleading summaries of the Note which had gained currency. In its reply of March 30 the Egyptian Government expresses its deep regret that it has been confronted with the *aide-mémoire* of March 4, "which does not correspond with its frank willingness to develop and fortify the bonds of friendship which should govern the relations between Great Britain and Egypt." Considered from the point of view of international law "the *aide-mémoire* is an evident departure from the rules admitted in matters of diplomatic intervention, which cannot, without a complete change of character, give to the intervening State a right of control over acts of the other State." After protesting Egypt's solicitude for the protection of foreigners, the Note continues :—

"The *aide-mémoire* in question constitutes a perpetual interference with the internal conduct of Egyptian affairs, paralysing the exercise by Parliament of its right to legislate and to control administration and rendering impossible the existence of a Government worthy of the name. Such cannot clearly be the intention of the British Government. For these reasons the Egyptian Government cannot admit the principle of an intervention which would be tantamount to its veritable abdication. As the Government of a sovereign and independent State it is fully conscious of the duties which devolve upon it. It intends to fulfil them strictly, and with the help of God, to the satisfaction of all."

The British Government's Reply.

To this communication the British Government has replied through Lord Lloyd that it cannot accept the Note as a correct exposition of the relations existing between Great Britain and Egypt or of their respective obligations. Reference is then made to the fact that by the Declaration of February 28, 1922, the British Government declared the independence of Egypt subject to the four Reserved Points, and at the same time informed foreign Powers that the British Empire would always maintain as an essential British interest the special relations between itself and Egypt long recognised by other Governments. Foreign Powers were also notified that Great Britain would not allow these special relations between herself and Egypt to be questioned or discussed by any other Power, that Great Britain would regard as an unfriendly act any attempt at interference in the affairs of Egypt by another Power and that she would repel with all the means at her command any aggression against the territory of Egypt. It was in view of the responsibility thus incurred towards other Powers that the British Government reserved the four points until they should have been settled by agreements between the two Governments. A settlement was sought in the recent Treaty; but the Egyptian Government having refused that treaty, continues the Note :—

"the *status quo ante* continues. The position to-day is, therefore, the same as when the Ramsay MacDonald-Zaghloul negotiations broke down, except in so far as it has been modified by the Notes exchanged in November, 1924. The reserved points remain reserved to the absolute discretion of his Majesty's Government, the Egyptian Government exercising its independent authority subject to satisfying his Majesty's Government on these matters."

The Status Quo Ante.

For the satisfactory adjustment of the relations between the two countries it is, perhaps, just as well that a start should be made *de novo*, now that the Wafd has formally assumed power. The Egyptian Note and Nahas Pasha's statement to the Cairo journalists show that the Egyptian Government is anxious to reach a friendly agreement with Great Britain and does not take its stand on any crude anti-British basis. It clings, however, to the belief that Great Britain ought to be able to project herself into a future which takes no thought of the past, as far as Egypt is concerned. A little reflexion, we are confident, will convince all thinking people in Egypt that this is asking too much of any country. No real prejudice will be done to Egypt by a gradual transition to the state of affairs at which she aims; but she will defeat her own ends by insisting upon an immediate change. The mere sug-

Digitized by Google

gestion conjures up, not necessarily in Great Britain, but among the nationals of other States in regard to whom the British Government has accepted responsibility, all manner of possibilities which, however much it may be realised to-day that they are no longer probabilities, cannot be banished from men's minds. The history of the War and still more of the Peace shows that no country in the complex state of affairs which exists to-day can count on obtaining all that it wants directly it wants it. Is it worth Egypt's while to maintain that she must be the one exception to a universal rule? The shortest route to the complete independence that she very naturally desires is to accept an early treaty with Great Britain, in the certainty that whatever stages are laid down in the treaty will be susceptible of curtailment as a result of the establishment of really friendly relations and a complete understanding between the two countries. A treaty, however, as Zaghloul Pasha discovered, entails negotiations and is not to be reached by dictation, save by a Power that has proved or can demonstrate its superiority in war.

Italy, Turkey and Greece.

Speculation has been stirred by the announcement of a meeting between Signor Mussolini and Tewfik Rushdi Bey, Turkish Foreign Minister, which coincides with a marked *détente* in Greco-Turkish relations and follows upon the establishment of correct relations between Italy and Greece. There is no reason to infer that a tripartite pact is necessarily imminent; but it may well be imagined that the Italian Government will do its best to secure one. The Turkish and Greek Governments are known to be trying to discover a *modus operandi* which will provide a short cut to more satisfactory relations between the two countries than is likely to result merely from the normal progress of the international commission responsible for the regulation of the exchange of populations. A *rapprochement* between Italy and Turkey would mean the abandonment of the fear of Italian designs on the territorial integrity of Asia Minor, and must inevitably be acompanied by a relaxation of the general suspicion of the principal Western Powers that so incongruously hampers Turkey's professed ambition to become westernised. For this reason considerable interest attaches to the action of Signor Mussolini in making a special journey to Milan, in order to meet the Turkish Foreign Minister. Turkey's financial needs are forcing her to reconsider her international position, and the efficacy of the hair of the dog that bit you may not be unknown to the Angora authorities. It would be a good stroke of policy if Turkey could exorcise all her fear of Italian designs on Asia Minor and at the same time obtain some of the advice and financial support which she badly needs, if the rehabilitation of the country is not to be indefinitely postponed.

Political Currents in Bulgaria.

A leading article in The Near East and India of March 22, entitled "Bulgaria's Problem," referred to the association of M. Tsankoff with "a military combination" in his attempt to challenge the position of M. Liaptcheff, the present Prime Minister. This article, which appears to have been widely quoted in the Bulgarian Press, has led General Volkoff, Minister for War, to explain in the course of a public statement that the use of the term "military" is liable to create a misunderstanding abroad, as the word will be taken to refer to officers on active service in the Army, who may be supposed to be discussing the question of the Bulgarian Loan and to be identifying themselves with the supporters or the opponents of the proposed scheme. "In case this supposition should be current," continued General Volkoff, "I must point out, and I am able to give the assurance in the most positive manner, that the Army remains entirely neutral in relation to the political life of the country, that it takes no part whatsoever in the struggles between the parties or in the different political currents, and that it remains firmly at its post and strictly fulfils the duties assigned to it by the Constitution and by the laws of the country. The reference in the passage in question is clearly to ex-officers, who are at the moment Members of Parliament. These are not to be regarded as military, for they have long since quitted the ranks of the Army and, having become free citizens, have, as all citizens, the right to adopt the political views or the attitude which seems to them best to respond to their own idea of the nation's interests. It is necessary to make this distinction, in order not to have a false impression conveyed abroad of Bulgarian affairs."

We gladly publish General Volkoff's statement, to clear away any misapprehension that our words may have caused. M. Tsankoff's military supporters in the Democratic Entente are, of course, deputies in the Sobranye. They may find a bond of union in their former association with the Army, but anyone who is acquainted with present conditions in Bulgaria is able to testify to the success that has attended General Volkoff's policy of keeping the Army strictly aloof from politics.

Bulgaria's Problem.

The unanimity with which a few organs of the British Press that are well informed in regard to Bulgarian affairs and are known to have Bulgaria's interests at heart have commented adversely on the movement to split the Democratic Entente from within has proved unwelcome to the followers of Dr. Tsankoff, and attempts appear to have been made to attribute these comments to the inspiration of Bulgarians who would enlist foreign support in the country's political differences. There is, however, no foundation for the charge, for the criticisms represent the obvious judgment of any intelligent onlooker who desires to see Bulgaria reap the full reward of the correct but difficult policy that she has adopted with very few lapses since the War. Many Bulgarians are inclined to be disheartened on account of what appears to them to be a lack of appreciation on the part of the Great Powers of their country's good behaviour and sacrifices; yet reflexion will convince them that in this particular matter the Great Powers can do little on their own accord, unless they carry with them the endorsement of Bulgaria's neighbours. The latter will come inevitably, in the interests of the whole Peninsula, albeit slowly; perhaps not so slowly as the tone of the Balkan Press would suggest. In these circumstances any serious political upheaval in Bulgaria would set the clock back, the more so as Balkan opinion begins to react to the conditions of which the new Bulgarian Loan is the eloquent witness. It is satisfactory to learn from General Volkoff's declaration, to which reference is made above, that the active Army has no part in the movement against the present régime.

Treaty Revision.

If the campaign for the revision of Hungary's frontiers as fixed by the Treaty of Trianon fails, the fault will rest

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

mainly with those responsible for the misguided tactics employed to secure the end in view. The question is clearly a delicate one. In the first place, if one of the Peace Treaties has to be materially revised, it will be difficult to resist a plea for the revision of all. Rightly or wrongly the prospect of such an eventuality horrifies a number of worthy people. In the second place, revision will have to be effected with the consent of all concerned, or at the point of the bayonet. The latter course, however, is out of the question, and the advocates of revision are doing their best to make the former impossible. No one claims that the Peace Treaties were perfect; but in the case of the Treaty of Trianon this point is entirely overlooked, that, whereas revisionists are content with vague and general assertions, it can be shown that the actual frontiers were drawn after a careful balancing of irreconcilable claims. In a dispassionate analysis of the whole question in the current issue of the American quarterly *Foreign Affairs* Major H. W. V. Temperley examines the pros and cons of revision. He does not admit that there was ever an undertaking or obligation to draw Hungary's frontiers solely on ethnographical lines. He shows reason for modifications of the frontier between Czechoslovakia and Hungary, but points out that the restoration to Hungary of the Arad-Szatmar strip of Roumania's north-western boundary could only be made if the Hungarian Government undertook to build Roumania a railway farther to east to connect the north and south of Transylvania. Major Temperley, it need hardly be said, is much more convincing than the great mass of vapourings that do duty for the revision case. At the same time it is only fair to state that Hungary's neighbours are largely to blame for the campaign in favour of rectification of the frontiers. It was known that violence had been done to the principle of nationalities, but as this could not be altogether helped, the different countries were asked to treat minorities in a decent and civilised manner. For the most part they have signally failed in this elementary duty.

Political Parties in Roumania.

The postponement of the party congress summoned by the National-Peasant Opposition in Roumania to meet at Alba Julia on April 22 is a hopeful sign that the political tension manifestly existing in the country may not, after all, be allowed to drift to extremes. Until a date which is variously announced as May 6 and May 16—the latter would give the weather a better chance of conforming to the meeting's requirements and thus justify the reason given for the postponement—there is, therefore, little likelihood of an attempt on the part of the Opposition to force an issue, while the Government on the other hand has time to weigh more carefully the possibile consequences of an unbending attitude. M. Vintila Bratianu has already announced that the failure of the loan negotiations will in no wise affect his decision not to resign, on the ground that no other Party is qualified for office. This statement is not calculated to encourage the National-Peasant Party to seek an amicable settlement; but it is, no doubt, according to the rules of the game that fierce words should be bandied to and fro until the last moment.

The Yaman and the R.A.F.

In our issue of March 22 we recorded the kidnapping by the Imam Yahia of the Yaman of the Alawi Shaikh of Al Kasha and of the Qutaibi Shaikh of Jamil, two leaders who were in treaty relations with the British Government. On the refusal of the Imam to yield up these two men, the British authorities gave notice that Dhala and Qataba would be bombed. The earlier bombings, which began on March 5, had little effect, but a continuance of this argument until March 22 has resulted at last in the Imam's complying with British demands. On March 24 the two prisoners were returned by the Imam, and a truce has been arranged between him and the R.A.F. It is profoundly to be hoped that this display of force will have proved sufficient to convince the Sanaa authorities that Aden intends to allow no further encroachments upon its territory, and that recourse will not again have to be made to it in the negotiations which are bound sooner or later to be resumed between the Zaidi Imam and his southern neighbours. His bluff—if bluff it were—has been called; and it is now for both sides honestly to lay their cards on the table. It is interesting, by the way, to note in this connexion that an agreement as between the Wahhabis and the Zaidis is reported to be on the way. The second mission of King Ibn Saoud's delegates to Sanaa appears to have been more successful, and it is stated that the Imam's agents have returned to Mecca in order to reach a definitive arrangement.

Trouble in Luristan.

It is characteristic of the interest which the outside world pays to Persia that practically the first news which reaches it of a rising in Luristan against the Teheran authorities should be to the effect that the trouble is at an end. Nobody who knows the real condition of Persia, however, and who recognises the capital part which the tribes play in the country, is likely to be satisfied with the bare announcement that the Lurs have again been on the war-path, but have been forced again to submit to the troops of the Shah. A certain light, a rather lurid light, is thrown upon the obscure situation in Luristan by the subsequent report that the Amir Lashkar, Minister of Public Works, has been killed near Khurramabad in a skirmish with Lurs, that as a consequence the Majlis at Teheran at once adjourned, and that, on April 4, the Shah left his capital for the scene of the outrage. Now it should not be supposed, in the absence of a compete explanation, that this action of the Lurs is purely and simply an example of the forces of reaction in array against those of progress. A more plausible explanation might perhaps be found in an examination of the treatment by the Teheran authorities of the Lurs in general. It is, of course, right and fitting that roads should be made in Persia, and the fact that in connexion with such a progressive effort the hand of the tribes should have been reared in revolt may well throw light on what is really one of Persia's capital problems: the good treatment of her tribes by the central authority and their being won-over, not coerced or dragooned, to the ways of real progress as opposed to those of personal aggrandisement. The oppression of the tribes in the past few years by certain of the Shah's subordinates has been in fact a scandal, though little enough of it has been known by the outside world; but it appears possible that this unfortunate death of Mirza Adbullah Khan Tahmasp may open the eyes of Teheran and of the rest of the world to what might conceivably become an irreparable abuse.

TURKEY IN EVOLUTION.

If constant change could always be taken as a sign of progress, then Turkey would be making steady headway these days. There is little to suggest that the Republic is settling down into a groove; rather is the impression conveyed that in every direction a certain restlessness, not to say feverishness, prevails, which it is too early as yet to diagnose as mere growing pains, for it may prove to be the prelude to a serious illness. Indeed, a question mark is written large over the whole of Turkey. At the moment the matter which dwarfs all others in public interest is the trial, now nearing its end, of Ihsan Bey, ex-Minister of Marine, on a charge of corruption and of acting prejudicially to the interests of the State in connexion with a contract for the repair of the battle-cruiser Yavouz. For three years, while the condition of the vessel steadily deteriorated, the question of repairing the Yavouz had engaged the attention of the Turkish Government; four days after he had been informed that the Cabinet was to be reconstructed and that his Ministry would be abolished Ihsan Bey concluded a contract with a French firm for reconditioning the Yavouz. He was at once denounced by the Prime Minister and a parliamentary commission was formed to investigate the affair. This commission was presided over by a personal enemy of Ihsan Bey's and its verdict was a foregone conclusion. Trial before the High Court followed. The Government has openly set its face against corruption, and it is certain that such a step is an indispensable preliminary to the building up of a new Turkey on a sound basis. Yet the conditions of the investigation and trial, as well as the confident assertions of the accused, suggest that corruption is at present likely to be attacked only when those guilty have incurred the enmity of the Government on other grounds, and it is left to be inferred that disposition to be critical of the methods and policy of the powers-that-be is the head and front of such offending. If there is any truth in these contentions, it is possible that a serious clash of interests will take place before long in Turkey. While devotion to the Ghazi President is expressed in as fulsome terms as ever, a tendency is manifesting itself to withhold a similar halo of infallibility from some of his subordinates and from the official class as a whole. The administrative record of recent years, with its impulsive enactments and equally hasty cancellations or revisions, has helped to undermine the prestige of the Government, and the public denunciation of official delinquencies has encouraged a critical spirit among the people at large. If the Angora authorities continue to ignore the fact that government to be successful ought to be as much as possible an exact science and not merely a succession of haphazard enactments, often contradictory and rarely fitting compactly into a well-planned scheme, the peaceful evolution of the Republic must remain highly problematical.

A symptom of the rapidity with which ideas find expression in legislation is to be seen in the frequent tinkering with religious matters. It may be that from the outset the leaders of Republican Turkey had set their hearts on the repudiation of Islam in favour of official atheism, but that they lacked the courage to adopt the rough-and-ready methods of their Bolshevist neighbours. The Constitution, not yet four years old, declared that the Muslim religion is the religion of the Turkish State. In the light of this declaration it was thought that the successive encroachments on Muslim institutions—the abolition of the Caliphate and the Sheikh ul Islam, of the Courts and Medresses—aimed not at the eradication of Islam from Turkey, but at a separation between Religion and Law, in order that Law and Justice should be administered according to the standards of modern civilisation. Now, however, comes the proposal, endorsed by a sufficiently substantial body of opinion in the Grand National Assembly to assure it the sanction of that body, to repeal the Article of the Constitution making Islam the State religion on the ground that in a republican and lay State religion ought to be wholly separated from the State. The ultimate bearing of this further change will be revealed later; the immediate significance lies in the fact that when so much constructive legislation is urgently needed the time and inclination should be found to undermine further the position of religion in the Republic. There can be no real demand in the country for this fresh step towards official atheism, although it may seem a logical development in the eyes of Angora. It suggests at the same time a complete indifference on the part of the rulers of Republican Turkey towards the feelings of, or the possibility of challenge from, the more fervent adherents of Islam. Yet another instance, therefore, in addition to that of Bolshevist Russia, is provided of an attempt to build up a State without any other rallying point or steadying influence than devotion to doctrines imposed by an handful of strong-minded leaders.

Religion, however, in Turkey is still accorded the negative virtue of distinguishing Muslims from non-Muslims. The separation of religion and State carries with it no accession of tolerance towards non-Muslim religions. Although the Turkish Government is pledged to allow freedom of religion and of speech, and the exercise of all professions without distinction of race, creed or language, yet there is an increasing disregard in the Republic of this undertaking. On the top of the official steps taken to enforce the employment of Turks —Muslim Turks alone are designated in practice—by foreign firms and the use of the Turkish language in business correspondence comes the less savoury feature, enforced by unofficial agents, of compelling people in the streets and public vehicles to speak Turkish. Even Jews who have for centuries been exemplary citizens in Turkey are now suspect, and have come under special bans. The restoration of their right to travel freely in the country, although granted officially, seems to hang fire in practice, and there is an ominous ring in the announcement that a society has been formed in Angora for the "Turkification of the Jews." It may be that with a population registered by the census at fourteen millions Turkey thinks that she can dispense with all but Muslim Turks within her borders. The experiences of the Angora Government and the young Republic do not suggest that the country can afford to discourage any who show promise of being law-abiding citizens and of adding their quota to its economic development.

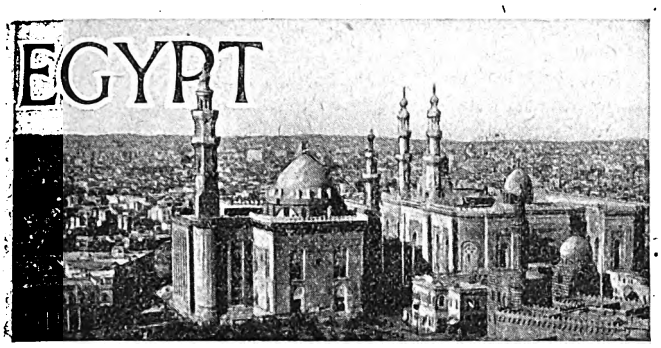
The Near and Middle East*

From Our Own Correspondents.



Cairo, March 31.

The Political Situation.

It is a matter for sincere regret that the hope expressed in this correspondence last week, that the Wafd would inform its future actions with the same spirit of conciliation and good sense which had characterised its handling of the question of the vice-presidency of the Chamber, has so soon been disappointed. When the new Cabinet took office it was authoritatively stated that it intended to reply to the Note on public security presented to the Sarwat Cabinet by the British Government on the 4th instant, and that in this reply it would express its inability to be bound by the Declaration of February 28, 1922. Time passed, and no reply was forthcoming. This encouraged the hope that the Cabinet had thought better of the matter. Then came Sir Austen Chamberlain's categorical statement at Oldham with regard to the Declaration, and, to judge by the remarks made by prominent political men, it certainly appeared to have had a salutary effect, particularly as the reply was still not forthcoming.

However, the wiser counsels which at one moment promised to prevail, have been swept aside, and yesterday the Egyptian Government handed the Residency a Note, which is nothing short of a repudiation of that Declaration and of the basis of the present régime in Egypt. The step taken by the Cabinet is, indeed, an unwise one. There was no need for a reply to the Note, since it was only in the form of a *caveat* and if, for the sake of *amour propre*, the Cabinet felt itself compelled to reply, it would have been so easy to couch it in terms fully maintaining the national dignity without in any way questioning Great Britain's position in Egypt. We are too near the event for it to be possible to say what action the British Government will take.

The Royal Visit.

Princess Mary with Viscount Lascelles arrived to-day on her return from Upper Egypt. She did not carry out the Sudan part of her programme, because on arrival at Wadi Halfa the doctors considered that the heat in Khartoum would be too great. The Princess spent the extra time in visiting the various historic monuments, particularly at Luxor. This afternoon she attended the races and took tea with King Fuad in the Royal Kiosk. This evening she and Viscount Lascelles were the King's guests at a banquet at Abdin Palace, which was followed by a reception of the leading British residents, in the course of which a concert was given in the Throne room. The coming week the Princess will spend quietly in Cairo visiting various points of interest and she will stay, as before, at the Residency as the guest of Lord and Lady Lloyd. On the 9th a dinner, followed by a ball, will be given at the Residency; on Tuesday the 10th Her Royal Highness will attend the first performance of "Merrie England," to be given at the Royal Opera House by the C.A.D.M.S., and will leave at midnight by special train for Jerusalem where she and Viscount Lascelles will spend three days.

King Fuad intends, I understand, to make a trip in the Western Desert towards the middle of May. He will go by the "Mahrussa" to Sollum and make the rest of the journey by car, pushing as far afield as Siwa, which has never before been visited by the Sovereign of Egypt.

Lady Bailey's Flight.

Official and aviation circles were much concerned during the past ten days with the question of Lady (Abe) Bailey's flight to South Africa. Although it is not the first occasion that a lady has passed through Egypt in an aeroplane, it is the first time that one has come entirely unaccompanied, and the problem which confronted the Residency and the Governor-General of the Sudan was whether she was to be allowed to fly from Khartoum to Uganda alone. Particularly in the Southern part of the Sudan the country is exceedingly difficult even for men aviators, and it was feared that if Lady Bailey were unfortunately compelled to make a forced landing in that area serious complications would arise from the fact that a woman was stranded in such wild surroundings. The British authorities decided that they could not take the responsibility of allowing her to fly unescorted over that part of the country. Fortunately an escort became available in the person of Mr. Bentley, who is flying up from the Cape under the auspices of the Johannesburg Star, with his wife and Lady Heath, and has undertaken to escort Lady Bailey from Khartoum to the Uganda frontier. Lady Bailey, who left here on Wednesday, will wait for him in the Sudan capital.

While one cannot help admiring the nerve and enterprise of a woman like Lady Bailey in undertaking this venture, and one would like to encourage women flying as much as possible, it is to be hoped that the attempt to fly over the Sudan unescorted will not be followed by other similar attempts and that steps will be taken to prevent a repetition of the very difficult position in which the British authorities were placed. If any precedent is to be established it is that no woman aviator will be allowed to fly South of Khartoum unless she has an escort.

Dr. Sydney Smith.

The Egyptian Civil Service in general and the administration of native justice in particular have suffered a serious loss in the person of Dr. Sydney Smith, who sailed on Sunday last for home in order to take over the chair of Forensic Medicine at Edinburgh University left vacant by the death of Professor Littlejohn. Dr. Smith came to Egypt in 1917 in succession to Dr. T. H. Hamilton and has held the post of Medical Legal Expert at the Native Appeal Parquet and the professorship at Kasr El Aini School of Medicine ever since.

All those qualified to know speak most highly of the work he has done in that dual capacity. The most up-

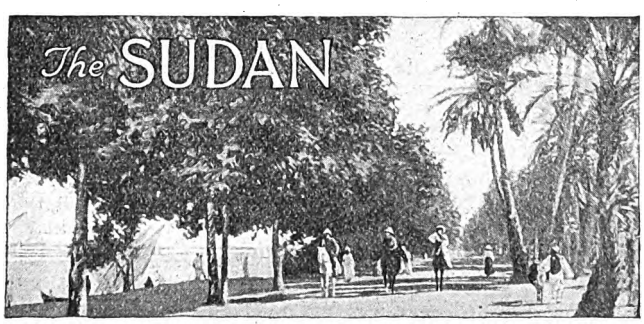
to-date methods have been introduced at the Parquet and have been taught to the students at Kasr El Aini, and, thanks to Dr. Smith's keen brain, methodical work and enterprising initiative, the medical-legal administration has been completely re-organised and placed on a basis which, if it is in future carried out efficiently, should enable it to respond to all the calls which modern conditions will make.

Dr. Smith was fortunate, if one may so put it, in finding his tenure of office coincide with remarkable criminal activity, particularly in the direction of political crime, and, while no reflection on the excellent work done by the judicial side of the Parquet is intended, there can be no doubt that the successful handling of these cases and the bringing to book of the men responsible for these murders have been in great measure due to his ingenious mind and painstaking work. We still remember the convincing proofs, the fruit of careful research and observation, which he laid before the Court in the case of the assassins of the late Sirdar.

Everyone—including Egyptians, and their expression of feeling on the matter has been, perhaps, the most noteworthy feature in the demonstration of personal esteem which Dr. Smith received on the eve of his departure—agrees that, while an efficient successor may be found, there will never be anyone to replace Dr. Smith, and they regard the failure of the Egyptian Government to rise to the occasion in time and assure continuation of his services as in the nature of a calamity. I recall that the late Professor Littlejohn, when he was out here during the winter of 1923, told me that he looked upon Dr. Smith as the most brilliant man of his period in the matter of Forensic Medicine and that he had marked him out as his successor.



Khartoum, March 26.

The Close of the Season.

Our "season," which begins with November, is drawing to a close. We have had the last dance at the Grand Hotel and Thursday saw the last Ladies' Night at the Sudan Club with diminished tables. Our visitors are gone. Officials' wives and children have gone or are going. With fewer social activities before us those who are left settle down to work and to sweat in, and swear at, the weather.

Except for one or two cold spells we have had little or no winter. December, January and February have probably been hotter than any such preceding period for many years. It seems that just as England and Europe experienced an abnormally cold winter the Sudan had an abnormally hot one.

We have not had a visit from Lord Lloyd this year, but we have had quite a number of notable people at Khartoum, amongst them Field-Marshal Lord Plumer, High Commissioner for Palestine, and Sir Hugh Bell, the veteran industrialist; each gave an address at the Sunday Supper Club at the Clergy House. Sir Alan Cobham has again visited us on his trans-African flights and at special meeting at the Bourse, under the auspices of the Sudan Chamber of Commerce, told us, amongst other things, of the prospects of Khartoum becoming a great air-port. It surprised nobody here that Princess Mary and Viscount Lascelles came only as far as Wadi-Halfa in view of the 111 degrees F. in the shade that we were getting at the time in Khartoum. A Sudan winter is ideal and March is often quite enjoyable, but this year it would have spoilt any pleasure that Khartoum offers. Yet to break the journey at Halfa must be a disappointment, for Khartoum is a hallowed name to English people.

Public Works and Enterprises.

The opening of the Khartoum-Omdurman Bridge will make the season a memorable one and will help to disperse the feeling amongst residents that we are shut in on all sides by the Niles and the sand. We have also seen the completion of a fine General Post Office, worthy of, say, Glasgow or Manchester, extension to the Law Courts, and, last but not least, a Pompeian-looking Swimming Bath of standard dimensions in the Sudan Club grounds, which is open to members and lady relatives and friends. Ladies are now allowed on the Club Lawns every evening from tea time to 8 o'clock and have certainly brightened and added greatly to the use of the Club.

The Race Meetings have been well supported, whilst the Open Tennis Tournament continued its annual success. Mr. "Bunny" Field won the open singles as usual, but one only needed to have seen the match to feel assured that it was no easy "walk over." The ever popular Governor and Mrs. Munro won the Handicap Mixed Doubles, though it looked at one time that Mr. and Mrs. George Gerrard might well have won. The Governor-General did not enter this year. It will be recalled that he won, with Bimbashi Muir, the Mens' Doubles last year.

The Even Tenor.

Whatever actions and re-actions might have been taking place between London and Cairo, we have ceased to be more than an interested spectator since the Egyptian Army was evacuated from the Sudan and Egyptian officials who were conspiring to make trouble were either put under lock and key or sent away from the country. We feel safe in the knowledge that no Government, whether Conservative, Labour or Liberal, will sacrifice the Sudan and the progress of the last thirty years.

The regrettable murder of Major Fergusson might give ideas to those uninformed about Sudan or African affairs

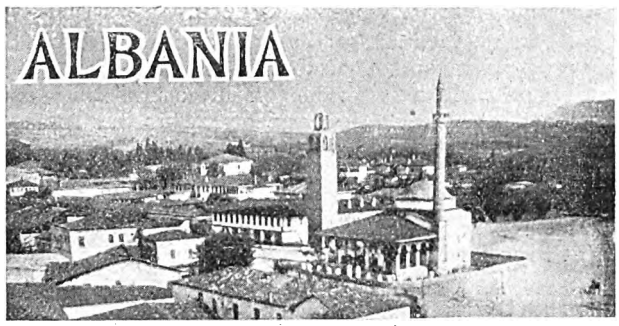
which are far from correct. You can train, caravan, or tramp the Sudan from end to end with as great a feeling of safety as in England itself. Two British battalions, a few gunners, and other details garrisoned a million square miles. What other troops exist are the Arabs and blacks of the Sudan Defence Force, representatives of the people themselves. Major Fergusson calls to mind those fine picked Englishment who serve in vast tracts of territory, often alone, and govern by the grace of their personality and the good will of their subjects rather than by perhaps there always will be, when settling disputes have, it may be, never seen. There must be times, and, perhaps there always will be, when in settling disputes amongst tribes without any show of force or putting down customs which our trust will not allow us to recognise will result in tragedy. Major Fergusson was beloved of the natives he ruled as well as by all others who knew him. He was another sacrifice offered for good government and progress in backward lands.

Makers of the Sudan.

On Sunday evening, February 5, the Governor-General unveiled Countess Gleichen's memorial monument to Lord Kitchener and memorial windows to Sir Oliver Lee Stack. The group of statuary is finely executed and, if small, very impressive. Kitchener is carried full length on the shoulders of the armies of Great Britain, India, Egypt and the Sudan. The Governor-General gave an interesting address to the congregation.

The Sudan has figured prominently recently in the East African and Sudan Number of *The Times*. Gordon, Cromer, Kitchener, Stack are great names in Sudan history, but we must not forget, as do the writers in that publication (official, too!) that, however great these names, the man who made the Sudan what it is to-day is General Sir Reginald Wingate. Gordon gave his life and a name, but the Sudan relapsed into barbarism; Cromer, no doubt, won through financial and diplomatic difficulties in Cairo, but his services to the Sudan were a detail amongst them; Kitchener brought victory to the gates of Omdurman after long years, but within twelve months he had left the Sudan; in Stack (Governor-General 1917-1924), perfect type of a gentleman, the Egyptians murdered the best friend they ever had, but it must not be forgotten that Sir Reginald Wingate governed the Sudan for seventeen long years (1899 to 1916). It is almost impossible to set limits to his genius in the pacification and governing of the various tribes, whose dialects and customs he knows so well, whilst his bringing in the scientist to lay true foundations for the development of the country is not without its lesson to the politician at home. Every great scheme of which we have heard in late years was initiated during his Governor-Generalship. It is all common knowledge—but lest we forget, like the writers in *The Times* Special Number on the Sudan!



Duruzzo, March 30.

An English Fortnight.

The fortnight which has just ended might justly be called an English fortnight for Albania, owing to the visit from London of several old friends of Albania. First, there was the Countess Carnarvon, mother of the late Aubrey Herbert, who comes two or three times a year

to visit Albania, notably Scutari, Valona, and Koritza, interesting herself in welfare, educational and refugee work, in the struggle against malaria, and in the development generally of young Albanians.

Then one has to record the visit of Lord Lamington, President of the Anglo-Albanian Society of London, and of Sir Harry Eyres, formerly British Minister here. Sir Harry, who has been a great friend to Albania, and is a personal friend of Ahmed Bey Zogu, is a little anxious at seeing Albania follow so slavishly the Italian policy, the influence of which he had always sought to oppose, on the ground that Albania should preserve her independence and political neutrality.

Finally, Mr. Stroud Read, a former professor at Robert College, Constantinople, has visited Albania. He is collaborating with Lady Carnarvon and is making an inquiry into the condition of Albanian schools.

The Albanian Red Cross and Greece.

The Albanian Red Cross having decided to send a quantity of maize and corn to the Albanians of Greek Epirus, who are in a miserable plight, asked first of all permission of the Greek Government. This was refused, on the ground that Greece is rich enough and possesses enough to succour the Chami. But seeing that the condition of these poor people is critical, the Albanian Red Cross intends to appeal to the International Red Cross at Geneva for its intervention.

It should be noted, further, that relations between Albanian and Greece are a little strained, as a result of the Greek Government's refusal to deal with the question of Albanian minorities and to suppress the rigorous measures which are applied to them. The Albanian representative, of a consequence of this situation, has had to leave Athens. But there is as yet no question of an official rupture, but only of an acute crisis.

Italian Engineers.

As is known, the Albanian loan contracted in Italy will be devoted in part to public works, that is, to the construction of roads. The Italian Government, in order to exercise a certain control over these roads, has just sent twelve engineers, who arrived ten days ago in Tirana and were placed at the service of the Ministry of Public Works. Up to the present the technical service of the Department has employed Albanian engineers under the direction of M. Emil Beck, a German engineer who has been employed for five years in the Albanian Ministry.

THE PROGRESS OF GREECE.

At the dinner given under the auspices of the Anglo-Hellenic League on March 26 in honour of Greek Independence Day, an interesting review of the progress of Greece since 1821 was given by Monsieur Caclamanos, Greek Minister in London, in his reply to the toast of "The Welfare of the Greek Nation." The following is a summary of the speech, for which there was no space could be found in last week's issue of The Near East and India :—

One hundred and seven years have now elapsed since the great and eventful day when a handful of Greek notables and warriors assembled round Archbishop Germanos on the abrupt mountains of Kalavryta for the raising of the Standard of the Cross. Some prelates, leading a crowd of peasants armed with scythes, club and slings, formed an assembly of dashing soldiers as well as wise leaders. The first thought of this first Government and first army of modern Greece was to occupy Kalavryta. Their next move to march on Patras. The venturesome patriots were certainly inflamed by unflinching courage, but they hardly realised how long, harsh, bloody and difficult would be the struggle, in which they were engaging themselves and their country. Archbishop Germanos raised the standard of the Revolution on March 25, 1821, and Patras remained in the hands of the Turks until 1828. Greece was not definitely recognised as an independent State before 1830, or rather 1832, when the Bavarian Prince ascended the throne.

The enthusiasm which the Greek struggle aroused among the nations, the feelings it stirred among all noble hearts throughout the civilised world, the powerful support accorded from the beginning to the rising by public opinion—Philhellenism, to give to the whole movement its synthetic and glorious name—constituted the decisive lever in the final achievement of the Greek Revolution.

In spite of our gratitude, however, for everything which has been done for Greece by liberal nations and by noble and courageous friends who hastened to our aid, we Greeks cannot forget that Chateaubriand so magnificently said in the second edition of his famous "Note on Greece," published one year before Navarino: *"Les Grecs se sont refaits nation par leur valeur; la politique n'a pas voulu reconnaître leur légitimité; ils en ont appelé à la gloire."*

In securing, moreover, freedom and independence in those narrow, impolitic and suffocating frontiers against which Leopold of Coburg so wisely, if not effectively, objected, by declining to accept the Greek Crown, Greece has not achieved all that her friends expected or rather peremptorily requested from her. A great and ancient legacy constitutes a heavy burden. Those are happy peoples, perhaps, who have no history, and I cannot help thinking that nations as individuals with not too embarrassing ancestors, are able to keep more easily their account-books in life.

When the friends of Greece went to see the new country that they had helped to liberate, they have not regarded it with over-indulgence. They have been unfavourably impressed by the aspect of her population, decimated by a long and cruel war and its unthinkable sufferings, by the ruins of the towns, by the prevailing disorganisation, the factious dissensions, and the general low standard of life. Disillusionment has ensued and disillusionment renders people unjust. Many friends turned bitter critics or indifferent onlookers. It is only from the day when it has been realised—and such a recognition has been delayed for many decades—that it was quite unfair to ask modern Greeks to build, without any delay, a new Parthenon, to model, in some hours, the Praxitelian Hermes or the Nike of Paconius, to find someone to deliver a new oration of Periklés, to include it in Cook's tourist programmes and to stage in modern Athens some new dramatic masterpieces—it is only from this day that Greece and Greeks have benefited by more equitable judgment. As one sympathetic English observer, Mr. William Miller, remarked quite lately: "The over-enthusiasm of exclusively over-classical scholars was expecting to find modern representatives of Pericles and Plato among newly emancipated rayas, but the same people never have supposed Fleet Street and Piccadilly inhabited by Shakespeares and Bacons."

One hundred and seven years have elapsed just to-day since the raising the blue-white flag at Kalavryta. The city of Athens, visited by Chateaubriand some years before, was described by him as a territory not larger than some twenty leagues. One could walk over it in 45 minutes. Its population, according to the same authority, did not exceed that of a suburb of Paris (of the Paris of 1806). The port of Piræus, according to Chateaubriand, was unable to contain more than fifty small craft or two not very large vessels. According to another traveller, an Irishman who visited Greece in 1836, the Piræus was connected with Athens by two "Buses," running four times daily in each direction. The population of Greece did not exceed at that time 800,000, and the public budget, at the advent of King Otho, balanced at no more than £300,000, represented by a copper and silver national coinage with some foreign cold coins, which attracted general curiosity to the same degree as ancient gold Attic coins exhibited in a museum.

Since that not remote date Greece has been territorially extended by the acquisition of the Ionian Islands, so generously handed over to her by the liberalism of Great Britain, of Thessaly, Crete, the Ægean Islands, Macedonia, Western Thrace. Her population has already attained 7½ millions of inhabitants, a homogeneous and strongly-knitted nation. The public budget from £300,000 raised to £23,000,000. The National Bank of Greece, created through capital mainly contributed by a Swiss Philhellene (Eynaed), has developed into a powerful institution, the tremendous deposits and reserves of which illustrate the accumulated wealth of the nation. From currants and tobacco alone Greece obtains from 10-12 million pounds yearly. Agriculture is wonderfully developing and the impending execution of irrigation works in Thessaly, in the plain of Salonika, in the Struma Valley, and in Thrace, will bring under cultivation more than 1,000,000 acres of fertile land. Industry is progressing by leaps and bounds. The capital of 12,000 inhabitants in the first years of independence has grown to a city of over 800,000. The Piræus of Chateaubriand and of the two buses becomes the first port of the Eastern Mediterranean, where no fewer than one hundred steamers enter and leave every day. The mercantile marine, represented one century ago by a few, although enterprising, sailing ships, which constituted the nucleus of the Navy of the War of Independence, amounts now to 1,200,000 tons of steamers and the Greek flag is displayed on every sea. The primitive vehicles of the Irish traveller of 1836 are replaced by an electric railway connecting Athens and the Piræus with trains running every ten minutes. Ten thousand motor cars of every description intersect the streets of the two neighbouring towns, controlled with difficulty but efficiently by the British-trained police of the Greek capital. The rare foreign travellers, who according to a witness in the year 1850 were followed and contemplated as some queer acquisitions at the Zoo, have been replaced by more than 30,000 tourists wandering every spring and autumn among the glorious ruins of the past, under the paternal care of guides more polyglot than learned.

I do not want anybody here to-night suspecting me of boasting. But I thought that it would be of interest to mention these facts and figures, convinced as I am that they will encourage friends of Greece in the continuation of their friendship.

TURKEY AND FOREIGN MISSIONS.

It will be remembered that the announcement that four Turkish girls in an American school at Broussa had been converted to Christianity was followed by drastic action on the part of the Turkish Government, which ordered the school to be closed and announced its intention of prosecuting the head of the school for contravening Turkish law. The incident would seem to have attracted considerable attention in Turkey, and to have given rise to a certain amount of public discussion. A Turkish magazine, *Hayat*, devoted to literary and educational subjects, has had a series of articles on the Broussa conversions, which, throwing as they do an interesting ligh on Turkish mentality and the Turkish attitude towards foreigners, are of sufficient interest to be quoted at some length.

The first article appeared in the *Hayat* of February 2; it was unsigned, but the authorship was subsequently claimed by Mehmed Emin Bey. Taken by itself, the writer declared, the conversion of the children

is a simple, ordinary event: a few individuals of the Muhammadan mass numbering several hundred millions have come out from the mass and joined the Christian mass, also numbering several hundred millions. But if we think of the reactions to which the event has given birth, the publication in the newspapers, the emotion experienced by the parents whose children were studying in the Broussa School, and the removal of those children by the parents after the event, then we realise that we are not confronted by an ordinary question. The affair has made a deep impression in the Turkish mass, to such a degree that the Education Department of the secular Republican Government felt the necessity of entering into the affair. In this respect the problem is not simple.

The article proceeds to ask why an American school exists in Broussa, which is "our most Turkish city," and continues:—

It is well known that the duty of the school is to give education; the function of education is to inoculate the younger generation with the thoughts, feelings, desires and ideals of the society *to which it belongs*. The thoughts, feelings, etc., common to a society, however, can only be firmly established in the spirits of conscious and cultivated mature members of that society. And only these can inoculate the younger generation with these things. If this idea of ours is correct, then American and other foreign schools in general in Turkey are meaningless, and therefore functionless, empty institutions. We are sure of the truth of our ideas about education because these are not merely a matter of personal opinion; in every civilised country they are current and respected ideas. From another point of view, the foreign schools in Turkey are not meaningless, functionless and "empty."

The object of the foreign school is foreign culture; foreign language, foreign national ideals and foreign religion are the chief basis of this culture. The purpose of the foreign school then is to inoculate native youth with this culture.

From these premises it is argued that a foreign school is abnormal and, therefore, harmful. The schools claim to be serving merely "a humane purpose, in order to aid the education of Turkey," and the curriculum, it is admitted, lends some colour to the claim. It is necessary, however, to pass from the educational activities of a school to its moral training, the so-called "character building," an important point with American teachers. Then there is "the most attractive of the activities of the school," i.e., sport. "The one directing this is sure to be a teacher brought up with care and under strong religious suggestion in the special schools of the Y.M.C.A." Another important activity is student discussions.

These discussions are conducted with great skill and always drive the student towards a definite idea. This idea is a virtue, such as faithfulness, cleanliness, etc. Only the roads which, always secretly in the beginning and on the condition of remaining nameless, lead to this virtue, all lead through Christianity.

The result is that there are Christianity and Protestantism in the school, and the impression which all this indirect influence will make, especially on the spirits of romantic young girls, can be easily imagined. Some, however, may ask: "Well, what of it? In a secular Republic is a religious question to be discussed?" Every Turk who has attained his majority can choose the religion he wishes, or may have none at all. But we must not forget that every religion is an ideal, and every ideal is an intense longing that needs to be satisfied. The longings of soul of a young Turk who is a Protestant cannot be satisfied in Turkey within Turkish society. He will turn his eyes to the great Protestant nations. It is necessary, however, that the glance of a young Turk should be directed to his own social surroundings and education is charged with assuring this. Hence the foreign school becomes an institution very injurious to society; even for the foreigner who is working with the greatest good intention it is impossible to have an influence on the youth of a society that is entirely in harmony with the purposes of that nation. Foreign teachers despite their alleged good intentions are trying to separate Turkish youth from Turkish society. Apart from the habit of celebrating foreign holidays and ignoring Turkish national holidays, the foreign school is a political influence, as it teaches history from foreign sources and from foreign points of view. Another evil is their high fees which introduce class distinction in education and snobbery.

It is true that these schools are crowded. The fault lies with parents, who are attracted by their meretricious glamour, and with the Department of Education, which is under the necessity of providing rapidly for the increasing need of schools. It is not as if education were better at the foreign schools. Of the greatest leaders of the country has a single one studied a single hour in a foreign school? Can you think for a moment of the likelihood of the Ghazi, or Ismet Pasha, or Fevzi Pasha being a graduate of a foreign school? In spite of the many faults of the Turkish schools in the past they have brought great Turks into existence, and to-day Turkish schools are preparing great Turks for the future.

Character is very much a matter of nationality. It takes shape only in a national environment. It cannot be brought in from outside. A foreign school moulds character only according to foreign ideals, and whether the mould be religious or political it is harmful for Turkish national ideals.

In the *Hayat* of the following week the discussion is continued by Professor Keuprulu Zade Fouad Bey. He points out that the revulsion of Turkish opinion against the conversions has nothing to do with fanaticism, but arises from a consciousness of a "conspiracy designed to destroy national unity." It is not enough, however, to suggest that foreign schools are the main factor in this destruction of national unity. In the writer's opinion the national bonds of unity have been gradually getting looser and looser. Even the girls who have accepted Christianity claim to have become "civilised Turks" and regard those who attack them as uncivilised, fanatic and ignorant. Fouad Bey, therefore, proposed "to diagnose the case from a deeper and a more comprehensive point of view," and continued:—

I have the idea that Turkish society of to-day is passing through a very deep and a very acute culture crisis. This crisis through which we have been passing since the Tanzimat period (early nineteenth century) has to-day reached its zenith. Our society, leaving the sphere of Islamic civilisation of the Middle Ages, has felt it to be a vital necessity to enter the sphere of modern civilisation. This was of necessity so. The "placing-things-adjacent" policy of the "Tanzimat" and "Constitutional Monarchy" periods which appeared in the form of creating new values by the side of old values without destroying those old values could not continue in Republican Turkey. A secular court beside a religious court, a modern school opposite a religious school, a religious régime above a national régime: in a word, democracy and theocracy are contrary principles which it is impossible to harmonise. When it is necessary for the city woman under economic stress to enter business life, the harem, which was a souvenir of Byzantine-Persian civilisation, was bound to be destroyed.

Republican Turkey rapidly completed these necessary and vital changes and we witnessed the sudden fall of the old values and the old traditions. We were then facing the necessity of putting new values in the place of the old that have been destroyed, of strengthening anew upon modern foundations the bonds of social life, of giving a new ideal and a new direction to society. Like all modern democratic people, we also wished to lay the foundations of a new Turkish society upon national culture and upon a national ideal. A heavy duty had fallen upon the thinkers, the philosophers, the leaders of the country. However, this class of people were not able to accomplish this task. In this pathetic situation life on the social plane, not being able to wait for the development of great minds who could establish these new values, went forward without theoretical support. We tried to appropriate the institutions and values of modern European society, but because of social differences

Digitized by Google

this was done only in a superficial fashion. Those who wish now, in order to complete our revolution, to cast aside also the Arabic alphabet and substitute the Latin characters form a most patent example of this worship of form. These people hope that we will thus save ourselves also from the last vestiges of the Middle Ages and become completely modern. They do not realise that the clearest point of difference separating us from Europe is that of mentality, logic. Until we change our manner of thinking and of working to the European fashion, and until we save our economic life from its present Middle Ages state we cannot claim to be a modern society. When our ancestors first entered the sphere of Islamic civilisation, they looked down upon our national culture, they melted their national personalities in Islamic civilisation. To-day when we wish to enter into the sphere of modern civilisation we again face the danger of traversing the same wrong road.

When we see our mayors tearing down the art monuments of our ancestors because they wish to open broad streets, when we see our intelligentzia priding themselves on not knowing our national history and our national literature, when we see our scholars ridiculing our libraries which contain the records of the history of our civilisation and desirous of their destruction, when we see our historians taking the view that our national past consists simply of a mixture of filth and evil, when we see our patriots regarding the education of their children in foreign cultural environments a necessity of civilisation, it is impossible not to understand with how deep and how awful a cultural crisis we are face to face.

This kind of propaganda which corrupts national culture and weakens national self-reliance has a very harmful influence over youth. These ideas which have appeared under the mask of an outwardly brilliant modernism and democracy and which no one dares to criticise lest they be charged with conservatism, create even within out own national schools an atmosphere which poisons the spirit of youth. A young person who thinks it is ridiculous and unmodern to speak of the stories of Dede Korkot or of Battal Ghazi or of Keor Oghlu—just like students of the Middle Ages religious seminaries—regard it as a great virtue to discuss with a show of great learning Middle Age French or German works of the same sort. Thus this completely misunderstood modernisation movement gradually deepens the abyss which exists between the masses of the real people and the youth who to-morrow will constitute the better class. It creates a terrible crisis in our souls. It is certain that the foreign schools in the country aggravate still further this cultural crisis. But even if the foreign schools do not exist, if not in the form of "conversions" then in some other form, we cannot deny the existence of this cultural crisis which destroys national unity. To deny their national past, to despise their natural culture, and to make propaganda for foreign culture are traits characteristic of false and naive "so-called intelligent people" coming from backward servile, colonial peoples. The modern nation to-day is that nation which knows how to develop its national culture, its national personality—in a degree to give it international value. The Turkish nation will not imitate Western civilisation in the same sense that it will melt away with it; it will assimilate that civilisation in order to develop with its great power its own personality.

A further article in the *Hayat* of February 16 by Mehmed Emin Bey is inclined to challenge the theory of the loosening of the bonds of national unity, and returns to the charge against foreign schools. The parents and guardians, however, who for various reasons send their children to these institutions "are intelligent people. If we can explain the truth to them and if we can show them the danger, we shall help to prevent them from following this wrong course." He adds:—

In addition to the conscious opposition on the one hand of the Government and on the other hand of the fathers of families, if we can guarantee the putting-forth of greater efforts every year for the material and spiritual advancement of our national schools, and if we can facilitate the desires of those fathers who wish their children to learn languages well, we can in a short time remove from our midst the harm of these institutions which destroy the unity of the country and which bring into existence an entirely foreign class.

HUNGARY AND THE BALKANS.

Lord Danesfort presided on March 29 at a lecture on "Hungary and the Balkans," which was given by Mr. Dudley Heathcote under the auspices of the Near and Middle East Association, at the residence of Lady (Edgar) Bonham-Carter, in Radnor Place, Hyde Park.

Among those present were: The Hungarian Minister and Baroness Rubido-Zichy, the Bulgarian Minister and Mlle. Hadji-Mischeff, the Estonian Minister, Dr. Feine (Secretary of the German Embassy), the Counsellor of the Austrian Legation, the Counsellor of the Bulgarian Legation and Madame Lessinoff, Count de Salis, Viscountess Dupplin, Lady Sydenham, Lord and Lady Strathspey and the Hon. Joan Grant, Sir Edward and Lady Boyle, the Hon. Lady White-Thomson, the Dowager Lady Boyle, the Hon. Mrs. Edward Meade, Sir Edgar and Lady Bonham-Carter, Sir Frank and Lady Newnes, Sir William Clark, Comdr. the Hon. T. P. Parker and Mrs. Parker, Sir Robert Donald, Baron and Baroness Gyllenstierna, M. and Mme. Dimitri Stancioff, Lady Penson, Lady Hewitt, Lady Tighe, Admiral and Mme. Guépin, Major Arthur Bentinck, Captain and Mrs. E. N. Bennet, Mrs. Steuart Erskine, Miss Edith Durham, and Major Beldy.

Mr. Heathcote first described the Treaty of Trianon as having disregarded equity and having shown indifference to ethnographical and economic claims. Before 1914 Hungary was a perfect geographical entity, in spite of the fact that it contained, in addition to 11,500,000 Hungarians, 9,500,000 Roumanians, Ruthenians, Slovaks, Serbs, Croats, and Germans. The Treaty of Trianon reduced Hungary to one-third of its former size, handing over 1,000,000 Hungarians to the Czechs, 1,400,000 to the Roumanians, and 400,000 to the Serbs.

The lecturer laid down three objections to the Treaty of Trianon:—(1) That President Millerand promised to revise the Trianon frontier where judged desirable by a Commission of Delimitation; (2) that the treatment afforded to Hungarian minorities disregarded the promises laid down in the Peace Treaties; and (3) that the share of the Hungarian Government in responsibility for the War was based on a misconception. On this last point Mr. Heathcote subsequently stated that Count Tisza did all in his power to prevent the War, and that only his reticence prevented this being generally known.

He proceeded to the problem of the Hungarian minorities. These minorities, he asserted, were being systematically deprived of the most elementary justice. In Roumania and Czechoslovakia deliberate attempts had been made to denationalise them. Upon the acquisition of Transylvania by Roumania, he said that this province had belonged to Hungary for over a thousand years, that the argument that the confiscations were carried out in pursuance of an Agrarian Reform was false. And he gave instances of differential treatment as between the Regat and Transylvania.

His conclusion, after recounting the part which Count Tisza played in trying to prevent the War, was that Hungary would never resign herself to the present situation. First, he said, Roumania should be made to treat justly the solid *bloc* of Hungarian people made subject to her rule by the Treaty of Trianon, and secondly such rectification should be made of Hungary's frontiers as to cause Magyar elements still living in foreign countries to be negligible.

THE KING AND QUEEN OF AFGHANISTAN.

The King and Queen of Afghanistan left Victoria Station on April 5 *en route* for the Continent. Before bidding farewell to those who had gathered to see them off, King Amanullah expressed his appreciation of the friendly welcome accorded him by the English people. At the station were the Duke of Gloucester (representing the King and Queen), Sir Austen Chamberlain (Foreign Secretary), Major-General Sir John Hanbury-Williams (Marshal of the Diplomatic Corps), members of the Diplomatic Corps, Coloned Sir Clive Wigram, Lieutenant-Colonel Sir Francis and Lady Humphrys, and Field-Marshal Lord Allenby. Before the King of Afghanistan passed out on to the platform he asked for the representatives of the English Press, and through a member of his suite who spoke English said:

"I have sent for you because I wished to communicate my interest in and my impression of Great Britain and its people. I have experienced warm greetings and welcome from the people of Great Britain, and, of course, sincere friendliness from His Majesty King George, all of which have pleased me very much. I am very pleased with this visit of mine to Great Britain, because through it we have come to know each other better than we did before. Therefore, through you, I wish to convey my best wishes to the people of Great Britain."

The King and Queen of Afghanistan were accompanied to Dover by Colonel Sir Clive Wigram, Field-Marshal Lord Allenby, and Lieutenant-Colonel Sir Francis and Lady Humphrys.

Before embarking in the Maid of Orleans King Amanullah inspected guards of honour of the Royal Marines and the Queen's Royal Regiment. Dover Castle guns fired a Royal salute as the boat left.

The following telegram was dispatched from the Maid of Orleans by the King of Afghanistan to His Britannic Majesty before leaving the shores of England:—

"To-day, when we are leaving the shores of England, the Queen and I consider it our duty of personal affection to thank your Majesties sincerely for all the kindnesses and kindly considerations shown us by your Majesties.

"During our stay in England such favours, kindnesses, and sincere regards were so profusely shown us by your Majesties, members of the Royal Family, your Majesty's Government, and the people of England, that they will always remain treasured in our memories.

"The Queen and I wish your Majesties and the members of the Royal Family health and prosperity."

King Amanullah also sent a telegram to the Prime Minister thanking His Britannic Majesty's Government for their splendid hospitality. Ghulam Siddiq Khan, the Afghan Foreign Minister, telegraphed to Sir Austen Chamberlain thanking him for the consideration and friendship shown him.

It is stated from Constantinople that one hundred and nine Turkish Deputies, including Ismet Pasha, the Prime Minister, the President of the Assembly, and all the Ministers, have signed a motion asking for the suppression of those articles in the Constitution which recognise Islam as the religion of the Turkish State, and make the National Assembly responsible for the application of religious doctrines. This motion will shortly be submitted to the Turkish National Assembly.

Book Reviews

BULGARIA AT THE CROSS-ROADS.

"RECOLLECTIONS OF A RUSSIAN DIPLOMAT." By A. Savinsky. (London: Hutchinson. 21s.)

M. Savinsky was, during most of the period dealt with in his book, Chef-de-Cabinet to the Russian Foreign Minister, in fact his Principal Private Secretary. He writes, on the whole, in excellent English, though now and then one has to re-translate into French to understand his meaning. But one feels sure that he is not responsible for the curious designation of "Chief of the Russian Cabinet of Foreign Affairs" which his publisher attributes to him.

The book is all of interest, specially for the intimate glimpses given by the author into the intrigues of the Kaiser with the unfortunate Tsar. Full justice is done to the former's crookedness, bad manners and general offensiveness.

Readers of THE NEAR EAST AND INDIA, however, will find matter of the most absorbing interest in the last 118 pages of the book where M. Savinsky gives a detailed account of his doings as Minister at Sofia from January of 1914 till Bulgaria finally joined up with Germany against her liberators. As he is able to give in full many of the most important communications between the Russian Foreign Minister and himself, as well as notes of interviews between himself, the King and Radoslavoff, we are put in possession of a wealth of documentary evidence which so far has been lacking. It is impossible to summarise it here, and indeed every serious student of the period must read the book for himself. His whole time at Sofia seems to have been taken up with vain attempts to get to grips with actualities, attempts which the wily Ferdinand invariably foiled, with the assistance of his tool, Radoslavoff. Nor did he receive much practical assistance from his own Chief, who seems to have been himself hampered by the extreme dislike with which Ferdinand was viewed by the Russian Court. The author evidently thinks that if only the Tsar had insisted, Serbia would have had to give way in the matter of territorial concessions to Bulgaria. But, without such personal insistence, the half-hearted efforts of the Allies to induce Serbia to yield were of no avail against the tempting promises of Germany. It was not very long till the author realised that he was really beating the air and that the matter had long been finally decided against him. He certainly had warnings. Even as early as July of 1914 the Government managed to carry the proposals for a German loan against a much more favourable offer from French interests. Here is our author's account of how it was done:—

> The Government understood fully that the representatives would not approve of the burdensome conditions of that transaction which were to bring the country for many years to come into a state of complete political and economic bondage. They accordingly took all measures in order to shuffle off all the Parliamentary proceedings demanded by the Constitution: the Bill was neither read, nor discussed, nor even voted; at the close of a tumultuous sitting the Government simply declared that it had been passed by the House. I assisted at that scandalous meeting of the "Narodnoie Sobranie" which opened amid strong effervescence. The Opposition parties overtly accused the Government of selling the country. They emphasised their arguments and invectives by hurling books and inkstands at the heads of the Ministers. The most bellicose of them tried to fall upon their adversaries and proceed to blows, but were restrained by more peaceful friends. Radoslavoff held a revolver in his hand. Amid all that uproar nobody even noticed that a Secretary had climbed upon the platform to read the Bill. When he came down, the Chairman, a confirmed emissary of the Germans, pretended he was putting the Bill to vote, the indescribable hubbub still going on. Then, of a sudden, the meeting was adjourned. When coming out, several persons inquired, in perfect innocence, when the Bill was coming under discussion, and was astounded at hearing that the Bill had just been "voted."

Next day he went to Radoslavoff to protest and to try to prevent the sanction by the King of such a scandal. Ferdinand had, however, taken the precaution to confirm the "vote" the previous night. When Savinsky remarked that such proceedings were disgraceful and that all Europe would talk of them with scorn, Radoslavoff calmly replied: "No one is going to say a word about it, provided M. Savinsky does not mention it in his letter to Sazonoff."

M. Savinsky says little of his relations with his diplomatic colleagues at Sofia. The British Legation is never mentioned till it was taken over by Mr. O'Beirne, with whom he saw eye to eye. Incidentally, the reasons for his silence about his predecessor are made fairly clear. He gratefully mentions the services of Sir Valentine Chirol, who has recently given us his own notes on his mission in his volume of reminiscences. We can hardly think, however, that his English friends will recognise Sir Valentine as the "liaison-officer" between the British Government and *The Times!*

When at last the die was cast and the Allied Ministers had left Sofia, M. Savinsky found himself tied to bed for another month by an attack of appendicitis. When, at last, he was able to be moved, Ferdinand actually called on him personally to say good-bye. The account of this interview is, if one may be excused using such an expression where all others are useless, "simply priceless."

The illustrations scattered throughout the book are rather of the "official" type, but many of them are of real interest.

C. S-W.

MYTHS.

"THE STORY OF MYTHS." By E. E. Kellett. (London: Kegan Paul. 7s. 6d.)

It is not always realised that the serious study of Mythology and Folk-Lore is a very modern development and that practically everything of any value on the subject has been published well within the last hundred years. Within that period very much has been done and we are the richer for numerous works of the greatest value which are, indeed, being constantly added to. But such works are not usually attractive to the layman. Still less so are most of the attempts that have been made, often by utterly incapable authors, to give the ordinary man some real insight into this very important branch of human science. There was, therefore, plenty of room for a good popular book on the subject, written by a serious student.

This want has been triumphantly met by Mr. Kellett in

ISLAMIC LITERATURE.

ENGLISH TRANSLATION OF THE HOLY QURAN WITH NOTES. By Maulvi Muhammad Ali, M.A., LL.B., President, Ahmadiyya Anjuman Ishaat i-Islam, Lahore. Leather Bound, 50s.; Pluvinson, 40s.; Cloth Bound, 30s.

this pleasant little book of some 250 pages of comfortable size, good paper, printing and binding. Mr. Kellett is evidently a born lecturer and teacher. For he tells us that what he is giving us was originally composed as a series of lectures or rather informal talks to students at a Training College. We cannot imagine better pabulum for such an audience and doubtless many a boy and girl have since benefited indirectly from the enthusiasm which many of his audience must have caught from their lecturer. He has done well in giving these addresses a permanent form, and this book should have a wide appeal and will, no doubt, become a text-book on its subject. Not the least delightful feature of it is the way in which the reader finds himself beguiled into pursuing individual studies, the books necessary for which are quietly indicated and are selected mainly for ease of access. The great mass of illustrations given in the book are wisely taken from familiar books, as the Bible, Homer, and Beowulf.

We must allow ourselves three quotations to indicate the persuasive nature of his exposition. Here they are :—

The fatal battle of Megiddo was the last day of Jewish prosperity. After it came twenty years of fearful upheaval; Jerusalem was three times taken, and finally destroyed. But there was something also peculiarly mysterious about it all. How could God have permitted so good a King, who had spent his life in His service, to die at thiryt-nine? It was a terrible trial of faith. Hence, for centuries on centuries the battle of Megiddo was never forgotten; so much so that the author of the *Book of Revelation* uses the same name to describe the last battle before the end of the world: he says all nations shall gather themselves together to Armageddon. Nay, we use the phrase even for *our* war; and we may say that a battle fought in 608 B.C. has been made a type of a war that ended in A.D. 1918, two thousand five hundred years after. The mourning for Josiah was particularly impressive, and no wonder. Jeremiah composed the dirge, and the women wailed and keened, for once, with real tears. We hear that every man mourned with his wife and children in his own house, as if for the death of his only son: and in Zechariah XII. we read that when another catastrophe comes, there shall be a mourning in Jerusalem "like the mourning of Hadadrimmon in the valley of Megiddo." I knew an old lady who never forgot the mourning for the Princess Charlotte in 1817.

There is a tendency in all nations to attach famous exploits to famous names, as the Franks ascribed every great deed to Charlemagne or Orlando, the Welsh to King Arthur, the Irish to Cuchullin: and as in Oxford, forty years ago, every witty saying was ascribed to Jowett.

Euhemerism must not be confused with the primary tendency to give life and human characteristics to all things—that tendency which makes a man-like god out of the sun, the sky, or a river. It is due to the crude impulse, which comes later, in men when reflecting on the myth already made, to try to explain *that*. The myth is invented to explain a phenomenon, and then it in its turn is found to need explanation; and the easiest explanation is to imagine that the god was a man. He has already many human attributes: you have only to imagine that he had a few more, and the thing is done. To take an example. If cricket had existed in primitive times, then cricket, *the game*, would have been a god, or more probably a goddess; she would have had a round bald head and three legs. As time went on, great heroes of the game would have gathered round her; W. G. Grace and Hobbs would have been the children of her and the sun, and there would have been myths of them, or of her, as killed by a rain-storm. Later still, would have come the theorising myth, with Cricket treated as always a woman, and a very real woman. "Cricket," says the author of the most famous description of a man in our language, "is full of glorious chances, and the goddess who presides over it loves to bring down the most skilful players." No one is now deceived by such a metaphor; but in early days it would have been regarded as all but literally true; later would have come some Euhemerus with his reflections, and the woman-like goddess would have been reduced to a woman without more divinity than any woman has in the eyes of her lover.

C. S-W.

FRENCH SELF-TAUGHT, GRAMMAR WITH KEY

By J. LAFFITTE, BèsL., Principal French Master, City of London School.

For learning the Language by the Natural Method. It contains Classified Vocabularies, Travelling by Rail, Road and Sea. Cycling, Motoring, Post, Telegraph, etc. Commercial, Naval and Military Terms, etc., Conversations so arranged that they may be learned AT A GLANCE, with ENGLISH PHONETIC PRONUNCIATION Tables of Money with illustrations of Coinage, etc.

A course of simple and practical lessons in the Grammar and construction of the French language, progressively arranged and fully illustrated with model sentences; useful exercises throughout, and an Alphabetical Vocabulary.

A GENTLE ESSAYIST.

"NINE ESSAYS." By Arthur Platt. (Cambridge University Press. 8s. 6d.)

Arthur Platt was for twenty years Professor of Greek in University College, London. A man of first-rate scholarship, but of indifferent ambition, his memory is proudly cherished by those who knew him and were in a position to appreciate his worth in learning and humanity. Of these, the foremost was Professor A. E. Housman, whose perception of a man's literary and scholarly merits is less likely to err than that, probably, of any man living. It is a beautiful picture which the Trinity Don (who is also England's first poet) draws of the erstwhile Trinity scholar, that of a man concerning whose "vices" it could be mentioned that "he was addicted to tobacco and indifferent to wine, and he would squander long summer days on watching the game of cricket."

Of the essays themselves, which are on such subjects as "Science and Art Among the Ancients," "Aristophanes," "Lucian," "Julian," and "The Relations of Poetry and Science," readers of this journal may probably turn first to that on "Edward Fitzgerald." This essay upon the populariser of Omar Khayyam was read to the Literary Society of University College in 1896, but it is surprisingly modern. A delightful sketch, it depicts Fitzgerald at home, spiritually and physically, in Suffolk, unravels Omar Khayyam's philosophy, explains Fitzgerald's principles of translation from the Persian and vigorously defends his "Letters." And his final prophecy upon Fitzgerald is likely now to find general endorsement. It is:—"The Nightingales of Fitzgerald yet live, and shall sing to generations yet unborn when we are all with Kaikobad and Kaikhosru."

INTERNATIONAL AFFAIRS.

"SURVEY OF INTERNATIONAL AFFAIRS. 1925. SUPPLEMENT. CHRONOLOGY OF EVENTS AND TREATIES. JANUARY 1, 1920-DECEMBER 31, 1925." (London: Oxford University Press. 12s. 6d. net.)

This volume, which has been compiled under the auspices of the Royal Institute of International Affairs by Miss V. M. Boulter, will prove of very considerable value to the student of foreign affairs. The list of treaties is, naturally, more complete than the list of events between 1920 and 1925; for the importance of the latter is to some extent a matter of individual judgment. On the whole, however, the work seems well done, and will undoubtedly be much used for purposes of reference.

THE WEEK AT HOME

London, Tuesday Morning.

The I.L.P. and Coal.

The annual meetings of the Independent Labour Party, from which, it will be remembered, Mr. Philip Snowden recently resigned, are not followed with the closest interest by the nation at large, but this year's conference had an interest of its own because of the proposals set forth in connexion with the coal industry. The I.L.P. are, of course, bound in advance to the principle of nationalisation, but they found a difficulty in regard to the transition stage between private and State capitalism.

These Socialists demand a return for the miners to the wages of the 1924 agreement, a six-hour day, and a guaranteed living wages. But how to obtain these consummations? According to Mr. Shinwell, who was Secretary for Mines in the Labour Administration, the answer is by means of a subsidy.

Yet if coal is granted a subsidy why not cotton, why not agriculture, why not every industry, in fact, which is passing through hard times?

This policy of a subsidy certainly will not commend itself to the public at large, not because there is not very real sympathy with the distress among the families of miners, but because it is considered a vicious economic principle. It is an astute move, by the way, to have inaugurated a public subscription fund to alleviate the distress in the coal fields, for by that means Conservative minded people are enabled with easy conscience to lighten the burdens that derived directly from the Strike of 1926.

"Dux Femina."

The Conservative Party certainly are consistent revolutionaries. Not content with having gained the reputation of caring to conserve only the newest things, e.g., "Dora," they have boldly set out on the uncharted sea of the female electorate, and have actually appointed a woman as the deputy principal agent of the Party.

This last move is a refreshing manifestation of their belief in the new electoral weapon, and it is probable that the other political parties are envying the Conservatives' foresight. The day cannot be impossibly distant now when a woman's counsels will be called in to aid the deliberations, not merely of a Party, but of a Cabinet. It is the fashion to attribute to women merely administrative or secretarial capacity, but how many Cabinet Ministers have aught else, or even so much?

The Syndicated Press.

Before it rose for the Easter recess the House of Commons indulged in a debate upon the evils of the syndicated Press. No division was taken, but it was sufficiently obvious that all parties are alive to the dangers of the concentration in a few hands of the majority of English newspapers. It is true that the point was justly made that the influence of newspapers upon public opinion is decreasing—and is likely further to decrease the more partially news is distributed—but there was fairly general regret that what used to be regarded as the bulwark of public liberty is in way of disappearing.

From a practical point it is extremely difficult to see that anything can be done to remedy this state of affairs. Obviously the only real way is for the public, which is at present enticed by means of competitions, insurance, and the like, to refuse to buy the syndicated papers. But there is little sign yet that the financial offers of the syndicated journals do not outweigh with their readers the *suppressio veri* and the *suggestio falsi* with which the said newspapers are wont to be studded.

The Naval Affair.

Incomparably the most serious aspect of the naval scandal is the publicity which has been given to it. The trouble is that those ignorant of the way of the British Navy—who include, unfortunately, many Englishmen as well as most foreigners—have been giving vent to wild surmise. Among those who really know there is little tendency towards partisanship in the Royal Oak affair, for in such circles the matter was discussed and thrashed out long before it was given wretched publicity; but regret is keen that a personal occurrence should have been magnified and distorted to the detriment of the Navy as a whole.

The Sale of MSS.

Last week the original manuscript of "Alice in Wonderland" was sold, in London, to an American, for £15,400. The price is a quite extraordinary one, and the ordinary man appears to be convinced that here is another example of the inability of England to preserve her priceless treasures. But the truth is that this fashion of paying fantastic sums for MSS. is a ridiculous one. Money has no meaning when Lewis Carrol's tale fetches this price. People have applauded the generosity of the American buyer who offered to sell it back to the English nation for the same sum which he gave for it, but it is unintelligent applause. The nation does not particularly want these original manuscripts, for a manuscript is not like a painting. In an MS. the interest is generally a little morbid, or unproportioned. Perhaps that is why the great museum, the uncreative storehouse of the world, America, is so keen and so expert in snapping such things up.

Eastertide.

One does not remember a kinder Eastertide in the South of England. The weather for the whole holiday was a perfect blend of sunshine and breeze. This fact meant a very notable social phenomenon, namely, the evacuation of the towns. One was reminded of old Omar's New Year, when the thoughtful soul retires to the open country.

All English tourists to the country, however, are not thoughful. The kind of tripper who, in marine or rural surroundings, cannot fail to leave traces behind him, does not decrease; he is, in fact, one of the major preoccupations of a certain type of mind.

Eastertide was nevertheless a time of enchanting beauty. True, the apple and cherry blossom were not abundantly present, but the flowers, such as the daffodils and cowslips and hyacinths were some compensation. Thousands of untutored travellers, I suppose, will carry away from this Easter memories of peeps into country churches decorated with daffodils for the time and suggesting with their scent and colour a mood of reverence which words would scarcely create.

PERSONAL AND GENERAL

TO-DAY

April 12, 1928 (New Style).
March 30, 1928 (Old Style).
Shawall 21, 1346 A.H., of the Muslim Calendar.
Nisan 22, 5699, of the Jewish Calendar.

Patricia Countess of Cottenham has returned to 34, South Street from Egypt.

Sardar Ahmer Khan left Claridge's Hotel last week for Paris.

Mrs. Robin d'Erlanger left 37, Ovington Square, on April 10, for Athens.

The Earl and Countess of Ilchester arrived at Holland House on April 7 from India.

Major and Lady Zia Wernher are among the recent arrivals at the Semiramis Hotel, Cairo.

The Maharaja of Kapurthala is due to arrive in London towards the end of this week from India.

The Earl and Countess of Lisburne returned from Egypt on April 6 to 55, Green Street, Park Lane.

The Prince of Wales received Lieut.-Colonel Sir Francis Humphrys at St. James's Palace on April 3.

Viscount and Viscountess Inchcape are remaining at the Golf Hotel, Hyères, for a time before returning home.

Field-Marshal Sir Claud and Lady Jacob left London last week for Switzerland, and expect to be away for a fortnight.

The High Commissioner for India and Lady Chatterjee arrived on April 2 at 131, Ashley Gardens from their tour in Italy.

Lady Helen Brocklehurst arrived last week in England from the Sudan, and is at present in residence at Burwash, Sussex.

Mr. and Mrs. George Macmillan and Miss Macmillan left England last week for Italy and Greece and will not be back until the middle of May.

The Earl and Countess of Albemarle are expected to arrive from Egypt to-day (Thursday) for a short stay at 7, Cadogan Square, before leaving for the country.

The Right Hon. Sir Herbert and Lady Samuel have left London for Greece, and will be away until the end of the month.

The Marquess and Marchioness of Reading have been spending a few days as the guests of Sir Alfred and Lady Mond at Melchet Court, Romsey, Hampshire.

Lady Joan Verney, who has been on a cruise to the Mediterranean and on a visit to Cairo, is expected to return to 1, Rutland Gardens at the end of this week.

The Bishop of Manchester, who has been attending the International Missionary Conference at Jerusalem, proceeded to Cairo on April 9. He expects to be home on April 12.

The Duchess of Sutherland, Lady Isobel Gathorne-Hardy and Miss Hardy were among the passengers in the Ranpura, which arrived at Marseilles on April 6, from Bombay.

Lady Irwin, wife of the Viceroy of India arrived in England at the end of last week from Delhi. She has gone into residence at Garrowby Hall, Yorkshire, for about a month.

The King and Queen of Afghanistan, accompanied by Princess Nur-ul-Siraj, Princess Hurya Tarzi, and His Excellency Muhammad Hassan Khan, and attended by the members of their suite, visited the King and Queen at Windsor Castle on April 2, and remained to luncheon. Wreaths tied with ribbon in the Afghanistan Royal colours and bearing an inscription from the King and Queen of Afghanistan, were left to be placed on the tomb of King Edward VII.

The present German Minister in Riga, Dr. Koester, has been appointed Minister in Belgrade.

The Albanian Chargé d'Affaires in Belgrade, M. Styla, has informed the Yugoslav Foreign Office that the Albanian frontier has been reopened.

After an absence of three months, during which time he had visited London, Paris, Geneva, and Rome, Ilias Bey Vrioni, Albanian Foreign Minister, has returned to Tirana.

Signo Mussolini, who had arrived in Milan *incognito* from Rome for the purpose, on April 3 received Tewfik Rushdi Bey, Turkish Minister for Foreign Affairs, at the Prefecture, and afterwards entertained him, General Jevad Pasha, and the other officials of his Excellency's party and Signor Grandi, Under-Secretary of State for Foreign Affairs, at a luncheon.

The King and Queen of Afghanistan arrived in Paris on April 5 and were received by representatives of the President, the British Embassy, and the Afghan colony in Paris.

The King and Queen of Afghanistan left Paris for Berlin on April 8, where the King is consulting a German throat specialist for tonsilitis. From Berlin the King and Queen of Afghanistan will go to Poland officially, and afterwards to Riga. In Russia the Afghan Royal party will remain for two or three weeks, afterwards proceeding to Angora. On the conclusion of their visit there their Majesties will travel to Teheran, and afterwards proceed to Kabul, where they are expected to arrive some time in July.

THE RAILWAYS AND PORTS OF WESTERN INDIA.

The success of the Indian Railway Board, since its Budget was separated from the general finances, has been very marked, but the time has certainly not arrived for it to rest on such laurels as it has earned. So little done, so much to do, must be its motto for some years to come. Among the most insistent demands on its attention is the claim of Karachi for a broad gauge connexion with Delhi, Agra, and the Gangetic plain. That Port is connected by broad gauge lines with Baluchistan and the Punjab, but traffic with the fertile plains of the Central North has either to make a long detour by the Punjab, if the broad gauge is used, or to follow the metric gauge railway across Rajputana with the necessity of transhipping all passengers and goods at Hyderabad, one hundred and twenty miles from Karachi. So obvious was the hindrance to trade of such transhipment that the local Chamber of Commerce many years ago suggested that the metric gauge line should be extended to Karachi along side of the broad gauge. This proposal would have introduced unlimited confusion into the working of the Port, and it was fortunately abandoned. The Chamber then pressed for the connexion across Rajputana to be converted to the board gauge, with such apparent success that the Railway Board in 1914 stated that the scheme had been agreed on in principle and that, when estimates had been prepared and accepted, the work would be started. This was regarded in Karachi as a definite promise, but a promise it has remained, and no great effort has been made to implement it. Yet it would be easy to show that the arguments which were admitted as sufficient in 1914 have since been greatly strengthened.

In the first place, the congestion at the point of transhipment has increased, with a corresponding degree of delay and loss through pilfering and exposure. Then the creation of the Sukkur Barrage and the Canals under it have greatly affected the situation. A series of feeder railways are sanctioned or planned to carry the produce of the lands served by these canals. The most important of these feeder lines, the Middle Sind Railway, runs into Hyderabad and is being constructed on the broad guage, so as to avoid transhipment. But three other feeder lines must join the existing metric gauge line, and, if the latter cannot be converted into broad gauge, will greatly increase the congestion at Hyderabad. That congestion will in any case be augmented if the line proposed to bring in the produce of the land in the Bikanir State under the Sutlej Valley project is constructed. Further, the trade of the Port has greatly increased since 1914. If the one item of petrol be taken, the potential demand is enormous, and the sales in the area fed from Karachi in 1927 exceed the sales of 1926 by 45 per cent. Again, the strategic value of a broad gauge connexion across India would be great. It is not merely a question of the more rapid transport of troops from and to Karachi, but the speedy movement of supplies which might be essential, such as the coal of Bihar and Bengal. Finally, there is the fact, which is rapidly acquiring a practical as well as a sentimental value, that Karachi is the Air Port of India, and should be adequately linked with the rest of India. So strong appears the cumulative effect of these arguments that their failure to rouse the Railway Board to action seems remarkable. The necessity for the broad gauge connexion is admitted by every one, the Secretary of State, the Viceroy, the Member for Commerce, the Railway Board itself, but the scheme seems no nearer execution than it was fourteen years ago.

The reasons for this strange deliberation must be sought in the opposition of Bombay, the lack of furtherance interest on the part of the Bombay Government, and the lukewarmness of the Railway Board. We may sympathise with the apprehensions of Bombay at the possible loss of any trade. If, however, the natural and cheapest outlet for the produce of any particular area is towards Karachi, it is clearly inequitable and against the interest of the agriculturist and the producers, to drive it to the more expensive port. Nor do we believe that the injury to Bombay from the possible loss of trade from areas geographically nearer Karachi would be very serious. The Government of Bombay naturally prefers that the broad gauge railway to join Sind and the Presidency proper should be constructed first. We agree that, so long as Sind is a portion of the Bombay Presidency, a better connexion by rail is desirable for the purpose of administration. Strategically also the Railway would be useful, though in a less degree than a broad gauge railway from Karachi across India. The unfortunate defect, however, in the Bombay Sind Project is that neither the merchants of Bombay nor those of Karachi make any demand for it. It is claimed that such a railway would carry grain from the Sukkar Barrage area to Guzerat and Kathiawar, and particularly to the industrialised city of Ahmedabad. It may be agreed that this purpose might be a very useful one, especially in years of scarcity. It may, however, be observed that the grain trucks would not run back empty; they would be likely to carry the cotton and oil seeds of Guzerat to Karachi, and would thus constitute a greater menace to the trade of Bombay than any railway from Karachi to the north. The Railway Board, perhaps affected by this Bombay feeling, and perhaps also thinking of the traffic of existing railways, looks at the project with the unsympathetic eye of cold finance, and demands that the certainty of an immediate five per cent. return should be established before the project is sanctioned. To this Karachi replies, with some reason, that improved communications bring many indirect benefits, apart from the obvious financial return. The Karachi merchants maintain that few trunk lines in any country would have been constructed if an immediate paying dividend had been demanded; that no such principle has been enforced when making the railway connexions of other Indian cities; and that Karachi, as admittedly one of the great Continental Ports, deserves to have the best communications possible. The Railway Board is happily no longer obliged to plead either poverty or poor prospects. Imagination and vision are as neces-

Digitized by Google

sary for the Board as the admirable virtue of economy, though possibly more difficult of attainment. We believe that the railway development of Karachi offers an admirable occasion for sympathetic television.

CURRENT TOPICS.

A Fine Record.

By the retirement of Sir Alexander Murray and Sir John Bell the European community in India has been deprived of two of its ablest leaders, and Calcutta of two of its foremost citizens. Sir Alexander Murray is probably the greatest living authority on the jute trade of Bengal. But he is much more than that, as he is also intimately acquainted with most other branches of Indian commerce, industry, finance and economics. He went to India about thirty years ago with Messrs. Thomas Duff and Co., Ltd., the well-known Dundee firm of jute mill agents; and after a long period with them he joined Messrs. Jardine, Skinner and Co. as senior resident partner in Calcutta. He has been no less successful in the public life of Calcutta and of India generally. As President of the Bengal Chamber of Commerce, the representative of the Chamber in the Council of State, as a member of the Legislative Assembly and as a member of innumerable Committees dealing with all manner of subjects he has played no inconsiderable part in the framing of legislation and in the shaping of public policy. He was a member of the Royal Commission on Indian Currency and Finance, and is thus associated with recent currency legislation; and for some time past he has been prominent in the direction of the Imperial Bank of India. He has been very closely concerned with the various industrial Acts which have been a feature of Indian legislation during recent years. And he is an acknowledged authority on the Indian income-tax, the legislation imposing which has been completely overhauled and remodelled in the last decade. It would be possible to extend the list almost indefinitely, so extensive has been the range of Sir Alexander Murray's activities.

Sir John Bell is another example of how European business men can successfully participate in Indian public affairs. During the whole period of his residence in India Sir John Bell has been associated with the great firm of Messrs. Mackinnon Mackenzie and Co., the representatives in the East of the P. and O. and B. I. Steam Navigation Companies. Like Sir Alexander Murray, he also has been President of the Bengal Chamber of Commerce and the Chamber's representative in the Council of State. He conducted the affairs of the Chamber with energy and skill and presided over its meetings with dignity and tact. And—a fine public speaker—he lucidly expressed its views in the Council of State on numerous occasions. He has been prominent also in many other public capacities, notably as a member of the Bengal Legislative Council and as a Commissioner for the Port of Calcutta. And in all of these offices his wide knowledge and ripe experience of financial, commercial and shipping questions were of the utmost value. We tried recently to show that in the rapidly changing political conditions of India it is essential for British merchants there to recognise their obligation to take their due share in public work. Both Sir John Bell and Sir Alexander Murray have fully recognised this obligation and have given of their best in the public interest. It is to be hoped that their example will be widely followed by those coming after them.

Irrigation in Bengal.

Sir William Willcocks, the eminent irrigation engineer, has been in Bengal recently on an unofficial mission of inquiry. He has been over a large part of the province, and has thus examined the conditions on the spot. No question of irrigation arises, of course, as regards the greater part of Bengal, where the rainfall is quite sufficient for the system of cultivation followed. But in Central and Western Bengal there are large areas where many of the waterways are failing, and where malaria is rife. It is with these areas that Sir William Willcocks has been mainly concerned. He sums up his results in one sentence: "If there is one thing one has learnt in Bengal it is that health and wealth have accompanied the overflow irrigation of the ancients, and malaria and poverty have followed its abandonment." This is a challenge to the existing irrigation system under which rivers have been banked and canals treated as rivers. Sir William Willcocks would pierce the existing chain of embankments at suitable points, notably opposite to old channels. And he would clean the old canals and put them into working order again. In fact, his object is to restore the overflow irrigation system which is said to have existed in the past, but he would bring it into line with present-day requirements. In Central Bengal Sir William would open up the old canals, most of which can, he says, still be traced on the ground: protect and train the rivers; and, subsequently, construct a barrage on the Ganges. He estimates that the cost of this scheme would be about £12,000,000; and he claims that it would serve Central Bengal completely, and would provide for the control of the supply from the Hooghly for Calcutta. In Western Bengal he would break through the banks of the river Damodar, and restore the canals, which originally took off from the left bank of the river. With the Uddnapur river and its canals he would deal in a similar manner. In this way he would provide perennial irrigation for an area of four million acres in Western Bengal, making for the whole province a total irrigated area of ten million acres. It is a bold scheme, and we may be sure that it will be extensively criticised and discussed. Irrigation has not, perhaps, been taken seriously enough in Bengal in the past. The province has been always regarded as one of the richest of Indian territories; and its magnificent system of waterways has been thought to be sufficient to provide it with adequate natural irrigation. But of recent years these views have not, perhaps, been so confidently expressed as they formerly were. The persistence of malaria in many districts, the tendency of some of the waterways to deteriorate, and the rapid propagation of the weed known as the water hyacinth, are disquieting symptoms. It may be urged, therefore, that the scheme which Sir William Willcocks has framed should not be dismissed without close examination and consideration. Even if it only serves the purpose of arousing attention and provoking discussion it will not have been wholly in vain.

A Knotty Problem.

Our contention that it is the arbitrary division of heads of revenue, not the system of contributions and remissions, which "has been a millstone round the necks of the Central and provincial Governments," found an echo on many public platforms in India last month. At the annual meeting of the Bombay Chamber of Commerce, the Governor, Sir Leslie Wilson, pointedly observed: "Our gratitude for favours received will not, however, prevent us from pressing for still further revision of the Meston Settlement, in order that . . . . the increasing demands made upon us for the expansion of essential services may be met, and we may have some expanding source of revenue to meet our growing needs." The assignment of income-tax as a Central head of revenue is, of course, still the principal grievance of the industrial provinces—Bombay and Bengal. It is true that the Devolution Rules also provided for the sub-division of a share of it with the local Governments on a principle which the Todhunter Committee have recommended should be extended, but which has not, however, so far benefitted the provinces mainly concerned. According to the proceedings of the last session of the Legislative Assembly the Finance Member is not opposed to the grant of an additional share of income-tax receipts to the provinces. The difficulty is that the Central Government have not been able to secure a sufficient degree of unanimity as to the form which the relief should take.

Digitized by Google

At the last Conference of Provincial Finance Members the Government of India actually made such an offer, involving the sacrifice of some 65 lakhs of Central revenues. Three provinces approved the scheme, some remained neutral, and two, including Bengal, preferred to refer the matter to the Statutory Commission. No change in the existing rule will, therefore, be made until the Commission has reported.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 22.

The President and the Commander-in-Chief.

Following upon animadversions of the President of the Assembly upon the absence of the Commander in-Chief one day, there has been a revival of interest in the old but not forgotten controversy between Lord Curzon and Lord Kitchener on the subject of the Military Supply Member. Lord Curzon sent in his resignation, and the Home Government, thinking Lord Kitchener the one to back, accepted it; but the more far-sighted people knew at the time that Lord Curzon was right. The late Charles Russell of the Indian Eductional Service did for one, and in a political satire that deserves to be better known put these words into the mouths of the politicians of Bengal:

> When they bade him deliver us hand and foot to the Mastery of the Sword,
> He fought for Us till he lost his throne—and small were the thanks he scored!

Small indeed they were: the politicians, with their long score against the Viceroy, were glad that he should meet discomforture. Now, wise long after the event, they all agree that the Commander-in-Chief ought not to be the Member of the Government responsible for the defence of the Army Budget in the Assembly. Whatever else the Statutory Commission recommends, men now are saying, they must recommend that a change be made there.

One cannot have been as long in India as the writer without often hearing a civilian member of the Government, an officer of the Forest or Education Department, say such a thing as, "If the grants cannot be spent within the year on what they intended to be spent, they must be spent on something else; otherwise the money will lapse, and the Army will get the spending of it." On the other side you will hear a soldier say, pointing to new buildings or walls or the like: "They were only built to prevent the money lapsing and being lost." I have myself noticed in Calcutta, which is not a great military station, activities that looked very like a spending of money for the sake of getting it spent. If a crore could be saved on the Army Budget, there would be the crore that Sir Asutosh Mookerjee used to say he would raise for Primary Education.

The Bengal Ministry.

The long-deferred votes of no-confidence in Sir P. C. Mitter and Nawab Muarruf Hosain, the Bengal Ministers in charge of the Transferred Departments, have this week been moved. They were lost, but by the narrow margins of three votes in the case of the Knight and five in the case of the Nawab. Commenting on the debate, the *Statesman* says: "Theoretically the welfare of the transferred subjects is the interest of every politician, but when those who have or affect a grievance against Ministers make it their business day in day out to embarrass and obstruct them, there can be no progress. The Congress Party has its own peculiar body of doctrine, but after this trial of strength there is no reason why members of other Parties should not set themselves to insist that Ministers do their work, and assist them in doing it. Censorious criticism is not the only function of a Legislative Council." Many members of the present Council in Bengal would answer that it may not be, but it is by far the most amusing.

Sir Basil Blackett.

Among other welcome signs of better feeling revealed by the news of the last few days was the fact that those present at the farewell dinner given by the non-official European group of the Central Legislature to Sir Basil Blackett included the Hon. Mr. Patel, Lala Lajpat Rai, Mr. Jayakar, Sir Hari Singh Gour, Sir Abdul Qayum, Mr. Joshi, and other prominent Indian politicians. Sir Basil, responding, said that he believed that there was an immense future before Indian capital. If it was not hoarded, it was going to revolutionise not only the finance but the political conditions of India. He believed India would soon develop into a creditor nation, and nothing would give her a greater sense of importance and racial equality than this consciousness—that she was the creditor of European and other debtors. "Nothing," Sir Basil went on, "has been more remarkable in the last ten years than the rapid change in ownership of capital in India. I am told that between 60 and 70 per cent. of shares in jute mills are now Indian-owned. A considerable proportion of the last sterling loan was subscribed from India. A considerable proportion of Indian sterling loans in London are Indian-owned.' That is to say that when India pays interest in sterling in London, much of it is a payment on account of Indian holders of the loans. That money is Indian, whether it remains in London for investment, or is remitted back to India. That is a point to remember, when the Home Charges are under discussion. It is always assumed that all the interest paid by India outside India is lost to India.

The Weather.

As an Occasional Note, the *Statesman* gave us this to read yesterday:—"The skies in Southern Bengal have clouded over heavily once or twice during the week, giving a promise of rain, but the clouds have finally dispersed after a sputter or two of the kind that is known as a mango shower. These showers are very good for the crops, but they do not help to fill the tanks on which so many villages rely for their water. In several parts of Bengal a real cry of distress is being heard, village people being compelled to carry water from tanks or streams several miles from their homes. One of the great needs of rural Bengal is some system for the provision of tube-wells or deeper and larger tanks in every village." Those showers may be good for the crops, but what the mere traveller in Bengal thinks he observes from the train window is that there appear at this time of year to be no crops in the narrower sense of that word, and that there are none, where there might be crops in abundance, was the whole burden of Sir William Wilcock's recent criticism. He has now returned to Egypt, or rather is on his way there.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, March 24.

A Lull in the Storm.

The political activity which commenced some time during Christmas week last is gradually subsiding. The Assembly session is nearing conclusion, the provincial councils are flickering out one by one with an occasional bursting into flame, the Congress, whose activities extend farther into the year than that of most of the other political bodies, has concluded, if temporarily, its various conferences, Sir John Simon and his colleagues will shortly leave for England; all of which indicates that we are gradually slipping into a sort of political calm. It is the temporary lull during which politicians are believed to look back upon their activities during the past few months though I wonder if it is ever really done. I am almost sure it isn't; this is the age when the minutes of the previous meeting are taken as read. We look forward, never back. And following the general example I would venture to predict that when the busy season

Digitized by Google

starts again, we shall all find ourselves in very much the same position as we are in to-day. Just as when the Prince aroused the Sleeping Beauty the household resumed their pre-occupations where they had left off, so it will be with us. The boycotters will go on boycotting, the co-operators co-operating, and, not the least, Lord Birkenhead stubbornly adhering to his Simon Commission. It is like digging yourself into a trench; the deeper you go the less able you are to obtain a true perspective of the country around. Only a generous gesture can save the situation and the stronger for very good reasons can afford to be magnanimous without their action being misinterpreted. But all this is speculation.

The Assembly Debates.

In my last letter I dealt with the debate on the Skeen Committee's Report and Government's action on it. It was the climax of the bitterness that has been growing during the session. The Commander-in-Chief absented himself from the debate and Sir Basil Blackett left the House in anger when reference was made to His Excellency's absence. This was followed by the Congressmen absenting themselves from the European social functions and the Europeans retaliating. Somebody said that the Europeans were organising a social boycott of the President because of his remarks regarding the Commander-in-Chief. This charge was denied by the Europeans though they admitted that the Swarajists' attitude had provoked to a similar plan of action. And so it would have gone on, mistrust followed by futile explanations, had not the Commander-in-Chief stepped in and saved the situation. He expressed regret for having absented himself from the debate on March 10, as he believed that had he been present certain misunderstandings would not have occurred. The President was equal to the occasion and said that had the Chair known on the day in question what it had learnt since, the misunderstandings could have been avoided. The incident was closed. That is the last incident of note in the Assembly and it has helped to gulf the bridge between the various parties and Government in a remarkable manner.

Sir John Simon's Statement.

Sir John Simon has made another of his statements. He laid special emphasis on the fact that the Commission have not arrived at any conclusions. Sir John has discovered that the press has sometimes quoted numbers rather excessive even when describing crowds in favour of the Commission. "I can only say wait and see," concluded Sir John. "I have great faith in patience and time, and, perhaps, I may be allowed to say in good sense and statesmanship of which there is so much in India." It is proposed before the Commission leaves India to hold a conference at Delhi, when a representative of each of the nine provinces will be present, to decide on the October programme of the Commission. In this connection, I must draw attention to an important statement in favour of the Commission by a leader of great integrity. Sir Hari Singh Gour, in the course of a lengthy statement, says: "I believe the Statutory Commission has come out to India to destroy the last vestige of bureaucracy and it is an unfortunate irony of fate that the very people who stood by it are the members of that bureaucracy; while the people it has come to liberate here joined in a body to oppose it."

Lord Irwin, Viceroy of India, has become a member of Toc H, and sent a personal donation of £50 towards the Toc H Endowment Fund, asking that it may be earmarked for India.

The King has been pleased to approve the appointment of Mr. Satyendra Chandra Mallik, I.C.S., to be a Puisne Judge of the High Court of Judicature at Calcutta in succession to Mr. Justice Chotzner, I.C.S., who will resign his office on July 5.

The India Office announces that the King has been pleased to approve the appointment of Diwan Bahadur Mannath Krishnan Nayar Avargal as Member of the Executive Council of the Governor of Madras, in place of Mr. T. R. E. Venkatarama Sastri, C.I.E., resigned.

INDIA IN PARLIAMENT.

By Sir Frank Nelson, M.P.

The valedictory note struck at the end of Sir Leslie Wilson's speech at the annual meeting of the Bombay Chamber of Commerce last week must, I am afraid, be taken as an indication that His Excellency has no present intention of accepting an extension of office. This is not the time to dwell on the affectionate regard and high esteem with which the Governor is held by all sections of the different communities in Bombay. And Sir Leslie Wilson has had many difficulties with which to contend during the past four and a half years.

To succeed so indefatigable and able an administrator as Sir George (now Lord) Lloyd was itself no easy task. And apart from the manifold cares and responsibilities of his high office there has always been the grave domestic anxiety to which the state of health of his popular consort must from time to time have given rise. The spontaneous welcome accorded the suggestion, advanced in many questions, that renewed efforts should be made to retain the services of one of Bombay's most popular Governors for a further period is the measure of his success. And much may happen between now and the beginning of December when his present term expires.

As one who practically throughout the whole of his time in the country was in close and constant contact with the officials of the Finance Department of the Government of India, I can fully endorse the many tributes paid to their work at the farewell dinner to Sir Basil Blackett given by the European non-official group in the Central Lesislature. I also agree with the guest of the evening's good-humoured contention that, in reality, the Department over which he has presided with such conspicuous success is an outstanding example of racial discrimination, in that an officer, to succeed, must be either a Scotsman or a Madrasi!

But though it has long been regarded as the close preserve of those two eminently worthy races, there have, of course, been notable exceptions. Sir B. N. Mitra, who is now officiating for the third time as Finance Member, pending the arrival of Sir George Schuster, the new permanent incumbent, in the early autumn is, appropriately enough, such an one.

The present Finance Member, who has risen by sheer merit from subordinate positions in the Bengal Finance Department, which he joined in 1896, has served in turn as Controller of War Accounts, Military Accountant-General and Military Financial Adviser, in which latter appointment he was succeeded by Mr. Ernest Burdon, the present Financial Secretary.

It is nearly four years since Sir Bhupendranath first attained the coveted distinction of a seat on the Viceroy's Executive Council, of which he is now the senior member and Vice President. The first Indian to hold the Finance portfolio, even temporarily, it was only the need for a somewhat wider experience of international monetary affairs than can fall to a whole-time officer of the Indian Government which necessitated the selection of the permanent incumbent, for the second time in succession, from among those in public service in England.

I have had occasion frequently in the past to deprecate the tendency of the members of the Opposition parties in this House to compare wages, hours of work, and labour conditions generally, in India with those in force in this country, without any regard to the difference in the standards of life and customs in the two countries. One passage in Mr. Tom Shaw's speech in the debate on the plight of the Lancashire cotton industry last week marked, however, such a welcome departure from precedent that I cannot refrain from quoting his exact words.

"We have heard a great deal," said the right hon. Member for Blackburn, "about Japan and India, and it is assumed that their condition is what it is because of the extraordinary advantages possessed by these two countries. I have had an opportunity myself of making an investigation in India. I found that wages were shame-

Digitized by Google

ful, and that the condition of the workers was quite different from that of our own people. But we have to use a sense of proportion and remember that we cannot compare European conditions with Indian conditions. I found also that while a Lancashire man was working on four looms a weaver in one of the finest firms in Madras had one loom only, and one loom wages cannot be compared with wages for four looms. . . . When we talk about wages and hours we must observe a sense of proportion, and realise the other conditions, and when we do so it is extremely doubtful whether the Indian employer —I am not speaking of Japan—really has an advantage in the actual wages cost over the employer in this country."

ANCIENT BIHAR AND ORISSA.*

By Sir Edward A. Gait, K.C.S.I., C.I.E.

Some 500 years later, another Chandra Gupta, the founder of the Gupta dynasty, by his marriage with a princess of the Lichchhavis, who ruled north of the Ganges, gained a paramount position in Bihar, and brought a large part of what is now the United Provinces under his sway. His son, Samudra Gupta, though he was one of India's greatest monarchs, is not even named in Hindu literature, and we owe the full knowledge of his reign which we now possess solely to modern research—to the study of inscriptions on coins, copper plates and buildings, and on a pillar at Allahabad, which was already incised with the edicts of Asoka. . . Samudra's son, Chandra Gupta Vikramaditya, added Malwa, Gujarat and Kathiawar to the Imperial dominions. The Chinese pilgrim, Fa Hien, visited Pataliputra during his reign and spent three years there pursuing his Sanskrit studies. He was so impressed by the grandeur of Asoka's palace that he ascribed its erection to spirits who at Asoka's bidding "piled up the stones, reared the walls and gates and executed the carving and inlaid sculpture in a way that no human hands can accomplish." Charitable institutions were numerous and the capital possessed an excellent hospital where the poor were treated for all kinds of diseases. The country was peaceful and well governed, and crime was very rare.

The imperial power of the Guptas was broken by the Huns about 465 A.D., but they lingered on for several centuries as local rulers of Magadha under foreign overlords, such as Harsha Vardhana of Thaneswar. Though the Guptas were Hindus, they tolerated Buddhism, and more than one of them erected noble buildings at Nalanda. But deprived of the prestige attaching to a State religion, Buddhism lost its hold over the masses, to whom the pomp and polytheism of the older religion had always perhaps offered greater attractions. This probably explains the sudden and complete extinction of Buddhism when Muhammad Bakhtiyar put the Nalanda monks to the sword. The Gupta period was one of great intellectual activity in many different fields. The earliest of the religious books, known as Puranas, probably took final shape at the beginning of this period, and also, perhaps, the Code of law attributed to Manu, though some think that this work was compiled in the days of the Sunga dynasty. Mathematics and astrology flourished. So did the arts of music, painting and sculpture. Kalidasa, the renowned author the Raghuvansa, Sakuntala and other poems, was the greatest poet, but there were many others who would have attained the highest distinction had they not been overshadowed by that great genius.

The downfall of the Guptas signalised the end of Bihar as the nucleus of a great empire. Henceforth it was fated to take a subordinate place in Indian history. Its ancient capital shared the same fate. Pataliputra was deserted and in ruins when Hiuen Tsang visited it. It may have been sacked by the Huns, or by Sasanka, the King of Central Bengal, who destroyed many Bihar monastries and drove away the monks. It enjoyed a temporary revival in the eighth century, when the Bengal King, Dharmapala, after conquering Bihar, transferred his capital thither, but after that it fell into utter oblivion. Even the ruins were hidden by new soil formation and the efforts made in the course of the first archæological survey to find the site failed so completely that it was concluded that it must have been washed away by the Ganges. In 1892, however, Colonel Waddell proved that this was not the case, and that the ancient city lay buried fifteen to twenty feet beneath the surface of the south part of modern Patna. He found various Maurya remains, and claimed on the basis of Hiuen Tsang's description, to have located the position of many of the old buildings. It is difficult now to assign any reason why this comparatively low site should have been chosen for the capital in preference to the higher ground on the bank of the river, but there is no doubt that Waddell was right. Excavations made fifteen years ago by the late Dr. Spooner on the site which Waddell had indicated as that of the King's palace brought to light the remains of a great hall. Spooner held this to be part of Asoka's palace, and pointed out that it appeared to have been modelled on the plan of the palace of Darius at Persepolis. . . . I will conclude with a word as to the origin and growth of Modern Patna.

After the Afghan Sher Shah defeated Humayun in a battle near Buxar, in 1538, A.D., and so made himself Emperor of Hindustan. He caused a fort to be constructed on the spot where the ancient Pataliputra once stood. He did so, however, solely on account of the natural advantages of the site and without any idea of its glorious past. . . . The new Patna grew very rapidly and soon became one of the greatest cities in the empire. It was there that, thirty years later, Daud, the Afghan King of Bengal, successfully held out against the Mughals until Akbar took the field against him in person. Patna then became the headquarters of the Mughal governors of Bihar. It reached the zenith of its revived splendour when Aurangzeb's grandson became the governor and renamed it Azimabad, after himself.

After the battle of Plassey, Patna became the centre from which military operations in Hindustan were directed. It was twice besieged by the Imperial troops. On the second occasion the siege was raised by a wonderful feat of indomitable determination and endurance on the part of Major Randfurlie Knox, one of the greatest of the devoted band of little-known Empire builders to whom our present position in India is so largely due.

In 1762, when hostilities broke out between the English and Mir Kasim, the Nawab of Bengal, Mir Kasim captured Patna and caused its small British garrison to be massacred. His Indian officers refused to obey his order to kill them, and it was left to the Alsatian renegade, Walter Reinhardt, alias Samru, to carry out the work of butchery. Patna was taken a few weeks later by a force under Major Adams. It was again invested by the united armies of the Nawab and the Moghul Emperor. They were driven off and withdrew to Buxar where, on October 23, 1764, Major Hector Monro won the great victory which made the British undisputed masters of the Lower Provinces.

With the construction of railways and the consequent diversion of traffic from the Ganges, Patna fell once more into a state of decay. This continued until 1912, when it became the capital of the newly-created province. It is now the headquarters of the Local Government and has a High Court and a University of its own. Its long and chequered career has again taken an upward turn. Long may it grow and prosper!

(Concluded.)

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

Roumanian Loan Negotiations.

It is not yet by any means certain that the Roumanian Stabilisation Loan will be issued in the United States. The preliminary negotiations to that effect have certainly been in progress for some time, but other countries have stabilisation loan will be issued in the United States. and it would appear probable, according to the latest information, that France, for one, is to make a bold bid for handling at least a substantial part of the issue. As I have already pointed out, the Bratianu Government are absolutely opposed to a loan under the auspices of the League of Nations, though the Opposition favour that course. If a loan is to be obtained otherwise it is probable that one in which France had at least an important part would be more popular generally than one obtained on the other side of the water, and it is therefore to be surmised that if French interests are as willing as they appear to be, the French offer is likely to have the preference. From what our Bucharest Correspondent says this week, it will be realised that the greatest importance attaches to the successful issue of the negotiations for a loan, and it is interesting to note further that considerable confidence obtains in this connexion. If, as I have suggested, competition abroad for the loan is taking a political aspect, in Roumania itself it has undoubtedly become a political factor of the first importance.

The Persian Market.

While conditions in the Persian market are on the whole unlike those which obtain in other similar outlets the country is at one with the rest of the Near East in the fact that there is scope for much more British enterprise there Elsewhere in this issue will be found extensive extracts from the very interesting report of Mr. E. R. Lingeman on conditions in Persia during the last two years, in the course of which he devotes considerable attention to the openings for British trade and the idiosyncracies of the market. The commodities mentioned which offer a progressive market cover a wide range of products, and should give our traders cause to think whether it is not possible to obtain a satisfactory footing in this outlet. Mr. Lingeman's warning must be noted, however, that the market is a poor one, that it is not in fact one for the best quality goods. This is one of the points that it behoves our manufacturers to bear carefully in mind not only in regard to Persia but in connexion with other Near Eastern outlets. There is, in fact, as I had occasion to point out recently, such a thing as giving a customer commodities which are too good. It has been the habit of British manufacturers in the past to produce goods for markets which they think the consumers ought to have and not necessarily what they want. If, however, cheap goods are required for a particular market, it is obviously good business to provide them, and it obviously means in the long run that much more trade will be done, for if high quality goods are supplied they will last indefinitely, whereas the cheap kind will quickly have to be replaced. A development of special interest in Persia is the growth of the instalment system, which is due there as in other countries, with the exception of America, to the general financial stringency. This departure will no doubt be a permanent feature of the Persian economic system, and will tend to enlarge the opening for foreign products.

Production and Competition.

Mass production is one of the ideas which America has developed for the benefit of the world, and like other striking departures it is proving to have somewhat unexpected results. The United States, as is well known, is now beginning to experience unemployment on a considerable scale, and an examination which has been conducted into the effects of mass production has shown that America's demand for certain specified commodities can be satisfied in a comparatively short period of the year, and that the development of machinery means that there is roughly 25 per cent. less employment in the industries affected. Of course new industries have been started, but the same applies to them also, and the net result is that America will be dependent in the future to an even greater extent on foreign markets for the absorption of the surplus output under the mass production system. Now America's example in the way of mass production is being followed here and in other countries in pursuance of the doctrine that the more commodities that are produced the better is it for the countries concerned. It is a doctrine which seems to lose sight of several important factors such as the provision of an adequate demand for commodities, but it is nevertheless now becoming the basic factor in industrial endeavour. From Great Britain's point of view the significance of America's predicament lies in its effect on the foreign markets, notably those in the Near East. America must dispose of her surplus production, and she will no doubt do so at unremunerative prices rather than fail to secure an outlet, and the result must be that our traders in the Near and Middle East will find themselves faced with much more serious competition in the near future.

The Rubber Situation.

This has been an unprecedented week in the rubber market. For the first few days business was restricted pending the Prime Minister's statement, and after it was delivered the conditions were such that business was at first almost impossible. As I pointed out, it was to be expected that Mr. Baldwin would indicate the impending end of the restriction scheme, but what was not anticipated was that it would be brought to such a speedy termination. Hence the slump in the market. A very possible construction to put upon the Government's action is that they hope to create a situation which will leave the Dutch no option but to give their co-operation to British producers which they have so far refused. standpoint the decision would be unintelligible. Since the Government made the first fateful pronouncement on February 9, there has been a large fall in London stocks, which suggested that at long last the restriction scheme was going to justify itself for a second time. The fact that last week there was an addition to the London stocks may be disregarded, for the holiday period and the conditions alike have been adverse to normal business, and of course, the same remark applies to the present week. The outlook now is uncertain in the extreme—granted that when the market settles down there should be further and substantial reductions in stocks between now and November 1 the situation is bound to be governed by the fact that after that date there will be unrestricted production, which, in default of an agreement with the Dutch, must mean rubber round about 6d. per lb. at which rate, of course, no estate can hope to escape running at a loss, and a continuance of which price for a lengthy period must mean inevitably that only the strong companies will be able to survive.

COMMENTATOR.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, March 25.

Importance of a Loan.

The feeling in the country against the Liberal Government appears to be growing more and more acute, and in any other country it would seem safe to predict some kind of disturbances if the Liberals do not soon yield to the manifestations made against them both in and out of Parliament. The Opposition have expressed their intention of resorting to force if necessary. But in this country force is rarely resorted to, and quarrels usually end either in a compromise or in the somewhat blustering withdrawal of the weaker party. Possibly if the stabilisation loan is obtained, about which a great deal is spoken in the Press and by the public, it may help to retain the Liberals in power some time longer. It is confidently asserted on all hands that a loan is being arranged for through a French and an American group, the name of Blair and Co., of New York, being mentioned in this connexion.

One noticeable result of the prevailing confidence in the success of the loan negotiations with a view to the stabilisation of the currency is the rise in the quotations of the shares of the National Bank and of several of the sounder industrial companies, such as the Reshitza Iron Works and the Mica Gold Mining Company. Petroleum shares, however, are falling, as the oil industry is passing through a crisis, created apparently by overproduction and overstocking of the world market, and the consequent low prices now ruling. Thus pressed the oil companies appealed to the Government for a reduction of the export taxes with the result that these taxes were reduced to a nominal figure, and the railway transport charges were also reduced. In spite of these concessions, however, the oil companies have been obliged to cut down their expenses all round and even to restrict their production. Nevertheless, although drilling has been less active the total tonnage produced this year is greater than that of last year, viz., 3,650,000 metric tons as against 3,244,400 in 1926.

A Bucharest Municipal Loan.

It is stated in the Press that the Bucharest Municipality is now negotiating for a loan of 240 million lei to be used principally for the paving of the streets. If this be so all the unfortunate inhabitants, who now plod through seas of mud and flowing rivers in all the gutters during the rainy seasons, or venture forth after dark at the risk of breaking their bones owing to the neglected state of both streets and side walks, will no doubt exclaim in chorus, "'Tis a consummation devoutly to be wished." The Municipality have several times been on the point of obtaining a loan for this and other purposes, such as lighting (which is also utterly inadequate at the present), but hitherto all the negotiations have come to nought. The present offer is said to have been made by an Anglo-French group.

Though it must be admitted that a great deal has been done in recent years towards improving the appearance of the town, the Municipal organisation is still far from perfect, and it is to be feared that Bucharest would still take a very low place in any competition for cleanliness.

A Bucharest Housing Scheme.

Another scheme appears to be engaging the attention of the Town Council, for the Mayor of Bucharest is reported to have received an offer from an Italian group for the building of a large number of dwellings for public functionaries. In spite of the enormous number of houses which have been built in the course of the last few years, there is still insufficient housing accommodation in Bucharest for the population and rents are exorbitantly high—much higher even than in London, especially if the comfort of the houses is taken into consideration. Houses at moderate rentals suitable for clerks and others earning small salaries are practically non-existent. The art of house building is very imperfectly understood in this country and the flats being run up in Bucharest just now generally consist of three or four living rooms, none of them large, a tiny bathroom, a kitchen and very small servant's bedroom and no cupboards, storerooms or conveniences of any description. For these a rental of £220 is charged (at the present rate of exchange). For a comfortable flat with three living rooms, two bedrooms and kitchen, etc., the rents run from 350,000 lei upwards, that is £430.

High Cost of Living.

These figures lead to the reflection that the rise in the value of the leu which took place last year, from about 1,000 to 800 to the pound sterling has had the effect of making Bucharest perhaps the dearest capital in Europe to live in for the prices of commodities have not yet fallen in inverse ratio to the rise in the value of the currency. The official index figures of the cost of living in Roumania as a whole show it to have been in 1927 50 times the cost in 1916.

FOREIGN EXCHANGES.

Engineering Topics.

By G. B. B.

Coloured Cements.

The use of coloured cements is rapidly on the increase in this country and some remarkable effects can be obtained by a judicious blending of tints. The colouring matter is added to the cement during the mixing of the material, care being taken, of course, to follow carefully the directions both of the maker of the colouring matter and also of the manufacturers of the cement itself. Only the highest grades of cement are really suitable, as with them and with a good quality lime not only can permanency of colour be assured but there is an absolute certainty that no chemical action will be set up which would have a bad effect on the finished product. With cheap and unguaranteed materials, flaking or actual disintegration of the cement might take place, so that in this, as in so many other cases, it pays to use the best materials even at a slightly higher first cost. The Associated Portland Cement Manufacturers and the British Portland Cement people all make guaranteed products, and their advice, which will be freely given to all readers of The Near East and India, should be sought before any work of the kind is undertaken. So far the use of coloured cements has not been so popular in the Near East as should have been the case, and no doubt some of the hesitancy has been due to doubt as to the permanency and durability of the finished product.

Internal Combustion Engines.

It seems only a few days since the engineering world was startled by the great success obtained by the use of oil engines for ship propulsion. The development of the motor ship has been little short of sensational and, incidentally, it may be mentioned that the industry has had more written and said about it in a few years than almost any other branch of engineering. At first oil engines were thought to be only possible for comparatively small vessels, but now engineers and designers are quite prepared to guarantee good results from the use of internal combustion engines in vessels of the largest size.

As an instance of this it may be mentioned that the Union-Castle Mail Steamship Company have just placed an order with Harland and Wolff, Ltd., for a twin-screw 20,000 ton passenger liner. This is the result of the success obtained with the Carnarvon Castle, a motor liner built for the company in 1926. Naturally the new vessel will contain certain improvements suggested by practical experience, but, broadly speaking, both vessels will be on similar lines. There is a second vessel already under construction on the Belfast slips and the new vessel will be laid down immediately, so that when she is completed the Union-Castle Line will have three big motor-driven passenger liners in use. So convinced are the company as to the superiority of oil engines over steam engines that they have on order an 11,000 ton motor vessel for their East African service, built on somewhat similar lines to the Llandaff Castle. The *Engineer* announces also that the Compagnie Générale Transatlantique has placed an order with a French yard for a 22,000 ton passenger liner. This vessel is to be of the De Grasse class, to be driven by four 4,000 h.p. engines of the double acting, two-stroke, six-cylinder type, running at 145 revolutions per minute. Four 700 r.w. auxiliary generator sets will be installed, driven by 1,050 b.h.p. engine, four-stroke, of the airless injection type. The anticipated fuel consumption of the engines, which will be six-cylinder units designed to run at 215 r.p.m., has been given at about 0.385 lb. of oil per b.h.p. hour for the main engines and as 0.377 lb. per b.h.p. hour for the engines driving the auxiliary sets. The great economy of these engines can thus be readily realised.

Another branch of engineering in which extraordinary progress has been made of late is that dealing with extra-high voltage work, and electrical engineers, after years of research work, have succeeded in producing artificial lightning of 3,000,000 volts. This is about seventeen times greater than used in any transmission line, even in the United States, where super-tension work has reached a very high pitch. The result mentioned is the result of experimental work at the Pittsfield laboratory of the American General Electric Co., and the electrical energy, produced by a unique type of generator, is gradually stored in artificial clouds until the saturation point is approached, after which it is discharged in a flash which in every way resembles natural lightning. It may well be said that it remains to be seen what value the new process will prove to be in actual work, but, be that as it may, a great advance in electrical engineering work has to be recorded.

First British Electric Railway.

In its obituary notice of the death of Sir Wm. Forwood, of Liverpool, *The Times*, in mentioning that he was the first chairman of the Liverpool Overhead Railway, said that this was the first full gauge electric railway in this country. This was a slip, the first full gauge British electric railway was the City and South London, now incorporated in the London underground electric railways group. This was opened in December, 1890, the first train being driven, I believe, by Mr. J. Moffatt, who later joined the old Edison and Swan United Electric Light Company. As the Liverpool undertaking was not opened until April 7, 1893, the South London venture has an undoubted claim to seniority.

THE BONDHOLDERS' REPORT.

Reference was made last week to the summary of the position with regard to the Ottoman Debt in the report of the Corporation of Foreign Bondholders. The following are extracts from the report:—

Bulgaria.

The new arrangement which came into force on April 1, 1927, appears to be working in a satisfactory manner, payments thereunder having been duly effected.

Greece.

The total gross receipts in 1926 applicable to the service of the old gold loans amounted to 1,867,258,789 drachmæ, against 1,380,664,300 dr. in 1925, and out of these sums the Monopolies and the Stamp and Tobacco Duties, from which the plus-values are derived, yielded 226,709,436 dr. and 129,129,498 dr. respectively.

With the addition of (1) the portion of the revenue from the tobacco duties which is not applicable to the old gold loans (viz., 12,208,026 dr.); (2) the customs receipts of the ports of Corfu, Patras, Laurium and Volo (viz., 135,335,074 dr.), which constitute an additional contingent security of the old gold loans, and those of the ports of Salonika and Kavalla (viz., 333,046,012 dr.), on which the Five per cent. Loan of 1914 has a first charge; (3) the gross receipts of the revenues assigned to the Refugee Loan of 1924 (viz., 650,085,087 dr.), and (4) the receipts from the Refugees Settlement Commission for extraordinary amortization of the Refugee Loan (viz., £77,327), the total gross receipts in 1926 assigned to the service of the Greek Public Debt subject to the Control of the International Financial Commission were 2,997,932,988 dr. and £77,327.

The dispute, mentioned in last year's report, between the Greek Government and the International Financial Commission, as to the method of calculating the plus-values payable in 1927, was referred to arbitration, and it was announced in September of that year that the Commission had agreed, in the interests of the Bondholders, to a proposal of the Government to add to the minimum interest payable on coupons due October 1, 1927, a further 24 per cent. of the nominal interest on account of the plus-values of 1926. This represents the amount which the Government considered to be not in dispute. A similar addition has also been made, in the case of the other gold loans, on the first coupon matured since the announcement appeared. The corresponding sinking fund allotments have been increased by 8 per cent.

At the beginning of March, 1928, the Council were informed that the arbitrators had been unable to agree, and that the President of the Swiss Confederation had accordingly been invited to nominate a third arbitrator. Meanwhile the Greek Government had agreed to distribute 24 per cent. of the original interest in respect of additional interest on forthcoming coupons and 8 per cent. in respect of additional amortization, as representing the amount not in dispute on the plus values of 1927, distributable in 1928.

As regards the general position, during the past year the reform of the finances undertaken by the Greek Government has progressed in a satisfactory manner. The British and American War Debts have been funded; the Budget estimates have been balanced by means of fresh taxation and economies in expenditure; under the auspices of the League of Nations a scheme of banking and monetary reform has been adopted; and the approval of the League has been obtained for a new loan for the purpose of stabilising the drachma, of liquidating arrears, and of continuing the work of establishment of the refugees.

In 1927 the gross receipts for the service of the old gold loans were 2,250,020,992 dr., and the proportion applicable to the plus-values was 200,293,830 dr. With the additional receipts from the Monopolies and other sources, the total gross receipts in 1927 were 3,891,669,534 dr.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Paints.—The Director-General, Posts and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of paints required during the year 1928-1929 as per list and conditions of tender obtainable from Stores Department, Arsenal. May 10.

Rails.—Tenders are invited by the Ministry of Finance, Survey of Egypt, for the supply of any quantity of rails up to 14,050 tons 8,300 tons light, 5,750 tons heavy). Offers for any portion will be taken into consideration. Offers may be for either new or second-hand rails. July 25. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, April 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahanada for Calcutta (Birkenhead, April 16); s.s. Macharda for Calcutta (Birkenhead, May 3).

Bibby Line.—S.s. Herefordshire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, April 18).

British India Line.—S.s. Mulbera for Colombo, Madras, and Calcutta (London, April 21); s.s. Manora for Bombay and Karachi (London, April 28).

Cunard Line.—S.s. Cypria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, April 28); s.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Ancona, Venice, Trieste, and Fiume (Liverpool April 28, Swansea May 1).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 5); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 26).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, April 13); s.s. Tresillian for Colombo, Madras, and Calcutta (London, April 28).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, April 21); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, May 5).

Ellerman and Papayanni Lines.—S.s. Roumelian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona, Venice, Trieste, and Fiume (Liverpool April 14, Swansea April 19); s.s. Gitano for Gibraltar, Malta, Alexandria, Jaffa, and Haifa (Liverpool April 18, Glasgow April 26); s.s. Polo for Oran, Algiers, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 21). Cargo taken on through Bills of Lading to:—Algerian ports via Gibraltar; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 10.

In the investment world Rubber holds the centre of the stage with the limelight in full play. In the earlier part of the week, before the Prime Minister's statement on rubber restriction, the principal feature in the Stock Exchange was the strength of gilt-edged securities, accompanied by some easing off in the activity in favourite industrial share sections. After the Prime Minister had announced on Wednesday afternoon that rubber export restrictions were to be removed as from November 1 next, the markets both for the commodity and for the plantation companies' shares became demoralised to an extent that was rather curious in view of the fact that the statement followed expected lines. Shares in smaller companies became for the moment unsaleable, and the big leaders of the rubber market were marked down anything from two shillings to three shillings. Over the length and breadth of Britain thousands upon thousands of rubber shareholders will be anxiously enquiring what is the right thing for them to do.

Rubber Shareholders' Problem.

To help them to answer the question a few guiding considerations may be advanced. During the transition period from restriction to freedom the course of the price of the raw material cannot be confidently predicted. It may even fall for a time below present quotations. But there are factors which suggest that eventually the price will stabilise at a higher level, possibly nearer 1s. 3d. per lb. than 1s. One reason for this is that with new rubber below 1s. 3d. reclamation of rubber, which has been a very big influence of late, becomes unprofitable. Increased supplies of new rubber will for a time merely replace reclaimed material. If this prophecy comes true—it is, of course, a long view, which takes no account of temporary intermediate fluctuations—then holders of shares in plantation companies which are efficiently managed and produce cheaply, have no great cause for anxiety, provided they are in a position to hold on and exercise patience. Shares in inefficient or wasteful companies are, of course, in a different category. The occasion is one, therefore, not for dismay among rubber shareholders but for careful discrimination between companies; and such people will do well to look up the "all-in" production costs of concerns in which they are interested.

Some Interesting Industrial Reports.

Last week a number of important industrial reports and dividend announcements were issued. The report of Lever Brothers for 1927 is distinctly encouraging, the balance of profits having advanced from £4,899,966 in 1926 to £5,390,288. The directors resume the payment of dividends on the ordinary shares, which are privately held, the distribution being 5 per cent. The balance-sheet as a whole discloses a marked improvement, and particularly in the matter of liquidity. The accounts show a praiseworthy tendency to become increasingly informative. The report of the Birmingham Small Arms Company, on the other hand, is less satisfactory than had been expected. The balance of profit for the past year was £202,063, as compared with £241,883 for 1926. This result is certainly somewhat surprising in view of the recovery shown by many industrial concerns and the meeting will be awaited with more than ordinary interest. The ordinary dividend is again passed, the amount carried forward being £336,822, against £289,713. The dividend announcement of Babcock and Wilcox, the well-known boiler-makers, etc., is in welcome contrast, the total dividend for the past year having been raised by 2 per cent. to 15 per cent. free of income-tax. This undertaking has a remarkable record of prosperity and apparently the company continues to go from strength to strength. The ordinary shares, however, have stood at a very substantial premium for some time past.

The Neglect of Kaffirs.

Some optimists in regard to South African gold shares have been entertaining the hope that, with a slackening in the industrial share boom, attention would be diverted to Kaffirs; indeed, a number of correspondents argue that it ought to be so. Unfortunately the difficulty is to find the "bull points." The 1927 annual reports of all the principal groups are now in the hands of the shareholders. In several cases the position indicated as regards the mine or the finances or both is anything but good, and in not a single case does ground for much enthusiasm exist. For example, the Government Areas of the "Johnnies" group—the world's greatest gold producer—put up a fresh record in several respects; but the consulting engineer was under the necessity of giving a lengthy explanation of the development position which, if in a large measure reassuring, was not exactly calculated to inspire optimism. In the case of another of the group—the Van Ryn Deep—the report contains the significant information that the opening up of the principal ore body has now been almost completed. Similarly with the Rand Mines group. The two subsidiaries of the Union Corporation—the Geduld Proprietary and the Modder Deep—each showed record results, but failed to indicate anything to "go for." The only possible "bull point" for Kaffirs is a *modus vivendi* in regard to the recruiting of natives in Portuguese East Africa.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

LONDON—ANDREW WEIR & CO., 21, Bury Street, E.C.

The third International Fair of Salonika will be held from September 16 to 30

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for March was 45,670 tons.

The net profits of the Yugoslavenska Banka for 1927 amounted to 10,391,462 dinars, against 11,481,523 dinars for 1926. The dividend is 8 per cent. as compared with 9 per cent.

A Reuter message from Tirana states that the Chamber of Deputies on March 31 began the discussion of the Budget for the financial year 1928-1929, which estimates the revenue at 28,600,000 gold francs and expenditure at 27,000,000 gold francs. After the speeches of the Minister of Finance, M. Starova, and other Deputies, the Budget was referred to a Committee.

NOTES FROM THE SUDAN.

(From Our Own Correspondent.)

Khartoum, March 26.

Economic Conditions.

After two years of more or less drought we had ample rains which saved the Sudan from what would have been a most disastrous year. But with the low price of dura, the staple food of the country, the native either refuses to work or restricts his labour to his immediate needs. The result is great difficulty in getting the cotton picked in. The gum arabic arrivals are the largest recorded for the time of the year and we must expect a large crop. The Government took the wise step of prohibiting the export of dura, but, of course, it has helped to restrict trade. The evacuation of Egyptian troops from the Sudan, though essential and beneficial in other respects, means less money—some say a million a year—spent in the country.

With few exceptions merchants bitterly complain of the bad state of trade, and if their complaints, like farmers' grumbles in England, are always with us, they have undoubted reason. Railway rates seem to be fixed to tax the country to the uttermost. The import of sugar remains a Government monopoly. A business man pays from 6 per cent. to 10 per cent. according to his income, but a Government official with a post guaranteed him for twenty years and a pension afterwards for the rest of his life pays nothing. The position of business people who have made the Sudan their second home is, to say the least, a trying one, and it is not without its amusing side to see former Government officials who have turned to business the loudest in their protests.

The Country's Real Position.

There is a mistaken view about the world that the Sudan is a kind of El Dorado. It has developed fast and we all hope it will continue to do so, but it must be remembered that for its size it is one of the poorest countries in the world and that literally hundreds of thousands of square miles cannot pay and perhaps never will pay the cost of Government. On the other hand, there is the Gezira with its possibilities of 3,000,000 acres and there are Kordofan and Kassala capable of great development—but development waits on population. Many people expected the impossible from the building of the Sennar Dam. In a country where there was little or nothing it was forgotten that interest on millions has to be paid, that companies operating remit their profits home in dividends and in the Gezira much of the labour is foreign, for the Fellata are working only to save enough money to carry them on their pilgrimage to Mecca or later to pay their return journey home across Africa. Even where money is paid to the native, as for gum in Kordofan, much of it has been buried and, therefore, never gets into circulation or adds anything to the import trade.

If out of quite startling figures for Sudan exports and imports one deducts Government imports which include even sugar, and cotton exports which are semi-Government, there remains very little trade to be done by independent firms either already in the Sudan or proposing to open up here. People in England before putting up their money in various concerns, too often doomed from the start, should consider all these things. It is not to the good of the Sudan that capital from home should be put up merely to be lost, for the Sudan as it develops will certainly need financial support and under favourable conditions will pay a good return.

WIRELESS IN THE SUDAN.

The Court Treatt expedition now on its way to the heart of Africa is to be in direct touch with London by wireless, for which purpose a small short-wave transmitting set is being designed by the Marconi Company. The region to which Major and Mrs. Court Treatt are making is a tract of 60,000 square miles of uninhabited and practically unknown country in the Western Sudan. From this wild, far-away spot they will send back messages for which a London man, who is a wireless expert, will listen-in every night.

The wireless set used by the explorers will be of special Marconi design and will work on a wave length of about 30 metres. Its power will be of the order of 20 watts to the anode of the single valve, this power being supplied by a hand generator. A half-wave-length aerial, 15 metres long, is to be used.

When from time to time the explorers move camp they will easily be able to carry the wireless transmitter with them, as it is being made of light weight and of very robust construction in order to withstand the rough handling and buffeting of jungle and desert travel.

The objects of the present expedition, in which Major and Mrs. Court Treatt are accompanied by Mr. E. S. Hinds, are exploration and scientific investigation throughout practically unknown parts of Central East Africa, and the making of two films for British Instructional Films, Ltd. One will be a picture of animal life and the other will show the life history of a tribe, portraying its first beginnings and struggles for existence in the African jungle.

JAFFA ORANGE SHIPMENTS.

The Empire Marketing Board states that four further shipments of oranges from Jaffa are reported with a total of 90,000 boxes. This practically completes the shipping season. Quantities now on the way total 220,000 boxes, divided between Liverpool, Manchester, Hull and Glasgow.

Exports and Imports

For the guidance of its customers the Westminster Bank issues a booklet dealing with the many ways the man of commerce may utilize the Bank's services in the development of his business; how he may avail himself of documentary credits, whether he is interested in exports or imports; and how he may take the fullest advantage of rates of exchange, rebate, or discount, and may best collect his bills with a maximum of safety and a minimum of delay

The Secretary will be pleased to send a copy on application to him at the Head Office

British Consular Reports

I.—PERSIA.

The following extracts are taken from the Report on the Finance and Commerce of Persia, 1925-1927, of Mr. E. R. Lingeman, Assistant Secretary in charge of commercial affairs, Teheran :—

1305 (March 21, 1926-March 20, 1927).—1305 was not a good year for the Persian national economy. It witnessed the consequences of the events and mistakes of the previous year : the transport crisis, the Russian embargo, the new taxes and the unemployment of public funds, while the resultant tightness of money was aggravated by the withdrawal of damaged and short-weight coin from circulation and, where the import market was concerned, by the continued depreciation in the foreign exchange value of the kran. Fortunately for Persia the 1305 harvest proved an excellent one and a good opium crop found a ready market in the Far East. The greatly increased contribution of the Anglo-Persian Oil Company to the State Exchequer also came at a very opportune moment.

The only constructive measure worthy of any mention that was actually carried into effect during the year was the creation of a pawnbroking establishment in Teheran under Government auspices which lends at 9 per cent., and which has revolutionised the short loan market in the capital, the small Jewish banks having hitherto been in a position to exact as much as 2-3 per cent. per mensem from their customers.

The Balance of Trade.

Persian economists firmly believe that the shipments of the Anglo-Persian Oil Company should not be included in any computation of the Persian balance of trade. Such arguments as they adduce would not stand in the light of public reason outside Persia itself. Within the country they have unfortunately gained currency, and it is not uncommon for responsible Persians to refer to the need for redressing an adverse trade balance which exists in their imagination only.

The capital behind the Anglo-Persian Oil Company is very largely British, it is true, but this vast undertaking has become a truly national Persian industry which in 1926-27 contributed over a million and a quarter sterling to the Persian treasury in the shape of royalties alone and which, with the employment it gives to thousands of Persian workmen, its admirable schools and hospitals, represents a factor for peace, prosperity, and social welfare, the significance of which in the Persian polity it would be both foolish and unjust to ignore.

The Anglo-Persian Oil Company, moreover, spend in Persia over three million sterling a year, of which one million represents wages alone. A large proportion of the latter sum helps to finance the importation of foreign manufactured goods. It should be noted also that the company imports into Persia every year foodstuffs for its staff, machinery, and other materials which figure in the statistics for the country's import trade; these imports aggregated £1,219,000 in 1926-27, or 6.7 per cent. of the total imports of that year. But the clinching argument in defence of the theory of a "favourable balance" in Persia's foreign trade is perhaps to be found in the greater demand for Persian rather than for foreign exchange experienced by banks operating in Persia and the large imports of silver for minting that have taken place during recent years.

It would be a curious mistake, however, to think that this greatly increased positive trade balance in 1926-27 is necessarily a sign of all-round prosperity. If the Russian embargo is mainly responsible for the fall in ordinary exports, the lower imports denote a general fall in purchasing power, while the increased oil shipments serve as an index of the ever greater dependence of the country on its oil industry, i.e., on the Anglo-Persian Oil Company.

Causes of Decreased Imports.

The Persian import trade, which showed an increase of 14.2 per cent. in 1925-26, fell off 10.7 per cent. last year. The fall in purchasing power which this decrease denotes is due to four main causes.

(1) The cereal harvest of 1926-27 was a good one, but it did not make up for the losses experienced during the two preceding years, the peasant applying his cash resources to the repair of the water channels, the replacement of oxen, etc., rather than to the purchase of foreign manufactured products, it being remembered that only a very few of the bigger landowners use up-to-date agricultural machinery.

(2) The Russian embargo on Persian produce was never very strictly applied. It soon gave way to a system whereby export licences were issued by the Soviet Embassy. Russian purchases, nevertheless, were greatly restricted (except in the case of cotton and wool) and many growers and merchants had stocks left on their hands which normally find their outlet in Russia (particularly dried fruits, rice, and skins).

(3) The fall in the exchange value of the kran, the average kran-sterling rate rising from 42 in 1924-25 to 43.50 in 1925-26, and 48.60 in 1926-27.

(4) Increased taxation. It is worthy of note that the only taxes of any importance introduced during the last two years, the regressive sugar and tea monopoly tax and the compound road tax are directly levied on trade, being in reality nothing else than disguised customs surtaxes. Not only has the financing of trade become a most acute problem, but the standard of living and purchasing power of the population have been adversely affected.

The ordinary customs duties on the 1926-27 imports, excluding bullion but including merchandise imported free of duty, amounted to 10 per cent. *ad valorem*. When the monopoly surtax is added the incidence is 17.9 per cent., which swells to 21.4 per cent. once the road tax is included. In other words, Persia, a country with no industries to protect, has surrounded itself with a tariff wall which would be considered high in the case of an industrialised State. In taxing trade as they have done, Persian financial legislators have merely been following the line of least resistance. It is true that the weight of the sugar imported during 1926-27 actually increased 9.9 per cent. in spite of the monopoly, but its c.i.f. value was 10.2 per cent. lower than the year before. The volume of these sugar imports, moreover, only represents 54 per cent. of the 1913-14 total.

Openings for British Trade.

Apart from cotton goods Persia offers a progressive market for such manufactures as woollens, knitted goods,

artificial silks, haberdashery, ready-made clothes; foods and preserves, whisky and other alcoholic drinks; rubber articles, including tyres; motor cars, cycles, motor cycles and their accessories, lubricating oils; machinery, both industrial and agricultural, electric plant, small tools; galvanised iron and tin plates, copper and nickel in bars or sheets, tin, lead and zinc in ingot form (this class of imports is mainly on account of the Anglo-Persian Oil Company); tin, aluminium, crockery and enamelled ware; glass; lamps; paper and stationery; soaps; dyes, particularly synthetic indigo, for the carpet industry.

The tariff which the Persian Government have in view will probably hit luxury articles severely and lead to a diminution in their imports.

It must be borne in mind that the Persian market is essentially a poor one and on the whole unreceptive to high quality and high priced British goods. Those foreign manufactures that find a market in Persia undercut the British to the extent of 10-40 per cent. It cannot be over-emphasised that conditions demand the grant of elastic credit terms to trustworthy importers. The number of these is unfortunately limited, and the search for suitable agents is an especially ardous one. Moreover, distances are such than an agent's sphere of effective activity is necessarily very limited unless he has representatives in the provinces.

There are no restrictions on the visits of commercial travellers. Such visits may be combined with tours in the Near East or India, the overland route to India being perfectly feasible. American, German, French and Italian firms in their several lines have found that the Persian market repaid attention although the difficulties which they and the few British firms in Persia encounter should not be glossed over. The following section aims at making clear the need for caution on the part of any British firm desirous of dealing with Persia and unfamiliar with the peculiarities of the market.

Idiosyncrasies of the Market.

The purchasing power of the great bulk of the population is extremely low. Purchases are of a hand-to-mouth character. Consequently price and not quality remains the determining factor, although in some lines the people are just beginning to realise that they are actually too poor to buy the cheap and shoddy. In towns the rapid extension of the instalment system allows for the sale of better quality goods to a certain class of consumer, but this tendency is itself an outcome of the general financial stringency and the determination of the retailer to turn his capital over at all costs. It follows that the retailer demands longer credits from the middleman, the middleman from the importer, and the importer from the foreign manufacturer who, in the last resort, is asked to finance the market. The British exporter, when he does not insist on an irrevocable credit being opened in London by the Persian buyer against the total payment of the goods on shipment, will ask for a 20-25 per cent. earnest with the order, balance against documents Persian Gulf Port or Baghdad. In exceptional cases he may grant a 91 days' credit which in summer allows ample time for the consignment to reach Teheran but not so in winter. Let us examine the terms offered by his competitors. The German firm will normally take a 20 per cent. advance, a further 20 per cent. when the goods reach Bushire, and the balance in Teheran. The Italian manufacturer of woollens accepts a 15 per cent. advance, 20 per cent. in Bushire, and the balance when the goods are sold, and this to an unlimited amount. Books have to be examined for this to be believed. In artificial silks conditions are a little stiffer; 25 per cent. advance, 25 per cent. in Bushire, balance in Teheran. But in cotton goods, besides granting the same credits as in the case of woollens, the Italian manufacturer will send goods on consignment to his Persian client without draft or bill. The Russians give six to twelve months credit. Where certain Continental firms doing business in Persia have made mistakes has been in accepting 5-10 per cent. advances from all and sundry. A British shipper, who took 20 per cent. with the order and 25 per cent. plus costs when the consignment arrived in Bushire, could afford to allow the Persian purchaser time to dispose of it.

On the other hand the abnormally large numbers of firms specialising in the main branches of trade (cotton goods, sugar, tea), their speculative tendencies and fiercer rivalry as demands weakens, leads to the grossest form of over-importation. This over-production, coupled with the low margin of profit, fluctuations in the exchange and a low standard of commercial morality, results in an alarming tale of non-acceptances. A Persian merchant who happens to be anxious to meet his obligations will, when he is short of funds and accommodation is denied him, either have recourse to "kite-flying" or sell at a loss. The off-loadings of the Baghdad market, moreover, go to swell the volume of these uneconomic sales, not only in west Persia but in Teheran and Ispahan as well, to the serious detriment of the conservative trader. In north Persia the importer of British manufactures is faced with the competition of Russian goods dumped on the market irrespective of loss. Italian competition is still more dangerous because it is carried out on commercial, though perhaps somewhat hazardous lines. Russian imports of pure cotton piece-goods went up 18.4 per cent. in 1926-27, while the Italian advance was as much as 46.6 per cent. In south Persia the situation is further aggravated by the disposal, on an appreciable scale, of smuggled goods which, of course, undercut legitimate imports. No improvement can be foreseen until money flows more freely in the bazaars, and that must depend very largely on the soundness of the financial administration and an unrestricted flow of exports.

Industries.

Apart from oil production, the manufacture of carpets is the most important of Persian industries. In 1926-27 woollen carpets constituted 11 per cent. of the total export trade, or 27 per cent., if oil productions are excluded. The value of carpets exported in recent years show what appears at first sight to be a gratifying increase:—1924-25, 101,881,000 krans; 1925-26, 117,581,000 krans; 1926-27, 122,563,000 krans.

Experts, nevertheless, are sceptical of the durable prosperity of the industry. The demand for the carpet of Persian manufacture is lagging behind the ever-increasing world demand for the oriental or pseudo-oriental carpet. Chinese and Indian production has made rapid progress and Anatolia is once more a serious competitor since local conditions have improved. The looms set up in Greece by Greek and Armenian weavers expelled from Turkey after the War are already making their influence felt. Manufacture in these several countries is better developed than in Persia, where the cost of production is going up appreciably, while the pernicious system of advances to master weavers is responsible for the financial difficulties under which the Persian industry labours. Moreover, the use of aniline dyes does much harm to the reputation of the Persian product. Other countries also make use of aniline dyes for cheap qualities, but there the yarn is dyed properly and the dyes themselves are superior in quality to the Congo red and fuchsine which the Persian weaver is apt to use in such abundance.

With the reduction of the German Customs duty on oriental carpets on July 24, 1927, from 24 to 8 marks per kg., the market situation has changed for the present: large sales have been effected to German buyers in London and Constantinople. Germany is buying cheap and medium qualities principally and the Persian market for such goods has been very good of late.

Only the towns of Teheran, Bushire, Tabriz, Resht, and Enzeli have electric light. The plants are mostly very unsatisfactory owing to lack of power, supervision, spares, and funds. The absence of switches in many cases results in the lights burning all day. A wiring concession has been granted for Isphahan and others are in course of negotiation for Sultanabad, Kermanshah, Burujird,

Digitized by Google

Khoremabad, Shushtar, and Ahwaz. Electricity has not so far been utilised in industry. The potential supply of hydro-dynamic power is relatively small, although it would probably meet the needs of most Persian towns for some time to come.

Railways.

The North to South Railway.—A trunk line has been the goal of Persian nationalist ambition for many decades past. It has been brought somewhat nearer to realisation by the passage of the sugar and tea monopoly law on May 30, 1925, which created a railway fund by the application of a surtax of two and six krans respectively on every batman (6 lb.) of sugar and tea brought into the country. An American railway mission has appeared on the scene and on February 24, 1927, the Majlis authorised the Government "to begin from both ends the construction of a railroad between Khur Musa or Mohammerah and Bandar-i-Gaz via Hamadan and Teheran." It is too early as yet to expect accurate estimates, but it seems that the construction of a sea-to-sea railway may take from seven to ten years at a cost approximating £15,000,000, while it may be 30 years before the railway pays its way. No decision has yet been taken November 20, 1927) in regard to the negotiation of the Elburz range, a formidable obstacle. The southern terminus at Khur Musa also necessitates the construction of an entirely new port. The call for tenders made in September, 1927, was in respect of sufficient material for a hundred miles of 4 ft. 8½ in. gauge line at each end. This will allow the Railway Mission to gain a rough idea of the likely cost of construction over the whole length, and, when that has been made, it is likely that foreign contractors will be invited to build the more difficult sections of the line.

The cost of construction will certainly be very great if the idea is ahhered to of setting up smelting works for the making of rails on Persian soil.

The Tabriz-Julfa Railway, with branch to Sharaf Khaneh on the Urumieh Lake, has fallen on bad ways. New sleepers and new ballast are badly required. The condition and working of the line are such that speed is very limited and trains halt for the night. There are not more than two trains a week from Tabriz to Julfa and one to Sharaf Khaneh. A deputy recently drew the attention of the Majlis to the fact that trains took eleven hours to reach Sharaf Khaneh from Tabriz, whereas the journey formerly lasted three hours. The line was handed over to Persia by the Soviet Government under the terms of the 1921 Treaty.

Roads.

The position on September 11, 1927, was as follows:—

(1) Length of roads. Metalled*: About one thousand kilometres. Partially metalled (with a light surfacing of stone and gravel): about two thousand five hundred kilometres. Unmetalled (passable for cars nearly all the year round, though sometimes with difficulty): about five thousand kilometres.

(2) Expenditure on roads (year ending March 20, 1928): Construction, 1,200,000 tomans; maintenance, 1,000,000 tomans.

This state of affairs compares favourably with the pre-War situation when no funds were allocated by the Government for road upkeep or construction, and the only road open to motor traffic was that from Enzeli to Teheran and Qum.

The road tax law provides for an expenditure in each province of not less than 50 per cent. of the receipts of that province until such time as the main arteries have been constructed. Little was attempted in 1926-27 on those southern routes in which British trade is chiefly interested, but the funds have been held over and it is hoped that something tangible will be achieved in 1927-28.

Rates of animal transport on the Khanikin-Teheran, Bushire-Teheran, and Duzlap routes were some 40-50 per cent. lower during last year than they were prior to the transport crisis of 1925-26. Although trade has fallen off, the chief contributory factor has been the introduction of motor transport on a large scale and the realisation of its use for the carriage of merchandise, largely as the result of the operations of the Alimentation Service, which itself imported a considerable number of lorries. The following figures show how rapidly motor transport has developed:—

	1924-24	1925-26	1926-27
Motor cars	529	1,111	1,330
Motor lorries	103	492	967

Generally speaking, the lorry is rapidly elbowing the caravan off the more important carrossable trade routes, thus bringing down caravan rates on the less frequented roads. The premium on motor transport on the roads in the neighbourhood of Teheran has narrowed from 100 to 20 per cent. and has even disappeared altogether in some cases, but the smaller transporter, more often than not, quotes rates that cannot possibly allow for a commercial profit. The lesson seems to have been learnt, among others, that it is only the heavy lorry of 4-5 ton capacity and over that pays. Merchants are gradually realising the advantages of a quicker turnover. Another advantage is that motor transport rates are steadier than those for animal transport.

British imports of cars and lorries were as follows:—

	1925-26. Number.	1925-26. Per cent. of whole.	1925-26. Number.	1925-26. Per cent. of whole.
Motor cars	32	2.9	29	2.2
Motor lorries	80	16.0	115	11.9

It will be seen that the British manufacturer is not making progress on this market, which is dominated by the United States. Price, particularly in terms of horse power, is the determining factor.

(To be continued.)

* "Metalling" consists of stones loosely thrown on the surface which the passage of transport is expected to crush into permanent position. Many are flung off the road altogether. Tyre consumption is consequently abnormally heavy, particularly in the cases of solids. The Road Department are, however, investing in a dozen rollers.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 4:—

Egyptian Futures.—Sakel Contract.—Quite a large volume of business has again been transacted in this market during the week, but the undertone has been rather quieter and fluctuations on a more normal scale. During the earlier days the reactionary tendency commented upon in our last report continued in evidence, stop-loss orders and unloading by the more nervous and weaker holders running prices down to 19.70d. for the November position. A further decline appeared imminent at this period, as the undertone was decidedly weak; however, one of those quick turn rounds which are now becoming a customary factor in Alexandria took place over the week-end; this encouraged those who had previously liquidated to replace their cotton, and values at the best reacted 90 points below the low level. Since this, the market has settled down and appears to be becoming more evenly balanced; to-night's close shows gains of 36 to 40 points for near and 18 to 31 points for distant positions on the week. Latterly the sustaining factor has undoubtedly been the consistent strength displayed by Alexandria. We admit that the prospect of a water shortage may later prove a very strong "bull" point, but we think for the time being, at any rate, that this factor has been fully exploited and for the immediate future more attention will have to be paid to the recent poor support given to the market by spinners, not only in Lancashire, but also, from all reports, in other parts of the world.

Manchester reports during the past fortnight have shown a falling off in the demand for fine counts with a corresponding shrinkage in the demand for Egyptian Sakels; on the other hand, it is noticeable that spinners when they have to cover are favouring Sudan Sakels. During the past two days some local hedge selling of new crops has been in process and this has had the effect of again widening out the Liverpool Alexandria differences. There has been little change in the relative contract positions; near months, however, have at times shown a tendency to close up with new crops. We are rather inclined to anticipate manipulation of the May position by the holders of the March dockets who, if they desire to do so, may easily put the month in question level with November.

Whilst we are not against the market for a long view, we certainly think that the open speculative long position may easily constitute a dangerous factor. As we have previously stated, the most has been made of the various "bull" points that have recently cropped up, and should anything of a more favourable character come into prominence many of the present holders will probably show anxiety to liquidate, and with the present trade attitude maintained it is difficult to foresee how this cotton would be taken without the level being materially affected. We consider that the present position calls for a certain amount of caution; probably the best policy to follow at the moment is to watch events carefully with the idea of making purchases should the market react substantially from to-day's prices.

Upper Contract.—This contract has shown a very steady undertone throughout the past week, and whilst at times prices have shown moderate reactions owing to straddle selling against purchases of Sakels, prices have been quickly re-established by some good speculative buying and increasing trade support.

Manchester reports only show a moderate tone, but on the whole spinners have shown an average amount of activity in their purchases of both spot and c.i.f. cotton. We see no reason to alter our recent views, and consider that purchases of old crop months on any reactions will later on prove satisfactory.

Egyptian Spot.—In spite of the rather uncertain tone of the futures markets, and consequent fluctuations in spot prices, a fair business has again been done in Egyptian cotton, and in Sudan Sakel a very good business indeed has taken place.

The daily inquiry for Egyptian growths has produced no fresh features, and conditions generally are much the same as when last we wrote. The bulk of the demand has been satisfied either by inferior qualities of Sakel at from 8d. to 14½d., or by Uppers at from 25 off to 25 on the contract. Good Fair and Fully Good Fair Sakel have once again received scant attention, probably owing to the very indifferent character of the local stock, but a fair demand for Good Sakel at about 175 to 225 on has been experienced.

The high prices quoted for the best qualities of both Sakel and Upper still continue to scare away potential buyers. An improved demand for Pilion has been met with at prices ranging from 15d. to 17d. C.i.f. business has been distinctly on the quiet side, but forwardings to the trade for the week ending the 30th ult. were again good at 9,218 bales Egyptian and 862 Sudan.

Estimated spot sales for the week, 2,000 bales Egyptian and 6,750 bales Sudan. Quotations of Sakel have been advanced 30 points, and those of Upper and Pilion 35 points on the week. F.G.F. Sakel to-day, 20.80d. F.G.F. Upper to-day, 14.85d. F.G.F. Pilion to-day, 15.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended March 29, state:—

The market during the week has shown considerable nervousness, and at the close to-day was without any decided tendency. The week's summary of price movements is as follows:—Sakellaridis: May, 40.80 dollars, 0.15 dollars down; July, 41.02 dollars, 0.25 dollars down; November, 41.15 dollars, 0.59 dollars down; January, 40.80 dollars, 0.60 dollars down. Ashmouni: April, 27.25 dollars, 0.25 dollars down; June, 27.59 dollars, 0.21 dollars down; August, 28.05 dollars, 0.15 dollars up; October, 27.63 dollars, 0.37 dollars down.

Sakel.—Fluctuations have been wide; May touched 42 dollars at the highest, fell to 39½ dollars, and finally closed to-day at about 41 dollars. The drop on Thursday was due to bull profit-taking, induced by the continued apathy of spinners and by the better crop news. The smallness of the business concluded with the mills is hardly surprising under the circumstances; with prices moving as they have been recently, sales are extremely difficult, indeed almost impossible. Spinners do not seem disposed to open commitments with prices so unstable, and a steadying-up would be greatly to the advantage of all concerned. For the time being, however, this is probably too much to expect; the open speculative position is large, and until this is much reduced violent and wide fluctuations are bound to occur.

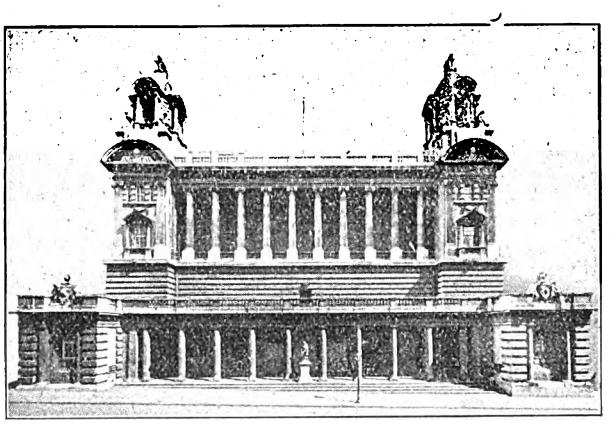
There is nothing new with regard to the cotton held by the Government, although the newspapers report the probability of a further sale to the Soviet. A considerabl quantity of Sudan Sakel has already been shipped to Liverpool, but it is reported that relatively high prices are being asked and, as a consequence, the cotton is not being bought as eagerly as it was last year.

At the third March tender, 2,250 kantars dockets were issued, making a total of 10,750 kantars for the month.

Uppers.—Prices of this variety have not fluctuated so violently as Sakel. The trade has bought a fair amount of contracts, which speculators have been straddle selling against Sakel.

The week's receipts amount to 73,489 kantars against 48,741 kantars; the stock in Alexandria stands at 2,815,581 kantars.

Spot: The past week has been a short one owing to the Bairam holidays, but during the three days the market was open Minet el Bassal has continued fairly active. Sales amount to about 8,900



THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

The Greatest Spot Cotton Market in the World

MEMBERS OF THIS ASSOCIATION OFFER FACILITIES FOR THE SALE, PURCHASE AND FINANCE OF EVERY GROWTH OF COTTON.

The World follows Liverpool Cotton Quotations daily.

GROWERS AND SHIPPERS SHOULD SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary.

Digitized by Google

bales, of which we estimate 1,200 bales Sakellaridis, 4,050 bales Ashmouni and Zagora, 450 bales Pilion, and 200 bales other varieties. The rise in prices has brought out a good deal of cotton for sale, and although still very difficult to deal with, holders showed themselves somewhat more ready to meet the market.

Sakellaridis: The selection of Sakel is fairly large but of poor quality, and desirable cotton is scarce, especially in medium grades. A fairly good business has been done covering all grades, with the medium qualities in most demand. Spot differences show little or no change from last week.

Ashmouni and Zagora: Have continued in good favour with buyers and a good business has been done in all grades at about last week's spot differences.

Pilion: A good business has been done at last week's spot differences.

Other Varieties: In White a small business has transpired at last week's spot differences. A fair business has also been done in Nahda and Fouadi, and a few little lots of Maarad have changed hands.

Up-country: With the native holidays at Bairam taking up several days of the past week, spot business in the interior has been quiet. Arrivals are considerably down owing to the ginning factories having been closed during practically the whole week as a result of the above-mentioned holiday.

Crop, 1928.—The conditions have been good in all districts during the past week and some of the delay occasioned by the recent bad weather has already been recovered. Sowing and re-sowing have been finished in many districts; the North Delta will go on sowing until about the middle of April. The plants in the early sown fields are looking strong and healthy. We already hear complaints of shortage of water in some districts and cases are cited of planting having suffered delay as a result thereof. There is no improvement in the river levels and the prospects for the summer water supply are unchanged. The Sudan gauges to-day show as follows:—Malakal, 9.76 metres against 9.93 last year; Rosieres, 11.14 metres against 11.40 last year; Wadi Halfa, 0.73 metres against 1.13 last year.

The discharge from the Assouan Reservoir on the 28th instant was 625 cubic metres per second against 638 cubic metres at the same time last year and 580 cubic metres in 1926. The Reservoir levels Malakal, 9.76 metres against 9.93 last year; Roseires, 11.14 metres 1926, 113.00 metres.

The King has approved the appointment of the Rev. Charles John Godfrey Saunders, M.A., Indian Ecclesiastical Establishment, to the Bishopric of Lucknow, vacant by the death of the Right Rev. George Herbert Westcott, M.A., D.D.

The Greek Government has approved a proposal submitted by a Greek and a German contractor to lease the Achilleion, a former summer residence of the German ex-Kaiser, situated in Corfu, for a 25-year period for the purpose of converting this property, which was confiscated by the Greek Government after the War with Germany, into a casino (says an American report). Hotels, theatres, and music-halls will be constructed in the large park surrounding the palace, and a minimum amount of £400,000 must be spent on these undertakings by the contractors within a period of five years from the signing of the contract. The time for the submittal of proposals for its construction work closed March 12. No award has yet been made.

Notes of the Week.

Yugoslavia and a Loan.

A significant move was made last week by the Yugoslav Government when it arranged for an economic conference in Zagreb to be attended by representatives of Croatian and Slovenian business interests and by six Ministers. The meeting was convened for the purpose of securing support for the international loan that the Government is expecting to conclude with American and British financiers and of enabling the Minister for Finance to explain the policy of the Government in the main business centre of the Kingdom, where hitherto it has been subjected to most criticism. Although the Peasant-Democrat political group under M. Raditch and M. Pribitchevitch tried to boycott the conference on the ground that it would merely be playing into the Government's hands, there seems to have been sufficient independence of thought among the members present to prevent the proceedings from being as stereotyped as may have been originally planned. The Government was informed very emphatically that Croat support of the loan was likely to be conditional on the terms of the loan, its purposes and the control of the handling of it. Croat dissatisfaction with Yugoslav officialdom was emphasised, and it was suggested that special measures would be required to ensure that the loan funds were spent for the good of the country as a whole and not for sectional interests. Dr. Bogdan Markovitch, Minister for Finance, emphasised how the peculiar conditions of the new State had determined its economic policy, but admitted that the time had come for the lightening of the burdens on trade and industry. The loan, together with a general overhaul of State finances, would be the means of bringing about better conditions for business interests, and its expenditure would be regulated by the principle of maximum productivity. The total contemplated was £50,000,000, but the money would be issued in instalments on terms to be fixed for each issue. Although the loan was the *raison d'être* of the conference, the Government was possibly actuated in the step that it took by a desire to show that its outlook is not so exclusively Serbian as its political opponents claim. Whether the meeting was entirely successful from this point of view must be left an open question.

General Pangalos Again.

For twenty months General Pangalos has now been kept under arrest in Greece without trial. The outstanding feature of the ex-Dictator's régime was that at a period of political confusion and administrative lethargy he was the only Greek capable of getting things done. They were not always the right things, and they were not always done in the right way, but the welcome change to some form of definite action in a country of "Never mind" and "To-morrow" reconciled many people to a régime that had little else to commend it. As if to emphasise the national weakness of procrastination successive Greek Governments have contrived to keep General Pangalos in prison for nearly two years without doing anything. The constitutional difficulty in indulging this habit in the case of a prisoner detained without trial has been overcome by *ad hoc* legislation, and as if to meet any possible scruples on the nation's part a series of Pangalist plots have been announced at more or less regular intervals. A Pangalist plot, it must be presumed, calls for immediate arrests and subsequent investigation, and nothing can be expected to be done with regard to the General himself, until the subsidiary matter has been dealt with. Investigation has generally led to the liberation of the arrested. In this way the ex-Dictator remained seventeen months in prison, until a more serious outbreak in Crete, where he was incarcerated, which might have been in some way connected with the widespread disgust over the treatment meted out to the General, compelled the Government to bring him to Athens last February to undergo examination at the hands of a parliamentary commission. This examination resolved itself mainly into a political assault-at-arms, as General Pangalos was concerned to show the damage that had been done by the mismanagement of the political leaders who are now for arraigning him, while they in their turn were anxious to throw the blame for Greece's copious troubles on the Dictator's régime.

Digitized by Google

Modern Greek Kalends.

Thus by means of one device or another the Pangalos trial promises to become synonymous with the Greek Kalends. If the alleged plots are real, they must be regarded as symptomatic of a certain amount of sympathy with General Pangalos over his present indefensible treatment, not with his dictatorship; if the plots are merely stage-managed, they must represent an official effort to whip up the flagging interest in the ex-Dictator or his acts of more than two years ago. The date for a further plot has recently fallen due, and one was announced on April 12. It had been stated in the semi-official press on April 1 that General Pangalos would be sent back to Crete for a further indefinite period of incarceration at the close of the parliamentary commission's investigation; but it is obvious that a new plot will duly regularise the step. If the object in view is to keep alive a political vendetta which has already been responsible for the judicial murder of five Greek Ministers, no better method could be found than the dilatory tactics adopted towards bringing General Pangalos to trial.

The Bulgarian Loan.

The satisfaction that Bulgaria is entitled to derive from the conclusion of the formalities for an international loan under the auspices of the League of Nations has been momentarily dimmed by the earthquake that has visited a portion of the country north-east of Philippopolis. From the point of view of the loss of life involved the disaster is happily not one of the first magnitude; but it is sufficiently serious for an impoverished State which has no surplus funds to repair fresh damage. In the face, however, of such a visitation it may be that the political troubles that were brewing will temporarily subside. The Government measure for the projected loan passed the Sobranye by 151 votes to 111, the smallness of the majority being due in the main to the defection of M. Tsankoff and some thirty of his followers who voted against the Government. The action of M. Tsankoff, which must be taken as part of his personal compaign against the Prime Minister, M. Liaptcheff, would seem to conflict with his position as President of the Sobranye; it would in ordinary circumstances suggest that the political issue between them is now definitely joined and would be followed by the breaking up of the Democratic Entente which has formed the Government *bloc* since 1923. Whether the earthquake will make M. Tsankoff decide that he has chosen inopportunely his moment for an open breach remains to be seen.

The Turkish Naval Trial.

The trial of Ihsan Bey, ex-Minister of Marine, and of two others on the charge of having accepted bribes and of having acted to the prejudice of Turkey's interests in connexion with the contract for repairs to the battle-cruiser Yavouz (ex-Goeben) has ended in a verdict of guilty, and Ihsan Bey has been sentenced to two years' imprisonment. From the time when a preliminary inquiry into the case by a parliamentary Commission was ordered it was evident that Ihsan Bey would be found guilty. The President of that Commission made no attempt either in court or in his newspaper to hide the fact that his mind was already made up on the subject. The aspect of the case that is likely to impress the foreigner is the distance that Turkish public opinion has to travel before it can approach Western conceptions of the indispensable adjuncts of correct judicial procedure. Even in the High Court the anomaly was to be seen of Ihsan Bey's summing up in his own defence (after the hearing of witnesses had been closed) being interrupted while the presiding Judge read out a fresh charge against the accused based on a letter handed at that moment to the Court, stating that Ihsan Bey had removed some furniture from the Ministry of the Marine to his own house. Asked what he had to say about the furniture, Ihsan Bey said that the charge was not true, as he had bought the furniture abroad and merely had it consigned to the Ministry. He then continued his closing speech. If the trial and conviction are intended to sound the knell of bribery and corruption in official Turkey, the Republic has passed a notable landmark in its history.

Turkey and Islam.

With the definite abandonment by the Turkish Government of Islam as the State religion, Turkish prestige in Islam *qua* Islam dramatically and utterly disappears. The effect of this step upon the masses of Anatolia it is, of course, impossible precisely to predicate; suffice it to say here that in the past Turkish aptitude for doing that which is not enjoined has not been considerable, and it may be that the de-Islamising of Turkey will be as complete and whole-hearted as was the original Islamising of the Turks. But there can be little question that upon the religious section of the Muslim world the prospect of gazing upon the erstwhile stronghold of the Ottomans as a creedless crematorium is held with dismay and misgivings. We do not refer merely to the "officials" of Islam in other countries, but to the millions of peoples whose traditions, whose culture, whose whole processes of life, in fact, are Islamic. These men know that in Turkey no moral basis exists for development without Islam; even outside commentators who regarded with admiration the nominal Westernisation of Turkey always were careful to point out the wisdom of the Nationalists of Angora in conserving Islam as the State religion. Nor can there be much comfort for those who never tired of asserting that Bolshevist Russia could make no headway in Turkey, for a spiritual conquest is of infinitely greater significance than any other kind of conquest. In effect, one more section of the world has grown grey from the breath of the Muscovite, so heavily have the Kemalists "drunken of things." But the religious world of Islam will have suffered no real loss by the official defection of Turkey; it may even be that a return to the Faith of their fathers will eventually be made by the Turks whose present absorption in politics and purely material things can scarcely endure indefinitely.

The Jidda Conference.

The fact that Mr. Cornwallis, Adviser to the Ministry of the Interior in the Government of Iraq, is to be present at the conference which will take place at Jidda about the end of this month between King Ibn Saoud of the Hijaz and Najd and Sir Gilbert Clayton, is a welcome sign that the authorities in Baghdad realise the need for explaining to the Wahhabis their interpretation of the frontier agreement between Iraq and Najd, and par-

Digitized by Google

ticularly their purpose in erecting the police posts at Busaiyah and other places which caused the recent trouble. Neither to Iraq nor to the Hijaz and Najd have the fantastic rumours of a Holy War in Arabia done any good, for, though false, they had a most disturbing effect upon both mandated and independent territories. Now that the affair is reduced to its proper dimensions, however, it is sincerely to be hoped that the conference will proceed smoothly, and, as on previous occasions, without arrogance on either side. Unquestionably the Iraq authorities had the right, after the fierce and merciless raids by the Wahhabis, to employ the Royal Air Force in the work of protection and punishment, but, that done, we trust that the British representatives at the Jidda Conference will in this connexion remember the words:—"Wisdom is oft-times nearer when we stoop than when we soar."

Foreign Schools in Persia.

There appears to be a considerable amount of misconception upon the position of foreign schools in Persia, an article on which is printed elsewhere in this issue. Last year the threat to the American and European educational institutions in Persia, contained in the edict of the then Minister of Education, to the effect that all such schools and colleges must conform to the official curriculum, that is, they they would have to include teaching of the Persian language, together with Muslim law, and also that they would have totally to forgo religious instruction, created very real alarm to such institutions as the American College at Teheran and the English College at Isfahan. Since that time, however, another edict referred to has been altered into an order that as from June next all schools must give secular instruction only—which would exclude the Quran and the Bible. That represents a concession, but the future is still not clear to the foreign educationalists in Persia. We notice that Bishop Linton referred to the difficulties in the Persian situation at the International Missionary Council held recently in Jerusalem, pointing out that while it was not necessary (as has been widely stated) to teach Islam in the schools, instruction in the Bible must not be indulged. If this attitude is persisted in by the Teheran authorities, the greatest loss will be suffered by Persia herself. Hitherto Persia has been able with justification to pride herself on her tolerance of and hospitality to foreigners, and if through any doctrinaire conceptions to foreigners, and if through allows the American and British institutions to close down, she will have suffered a very serious loss indeed. Nothing more disastrous to Persia could happen than that the reactionary hand of her *ulama* should be raised triumphantly against all forms of progress.

The Tribal Problem in Persia.

In our comment last week upon the murder of the Persian Minister of Public Works by Lurs near Khurramabad, we suggested that the origin of the trouble was deeper than mere objection to the driving of a road through Luristan. This view is confirmed by the report that the Shah himself is to lead a punitive expedition against the offending tribesmen. It is to be hoped, however, that before he proceeds to measures which are without doubt within the competence of the Persian regular troops, he may be enlightened on the radical cause of the reluctance of the Lurs to accept with gratitude any measures that the Teheran authorities may be inclined, through the medium of the local authorities, to impose upon them. Neither the Lurs nor the Kurds nor many other tribesmen have forgotten the treacherous means by which tribal submission was often enforced by the central authorities. You do not cow a tribe in Persia by making false promises to its leaders and then killing them; rather do you cause to emerge even more resolute spirits. Reza Shah Pahlavi will be better advised if, instead of conducting an expedition which can have but temporary effect, he makes an inquiry into the whole problem of the treatment of the Persian tribes by Teheran, or by Teheran's subordinates. It is not sufficient for the authorities in the capital to comfort themselves by declaring the integrity of their intentions towards the tribes, for, if reports are true, the tribes are in many places being exploited merely to swell the pockets of local officials. While such things endure, talk of the progress of Persia is a mockery, and he is no friend of Persia who pretends the contrary.

The Protestant Jerusalem Conference.

The Missionary Conference at Jerusalem ended on April 7, and though the full report of the decisions of the assembled Protestants is not yet published, the "Christian Message Report," which is considered to be the most striking declaration of the Conference, gives the *clou* to the spirit and form of the whole body of resolutions. It is, in a sense, a remarkable document, breathing very much the spirit of the West, though conceived in an Oriental atmosphere. It declares war upon "exploitation," and upon "fastening bondage," in whatever form, upon all peoples. It repudiates the religious imperialism that would impose beliefs and practices on the plea that such imposition was in the higher interests of the recipients. And it concludes with disavowing a wish to bring Western ecclesiastical traditions to the East, and expressing a desire that "the younger Churches" should continue to work through forms suitable to "their national prestige." What is wanted in general is a "Christ-like world," and it is because of this human need of non-Christian countries that Protestant missionaries are sent thither. For ourselves, we do not find this declaration particularly impressive. The early mention of exploitation and imperialism appears to be relevant in this context mainly to the British Empire, and it ill becomes missionaries assembled under the free ægis of Great Britain in Palestine to inveigh against imaginary tendencies on the part of a Power which is notoriously tolerant to all religions.

The Future of the Kurds.

If there ever were a case for the exercise of sentiment, or sentimentality, in regard to a subject people, it certainly does not exist in regard to Kurdistan, whose complex future vitally affects the Governments of Turkey, Persia, and Iraq. The futile attempt shortly after the War to attribute to a people almost utterly lacking in national self-consciousness the properties and feelings of a nation had consequences the evil effects of which are not even yet wholly dissipated, for Turkey is still suspicious that an autonomous Kurdistan yet lurks somewhere at the back of the minds of British politicians. These facts, however, should by no means lead one to accept the thesis that has from time to time been advanced from Angora and, less frequently, from Baghdad, that the Kurd is a Turk or an Arab. He is not, and will never be, either of these. But there is good reason to suppose that, by granting of local freedom and by judicious fostering of local tradition, the Kurd may be pleased at the prospect of amalgamation, though bridling at the prospect of absorption. In Iraq the necessity for conserving the Kurds' peculiar properties has been nicely observed, and the Kurd in Southern Kurdistan is in fact becoming an Iraqi, deplore the fact how the upholders of "Kurdish independence" will. In Turkey, this necessity of decent treatment of the Kurds has become manifest only after two or three years of intermittent warfare, but it is claimed that even the doctrinaires of Angora are at last realising the way of true wisdom. It is to be hoped, therefore, that amalgamation without absorption will be preserved alike by the Governments of Baghdad, Teheran, and Angora towards a people whose strength and whose weakness are only now being seen in correct perspective.

THE POSITION IN EGYPT.

In the light of past history there is good cause for satisfaction that the complete divergence of views between Egypt and Great Britain which has been brought to a head in the exchange of Notes between the two Governments has been accompanied by no physical excess and with comparatively little verbal fire-eating on the part of the Egyptian people. Nothing is to be gained by Great Britain in supposing that Egyptians are not solidly behind their Government. At the same time the nature of the comments of their Press suggests that this solidity is based on a general failure to grasp the realities of the situation. On the British side there is no call for histrionics or polemics. A correct lead was given in the British reply to the Egyptian Note, which merely challenged the interpretation put forward in the latter, and set out the position in regard to the relations of the two countries as it appears to the British Government. There is evidently considerable confusion of thought in the Egyptian mind, and it is much better to attempt to remove it than merely to denounce it as due to besetting sin. Difficulty would seem to be genuinely experienced by the Egyptians in reconciling the complete independence of Egypt with Great Britain's claim to veto Egyptian legislation. Here, however, there is confusion of thought arising from a misconception of the purpose of the British Note of March 4. Egyptian independence is spoken of as if it had a definite existence apart from the Declaration of February 28, 1922. Yet the cold fact is that Egypt—whatever the rights or wrongs of the case, or Egyptian wishes, may be—has never had independence; the near approach that she has made to this state rests entirely on the grant of independence made to her by Great Britain in 1922, which was conditional upon the settlement of four points. It is true that one section of the Egyptian people refused to recognise the conditional nature of this independence, but the fact remains that officially Egypt, whether she accepted it or not, acted upon the Declaration in so far as she availed herself of the measure of independence offered, Great Britain being content to allow her conditions to remain for a season unfulfilled. The intention of Great Britain was, without doubt, so to regulate the four matters that Egypt by willingly conceding the required adjustments should experience in actual practice no restriction imposed from without on her complete independence. Unfortunately, instead of voluntarily making a virtue of necessity for a limited period, the vocal part of Egypt chose to invest the four points with an exaggerated importance, and at last the country has so far lost its bearings as to believe that complete independence has long been a cherished possession upon which Great Britain proposes to encroach. The British Note of March 4 called attention to the fact that the draft Treaty which had been rejected was intended to implement the Declaration of 1922, which, if not so implemented, might, strictly speaking, be regarded as non-existent, and for this reason Egypt might wake up one morning to find herself back again in pre-1922 days. It need hardly be said that Great Britain does not suggest that Egypt should go back to those days, but the reference is made in order that the desirability of Egypt's taking full advantage of the Declaration should be appreciated.

For the present, however, there is little likelihood of the Egyptians' accepting the British point of view in regard to Great Britain's position in Egypt. Further negotiations for a treaty, therefore, are at the moment out of the question, and the best that could happen would be that Egypt should try to leave Anglo-Egyptian relations where they are and concentrate upon the improvement of internal administration. Unfortunately, it is just on this subject that a clash of opinions may be provoked. The Egyptian Constitution, passed in 1923, leaves various matters to be settled by special legislation, and it was with the object of filling up, as it were, gaps in the Constitution that one at least of the measures to which allusion was made in the British *aide-mémoire* of March 4 was introduced into Parliament. For the Public Assemblies Act, which, having passed the Assembly, has now to come before the Senate, it is claimed in Egypt that it seeks to apply the principle of personal liberty as guaranteed by the Constitution in the place of a system associated with martial law. The proposed Firearms Act, again, provides for the possession of firearms under licence—to meet the alleged needs of country property-owners, who must be regarded as dissatisfied with the police protection afforded them—in the place of the regulation prohibiting the carrying of them entirely, which was, no doubt, the better plan when British officials had more responsibility for the police administration. In any other country these measures might evoke no outside criticism; but their introduction in Egypt at this juncture is inevitably linked in the minds of foreigners with past abuses of the right of assembly and with the employment of firearms for organised outrages on foreigners. If the Egyptians had been particularly anxious to avoid the creation of any misgivings among foreign nationals in their midst, they would undoubtedly have postponed the introduction of these measures. They are, however, not so minded, and in their present spirit it may be asking too much of them to expect that the new Government should interrupt the course of measures through Parliament, when these have already passed through certain stages.

What, then, is to happen, if these measures, in regard to which the British *aide-mémoire* entered a warning, pass through Parliament and receive the King's signature? It is hardly to be supposed that the British Government would take action immediately on the strength of their having become law. The purpose of the Note was to point out that the legislation in question was calculated to weaken the hands of the administrative authorities responsible for the maintenance of order and for the protection of life and property in Egypt. If the event should prove that these new measures have not this effect, no harm will have been done, and the occasion for British action will not arise. In their attitude towards the draft Treaty prepared by Sarwat Pasha the Egyptians challenged criticism in the interpretation that they sought to put upon concrete facts; in regulating the details of their internal administration they are on surer ground, and they may be given the benefit of any doubt until the effect of the measures introduced can be accurately gauged. The great difference between the present position in the country and that of a few years ago is that the Egyptians may be regarded as having no real intention now of pushing things to extremes. They may not have modified their desire to be rid of the British, but they have changed their minds in regard to the chances of their attaining this consummation. In these circumstances Great Britain can afford to adopt an attitude of toleration and of almost unlimited patience, in the hope that ultimately wiser counsels will prevail and that Anglo-Egyptian relations will be fixed by friendly agreement rather than by dictation on the one side which must necessarily leave a sore rankling on the other side.

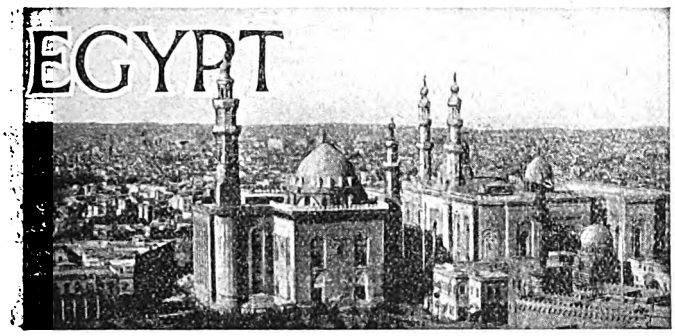
The Near and Middle East*

From Our Own Correspondents.



Cairo, April 7.

Rejoinders and Replies.

For the time being there is a lull in the situation. The British Government's rejoinder to the Egyptian reply to the *aide-mémoire* of March 4, was handed late on Wednesday evening to Nahas Pasha by Mr. Smart, the Oriental Secretary, after Mr. Henderson had earlier in the day had a long interview with the Premier on the subject of the British Government's reply, which by then had been received by the Residency. The following afternoon Nahas Pasha made a statement in the Chamber in which he re-affirmed the Egyptian Government's point of view, which he said was in accordance with the Cabinet's programme and was the only means of strengthening friendly relations with Great Britain. There the matter remains for the moment. The British Government knows the Egyptian Government's point of view and the latter knows the British point of view, and what it may expect if it disregards it. The British rejoinder is much approved in British and foreign circles and by the enlightened Egyptian element for its clear recital of the facts ruling the present situation and the firmness which can be detected throughout. If, in spite of this, the Egyptian Government persists in a line of action which it has been warned does not meet with the approval of the British Government, action from the British side may be expected to follow. But unless any development of this nature occurs nothing further will be done, the main point, as far as we are concerned, having been achieved, in making clear to the Egyptians that they can only enjoy their independence if they satisfy the British Government in regard to the Reserved Points, respect for which was the condition under which Egypt's independence was recognised.

The Aden Resident.

The news that Colonel Stewart Symes has been appointed Resident at Aden will give much pleasure to his many friends in Egypt and the Sudan. Colonel Symes was for some years in the Egyptian Army and at the time Sir Reginald Wingate left Khartoum to take over the High Commissionership in Egypt he was his Private Secretary. He followed his chief to Cairo and continued to serve him in the same capacity until his services were required in Palestine as District Governor of Haifa in succession to Colonel Stanton, also an old Sudan official. Col. Symes did so well there that when Sir Gilbert Clayton resigned the Chief Secretaryship he was appointed to succeed him, and he has held the post ever since. The extensive knowledge which the new Aden Resident already possesses in virtue of the positions he has filled in the past admirably fits him for this new post.

The Late Doctor Sarruf.

The customary ceremony in commemoration of the death of Dr. Yacoub Sarruf was held at the Opera House and attracted an enormous concourse of men distinguished in the literary or the political world. The meeting was under the presidency of the late Premier Abdel Khalek Sarwat Pasha and was opened by an eloquent speech from Aly Pasha Shamsy, the Minister for Public Education, who paid a warm tribute to the services rendered by Dr. Sarruf in his capacity both of professor and journalist to the cause of the Arabic language. He was followed by several others, including Shaikh Abdul Aziz Shawish, who spoke of the great culture and genius of Dr. Sarruf, and at the conclusion Sir Said Shoukair Pasha thanked the meeting in the name of the family. This ceremony was in every respect a fitting tribute to the man who for over fifty years played such an important part in the social, intellectual and scientific development of his adopted country.

Infant Welfare in Egypt.

Much satisfaction should be felt by Lady Lloyd and the Committee of ladies who assisted her at the result of the work which they have done to raise funds for the promotion of Infant Welfare in Egypt. As may be remembered, a great bazaar was held at the Residency which King Fuad I. opened, and a tombola was organised to which the leading firms contributed valuable prizes. The accounts have now been audited, and show a net result of £E10,237. What is exceedingly interesting and, indeed, an eloquent tribute both to the efficient and economic work done by the organisers and the generosity of those who gave their time and their services is that the total expenses only came to £E160, surely an unprecedentedly low percentage in view of the area over which the net for the collection of funds was spread. These funds will be invested and only the interest thereon be spent, so that in whatever direction further work is done it will be possible to continue it and extend it as and when more capital becomes available.

A Committee has now been formed to administer these funds under the title of "Society for the Welfare of Mothers and Babies in Egypt," and it will work under the chairmanship of Lady Lloyd with Mohamed Chahine Pasha, Under-Secretary of State for Public Health, Ahmed Wahab Bey, Under-Secretary of State for Finance, and such well known people as Dr. Hafez Bey Afifi, M. Henri Naus Bey, Mrs. Elgood, Mrs. Richmond and Mme. Khayatt as members.

The scheme aims at introducing preventive and pre-natal work into voluntary dispensaries which have hitherto practically confined themselves to the cure of sick children brought to the dispensary buildings, and the organisation is to be as follows: A fully-trained mid-wife with experience of matron's and infant welfare work is to be engaged as organiser, and to be employed in training suitable Egyptian girls as District Nurses or Health Visitors. These, when trained, are to be attached to such dispensaries as are affiliated to the Society and desire to take up preventive pre-natal work in conformity with the scheme. The Society will pay these nurses' salaries, and the organiser will be always available to supervise their work, lecture to mothers or nurses, and render general assistance to any affiliated dispensary. The initial training of the nurses will be carried out in rooms lent by one or other of the dispensaries for the purpose, so that the practical demonstration, as well as theoretical teaching, will form an important part of the course. The Committee hopes that the scheme will prove a thoroughly practicable and useful one and will carry the valuable work done by the Children's Dispensaries an important step further, by

EGYPTIAN UNIVERSITY.

THE Egyptian Ministry of Education invites applications for the post of Professor of Botany in the Egyptian University.

Further particulars may be obtained from:
THE DIRECTOR,
EGYPTIAN EDUCATIONAL OFFICE,
39, VICTORIA STREET, LONDON, S.W.1

Digitized by Google

enabling them to get in touch with children's diseases and infirmities at a much earlier stage, by making it possible to follow up the advice given by the doctors, and by attempting a larger measure of pre-natal work among the mothers themselves. As soon as the scheme is working the Egyptian Government will be asked to contribute a sum equal to the annual income of the Society. This would enable it to make a proper start, for which it is calculated a minimum income of £E1,000 a year is required. (Its present fund will bring in £E500).

The total amount collected is an unmistakable indication of public opinion in regard to the safeguarding of "Infant Welfare Work" in this country which the Government authorities cannot ignore and to which, in fact, under the very able and enlightened direction of Mohamed Chahine Pasha, it has already given attention. And it is to be hoped that as a result of these successful efforts on the part of private initiative a further impetus will be given to this deserving object.

THE HIJAZ.

Jidda, March 31.

End of Ramadhan.

The new moon having failed to make itself visible to human eyes on the evening of March 21, the full span of 30 days was allotted to the month of fasting and the Id was celebrated on Friday, March 23. The Governor of Jidda held the usual reception in the morning, and the following days were given up to ceremonial visits of congratulation from house to house. A section of the European community, however, took advantage of the four days' holiday to make an excursion to the second Quarantine Island, where everybody enjoyed a colourable imitation of the delights of the Lido. The coral atolls of the Red Sea have a charm of their own, and the weather was obliging enough to be delightful. This reminds me that a number of your Jidda readers have taken exception to my standard eulogies of the Jidda climate, to which I can only reply by a statement of the facts. During the past four months the maximum temperature has varied between 74 and 90 degrees, while the minimum has fluctuated between 60 and 76 degrees. The difference between comfort and discomfort here depends not on the temperature but on the wind and the humidity, and the misfortune of the present season is its rainlessness—we have probably not had more than one inch of rain up to date, and we are very unlikely to get any more till next November. This will affect the water supply during the Pilgrimage, but the new sea-water condenser will be ready within a few days, whereafter the daily supply of distilled water will be up to two tons—an ample supply for all reasonable contingencies.

Propaganda and Pilgrims.

The number of pilgrims already in the country is well up to the corresponding figures of last year, but the prospects of the Indian and Egyptian influx are still a matter of guess-work. And there is no doubt that the Sharifian enemies of King Ibn Saoud have done their best to queer the Wahhabi pitch by propaganda sedulously put about through the medium of British newspaper correspondents in connexion with the recent incidents on the Iraq frontier. Your recent article "Legends of Araby" is a timely reminder to some of those correspondents that the blind acceptance of wild rumours does not serve to enhance their reputation. The *Daily Mail* "Holy War" letter from the Wahhabi capital was appropriately enough published alongside of a long paragraph on the Zinoviev letter and need not be taken seriously—being so obviously meaningless. But it is regrettable that a paper like *The Times* should have adopted the attitude that it did on the strength of unreliable reports. "It is, unfortunately," I quote from a leading article of March 12, "quite certain that the Wahhabi King has lost control over a number of his subjects. . . ." This statement I hesitate to characterise as it deserves to be. The worst of it all is that the ignorant take these statements for gospel truth. All the talk and pother have now died down of pure inanition, but they cannot but have had some effect on intending pilgrims. To those of them, therefore, that still hesitate, let it be blazoned abroad that they can make the Pilgrimage as safely and comfortably this year as their fellows did last.

Diplomacy.

The King of the Hijaz and Najd is confidently expected back within the next two or three weeks, and it is understood that, as soon as his dates are known, Sir Gilbert Clayton will be able to make his plans for coming here. No man will receive a warmer welcome from all sections of the community, and of no one is more expected in the direction of setting to rights what has gone wrong owing to the working of tactlessness on irritable natures. Unfortunately, there is a fundamental obstacle in the way of a permanent settlement and that obstacle arises out of British policy. King Ibn Saoud has no desire whatever to add the Mandated Territories to his dominions and will never dream of attacking them while under mandate. But if the Sharifian princes of the north are resolved never to rest content with the existing order in Arabia, it is for Great Britain to keep them in order. The conflict may thus be postponed indefinitely, but with it all hope of the independence of Iraq, Syria and Trans-Jordan.

The Yaman and the Wahhabis.

The Wahhabi delegation, which has been negotiating for a settlement of outstanding questions for nearly a year at Sanaa, has now encountered a more accommodating spirit. An agreement has been arrived at in principle and the delegation which has now returned to Mecca to report to King Ibn Saoud is accomplished by a delegation representing the Imam Yahya to continue and complete the negotiations. It is confidently hoped, therefore, that a treaty between the Wahhabi King and the Imam Yahya will materialise in the near future.

A German Expedition.

An incidental result of British aerial action in bombing Qataba has been the cutting short of the operations of an important German scientific expedition, to which I referred in my letter in your issue of January 5. Failing

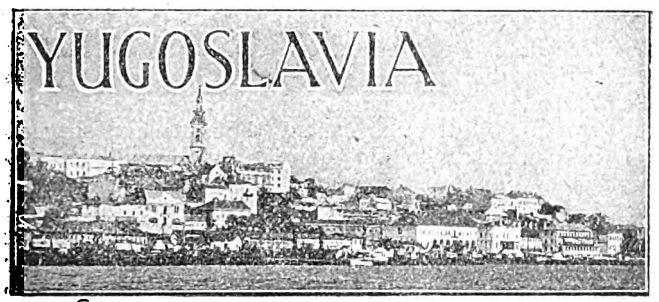
to penetrate inland in the Hijaz, Dr. Radjens and his party (including a lady Arabist) eventually reached the Yaman and went to Sanaa, and were allowed to conduct excavations among the Himyaritic ruins of the Hamdan district. Their intention of proceeding by land to Aden was frustrated by the Qataba incident and they have now returned to Germany, where, it is to be hoped, they will lose no time in publishing their results. It is regrettable that an expedition so well equipped for exploration should have been defeated by circumstances. I understand that, in addition to numerous Italians in the Imam's service, there are two German aviators in the Yaman air force and also that two American engineers are now in the country.



Belgrade, April 12.

Spring in the Balkans.

The short, brilliant Balkan spring has begun. On the street corners peasant girls sell violets, wild scilla, and primroses, café tables are spread upon the pavements and even in the centre of the city the bleating of lambs can be heard on every side—lambs destined to be killed and eaten on Easter Sunday, in three days' time. Last Saturday, the day before the Orthodox Palm Sunday, was Vrbitza day, when young children must have new suits and pretty dresses and go in procession, carrying tinkling bells, waving willow branches and singing songs, to the Cathedral. Here in Belgrade all is gay and festive.

But St. George's Day, April 23, is near, famous in the Serbian folk poems as the time of risings against the Turk.

"When at last 'tis bright St. George's feast day,
And the mountain sides with leaves are covered,
All the black earth gay with grass and blossoms,
When the lambkins sport about the meadows,
And the horses in the plain are hobbled,
And the wooded hills are decked with mallows,
Then will I a mighty army gather."

And, though the Turks have been swept from the land, the tradition still persists and spring in the Balkans brings *komitaji* action, strained relations with neighbour States and danger of breaches of the peace.

Komitaji Rumours.

Already a certain nervousness is shown in the frontier districts. This was typified by the alarm caused by the closing of the Albanian frontier a few days ago. The Albanians claim that it was done because of a reported epidemic of typhus in Southern Serbia, but the Yugoslav Ministry of Health denies the existence of such an epidemic and the Press declared the closing of the frontier to be in connexion with the activities of Bulgarian *komitajis,* working on Albanian territory in co-operation with members of the so-called Kossova Committee and backed by Italian influence and money. On diplomatic representations being made the frontier was re-opened, but the belief that preparations are going on for spring-time attacks to be made in the Ochrida district has not thereby been dispelled.

Reports from the Bulgarian frontier declare that General Protogueroff, head of the Macedonian Revolutionary Committee, visited the Bulgar-Yugoslav frontier districts early this month. On April 2 he is reported to have been in Petritch and some days later in Jumaia, and in each centre he is stated to have held conferences of the local leaders of the organisation and to have given instructions for the preparation of attacks to be made on Yugoslavia. The system of sending *troikas* (groups of three) is to be continued, so it is said, and attempts will be made to assassinate higher officials and important citizens and to blow up the railway lines. Counter-preparations are being made in Yugoslav Macedonia. The peasants, who expected long years of peaceful work after their seven years of warfare, have to leave their fields just when they should be working in them, to guard railways and stores, and all sorts of rules and regulations controlling their movements and activities are made by anxious police officers and administrators, which, if long maintained, may well lead to discontent among the people of the district. An example of this nervousness was shown a few days ago when the village guard of Smokvitza, near the Greek frontier, was turned out in the dead of night to investigate lights on the hill tops taken to be signals, but which are now suggested to have been due to a meteor. How long is this continued condition of tension to be left, a danger to European peace, uninvestigated by the League of Nations or the Great Powers? As it is, it gives every chance to outside Powers wishing for their own interests to keep the Balkan States weak and divided, to intervene. Some doubt has been expressed as to the truth of such statements as that made in court, when facing a certain death sentence, by Kralyeff, the Shtip assassin, as to the strength and organisation of the Macedonian Revolutionary Committee in Bulgaria. But, while such statements may be somewhat exaggerated, every Central European Legation which receives constantly their free gifts of well-written books, printed on expensive paper (usually in Vienna) and translated into three languages must realise the wealth and strength of the organisation. They must realise, therefore, that a few thousand peasants in Macedonia, mostly destitute refugees, whose land and goods were confiscated by the Greeks, could never carry on such propaganda without very considerable help from some outside source.

Political Currents.

In the internal political life of Yugoslavia there is great activity despite the double Easter holidays. The attacks on the Premier, M. Velya Voukitchevitch, by his fellow-leaders of the Radical Party are becoming more and more open and powerful. They are led by Dr. M. Nintchitch, Dr. S. Miletitch, and Mr. M. Ivkovitch, and it is proposed that a general delegate meeting of the Radical Party should be called soon after Easter to decide on their future action. M. Voukitchevitch and his fellow-Ministers are making strenuous counter-attacks, and M. Stankovitch is particularly active in the Veliki Betchkerek district, where Dr. Nintchitch was elected. Attempts are

THE LONDON & LANCASHIRE INSURANCE Co LTD

also being made by M. Voukitchevitch to find allies in Croatia outside the Croatian Peasant Party and the Independent Democratic Party, as he finds it quite impossible to work with either M. Raditch or M. Pribitchevitch. In connexion with these attempts a new Croatian Party has been founded in Zagreb by Dr. Kezlman and a small number of other Croatian Members of Parliament with the object of winning over as many deputies as possible to the idea of co-operation with the present Government. The Government made great efforts also to win over the Croatian industrialists and economic experts during a conference recently held in Zagreb, but despite the attendance of six Cabinet Ministers, it is not clear how much success they had.

Although in English and American circles little seems to be known of the proposed loan of £50,000,000 by an Anglo-American financial group to Yugoslavia, the Yugoslav Government is said to be preparing a Bill dealing with the methods in which the money shall be employed. The greater part is to be set aside for railway construction and repairs, the rest for road building, public works, the regulation of rivers and the draining of marshland, all profitable and secure enough investments.

Sofia, April 9.

The Macedonian Nightmare.

Without question Macedonian *komitajis* are the talk of the day as winter comes to an end. In the Yugoslav Press and in the Greek Press Macedonian *komitajis* are said to be on the point of invading Macedonia, now from the Bulgarian, now from the Albanian frontier. Nor is it simple incursions that are expected, but phantom raids which strike horror into the border guards and the mobile troops. There is talk not only of attacks on the railways and the villages, but of revolutionary action in full blast which, be it said in parenthesis, could not succeed without the active help of the population of Macedonia and would provide, therefore, an overwhelming proof of the particular nationality of this population. It is in view of such an eventuality and in order to paralyse such help that the Yugoslavs, or rather the militaristic Serbs—has not the special correspondent in Macedonia of the Greek *Eleftheron Vema* established the full power of the Serb Military League in the country?—have recently inaugurated a régime of terror, which manifests itself by suppression, by mysterious assassinations, of all the native Bulgarians who are more or less advanced and who are hostile to denationalisation, and whom Belgrade considers to be the main obstacle to the progress of "Serbisation" of the Macedonian population. The number of these assassinations would appear to be considerable, Macedonian circles in Bulgaria, who are well informed upon what goes on in Macedonia, estimate that the total runs into several hundreds, of which 243 occurred in the one Department of Shtip, after the death of General Kovatchevitch last October.

Nor does that take into account the innumerable political trials begun in Macedonia which led, after cruel tortures at the hands of the police, to the condemnation of dozens of other Bulgarians, who had lived as loyal subjects of the Kingdom of the Serbs, Croats, and Slovenes. These proceedings, indulged in as preventive measures, are maladroit in that they tend not only to spread the belief that the Macedonian population is with the revolutionaries, but also to bring this population nearer to the revolutionaries and so produce the danger of a rebellion in the whole of Macedonia—a result which Belgrade and Athens wish above all things to avoid, but which is the one hope of the Macedonian Committee.

This is all the more regrettable in that the Macedonian Committee, which is much more reasonable and much less sanguinary than is usually thought, had suspended all revolutionary action and especially all effort in Macedonia, in order to give to Dr. Koroshetz, head of the Slovene Popular Party, and Minister of the Interior in the new Yugoslav Cabinet, the chance of doing something to put an end to the situation in Macedonia, and to satisfy at least a part of the Macedonian claims, including the granting of a political amnesty, which would allow the return of numerous refugees to their homes, and the authorising of the re-opening of the Bulgarian schools and churches. For it stands to reason that the Revolutionary Macedonian Organisation and the Macedonians themselves would not endure for long, without acts of revenge, the provocations of the Serb Military League.

But Athens and, in particular, Belgrade, are hypnotised by the *idée fixe* of a revolutionary movement in the spring. Their military measures in preparation for the event have been of such dimensions that one would think tremendous things were in the offing. The Serbs have inaugurated along the Bulgarian frontiers an astonishing system of defence, reminding one of the measures in the Convention of Nish, negotiated by Stamboliski a little time before his fall, which provided for the clearing away of woods in the border zone to the extent of a hundred metres in depth on both sides of the frontier. The Serbs have cut down their trees for a hundred metres in Serbian territory and, so as to destroy all refuge or contours in the ground which might facilitate the passage of *komitajis*, they have filled the ravines near the frontier. Not content with this, they have dug a deep trench along the Serbo-Bulgarian frontier in Macedonia, which is guarded by soldiers.

This is a quite vain precaution, which the least cultural concession to the population of Macedonia would render superfluous.

ROUMANIA.

Bucharest, April 4.

Political Ferment.

Parliament being closed for the Easter vacation, the political atmosphere appears calmer at the present moment. The National-Peasant Party, with whose honesty of purpose one cannot but sympathise, continue unfortunately to show a lack of statesmanship which gravely compromises their chances of coming into power. M. Maniu appears to be attempting to coerce the Regency into calling a new Cabinet. But his overtures so far have been made in a form which placed the Regency in a most awkward position, and they have not been well received. His last move has been to withdraw from Parliament with all his partisans, as he hopes, apparently, that such a protest *en bloc* will force the Regency to consider the advisability of bringing in a new Administration. The Regency, however, was appointed by the late King Ferdinand, who also called the Liberals to-

power, and their legal term of office is four years, so that, unless their Government is overthrown by a majority in the House, the Regency must hesitate to interfere and it is difficult to see how the Liberals can be put out, and on what grounds.

The National-Peasant Party has called a great Congress at Alba Julia on April 22, but has not applied for official permission to hold it. The Press organ of the Government does not consider that Alba Julia, which is the Coronation city, is a suitable place for a colossal gathering of protest against the Government, and adds that the National-Tsaranists will be welcome to hold their meeting in any other town. This reads very like a menace, but it may be hoped that before the date in question some compromise will be reached, and that no disturbances of the peace will take place. Hitherto all the demonstrations of the National-Tsaranists have been made strictly within the limits of the law, and they will, no doubt, be wise enough to adhere to this principle again at the proposed Congress. It can never do them any good to put themselves in an illegal position, as it only adds to the strength of their opponents. Their main contention is that the present Government does not represent the will of the majority of the population, and they demand free elections. In the matter of elections this country is now at the stage in which England was about 150 years ago, and considering the methods of administration which are in force it seems likely that a good deal of time will be required to develop a national mentality which would favour administrative and electoral reform.

CYPRUS.

Nicosia, March 24.

Malta and Cyprus.

A contemplated mission from Malta to examine conditions, with a view to a possible settlement of Maltese in the island is regarded unfavourably. How, it is asked, can emigrants from that island be added to a population which, owing to poverty, unemployment, and trade depression, is obliged to send many of its own sons abroad every year to seek their fortunes elsewhere? This, by the way, is not the first time that a proposal to settle Maltese in the island has been made. In the early years of the British occupation a report was made by a similar mission, but it led to no result. Since that attempts to settle Jews and Armenians in Cyprus have been lamentable failures.

Turks and the Jubilee.

A Turkish paper, published at Nicosia, calls upon the Ottoman community to abstain from any participation in Jubilee celebrations. On the other hand officials of the Government and of the Evkaf Department, and many citizens have sent a communication to the Governor expressing their desire and intention to take part in the jubilee proceedings. With regard to the attitude of the Greek leaders, which is regrettable, it might well be regarded as in the nature of a set-back to their political aims more than anything else. Many late visitors to the island, who have realised the situation, regard what is going on as one more proof, if it were needed, of the unfitness of the people to be entrusted with further powers or privileges.

Greek National Festival.

Great preparations are being made for the celebration to-morrow (March 25) of the anniversary. There will be many meetings, speeches, and games. At Limassol the Commissioner has forbidden a contemplated procession with Greek flags and music. This has led to protests and meetings. The blue and white Hellenic flag is seen in many places. A leading Greek weekly paper is printed in blue ink.

The Trooditissa Monastery.

The Abbot is collecting subscriptions throughout the island for the repair of this interesting old monastery, which is one of the principal places that attract summer visitors to Troodos and Platres. Here Sir Samuel and Lady Baker spent three summer months in 1879, and Sir Samuel in his book, "Cyprus as I saw it" gives an account of its foundation and of the legends connected with it.

General News.

It is expected that Sir Ronald Storrs will take three months' leave, and proceed to England with Lady Storrs, her daughter, and Mr. Gunnis, A.D.C., probably about the end of June.

Mr. S. Gaselee, Librarian of the Foreign Office, will, it is said, shortly visit Sir Ronald Storrs; and will advise regarding the arrangement of the new Public Library, and the cataloguing of books.

A new draft Bill to control and promote public health in summer resorts is published in the "Official Gazette"; as also an interesting report by Mr. A. S. Millard, Medical Officer of Health, on health resorts on Troodos.

The new five shilling (45 piastres) pieces, finished by hand as medals, are sold at the Post Offices at 7s. 6d., in cardboard boxes.

NEWS IN BRIEF.

A special Air Mail stamp was issued on April 1 by the Maltese Post Office consisting of the ordinary 6d. stamp overprinted "Air Mail."

The Gordon Shephard Memorial Prize for the year 1927 has been awarded by the Air Council to Wing Commander L. A. Pattinson, D.S.O., M.C., D.F.C., Headquarters, Royal Air Force, India.

Colonel John James Congdon, who died at Folkestone on April 13, in his 85th year, served in India in 1866-71 and 1876-82. In the Egyptian campaign of 1884-86 he commanded the first mule battery raised.

H. E. M. Philippe Lahovary, the new Roumanian Minister to Egypt, accompanied by Mme. Lahovary, arrived at the Continental-Savoy Hotel, Cairo, from Bucharest on April 1 and has taken up his duties.

The Turkish Grand National Assembly on April 10 voted an amendment to the Constitution, moved by Ismet Pasha, separating religious affairs from the State. The oath in Turkey will henceforth be taken on a person's honour.

Judge G. A. W. Booth, who is expected to succeed Sir John Percival as Judicial Adviser to the Egyptian Government, has arrived in England with Mrs. Booth, on leave, on his return from which he will take up his new duties in Egypt.

The Shah of Persia is reported to have presented his son to the Majlis as Regent, during his absence leading an army against the tribesmen of Luristan, consequent on the assassination of the Persian Minister of Public Works by Lurs.

Admiral Sir Edmond John Warre Slade, K.C.I.E., K.C.V.O., of Bedford Gardens, Campden Hill, N.W., chief Admiralty representative on the Royal Commission on Oil Supply, a director of the Anglo-Persian Oil Company, who died on January 20, aged 68, left estate of the gross value of £11,389, with net personalty £10,943.

M. Edo Loukinitch, who held office as Yugoslav Minister of Justice in M. Pashitch's Government of 1924, died of heart failure at Zagreb Station on April 9. He was 58 years of age. M. Loukinitch, who was a deputy of the Croatian Independent Democratic Party, was an outstanding figure in Croatian politics, and was one of the founders of the policy of National Union.

Commander Ernest Kinder, whose death occurred last week at Worthing, served in the Abyssinian Campaign of 1868 as a Midshipman, and received the medal. As a Lieutenant he served in H.M.S. Thalia during the Egyptian War of 1882, being employed ashore in connexion with the Transport Service, and for his work he was awarded the Egyptian Medal and the Khedive's Bronze Star.

In connexion with the study of modern languages by R.A.F. officers, the Air Ministry Weekly Orders state that courses in Arabic and Persian will be given at the School of Oriental Studies, London, next October. Two officers will be selected to attend each course. One officer will also be selected to attend a course in Russian at Kings' College, London, beginning in October. Officers desiring to attend should submit applications through the usual channels. It is added that officers attending the courses will be regarded as being on duty, and will, therefore, receive full pay and allowances during their study.

FOREIGN SCHOOLS IN PERSIA.

By Mirza Firooz Khan.

Tabriz.

[*Reference to this article will be found in our "Notes of the Week."*—Ed.]

Let me begin by stating that by "foreign schools" should not be understood only American Missionary or Church Missionary Society schools. The words include also schools owned and controlled by such "native" communities as the Armenians, Jews, Asoris (Syrian), Yezidis (Devil-worshippers), Giabrs (Zoroastrians), and so forth.

As early as last autumn a rumour went round that all non-Islamic schools were to be closed. They were not closed, however, and, instead, it was demanded by the Ministry of Education that the Persian language (Farsi) was to be taught in every foreign school with the proviso that both the teacher (a Muslim) and his salary were to be supplied by the Ministry at the expense of the State: This had already been so for years before. Both Persian and Arabic have been taught in the American Memorial College for years—in fact, from the very first day of its foundation. Persian has been, and is being taught, in the Armenian Central College also. Persian has been taught in the American School for Girls, but not in the Armenian Girls' School. When the demand was made to teach them Persian, the Trustees of the Armenian School asked for a Muslim lady teacher to teach the girls, but the Ministry could not supply this want, there being not enough qualified Muslim lady teachers even for their own schools, and the demand was dropped—at least, temporarily. Nothing more was heard of the "closing of the foreign schools" until last November, when the demand for teaching Persian was renewed, and with greater force: the demands of the Ministry of the Education were, however, of a double nature. First, the native "foreign" schools were ordered simply to teach Persian from the first to the sixth grade (or division), and all the subjects were to be taught in Persian except the mother-language and the religion of the particular race. And, secondly, the American and Church Missionary Society schools were to teach—in addition to the above—the Quran and the Religious Law (*Shariat*) of Islam.

This demand came like an earthquake to the Missionaries. The Christian Missionary a teacher of the Quran? The Missionaries—American and English—formed a "united front" to resist the demands of the Ministry of Education. A Missionary Conference was called in Teheran to discuss the subject. The Principals of Urmi College, Memorial College (Tabriz), and Hamadan College went to Teheran. Dr. Jordan, the President of the American College in Teheran, was present. Bishop Linton of Isfahan, representing the Church Missionary Society in Persia, also had come. At first, I believe, there was displayed a tendency in some individuals to yield, and to teach the *Shariat* under the name of "ethics." This suggestion was made to the Missionaries by the native Muslim teachers, who, as they had declared, were ready to teach the Islamic *Shariat* in a way that would not be very different from the "Christian Shariat!"

Armenians, Jews, Asoris and Zoroastrians also protested against using the Farsi language for all the subjects up to the sixth school grade.

It is reported from Kazvin that when the police officers entered the Armenian School there and informed the Principal that the School was to be closed at once, the Principal ordered the pupils out and, having stood them in a row, told them that by the order of the Ministry of Education their School was to be closed and they had to depart, but, he added, "We cannot leave this holy temple of education and light without saying good-bye to its walls with a holy kiss"; and, kissing the dry, earthen wall, gave his pupils the lead. The pupils, both boy and girl—began to kiss the wall one by one, but they were in such an excited state of mind that, before a dozen of them had kissed their good-bye, they all burst into such a weeping and wailing as to cause the Principal and the police officers to join them! The trustees, by the friendly advice of the officers, repaired to the telegraph office and telegraphed, personally, to the Reza Shah, begging him to permit the school to continue until the end of the school year. His Majesty was graciously pleased to grant their request.

The storm of protest, which poured into the Shah's office from every corner of Persia, caused the downfall of the Tadayoun (the Minister of Education). It is said the Majlis also was greatly displeased by this independent conduct of the Minister and approved his resignation, which was demanded by the Shah.

The Memorial College (Tabriz) has been closed before, in 1892, but, fortunately, it was during the summer months. The Mozaffer-ed-Din Shah was Valiahd then in Tabriz. The doors of the school were closed by his command and sealed by his seal. Guard was placed, also, at the American Church gate to arrest all those Muslims going in to hear the preaching of "the Injeel" (New Testament), notwithstanding the Mussulman belief that "the Injeel" is "one of the four Books, which have come down from the Heavens," the other three being the Bible, the Psalms of David (as a separate Book) and the Quran.

The Valiahd objected, apparently, that the Muslim boys should attend a Missionary School, where the Bible was used as a text-book, and the grown-up men should go into the Church to hear the reading of the New Testament. But his real intentions were different. He had heard—he was made to understand—that Americans are very wealthy and expected that the Americans, *à la* Persian, would give him a few thousand tomans for the re-opening of school-gates. Americans, however, are not in the habit of giving away money—unless it is relief money.

Nasir-ed-Din, the Shah of the day, ordered Valiahd to remove his seals and re-open the American School. Valiahd, in his turn, sent him his reasons for closing the school gates.

In those days the United States were sending their first Ambassador to the Court of the Shah-in-Shah. Mr. Russell had already arrived in Rasht, and was due in Teheran in a few days. Nasir-ed-Din Shah was anxious that the school-gates should be opened before the American Ambassador's arrival in his capital, in order that the first act of the Ambassador of the New World should not be an unpleasant protest to the Shah regarding the closing of the American School. But the Valiahd was not a statesman and persisted in his views. At last, Nasir-ed-Din telegraphed impatiently to the Valiahd "to go into his harem, play with his wives and not mix in the affairs of the State again." And to Hasan-Ali Khan Giarroos, the Amir-Nizam and Governor-General of Tabriz: "Break the seals of the Valiahd at once and re-open the gates of the American School." This was done an hour after the arrival of the Shah's command!

Tadayoun, the Mollah Minister of Education, was formerly a member of the Majlis, and once introduced a bill that the steel pen-points—made in Europe by foreigners—should not be used in Persian schools and Government offices. The cane-pen of the ancient days was to be used until such time as Persia should have her own national factory and would make the required steel pen-points. But the Majlis found that if they were to refuse to use everything that was foreign-made, they would have to undress absolutely—from the fine material which they had on—and keep only the native lamb-skin

cap. . . The proposal of the Tadayoun was rejected by a great majority among jeers and shoutings. . .

The Memorial College has existed now in Tabriz for the past forty-eight years At first a small school with only 30 pupils, it is now a college with 400 students Of this number, over 300 are Muslim young men, the remainder being Armenian, Syrian and Russian. On its foundation this School was intended only for Armenians, the intention being to prepare teachers and preachers for the provincial towns and villages. The Urmi School was for the Syrians, Jelos and Chaldeans. The Urmi missionaries stuck to their original programme, but not so the Tabriz missionaries. These missionaries were rather over-zealous. They opened the gates of the college to the Muslim boys in the hope that they would obtain the light of Christianity a few years earlier. The missionaries were mistaken. All the Muslim young men who attended this college regularly until they graduated, admittedly came under the Christian influence to a certain extent and imbibed some of the finer spirit of Christianity, but they never accepted Christianity as a better religion than their own. Not one of the many graduates of this college can be found to profess Christianity. Having learned the principles of Christianity, they at the same time learn to do what is right, and live a right life, but no more! They always stick to their own Muslim religion.

Thirty years ago the Tabriz College had only one Muslim pupil. But as the pupils got a taste of the sweetness of education and of elementary chemistry, their number increased month by month: *El-Kimia*—which has in it an element of magic and of which science Orientals in general are very fond—appealed to them as no other subject would, and drew within the college walls students by the score, until now—after thirty years—the number of Muslim students exceeds three hundred! Nor are they of the lower or middle class. They belong to the aristocratic and ruling classes of the city, and would not condescend to carry their own text-books under their arms. The old and trusted servant of the household—who has acted as *Lala*, or male nurse, to the lad, must see him to the school safely!

Missionaries would like to retreat and stick to their original programme of educating only Americans and other nominally Christian young men, and do away with the Muslim element, but the Ministry of Education would not consent to it. The Ministry insists: "If you had accepted no Muslim boys at all, from the beginning, we would have nothing to say about it. But, since you have enrolled our boys for years, you must continue to enrol them hereafter, and—you must teach them our religion and our Shariat!"

Both the teaching of the Quran and the immediate closing of these foreign schools have been dropped for the present, apparently until the end of the school year, but the *tamasha** will come next September, when the schools are to re-open their gates to hundreds of boys and girls thirsty for education! The Ministry is keeping silent and the schools are going ahead as before. The contest will be decided next school season!

Tamasha = Show, scene.

The King of Afghanistan has sent, through the Lord Mayor of London, £100 to the Children's Country Holiday Fund.

A special steamer left Marseilles for Athens on April 5 with 250 members of British scientific and archæological societies, who are to visit the Greek monuments and archæological sites.

The Society of the Red Crescent, the Islamic equivalent of the Cross, is, according to *The Times*, to benefit by the sale at Turkish post offices on 23 days during the current year of a set of charity-cum-postage stamps dedicated to the "Croisant Rouge Turc." These stamps have been printed by the London firm of Thos. De La Rue and Co. with a map of Asia Minor and additionally overprinted with a crescent devise in red denoting their special character. Their face values are ½, 1, 2½, 5, 10, 20, and 50 piastres, and the first days appointed for their use were April 4 to 8 (Feast of Sugar).

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE CYPRUS JUBILEE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In reference to what your Cyprus Correspondent writes about the Jubilee of the 50th anniversary of the British occupation, will you kindly allow me to pass the following remarks?

If the Cypriots have been satisfied with British rule, or rather, if they have been satisfied with the economic development of the Island during the last fifty years, under British rule, it should have been for them to ask for such a celebration.

The main thing, therefore, is to find out whether under the British there has been adequate improvement in the Island, and I am afraid many visitors, English and foreign, will state that the contrary is true.

Of course, the Greeks of the Island might have celebrated their delivery from the Turkish yoke, but can they be asked by their ruler to celebrate his coming to Cyprus? Besides, do you not think it tactless to ask the Muhammadans of Cyprus to celebrate such a Jubilee?

As for the games that the Government of Cyprus proposed to organise, I do not think that golf, tennis, cricket and horse-racing are the games of the Cypriots. If Olympic games had been proposed it might have been a little different.—I am, etc.,

SOCRATES E. EVANGELIDES.

London. April 4.

A JEW ON PALESTINE.

Mr. William Schack has an interesting article in the March issue of the *Menorah Journal* on "The Stark Land." He emphasises the "tenuous physical foundation" of Palestine, and the results of the Jews' bringing into this stark land the complex superstructure of Western civilisation. The Labour-Capital dogma in Palestine "seems to be a tragedy without a villain: the Zionist immigrants wish, nevertheless, to govern, while America subsidises them!" Mr. Schack writes vividly of "tottering" Tel-Aviv. He is inclined to deny that a Jewish National Home will have—as is so often claimed for it—any vital significance for the whole of Jewry. He does not care greatly for Palestinian Jewry—"in the present, self-conscious, formative years its principal cultural products are overweening conceit and ferocious egoism."

The Turkish Government is planning to issue a new series of postage stamps to replace the recent issue which came into use in 1926.

Experiments made in Athens on April 4 before the Greek Minister of Marine and naval experts proved the torpedoes ordered for the Greek Navy from England to be satisfactory.

On the occasion of the tenth birthday of Prince Farouk, heir to the Egyptian Throne, the Egyptian Post Office issued a special 5 milliemes stamp in a limited edition. During the absence of King Amanullah on his European tour, the annual stamp in honour of the anniversary of his accession made its appearance in Afghanistan. It is of the face value of 15 pools and is printed in rose in oblong form. In addition to the national arms, the plumed Turkestan fez, which is the State headdress of the King, and crossed swords also appear.

The Secretary of the ex-Sultan of Turkey, Abdul Mejid, has been arrested in Paris on a charge of theft. The Secretary, Halil Bey, was engaged by the ex-Sultan, while in Nice, on the recommendation of friends in Paris. Halil Bey disappeared nearly three weeks before his arrest, after having, it is alleged, robbed the ex-Sultan of about 80,000 francs (£640), which he lost at the gambling table. He has been transferred to Nice to await trial.

THE WEEK AT HOME

London, Tuesday Morning.

Ministers and Journalism.

As is well known, there is a section of the Press which cares nothing for the quality of an article so long as it is written by an "eminent personage." Newspaper-proprietors have chosen to include within this category a certain number of politicians, of whom Lord Birkenhead is one. It will be remembered that the enterprise of the newspaper-proprietors and the willingness of the Ministers reached such a pitch in 1925 that Mr. Baldwin, then Prime Minister, laid down the rule that no Minister during his term of office would contribute to journalism.

But Lord Birkenhead, who has been called "the licensed libertine of the Tory party," in that he says what he likes, and where he likes, has been unburdening his sagacious soul upon the question of women in public life in the pages of *Good Housekeeping*.

What is to be done about it? is the question that is everywhere being asked. There are those who think that Lord Birkenhead's talents are being wasted in Whitehall, and, indeed, whispers may be heard that the problem of comprehending India is more irksome and less lucrative than the making of a large income in journalism. Nor is there yet any sign of probable tears and lamentation among the Tory Party were Lord Birkenhead to answer the call, which apparently he finds irresistible, of the journalist's ink.

But worse, very much worse, than this is the sin of Mr. Winston Churchill in allowing his genius so quickly and so thoroughly to master the intricacies of the Chancellorship of the Exchequer as also to have contracted to write a series of articles for another journal which commends itself to a certain type of mind, namely, *Nash's Magazine*. Mr. Churchill's absence from politics is something more than we could bear; nor, one believes, could he himself long endure it.

Simplification of the Income-Tax.

The critic who sees nothing but evil in the operations of bureaucracy is not likely to be moved by the latest enterprise of Somerset House in making the tax-payer fill in more forms than hitherto. But actually it is a step in the process of simplification, if, indeed, that word can be applied to any principle which extracts money from us.

The new feature is that people are to be assessed on actual receipts during the previous financial year, instead of upon their estimated income for the coming year. Also the return of income-tax will be a single and comprehensive one, instead of being made for two or more places. Certainly it sounds an improvement, but why on earth was it not all thought of long ago?

Locomotives.

It is, one supposes, a universal assumption that everything tends to be speeded up, except, possibly, motor-omnibuses. And so when we read of the world's record non-stop run, from London to Edinburgh, we are not greatly stirred, and prepare ourselves in the usual way for the record of the "record."

Actually, however, there is, at any rate in connexion with the speed of trains in Great Britain, considerable miscomprehension. For before the South African War trains were making faster speeds than is possible now in Great Britain. Thirty years ago the journey between Euston and Aberdeen—548 miles—was covered in 512 minutes, or, on the average, at 63.3 miles an hour. And that included three stops! Such speed is said now to be impossible on account of the need for economy in coal, the policy of working agreement between competitive lines, and the heavier loads hauled.

But it does our modern pride good to be reminded of the fact that in those 'nineties the journey from King's Cross to Aberdeen was done in a time only 25 minutes longer than that taken by the Flying Scotsman in travelling as far as Edinburgh. And there is the story of the Great Western in 1904 which attained a speed of 102 miles an hour. So that there were pebbles on the beach before we set up our hodiernal claims.

The Photomaton.

The conquest of England by America proceeds by leaps and bounds, or, rather, in crazes and crowds. The latest sign of victory has been achieved in the elevating realm of slot-machine photography. At most of the big stores the process has been installed, and there is a shop near Charing Cross Station where you may see the people fairly queueing up to spend 20 seconds in a little studio, wherein your head is photographed in eight different positions, and whence at the end of eight minutes you draw the resultant portraits out of a slot.

I hear that the procedure is this. You sit on a stool with your face opposite the camera. You put a shilling in the slot; whereupon a strong light is turned on. You then obey, thus swathed in effulgence, the behests of a female attendant, who tells you exactly how to place your visage to its best advantage. It certainly is a popular pastime, this modern "Pieces of Eight."

The Cairo Museum has received an interesting addition in the carrying-chair of Queen Heterpheres, the mother of Pharaoh Khufu (Cheops), which was found in 1926 lying disjointed in the tomb discovered by the Harvard-Boston Expedition at the Pyramids.

Captain Vere Henry Fergusson, O.B.E. (late The Cameronians), of Kerrer Hill Head, Stubbington, Hants, District Commissioner in the Bahr-el-Gazel for the Sudan Government, who was killed by natives in the Sudan on December 14, left estate of the gross value of £3,830, with net personalty £3,829.

Field-Marshal Lord Plumer, High Commissioner for Palestine, had intended giving a farewell banquet to Prince Umberto, the Italian Crown Prince, on April 8, but the ceremony was unavoidably cancelled owing to the illness of Lord Plumer. Prince Umberto sailed from Halfa the following afternoon after a ten days' stay in Palestine.

Squadron-Leader G. B. A. Baker, M.C., who has been posted to No. 4 Flying Training School, Egypt, was originally an officer in the Royal Berks Regiment, and became a flying officer in May, 1916, proceeding to France two months later. He has a preliminary Law Society pass and won the Military Cross for distinguished service in the field, and a year later received the Croix de Guerre, and later still a mention in dispatches. He is a graduate of the Staff College and has been in Egypt since August of last year.

Book Reviews

MARCO POLO'S OPPOSITE NUMBER.

"THE HISTORY OF YABALLAHA AND HIS VICAR BAR SAUMA." By Professor J. A. Montgomery. (London: Humphrey Milford, Ltd., Columbia University Press, 10s.)

Towards the end of the 13th century the Kingdom of the Ilkhans or Western Mongols under the Mongol Great Khan, with a capital near Lake Urmia, in Azerbaijan, was in great difficulties with its Muslim neighbours and its Muslim subjects. There was constant fear that the Muslims would get the upper hand. Indeed, when King Abaga died, the throne was usurped by a brother who acted as their tool, becoming a Muhammadan and assuming the name of Ahmad. He was, however, destroyed by the late King's son, Arghon, who followed his father's example by making much of the Nestorian Christians. Like his father, he kept up connexion with Western Courts in the hope of securing their help in an attack on the Muslim kingdoms which threatened him.

This book is really the account of one of these missions to the West. It was undertaken by the Visitator-General of the Nestorian Church, Rabban Bar Sauma, a Pekinese by birth, on behalf of the King and the Nestorian Catholicus, Yaballaha. The Syrian author of it evidently used the Envoy's diary. But, in doing so, he appears to have shorn it of much of its interest. For the account tells us little except of the churches, relics and church-services which he saw or took part in. We should have been much more interested to hear something of his diplomacy. Here is the account of his meeting with our King Edward I, who was, at the time, in Aquitaine;—

And they went thence, that is, from Paris, to the King Ilnagtar (i.e., Angleterre) to Kesonia (i.e., Gascony) . . . and (the King) received them into his court. . . . And when discourse arose about the business of Jerusalem, his joy was still more increased. And he said: "We Kings of these cities carry the cross as a sign on our bodies, and we have no thought apart from this business. And my mind is gratified when I hear that somewhat of what I have thought of King Arghon was planned." And he commanded Rabban Sauma to celebrate the Eucharist, and he celebrated the laudable Mysteries, the King and his courtiers attending, and the King received the Communion. Then Rabban Sauma said: "We desire, O King, that whatever there is in this country of churches and shrines thou wouldst have shown to us, that when we return to the Orientals we may tell them the story." He answered: "So shall you say to King Arghon and all the Orientals that we have seen something, and that there is nothing more admirable than this, namely, that in the lands of the Franks there are not two creeds, but only one, that which confesses Jesus Christ, and they are all Christians." And he gave us many gifts and our expenses.

But, while hospitality and compliments were found in plenty, nothing material was forthcoming. Had the crusading spirit still existed, the future of the Near East might have been very different. As it was, the triumph of Islam was not delayed for many more years.

This little glimpse into Ilkhan Court life and its relations with the West five-and-a-half centuries ago, has great interest. But Rabban Bar Sauma is no Marco Polo. Profesor Montgomery, of the University of Pennsylvania, has done his work well and his introductory matter and notes greatly add to the value of the work. The book is one of the "Records of Civilisation Sources and Studies" issued by the Columbia University Press and published in this country by Mr. Humphrey Milford. C. S-W.

THE VILLAGES OF WESTERN INDIA.

"A HISTORY OF VILLAGE COMMUNITIES IN WESTERN INDIA." By A. S. Altekar. (Published for the University of Bombay by H. Milford. 4s. 6d. net)

This book is a fair specimen of the historical research now being carried on so extensively in India. The author discards the facile generalisations of earlier times, and goes to the sources when he can; but he tries to cover too much ground, and the result is unequal. He is clearly unfamiliar with the sources for the Muslim period, and reproduces some curious legends regarding it, as when (p. 64) he presents revenue-farming as a late introduction in the Deccan: Ibn Batuta tells how a Deccan farmer in the 14th century defaulted, and was duly flayed. The reader will do well to treat all that is said about this period as surplusage and confine his attention to Hindu times, where Mr. Altekar is at home. The evidence he brings together from inscriptions is most valuable, and is sufficient, or nearly sufficient, to make a picture of the ordinary village, as it probably was—quite unlike the visions of Sir Henry Maine, and exploding once again those "little democracies" which Metcalfe, in a moment of exuberance, unloaded on an uncritical world. At times, however, Mr. Altekar is apt to be a little too hasty in his judgments, and some of his assumptions are over-confident. To take only one instance, it is surely rash to treat Kautilya as evidence of the 4th century B.C.; it is true that some scholars take that view, but other high authorities put it 500 years or more later, and their conclusions should not be ignored. The book, then, must be read critically, but it is well worth reading.

INDIAN INFLUENCES IN ASIATIC ART.

Lieutant-Colonel Sir Francis Younghusband presided at the annual meeting of the India Society, at 21, Cromwell Road, on April 2, and announced plans for the coming year for a considerable extension of scope, without, however, the Society's losing its original character. He pointed out that, as a natural result of their researches into the connexions between the art of India and the surrounding countries, as exemplified by the survey entitled "Influences of Indian Art," the Society would now include in its curriculum of lectures and publications studies of the art and literature of Java, Siam, Indo-China, Afghanistan, Persia, and the Middle East. Arrangements were now being completed to supply through the Society's journal, *Indian Art and Letters*, information on art and on archæological research in those countries as well as in India. It had been decided not to change the name of the Society, as Indian culture was the centre from which there radiated the influence which affected profoundly the surrounding countries, which in turn exercised no small influence on India.

The High Commissioner for India, the Persian Minister, Professor Paul Pelliot, Dr. Ananda Coomaraswamy, and Dr. Denman W. Ross were elected Vice-Presidents. After the annual meeting Mrs. Elizabeth Ayscough gave an illustrated lecture on "Indian Links with Chinese Painting."

HISTORY of the WAR in

EGYPT and PALESTINE

By

Lieut.-General SIR GEORGE MACMUNN, K.C.B., K.C.S.I., D.S.O. and Capt. CYRIL FALLS.

The history of the operations in Egypt and Palestine possesses a very great interest, not only for those who took part in the events narrated, but also for all students of military history at home and overseas. The first volume has now been published as part of the Official History of the Great War. It covers a period of nearly three years from the outbreak of the war up to June, 1917, and it thus includes an account, not only of the preliminary defence of Egypt against invasion and the expulsion of enemy from the Sinai Peninsula, but also of the First and Second Battles of Gaza.

Vol. 1. Price 12s. 6d. net. Postage 9d. extra.
Case of Maps 5s. 6d. net. „ 6d. „

"A masterpiece of careful research."—Daily Telegraph.
"The whole account is clear and simple. Once again the interests of military history have been well served."
—The Times.

PERSONAL AND GENERAL

TO-DAY

April 19, 1928 (New Style).
April 6, 1928 (Old Style).
Shawall 28, 1346 A.H., of the Muslim Calendar.
Nisan 29, 5699, of the Jewish Calendar.

Lt.-Col. Sir Arnold T. Wilson is paying a short visit to France.

Mr. and Mrs. Murray-Philipson have arrived back at Stobo from Egypt.

Miss Annette Lefroy arrived at 47, Curzon Street, on April 12 from Egypt.

The Aga Khan arrived at the end of last week at the Ritz Hotel from Paris.

Sir Edmund and Lady Wyldbore-Smith have returned to 68, Cadogan Gardens from Egypt.

King Fuad on April 12 motored from Cairo to Sakkara, where he inspected Mr. Firth's latest discoveries.

Mr. C. H. Bentinck, British Minister in Abyssinia, is due to arrive in England this week on leave from Addis Ababa.

Field-Marshal Viscount Allenby returned on April 12 with Viscountess Allenby to 24, Wetherby Gardens, from Cornwall.

The Turkish Ambassador and Mme. Ferid Bey, who had been on a visit to the King and Queen at Windsor Castle, returned to London on April 12.

Sir Francis Humphrys, British Minister to Afghanistan, and Lady Humphrys, left Claridge's Hotel last week where they had been making a brief stay.

Mr. Kinahan Cornwallis, Adviser to the Ministry of the Interior of the Iraq Government, is attending the conference with King Ibn Saoud at Jidda, for which Sir Gilbert Clayton left England this week.

After visiting various parts of the island of Rhodes, where he was warmly received by the inhabitants and presented with many gifts, the Prince of Piedmont, on April 13, re-embarked for Italy.

Mr. R. Mitchell Banks, K.C., M.P., who has been appointed Recorder of Wigan, in succession to Sir F. Boyd Merriman, the new Solicitor-General, saw service during the Great War as an officer of the Gurkha Rifles in India and Mesopotamia.

Viscount and Viscountess Portman, who recently arrived at Claridge's after wintering in Egypt and the South of France, have now returned, with the Hon. Sylvia Portman, to their Sussex place, Buxted Park, Uckfield.

Mr. C. W. E. Cradock-Hartopp, of the Residency staff, Cairo, left Egypt at the beginning of this month on transfer to the British Legation, Teheran. He has been succeeded by Mr. Hamilton Gordon, who arrived in Egypt recently.

The Foreign Office announces that the King has been pleased to approve the appointment of Sir Robert Macleod Hodgson, K.B.E., C.M.G., lately his Majesty's Chargé d'Affaires in Moscow, to be his Minister Plenipotentiary at Durazzo (Albania). Sir Robert Hodgson, who thus succeeds Mr. William Seeds, appointed British High Commissioner for the Rhineland on March 27, has spent most of his consular and diplomatic service in Russia.

Princess Mary, who, with Lord Lascelles, arrived in Jerusalem on April 11 and was received at the station by the High Commissioner and Lady Plumer, was also received on April 11 by the Grand Mufti Haj Amin el Husseini when visiting the Haram-esh-Sherif (the Temple Area). The following day her Royal Highness visited the Mosque of Hebron and the Church of the Nativity at Bethlehem. Her Royal Highness later inspected the Ophthalmic Hospital maintained by the Venerable Order of the Hospital of Saint John of Jerusalem in the British Realm, and was present at the foot-washing ceremony of the Old Style Maundy Thursday at the Armenian Cathedral of Saint James. On April 13 Princess Mary visited the Church of the Holy Sepulchre, St. John's Chapel and St. George's Cathedral, as well as inspecting the maternity hospital, and the Evelina de Rothschild school. A visit was also paid to Nablus and Jacob's Well. Princess Mary returned to Egypt on April 15, embarking in the P. and O. Ranchi on her homeward journey.

NEAR AND MIDDLE EAST ASSOCIATION.

Sir E. Denison Ross, is lecturing on "The History of Islam" at 18, Park Lane, by kind permission of Mrs. Eckstein, to the members of the Near and Middle East Association at 8.45 p.m. on Wednesday next (April 25). Sir John Prescott Hewett will preside.

The restoration of the north side of the Parthenon has been proceeding for several years. M. Balanos, Director of the restoration works, has informed the Athens correspondent of the *Morning Post*, that there is no truth in the rumour of a complete restoration of the Parthenon, but four columns on the north side have already been re-erected, and two are being re-erected, and will be set up in two months' time, when two more will be re-erected.

Miss Young's Camp, Troodos.

There are summer quarters, for a limited number of paying guests, on Troodos (Miss Young's) in the midst of forests, 6,406 ft. above the sea—the summer resort of the Troops and Government Officials. 20 hours from Port-Said.

Pitched in the pine forest in a lofty and secluded situation, on the upper slopes of Mount Olympus—25 minutes from the summit. Perfect climate, dry, cool and bracing air, enchanting panoramas; no mosquitoes; completely equipped with every comfort and convenience.

Troodos is 35 miles from Limassol and 45 miles from Nicosia. From both towns there are good carriage and motor roads. The summer climate is dry and healthy. The nights are often rather cold after the end of August. As regards dress, Ladies should be provided with washing skirts, as there is a good deal of red dust on the hills; white is much worn, but dust-coloured costumes are advisable. A warm woollen coat and skirt are essential. Riding and motor excursions, Tennis and croquet are the chief occupations of the Visitors. An English Club provides Newspapers, Telegrams (Reuter's) and Books. The water supply is good, and there is plenty of fresh milk. Inclusive terms £3 10s. a week. *Open June 15.*

Apply to Miss Young, 38 Victoria Street, Nicosia, Cyprus.

CYPRUS.

SAVOY HOTEL: Port of Famagusta.
PALACE HOTEL: Inland City of Nicosia.

OLYMPUS HOTEL: Port of Limassol.
(Opened all the year round.)

OLYMPUS HOTEL: On Mt. Olympus (Troodos)
(Summer resort; altitude 6,400 ft)

Offer excellent accommodation at reasonable tariffs.

These four prominent hotels are owned and operated by:

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

INDIAN INCOME-TAX.

A Bill making an important amendment in the Indian Income-Tax Law was passed by the Central Legislature in the last few weeks of the session which has just ended. It dealt with a question which has been under discussion for many years, but of which no completely satisfactory solution seems to have been yet found. It is the question of the levy of income-tax upon the profits of non-resident traders. In referring to it last August we mentioned the failure of the General Economic Committee of the Imperial Conference to reach a definite understanding in regard to it. We also indicated at the same time that one of the reasons for the failure was that the representative of India on the Committee was unable to accept the principle that the total profit of the manufacturer, or producer, which finally emerges on the sale of his goods, should be deemed to consist of two parts, namely, the manufacturing or producing profit which arises from activities exercised at home, and the merchanting profit which accrues as the result of operations conducted in the country of sale. The members of the Committee were in general, but not complete, agreement that such a division is desirable; and that the scope of the charge to income-tax might with advantage be restricted to "merchanting" profit. Great Britain and Northern Ireland have adopted this arrangement; and some of the Dominions have followed out the same idea more or less in their income-tax legislation. But India does not accept the principle, and, as we pointed out last August, the amendment of the Indian law which was then in contemplation—and which has now been adopted—is directly opposed to it.

A clause providing for the taxation of profits, derived by a person not resident in British India, on goods consigned by him for sale to an agent in that country was enacted when the Indian tax was re-imposed in 1886. But it remained for all practical purposes a dead-letter. Several ineffective attempts were made to enforce it. But the commercial community were always in strong opposition, and in the result nothing was done. In 1918, when the Indian law was revised and generally recast, the clause was re-enacted so as to provide that profits or gains accruing to a non-resident directly or indirectly through or from any business connection or property in British India are to be deemed to be income accruing or arising within British India. This section was re-enacted on the further revision of the law in 1922, and it remained without alteration until now. But it has occasioned many difficulties, and has led to conflicting decisions in the Indian High Courts. And since 1924 the Government of India have been considering proposals for amending it. The Indian Taxation Inquiry Committee also dealt with it, as we mentioned in August last. They thought that in those cases where a non-resident maintains a selling branch for the sale of his goods in India the object in view would be attained by following Rule 12 of the English general rules. This provision lays down that the assessment in the case of a non-resident person chargeable to tax in the name of an agent is to be "on the basis of the profits which might reasonably be expected to have been earned by a merchant, or, where the goods are retailed by or on behalf of the manufacturer or producer, by a retailer of the goods sold who had bought from the manufacturer or producer direct." In other words that only the merchanting profit, and not the manufacturing profit should be taxed.

When the Government of India brought forward the proposals on which we commented in August they said that their object was to make the law more definite as to the assessment of: (1) the profits of export trade conducted by residents, and agencies or branches in British India of non-residents; and (2) the profits of import trade conducted by agencies or branches in British India of non-residents. The proposals concerning the export trade were abandoned in the Legislature, and they need not, therefore, concern us here. But the proposals regarding the import trade were proceeded with and they are now law. As we made clear at the time they were strongly objected to by the London Chamber of Commerce when they were first put forward. And we are glad to see that the Indian Associated Chambers protested with equal vigour against them in December. The section as it stood without amendment was admittedly unsatisfactory. For it was open to misinterpretation by reason of the phrase "all profits or gains accruing or arising whether directly or indirectly through or from any business connection or property in British India shall be deemed to be income accruing or arising within British India." But the amendment has made matters worse inasmuch as it takes from the assessee the right which he has hitherto had to an allowance for "any expenditure (not being in the nature of capital expenditure) incurred solely for the purpose of earning such profits or gains." That is to say, if the non-resident who is assessed in India through his agent is a manufacturer as well as an exporter he will not be entitled to reckon in his cost of production the profits on manufacture which will normally accrue to him at his place of residence. And if he is a non-resident buyer he will not be allowed to charge transactions with the cost of his services in buying and exporting. We quite agree with the Government of India that non-residents should not be allowed so to arrange the prices of articles sent by them to India for sale as to show little or no profit and thus to evade Indian taxation. But we are altogether opposed to the amendment, seeing that it will subject to Indian taxation profits which normally accrue outside India to those non-residents who carry on business with that country. As we view it such a provision is inequitable and wrong in principle. Moreover, it would seem to be inexpedient; for, as the Taxation Inquiry Committee made clear, it may lead to the reopening of the question of double income tax relief. At present this relief is mainly borne by the British Government; and it may be, of course, that they will continue to grant it in full. On the other hand, they may restrict the relief, for they have an incontestable moral claim to tax profits arising within their jurisdiction.

CURRENT TOPICS.

A Good Beginning.

Anglo-Indians—using the term in its older and still more generally accepted sense—are accustomed to receiving periodic shocks from the lay Press in reference to subject of which they may legitimately claim to have some first-hand knowledge. But one would scarcely have expected to find the Simon Commission and its task presenting quite the same pitfalls. And yet the announcement prominently displayed on the front page of a widely-read evening contemporary on Saturday afternoon, that Sir John Simon had assured its Paris correspondent that "the Commission will recommend no sweeping changes in Indian government" must be accorded a high place in the annals of journalistic gaucherie. Even the proverbial ingenuity of the most enterprising American reporter must pale beside many of the other statements attributed to the Chairman of the Statutory Commission at the same interview, the time and place of which make strange reading to any one conversant with the normal route followed by the P. and O. Special from Marseilles and Boulogne. The incident would of course be nothing more than a good story were it not for the unfortunate way such canards have of gaining currency in India in quarters where the subsequent denials never reach.

When we bade God-speed to Sir John Simon and his colleagues we remarked that "the most important part of the Commissioners' task in the initial stages of the inquiry will be the establishing of personal relations with representative Indians, gaining their confidence and good will, and removing genuine misapprehensions." At the same time we pointed out that a grave and in some respects unique responsibility rested upon those who were called upon to make the first move. A false step at this stage, for instance, would bias the direction of the task of the subsequent tribunals and introduce elements which, though insignificant at the outset, might be aggravated by the passage of time into weakness and defests that need never have been."

The members of the Commission are now back in England after spending two months in the country, mostly at Delhi and in the Punjab and Madras. During that time they have travelled some 6,000 miles over the length and breadth of India, touching all points as far apart as the N.W. Frontier, Calcutta and the extreme south of the Madras Presidency. "We believe that this first visit has done a great deal of good," Sir John Simon states in a statement to the Press on his arrival on Saturday. "It would have been quite impracticable, without some such preliminary survey, to have begun to handle the mass of material which is awaiting analysis and now we are in a much better position to undertake our main task." That the Commissioners entertain no illusions as to the latter's nature is evident from the Chairman's remark that, while in no way qualifying them to venture any suggestions, much less arrive at conclusions, "two months such as we have spent are enough to show us the immense complexity of the Indian problem. Indeed," Sir John Simon aptly continues, "it is not one problem, but a multitude of problems. These men who have spent a lifetime in one province may know little of another, and each province has its own special difficulties." On the question of the boycott the Chairman was able to be more explicit. "Whatever may be said of the strength of the movement, there can be no doubt that much of the opposition has weakened or broken down. We have, we hope, been fortunate enough to avoid making those mistakes which would have intensified opposition, and we are now assured of the goodwill and co-operation of important sections of the Indian public. We have strong hopes that this feeling will spread." For this happy result the credit is in no small measure due to Sir John Simon and his fellow Commissioners who have acquitted themselves well of a very difficult and trying task. And whatever may be the outcome of the next stage of the inquiry the Commission has already earned the grateful recognition of all Indians and Britons, who have the real interests of the two countries at heart.

The New Law Member.

More than ordinary interest attaches to the announcement that Mr. D. F. Mulla, an advocate of the Bombay High Court, has been appointed a temporary Member of the Governor-General's Executive Council, during the absence on leave of the Hon'ble Mr. S. R. Das, the Law Member. India in general, and Bombay in particular, owes so much to the energy, foresight, business acumen and philanthrophy of the small Parsi community that it comes as something of a surprise to realise that Mr. Mulla is the first member of that community to attain the coveted distinction. Although Mr. Mulla has been chosen purely on grounds of merit, the appointment is especially welcome on other grounds as well, for until Mr. Crerar became Home Member last year no one from the Bombay Presidency had been included in the Viceroy's Executive Council since, we believe, the days of the late Sir John Jenkins. The new Law Member is not only an outstanding lawyer but also a jurist of considerable distinction and the author of several standard works of reefrence. He started life as an attorney and after a very successful career was admitted as an advocate of the Bombay High Court by Sir Lawrence Jenkins. He subsequently became President of the Tribunal of Appeal, was for a time a Judge of the High Court, and at the date of his appointment was acting as Advocate-General of Bombay, in which capacity he was the recipient of a C.I.E. in the New Year Honours List.

Bolshevism in India.

In one of the most interesting chapters of Sir Valentine Chirol's classic work on modern India the author reminds us that however far the disintegration of the Swarajist movement may proceed, hostility to European control, however disguised, is likely to persist under the stimulus of Bolshevist propaganda. Bolshevism, he points out, not only promises complete independence to the Indian bourgeoisie but offers the proletariat freedom under a benevolent autocracy from the vexatious complexities of civilised government *plus* the spoliation of their own landowners and merchants. There are many channels through which Bolshevist culture can penetrate to the Indian masses. Russia itself provides abundant proof that ignorant peasants can be stampeded by Moscow's emissaries in the strangest directions. And "the large agglomerations of Indian labour that have resulted from the industrialisation of India provide a promising field for the creation of the 'cells" in which it cultivates its own special germs for the destruction of 'Western-bred capitalism.'" The Bengal Ordinance had given, at the time he was writing, towards the end of 1925, a timely set-back to revolutionary activity, "but," Sir Valentine Chirol observed, "Bolshevism has not dropped India and Indian extremists have not dropped their faith in Bolshevist Russia." We have not had long to wait to see the accuracy of the prediction abundantly demonstrated.

In his annual review of Indian administration last year Mr. Coatman showed that sustained efforts were being made "to disseminate propaganda designed to create a revolutionary spirit among the masses and to induce them to overthrow the entire existing social and political system." During 1926-27 the same authority has to report that Communism has been even more active and more vocal than in the preceding period. While the openly confessed intentions of the Soviet to capture and direct to its own ends the indigenous revolutionary movements continued to be translated into action in Bengal and elsewhere, the extracts from "India in 1926-27," reproduced on another page of this issue, show that Moscow's agents in the country were quick to turn the Chinese situation also to their own advantage. "There has been no lack of authoritative pronouncements from Moscow," Mr. Coatman observes, "that the Chinese

Digitized by Google

disturbances are no more than the first tremors of a great revolutionary upheaval that will dash the British dominion in India to pieces. Such forecasts are seldom devoid of the suggestion that the eyes of the Indian nation should be lifted to the power which has unselfishly taken upon itself the championship of the enthralled peoples of the East who are the victims of Imperialistic exploitation and oppression." The main force of these attacks have been mainly directed against Britain, which is invariably pilloried not only as the chief of the predatory foreign foes of Chinese liberty, but as the one Power that is responsible for keeping India in the same bondage which China is determined to shake off. Although it is unfortunately true, as Mr. Coatman points out, that this distorted view has found acceptance in many Indian quarters where a truer appreciation of the realities of the situation might have been looked for, the responsible leaders of Indian opinion have in no way been deceived. The Maharaja of Burdwan, addressing the 1912 Club last month, it will be recalled, said that Bolshevism was as much a menace to India as to Europe. In fact, he went so far as to affirm that its gravest danger lay in his own country, where the adoption of atheistic doctrines and the application of Bolshevist teaching would play havoc with the existing social system and speedily reduce the country to a state of chronic famine and distress.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, March 29, 1928.

The Statutory Commission.

After a fortnight spent in the Punjab the preliminary tour of the Statutory Commission has ended. The Commission's last official act was when, last mail day, Sir John Simon and Lord Burnham received representatives of the Associated Press, the *Civil and Military Gazette,* the *Tribune,* the *Hindu,* the *Herald,* and the *Muslim Outlook.* The Commission, Sir John Simon told the journalists, had every reason to be grateful for the general and personal kindness which it had received. The Punjab was a place that was ever ready to give a welcome to those who visited it. The Commission entertains the quiet hope that, when it returns, the Punjab's welcome will be not less cordial. Lord Burnham was in entire agreement, he said, with all that Sir John had said.

A few days later Sir John spoke in Delhi. In his speech there was, the *Statesman's* special representative reports, "a strong note of sincerity in his declaration of his desire to serve India and his sense of how much there is to learn. His reference to the villages and the countryside 'where the great majority of India's teeming millions live their lives,' seemed to his audience significant, but clearly his main purpose was to put beyond all doubt the fact that he was out to bargain, and that in the interval between now and the Commission's return in October no one shall have the right to conduct intrigues on the supposition that the whole procedure can be changed, and that the letter of February 6 does not stand. As the speech clearly shows the Commission's intention that it should stand, and as even now other rumours are afoot, it serves a useful purpose."

The Commission leaves India by this week's mail.

East India Railway Strike.

Fairlie Place was invaded yesterday, when thousands of East India Railway strikers marched in to present their tale of grievances in person to the Agent. Two hours later the strikers returned peacefully to Howrah, escorted up to Howrah Bridge by a large contingent of mounted and foot police. There, unfortunately, they formed a mass meeting on the *maidan,* when fiery oratory incited them to try to rush the Bamangachi railway bridge and the loco sheds, where there were still men at work. It became necessary to call upon a detachment of Eastern Frontier Rifles that has been stationed in the vicinity of the railway bridge since the strike began. A few shots were fired, five to be precise, and one man is reported killed and another mortally wounded. There has been one strike after the other among the larger groups of workers in or near Calcutta ever since the Bengal-Nagpur Railway strike at Khargpur came to its undreamt-of end, and there are men who maintain that the authorities in so "asking for trouble" have got no more than was to be expected.

Here and There.

There has been a comparative dearth of significant news. The Bengal Legislative Council was to be moved to come to its decision, whether to appoint a Committee to co-operate with the Statutory Commission, or not to do so; but in concession to a general disinclination to take up that thorny question at the end of the session, the debate has been postponed until the Council re-assembles in the Monsoon.

A strike of the students of the Scottish Churches College continues; the Principal, Dr. Watts, has issued a statement, and the authorities have decided to close the lectures and examinations for the rest of the session.

There was a meeting of the Bengal Baby Week Central Committee at Government House on Tuesday, when the Hon. Lady Jackson presided, and Dr. Rushforth put in a strong plea for a permanent Health Exhibition in Calcutta. "Indian people love visiting the Museum and the Zoo," she said, "and a Health Exhibition could well be made an equal attraction." Twenty thousand persons attended the recent Health Exhibition during the ten days when it was open, Rs: 750 being paid in anna pieces for admission. That might well be; for cholera is still a scourge in the city.

Tributes were paid to Lord Sinha at the Rotary Club by Mr. D. C. Ghose and others. Mr. Ghose read a paper, and I believe it contained a quotation from the columns of a recent issue of The Near East and India.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, March 31.

The Commission's Departure.

The Simon Commission leaves for England to-day after concluding the first stage of its inquiry and, as is customary on such occasions, the newspapers review the work done by the Commission since February 3. Of course, there is considerable difference of opinion as to the success or failure of the visit; but there are some surprises. The *Pioneer* of Allahabad does not believe that the preliminary visit has been a success and declares that the support accorded to the Commission is sectional and spasmodic and by no means representative of political India. "The problem which for the sake of British prestige must be speedily solved," says the *Pioneer,* "is how can a bridge be built between the present Commission and its opposition. It is no use deluding oneself with the belief that the opposition will crumble and disappear. On the contrary, there is ample evidence for the belief that when the Commission returns in autumn and nothing is done in the meantime, opposition will be stronger and more virulent than ever. And whatever people may think, no nation can govern or direct the affairs of another group of nations by force alone. Unless Great Britain can live in future as purveyor of political ideas superior to those of the rest of the world, her fate will indeed be a gloomy one." In order to bridge the gulf, the paper suggests the appointment of a Viceroy's Commission nominated by the Legislative Assembly with powers and status equal to the Simon Commission. The *Pioneer* brings a fresh mind to bear on the question—a mind free from the prejudice of Anglo-Indian interests to the exclusion of everything else.

Sir John Simon in Bombay.

Prior to their departure for England the Simon Commission spent a day in Bombay seeking interviews from leaders—Sir John Simon did all the interviewing—and if any additional evidence were necessary of the difficult position in which Indian leaders are placed, Sir John Simon must have got it in full measure. There is no doubt, of course, that Sir John Simon and his colleagues can, if they wish to do so, conduct their inquiry on the little evidence that they have got; just as they could have arrived at conclusions without visiting India. And it is also true that it will be easier for them to base their conclusions on limited evidence. But will the conclusions be adequate? Can they thus solve the difficult task they claim to have set their hands to? When Sir John Simon presents the case to the Premier, he cannot forget to mention that many of those who are supremely fitted to work the machinery of self-government that may ultimately be decided upon are not willing to co-operate under the existing conditions. Will the relations between the two countries be strengthened by arriving at a decision independent of this important section of Indian opinion? As I have pointed out in my last letter, there is one solution, and one only, to this impasse—the setting up of a parallel Commission which will raise the inquiry above racial bias. Though the names of those who met Sir John Simon may not be divulged yet, it may be stated that leaders of public opinion in Bombay did see him; but only to make it very clear to him that with the Commission constituted as at present co-operation is impossible. The conversations seem to have produced a favourable atmosphere in so far as hopes have been raised in certain quarters of conciliation; but hopes have been shattered so often within the last few months that few dare give expression to them lest they should be confronted with the eternal "I told you so." As for my part I am willing to accept Sir John Simon's advice: "Wait and see."

Soviet Oil for India.

The oil rates war has extended to India and the Indian Companies and the Standard Oil Company of New York are providing the consumer with plenty of amusement. A joint representation by the oil companies in Assam and Burma was submitted to the Government of India in a letter dated London, December 15, 1927, seeking protection against the alleged dumping of Soviet oil in India. The memorandum states: "We should have naturally preferred to avoid the consequences of this war of rates in India between these two groups, but with no alternative market that was impossible. On moral grounds our sympathies are, and must be, with the Royal Dutch Shell Group in its resistance to the injury and insult offered it by the Standard Oil Company in marketing this Russian oil cheaper because stolen by the U.S.S.R. of Russia from that group itself." It has been left to Government to point out that the fall of world prices generally must in any case have brought about by December 15 a reduction of 14 annas per unit in the selling price of kerosene in India, quite apart from the dispute between the Standard Oil Company of New York and the Royal Dutch Shell Group. The Government of India have referred the matter to the Tariff Board for investigation. It would be interesting if that body fixed the price of oil at the present reduced level, and if the rate war still continues it will indicate how far the protestations of the oil companies of their endeavours "to meet the requirements of the poorer Indian consumer" are founded in fact.

The following appointments have been notified in the *London Gazette*:—

Mr. Samuel Andrew Smyth, C.S.I., Indin Ciavil Service, to be a Member of the Executive Council of the Governor of Burma in succession to Sir William John Keith, C.S.I., Indian Civil Service, who will shortly vacate the office.

Rao Bahadur Chittoor Vaithilinga Ayyar Anantakrishna Ayyar, an Advicate of the High Court of Judicature at Madras, to be Advocate-General for the Presidency of Madras in the place of Mr. Tiruvalangadu Rajusastri Venkatarami Sastri, who has vacated the office.

THE STATUTORY COMMISSION.

The Chairman and the other members of the Statutory Commission returned to this country on Saturday, April 14, on the completion of their preliminary tour of investigation, extending over three months. Sir John Simon, in a statement to the Press, to which editorial reference is made on another page, spoke of the Commission as "a happy and united body," and said that they looked to all Indians of good will to seize the opportunity of joining with them in the practical work of helping Parliament to revise the Indian Constitution on lines which would best promote Indian progress and prosperity.

All the members were present, namely, Lord Burnham, Lord Strathcona (who was accompanied by Lady Strathcona), Major E. C. Cadogan, M.P., Colonel G. R. Lane-Fox, M.P., Mr. C. R. Attlee, M.P., and Mr. Hartshorn, M.P. the latter having recovered from the serious illness he had in India. The secretaries accompanying the Commission were Mr. S. F. Stewart and Mr. H. R. A. Carter, of the India Office; Mr. J. W. Bhore, I.C.S. (Secretary to the Government of India in the Department of Lands and Education) and Mr. E. W. Perry, I.C.S. Another officer on special duty has been left behind at Delhi to deal with the written evidence which the Commission has invited and to forward it for consideration in due course.

In the absence in Berlin of Lord Birkenhead, the Commissioners were met at Victoria by Lord Winterton, Under-Secretary of State for India, and by Sir Atul Chatterjee, the High Commissioner. Others present included, in addition to the wives and relatives of the members, Sir Robert Holland, Member of India Council, Sir Arthur Bannerman, Military Secretary, Mr. J. P. Dawson (private secretary to the Secretary of State), Captain Gerald Loder and Lady Louise Loder, Mr. J. E. Ferard, Mr. Victor Dewson, Mr. N. C. Sen, and the Nawabzada of Dera Ismail Khan.

The preliminary work of the Commission before its departure for India on January 19 was carried on at the India Office, but its headquarters will henceforth be at the Royal Courts of Justice. The change, it is understood, has no especial significance, being entirely dedicated by reasons of convenience. The secretariat will be established at the Law Courts this week and the Commission, after a short interval, is expected to reassemble early in May. Its work will include the examination of written material received from India and the completion of its tour programme for its next visit in the autumn. The Commission will leave this country again towards the end of September.

"INDIA IN 1926-27."

Although interest in India, both in Parliament and outside, has been sensibly quickened by the events of the past few months, the task of those who are called upon to present an intelligible conspectus of Indian affairs was never more difficult. India, as Lord Ronaldshay has reminded us, can be viewed from so many angles. A mere narrative of travel, however vivid the pen pictures which it contains and however graphic the description of the experiences of which it tells, is not enough. And studies of specialists which treat with a weight of technical knowledge, which alarms if it does not repel, of particular aspects of the case are equally unsuitable.

In the form introduced by Professor Rushbrook Williams, to which the present author has wisely adhered and in several respects actually improved upon, the annual Moral and Material Progress report is admirably adapted to the purpose in view. "India in 1926-27" contains, as usual, a wide survey of the main phases of Indian life, with particular reference to the growth of the political institutions brought into being by the Government of India Act of 1919, into the progress of which the Simon Commission is now inquiring.

The chief of these institutions is the Legislative Assembly and the proceedings of this popular body form the

Digitized by Google

main thread of the political and economic history of the period which coincides, incidentally, with the first year of Lord Irwin's Viceroyalty. If any certain conclusion can be drawn from the political experience of India during the past six years, it is that the legislatures set up by the 1919 Act, and particularly the Central Legislature, have established their prestige over the various political and quasi-political organisations which once contested with them for popular attention and esteem. The Legislative Assembly, and to an almost equal degree each provincial council, mirrors the political conditions of the country, and shows as faithfully as the diversity of interests will permit the broad trend of Indian politics.

The author of the review, Mr. J. Coatman, Director of Public Information for the Government of India, says that the year was marked by a recrudescence of the old antagonism between Hindus and Muhammadans, which showed itself in riots and excesses worse than any recorded for many years past.

The discussion of the question of joint or separate electorates for India alone makes it quite clear, Mr. Coatman points out, that the differences between the two communities are not only religious but political also. It is often said that Hindu-Muhammadan antagonism owes its present intensity to the Reforms, which, by bringing the people of India face to face with some of the problems which they will have to solve before they can enjoy responsible self-government, has precipitated the struggle for the powers and emoluments of office, and, in fact, for the control of the machinery of government. It can hardly be denied that the Reforms of 1919, by forcing Hindus and Muhammadans to take thought of their respective positions under a fully responsible government of a democratic type, with its tremendously powerful central doctrine of government by majority, have reinforced traditional enmities. The Hindus are generally content to accept all the implications of government by Parliamentary majority, but the Muhammadans, as the minority community, insist on safeguards. Again, the Hindus, with their greater aptness for study, their subtler minds, and their far stronger economic position, advocate the policy of *laissez faire*, not only in finance and business pursuits generally, but also in competition for admission to the public services. Here, again, Muhammadans dissent from these opinions, point to their backwardness in education and more material things, and ask the Government to guarantee them a fair proportion of places in the public services and to protect them in various ways from the full rigour of the competition of their economically more powerful neighbours.

The gulf between Hindu and Muhammadan interests is thus seen to be wide and deep, the product of the working both of ancient forces and historic circumstances. For centuries the two communities have lived side by side in India, yet in the most essential things in life they have always kept aloof from each other, not mixing their blood and so without the prospect of ultimate fusion into one common race. Periods of mutual toleration have alternated with periods of cruel repression and savage revolt, although organised massacres have been comparatively rare since the great invasion of the middle ages. British rule, with its cardinal doctrines of religious toleration and equal rights for all, has put an end to the oppression of any one community by any other, but present events seem to show that the danger from the old intolerance has not yet disappeared altogether. Clearly this danger must be removed before India will be safe for Home Rule. How can this be done?

No complete answer to this question is given, but the author points out that Lord Irwin and Sir Alexander Muddiman have suggested that every man of any standing in either community has the opportunity and the duty of influencing his own neighbours in the right way. The reconciliation of the two communities can be begun in this way, but what is the next step to be? As a physical fusion is out of the question, some means of at any rate uniting their interests and strengthening and developing their sense of common nationality must be found. Spheres of interest must be demarcated which are common to both Hindus and Muslims, and within those spheres the two communities must work together for their own good and for the good of all India. The opportunity for such work, and the machinery wherewith to do it, are at hand in the provincial and All-India Legislatures. So paradoxically enough, the reformed Constitution of India, which, by bringing the rival communities face to face with the hard realities of modern democratic government and its institutions, has helped to widen the scope of the old communal enmity and increase its intensity, also holds out the promise of a cure for the ills of recent growth and also for those which are of immemorial antiquity.

The Hindu-Muhammadan disturbances stand out in still sharper relief when viewed against the background of the general events of the year, for on the whole it was a year of greater peace than India had known for some time. It was not a particularly good year for commerce or industry, but not particularly bad. Although India was unusually free from calamities due to human agency, always excepting the riots, she experienced perhaps more than her share of calamities due to natural causes, especially from floods. But, as the author points out during the last few decades the wide extension of irrigation of all kinds and the rapid growth of communications, particularly of railways, have lessened the menace and greatly mitigated the effects of monsoon vagaries in India, and the word famine has not now the dread significance which it had in days gone by.

There are some interesting pages in the volume on the suppression of crime in India, a subject on which the author is peculiarly competent to speak. During the year under review every province in India, with the exception of the Central Provinces, saw an actual decrease in crime, particularly in serious crime. In the Central Provinces the figures for 1926 were somewhat higher than those of the previous year, but the rise, which was very slight, was due to economic causes. Serious crime remained low.

On the other hand, Communism in India was more active and more vocal than in the preceding year. The continuing disorders in China, which led to the dispatch early in 1927 of an Indian brigade to Shanghai, have served not only to focus the attention of Indian politicians on the Chinese situation, but to bring more vividly before their minds the importance of Bolshevik Russia as an active and potent force in world politics. This natural and perfectly intelligible interest in the affairs of a great adjoining country has assuredly not been permitted to languish for want of stimulation from outside.

Considerable quantities of printed propaganda on China were poured into India during the year, the general nature of which can well be imagined. The hand of Indian malcontents in China has not infrequently been discernible. Indigenous Communism, as represented by the so-called Communist Party of India, seems to have made little appreciable headway. Through Moscow's agents in India there have been formed, at least in Bombay and Calcutta, new "Workers and Peasants" parties, which, unlike the Indian Communist Party, seem to enjoy both the approval and support of Communists outside India, notably the Communist Party of Great Britain.

Only a few of the subjects dealt with in this comprehensive review have been touched on. The volume is profusely illustrated with photographs, maps and graphs, and concludes with appendices and index. It is issued with the general approval of the Secretary of State for India, but neither his approval nor that of the Government of India extends to every particular expression of opinion.

Owing to the Easter Parliamentary recess intervening Sir Frank Nelson's weekly notes on "India in Parliament" will not appear this week.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Budget.

Attention is now being concentrated on the Budget, which will be forthcoming next week, but there is by no means the usual amount of interested speculation as to its contents. That is due, of course, to the fact that what the Chancellor has already said has effectively discounted any prospects of tax reductions, and if there is to be no alleviation of the lot of the taxpayer there can be nothing in the Budget to excite enthusiasm. It must be frankly admitted that on the results of the past year Mr. Churchill has no justification for the remission of taxation. There was a balance, it is true, but it was due only to the adventitious circumstance that the yield of the death duties was much in excess of the estimates. Such a windfall is impossible every year. On the other hand, it was felt that the steady improvement in trade might lead the Chancellor to risk a further reduction in the income tax with a view to giving a further impetus to the commercial revival. In view of the developments with regard to rubber, which are going to have an appreciable effect on the income tax yield, it would have been, however, a dubious course to adopt, and the taxpayer will be left this time to find such encouragement as he can in the sure and certain hope that the last Budget of this Government will contain at any rate a part of the reduction for which he is longing.

The Trans-Persian Railway Project.

A further stage in the realisation of the long-mooted trans-Persian railway project is marked by the announcement last week at the general meeting in Berlin of the Julius Berger Engineering Company that a syndicate, headed by that firm is to carry out the preparatory work for the construction of the line which is intended to run from the Caspian Sea to the Persian Gulf. As a preliminary two lines of 60 miles each are to be constructed, one from the Caspian Sea and the other from the Persian Gulf, and it is understood that while the former line will be built by the German combine the latter will be constructed by an American-French-British syndicate with which the German group has entered into an agreement. Following the construction of these two sections the position with regard to the whole railway will be examined, and only then will negotiations be entered into with the Persian Government for the final contract for the line. Such briefly are the details of this development the aim of which is to give the country the railway communications of which it has so long been in need and thus to place it in a position in which it can further its economic development and in which adequate advantage can be taken of its natural resources. In weighing the importance of this German coup there are several features that have to be borne in mind. In the first place the building of the whole line, if it be ultimately decided to proceeed with it (and as to that it will be as well to preserve an open mind pending the completion of the preliminary work) will not be a matter of a brief period, but like the uncompleted Baghdad line must necessarily take years to finish. The very route has not yet been actually settled, but it is abundantly clear from the surveys which have been made that the task of construction will present engineering problems of the first order. However there is no doubt that the line can be built if it be considered worth while, for there is no obstacle which modern engineering cannot overcome. The all-important consideration, however, is to what extent the line can be made to pay for itself. In an undeveloped country no one looks for an immediate return from a railway, but it is the certainty of an ultimate return that is commensurate with the initial cost that makes possible such an enterprise. In regard to Persia this prospect is at least very doubtful, and it seems certain that the line will constitute a permanent charge on the Persian exchequer, the amount of the charge depending to a large degree on the extent to which motor car traffic (given the development of roads in the country in regard to which little has so far been done) successfully competes with the railway as it is doing elsewhere in the Near East, notably in Roumania.

Progress in Palestine.

It will be a source of great encouragement to all who have the welfare of Palestine at heart to know that the trade figures for 1927 showed a very considerable improvement. The economic depression from which Palestine has been suffering has been long drawn out, but towards the end of last year the indications suggested that the corner was being turned, and the commerce returns afford some support of this view. The value of the imports was £P6,588,142 as compared with £P6,680,340 for 1926 and £P7,798,895 for 1925. The feature of the trade was the drop in the value of imports for consumption from £P6,594,098 to £P6,184,454, which, of course, points to the temporarily reduced purchasing power of the country and also to the fact that the depression led to the market being overstocked for the time being. It is on the export side of the account that encouraging evidence of the improvement in the conditions is to be found. The value of the total export trade was £P2,280,810 as compared with £P1,536,329 for 1926 and £P1,628,879 for 1925, and the value of the exports of Palestinian produce rose from £P1,308,333 for 1926 to £P1,899,759, an increase of £P591,426 which cannot but be regarded as a fact of great significance. It is true that a large part of the

increase was in respect of Palestine's staple produce, the Jaffa orange, the export of which totalled 2,658,000 cases of the value of £P813,600 as compared with 1,887,581 cases of the value of £P580,712, but there were notable increases in a number of other directions. For instance, the exports of the Nesher cement factory at Haifa totalling 9,015 tons of the value of £P22,959 represented practically four times the exports of 1926. Then the export of edible oils amounted in value to £P75,673 which was eight times the figure of the previous year. There was a satisfactory expansion also in the export of cigarettes which totalled over 16 tons as compared with one ton in 1925. In several other directions, notably the soap trade, there was a satisfactory expansion of the export trade, and when it is added that during the year many new enterprises were started it will be realised that Palestine seems to be coming well through the period of depression.

Sudan Trade.

The trade figures for January make rather curious reading. The value of the total trade was £E610,832 as compared with £E710,742 for the corresponding month of the previous year, there being thus a decline of £E99,910. This change was due to falls in the Government imports from £E195,622 to £E112,468 and in the exports of cotton from £E232,606 to £E153,586. The encouraging feature of the returns is the increase in the value of public imports of £E57,486, which was distributed over a variety of items, the chief increase being in respect of cotton piece-goods. A significant feature is the fall in the imports of dura from £E7,599 to £E192, which is the consequence of the good harvest which the Sudan has experienced. It seems clear now that the Gezira cotton crop will be somewhat below the last year's yield, but the effect of that on the trade returns will be more than counterbalanced by the rising prices for the commodity.

Agriculture in Roumania.

Agriculture is one of Roumania's two great assets, and it is very unfortunate that, as our Bucharest Correspondent points out this week, the country should only have experienced one good harvest since the War. According to present indications the coming harvest will again be below the average, and if this should prove to be the case it will be particularly serious at a time when the oilfields, owing to the world oil position, are not the assistance to the country that they normally would be. The sowings last autumn of wheat, rye, and colza were somewhat below the figures for the previous year, while the sowings of barley showed a slight increase. The provisional figures were (in hectares) :—Wheat 2,824,898 as against 2,836,636, rye 253,220 as against 258,206, colza 32,995 as against 36,949, and barley 109,897 as against 100,770. Unfortunately, as our Correspondent explains, owing to the adverse conditions in the winter large areas had to be resown, while last month hard frosts delayed the spring sowings. The effect of another poor harvest on Roumania's exports, and incidentally on the stability of the leu, is bound to be somewhat pronounced, and it can only be hoped that the conditions between now and the harvest will enable much of the lost ground to be recovered.

Commentator.

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports :—

Egypt.

In spite of the unsettled political situation, the cotton market has shown very great strength, and prices have risen to almost the highest point of the season. Two reasons have been mainly responsible for this advance, the first being the persistent rumour that the Sudan crop of Sakel in the Gezira was short and that the quality had suffered, owing to disease and a very hot spell of weather during the opening period. The second was the news that the Nile levels were low, accompanied by a warning from the Government that unless the greatest economy in the use of the water was observed, the supply might be insufficient. These two points encouraged bull speculation and the immediate result was a sharp rise of 2½ dollars in the November position, which at one time touched 40 dollars, and although there has been a slight reaction, prices are well maintained, owing to strong Liverpool advices. In fact, the general opinion seems to be that spinners are short of Sakel and may have to buy, even at current prices. In any case, Egypt, as a whole, is benefiting, by the improvement in quotations, and other lines of business are profiting by the renewed optimism. Uppers have not advanced to the same extent as Sakels, but as American markets are showing a certain strength, they are also moving upwards. The cotton situation generally, in spite of heavy stocks, would seem to be brighter.

The cotton-seed market has been subjected to violent fluctuations, but, on the whole, has declined. The supply of oil-bearing nuts this year is large, and although cotton-seed cake is easily disposed of, the oil is accumulating owing to lack of demand, so that crushers have had to close down until they can reduce their stocks of oil. In the meantime, stocks of seed are running low and, given a fair trade demand, it is thought that prices should show a steady improvement. There has been a considerable amount of re-sowing in the interior, which will absorb any possible surplus of sowing-seed.

General trade has been brighter and the position of the fellah has greatly improved, owing to a good export demand for maize, which has caused a rise in price to a point where it is a fairly remunerative crop.

The Sudan.

Gum arrivals are still heavy and the crop is estimated at 23,000 tons. Buyers, however, are holding off and stocks show a tendency to accumulate, but not to the extent that might be expected in view of the large arrivals. Exports of sesame to Egypt are regular. The Gezira cotton crop is expected to yield from 380,000 to 400,000 kantars. The import market, although not up to expectations, has been fairly good and there is a steady demand for tea, sugar, flour, etc., in the Medani district. Heavy local rains were reported in Khartoum on March 16.

Palestine.

Recent arrivals of oranges in the United Kingdom have realised satisfactory prices at from 14s. to 18s. per case for large fruit and from 19s. to 21s. per case for American packing. Shipments to Hamburg have realised 20 marks per case, which is considered very favourable. About 1,700,000 cases have been shipped to date. The existing stocks of Colonial goods are sugar 300 tons, coffee 20 tons, rice 250 tons, and flour 200 tons. Climatic conditions during the latter part of February and the first half of March have been satisfactory and give rise to hopes of a good harvest, with surpluses available for export. The general agricultural and industrial outlook of the country is good, and the prospects of setting up a special organisation in London for the marketing of Palestinian products have given great encouragement for the future.

The traffic receipts of the South Indian Railway Company for the week ended March 3 totalled Rs.11,61,219, making the total from April 1 Rs.5,72,77,137. So far the traffic receipts show an increase of Rs.30,22,128 on the figures for the previous year.

An order has been given to Vickers-Armstrongs by the Bombay Port Trust for a ship-shape caisson for the communication passage between Princes and Victoria Docks, Bombay.

Motors and Motoring.

By G. B. B.

Dangerous Driving.

From every part of the country come reports as to the great number of motorists on the road during Easter, and from what I saw personally, I was touring in East Anglia, I should say that a large percentage of them had never been in charge of a car before. They struck me as never having had time either to learn to drive or to pick up the most elementary points about road manners. The one aim appeared to be to get somewhere or other as quickly as possible. Cases of actually dangerous "cutting-in" were to be seen every mile, and this year a new type of driver seems to have made his appearance; the man who, with a perfect disregard for his own safety or that of anyone else, passes the vehicles he overtakes on either the right or the wrong side just as he thinks fit. What is one to do with a man who, if you remonstrate with him for passing or trying to pass between you and the near-side kerb, merely asks if you want all the road and goes on, to take a similar risk a little further on? I was, at one time, as all my readers are aware, strongly opposed to the idea of motor cycle police, or "traffic cops" as they picturesquely call them in the United States, but I am really beginning to think that unless something of the kind is organised, the state of the roads will go from bad to worse and that it will become more dangerous to drive from London to Southend at holiday time than to smoke on a proverbial open powder cask.

Apart from definitely dangerous driving, there is a marked increase in what may be termed inconsiderate driving, such as continuing to drive in the centre of a road and refusing to move in to allow others to pass, and also in accelerating when another car is passing so as to prevent the overtaking vehicle from getting on to the correct side again. Much of the danger of "cutting-in" is due to this habit of speeding up the moment another car tries to pass. A further objectionable practice on the road, and one which is never indulged in by experienced motorists, is the incessant use of the horn. There is a certain type—one does not quite know whether they are nervous or have a domineering complex—who never seem happy unless they are hooting at other drivers. The "dust up," about which I have written before, seems largely on the increase, especially amongst light car owners, and is also a dangerous practice and the cause of many head-on collisions. A car may be proceeding at an ordinary pace when the driver hears someone overtaking him. He immediately quickens up, as though to say: "I shall not let this man catch me." The overtaking driver then starts to "show him," whether he will or not and a third and sometimes a fourth car noticing the speeding immediately tries to show what can be done. Within a few moments three or four cars are travelling "all out" in the same direction, each trying to edge past the first car and, incidentally, driving well out on the wrong side of the road to do so. If, as frequently happens, they meet a quartette of cars doing the same thing there has to be some pretty quick judgment and rapid deceleration to make things safe. As only novices engage in this miniature road racing practice they are just the people who have neither road knowledge nor judgment and when accidents happen, ill-informed people say that the roads are too narrow for safety. To paraphrase an old saying, the roads are all right; it is the people who use, or rather misuse them, that are at fault.

Bean Vans.

In the "Bean Bulletin" some interesting details are given regarding a fleet of mail vans made by Bean Cars, Ltd., Tipton, near Birmingham. It appears that there are 43 of these vans, and during the week ended Christmas Day of last year they ran a total of 16,000 miles in London traffic. Altogether they were driven for 5,574 hours and during this run only six hours' time in all was lost, this being due to water interfering with the correct functioning of a magneto on one of the wettest days of the week. Each van worked, on the average, 21 hours a day which seems to be a satisfactory testimony to the reliability of the Bean. I notice also, that the majority of the vans have each done over 30,000 miles without overhauling.

The Albion Motor Car Co., Ltd., of Scotstoun, have just issued a leaflet describing their 3, 4, and 5 ton lorries and vans. The 4 ton can be obtained in two types, one having a forward control position.

The Chenard-Walcker tractors and trailers, which have proved so successful in France, are now to be made in this country and Mr. Louis Brandes, for some time with Carrimore Six-Wheelers, Ltd., is to take up the sales side. The Chenard-Walcker productions have a light tractor unit particularly suitable for hauling on second-class and lightly constructed roads and wherever it has been possible to reduce weight without sacrificing strength, this has been done. I may have more to say about these tractors and trailers later on.

The Roumanian Treasury receipts in February amounted to 2,064,350,702 lei, making a total for the first two months of the year of 3,681,134,833 lei. The expenditure totalled 1,562,822,324 lei for February and 2,285,789,198 lei for the two months. In addition, 967,709,020 lei, belonging to the 1927 Budget, were earmarked during the first two months of 1928, against expenditure during the same period of 1,736,507,287 lei.

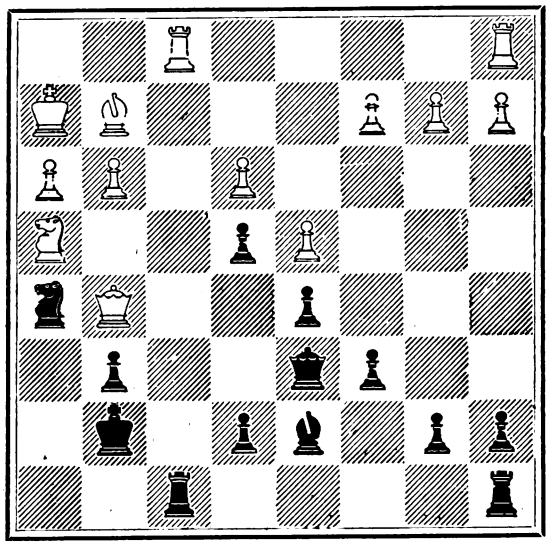
CHESS.

By "CARO-KANN."



It is curious how often games which at a superficial glance appear to be equal come to a sudden termination. The diagram, which shows a position in a game played last week in the Murton Cup handicap at the City of London Chess Club, illustrates this point. Black has a perfectly sound defence, and has a won pawn position if only the major pieces can be exchanged. Black has to make his 20th move, and played R—B3, and play proceeded as follows:— 21, RxR, QxR; 22, QxQ, KtxQ (and now, so strong is the position, White has to lose something); 23, R—B, R—R; 24, R—B2, P—K Kt4; 25, Kt—B4, BxKt; 26, RxB, K—Kt3; 27, R—B, Kt—Kt5 (ch); 28, K—Kt, KtxP; 29, R—B2, Kt—B4; 30, P—K Kt 4, KtxP; 31, P—B3, P—K6 (!); 32, R—B, Kt—K7 (ch); 33, K—R2, Kt—B5; 34, K—Kt3, P—K4 (a striking instance of the hyper-modern theory of delaying the advance of the centre pawns as long as possible); 35, R—KR, P—Q5; 36, P—B4, KtxB; 37, KxKt, P—K5; 38, resigns.

It is reported that another rich strike of oil has been made by the Anglo-Persian Oil Company at a point about 60 miles east of Ahwaz, in Persia.

The Indo-European Telegraph Company recommends a final dividend of £1 2s. 6d. per share and a bonus of 15s. per share, making a total distribution for the year 1927 of 10 per cent., free of tax.

The Greek Minister of National Economy has appointed a Commission for the valuation of the ex-Kaiser's villa at Corfu, as a British company has submitted an offer to purchase the villa and execute improvements.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1).

EGYPT.

Axle Boxes, Etc.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for 400 cast steel axle-boxes for bogies to drawings, and 13,450 kilos acid open hearth steel plates of six different sizes to specification.

Hose Pipes.—The Egyptian State Railways, Telegraphs and Telephones, Stores, Saptia, Cairo, invites tenders for the supply of 2,000 hose pipes I.R. 2 in. by 24 in. without couplings. May 5.

Document and Map Printing Paper.—The Surveyor-General of Egypt invites tenders for the supply of 2,364 reams of map printing paper, and 200 reams of document paper. July 14. (D.O.T.)

Spinning and Weaving Machinery.—The British Commercial Secretary at Cairo reports that a local firm are calling for tenders in respect of a contract for the supply and installation of spinning and weaving machinery for the company's factory. May 3. (D.O.T.)

General Stores, Etc.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply of general stores required during 1928-1929. May 8.

Chemical Fire Extinguishers, Etc.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of chemical fire extinguishers; fire canvas hose, 2½ in., 100 feet lengths; fire buckets; stands for buckets and for fire extinguishers, etc., required for the Schools during the year 1928-1929. May 5.

INDIA.

Various Stores.—The Director-General, India Store Department, Belvedere Road, Lambeth, S.1, invites tenders for:—(1) Thread linen; (2 120,000 yards duck, cotton; (3) 26,000 yards muslin; (4) 1,090 reams butter paper; (5) printed caps and tin fastener rings for "Commonsense" milk bottles; (6) two Diesel locomotives for 5 ft. 6 in. gauge; (7) 48 locomotives for 5 ft. 6 in. and metre gauge. April 17 for Nos. 1, 2, and 3; April 20 for No. 4; April 27 for No. 5; May 1 for No. 6; and May 4 for No. 7.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Birkenhead, April 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Macharda for Calcutta (Birkenhead, May 3).

Bibby Line.—S.s. Gloucestershire for Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, May 2).

British India Line.—S.s. Mulbera for Colombo, Madras, and Calcutta (London, April 21); s.s. Manora for Bombay and Karachi (London, April 28).

Cunard Line.—S.s. Bactria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow and Swansea, April 28); s.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Bari, Venice, Trieste, and Fiume (Liverpool April 28, Swansea May 1).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 5); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 26).

P. and O. Line.—S.s. Macedonia for Bombay (London, April 27); s.s. Tresillian for Colombo, Madras, and Calcutta (London, April 28).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, May 5); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, May 9).

Ellerman and Papayanni Lines.—S.s. Polo for Oran*, Algiers*, Piræus, Volo*, Salonika, Constantinople, Bourgas, Varna, and Constantza (Liverpool April 21, Swansea* April 21); s.s. Malatian for Malta, Alexandria, Jaffa*, and Haifa* (Swansea April 25, Glasgow, April 26, Liverpool May 2); s.s. Bavarian for Algiers*, Patras, Piræus, Volo*, Salonika, Constantinople, Bourgas, Varna, and Constantza (Liverpool, May 12); s.s. Manchurian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool May 12, Swansea May 17). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Gibraltar; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, April 17.

One of the largest settlements on record passed off comfortably on the Stock Exchange and appears to have had little effect upon the volume of business, which continues on a large scale. Apart from the activity in certain sections of the industrial department which is maintained at a high level, the feature has been the strength of the gilt-edged market, partly as a result of anticipations of easier conditions in the money market and the reinvestment of funds recently employed in other markets, and partly in consequence of the rumoured proposals to quote certain British Government stocks on the Wall Street Exchange. This has particularly affected Funding Loan and War Loan, interest on which is payable without deduction of tax at source. The former rose very sharply in the early part of the week, but some of the gain was lost later on. After the heavy fall in prices which followed the Prime Minister's statement before Easter the rubber share market has been uncertain, with very little business being done. The market is still in a highly nervous condition, but bargain hunters have been picking up shares of some of the better-class companies at the present low levels.

On Thursday the interesting announcement was made that under the auspices of Imperial Chemical Industries, Ltd., (whose maiden dividend of 8 per cent. slightly exceeded market expectations) and the Chase National Bank a private company, called the Finance Company of Great Britain and America, has been formed with a capital of £2,040,000 to act as a finance corporation to float securities on behalf of industries in all parts of the world. This development represents an important co-operation between financial and industrial interests in this country and in America.

The Merits of the Older Trust Companies.

During recent years many new investment trust companies have been formed, and doubtless a large proportion will enjoy a considerable measure of success. In certain important respects, however, the older companies have definite advantages over these newcomers, and the share prices suggest that this point has not been fully appreciated. In the first place, the older companies have been able to raise their prior charge capital at a very economical price, debentures and preference shares often being on a 4 per cent. basis. In the second place, some of the older companies, have built up very substantial reserve funds. This, apart from the possibility of bonus distributions, is a very important factor if, as seems probable, the investment opportunities for the trusts tend to become gradually less favourable. Finally, the old companies have obtained the maximum benefit from the high rates of interest ruling during the War and early post-War years. The following stocks of the older companies deserve the investor's attention. The deferred stock of the Army and Navy Investment Trust returns £4 15s. per cent. A yield of £4 16s. per cent. is given by the ordinary stock of the Industrial and General Trust Company.

The Artificial Silk Position.

The cut of 1s. per lb. announced by the British Celanese Company has had a somewhat unsettling effect upon the artificial silk share market. The precise implications of this move are rather obscure. Apparently it does not foreshadow a price-war, for it has been stated that the reduction has been made in the ordinary course of business. It seems possible, however, that the production of the celluose acetate yarns such as those made by the British Celanese Company in particular is more closely approximating to demand than has been the case recently. But the price of British Celanese ordinary shares shows considerable stability, the present quotation of £4⅝ being near the highest point touched this year. As for the other producers the position is uncertain. For instance, Courtaulds manufacture both acetate and viscose yarns, though the latter constitutes the bulk of the company's production. In trade circles the view is expressed that an immediate reduction in Courtauld's prices is unlikely. Nevertheless, it seems that allowance will have to be made for the increased production due to the operations of the newer companies, but the effects of this situation will be most keenly felt by these companies.

Attractive Japanese Bonds.

During the week there has been considerable activity in high-class foreign bonds, Japanese securities being particularly favoured. Japanese stocks have been somewhat neglected recently with the result that they merit the attention of the discriminating investor. It is true, of course, that Japan has lately been visited by misfortune. A few years ago the great earthquake disorganised Japanese life, while more recently the banking crisis was a disturbing influence. Throughout these troubles, however, Japan has shown great courage and resource. Competent observers believe that these qualities will stand her in good stead in the remaining stages of reconstruction and in any further tests which may be in store. The 6 per cent. loan of 1924, which is finally redeemable in 1959 gives a return of £6 4s. per cent. This stock enjoys a very free market, there being £25,000,000 of stock outstanding. A yield of £6 3s. per cent. is obtainable on the 4 per cent. loan of 1899, the final redemption date being 1954. A shorter-dated security is available in the 5 per cent. loan of 1907, finally redeemable in 1947, the return being £6 6s. per cent.

The eighth Liubliana International Sample Fair will be held from June 2 to 11 next.

The report of the Ooregum Gold Mining Company of India for 1927 states that the total production of fine gold, including 93 oz. recovered from slags, amounted to 99,090 oz. The amount realised was £422,845. Deduction of £22,699 for royalty and refining charges and addition of interest, rents and other receipts, left £407,961 at the credit of income and expenditure account. The profit on the year's operations was £145,640, plus £9,143 brought forward and £1,971 dividends received; total profit, £156,755. Income tax took £36,239, costs of income tax appeal £571, depreciation £10,000, insurance and contingency fund £5,000, and the directors recommend a final distribution on the preference and ordinary shares of 1s. 6d. per share, carrying forward £10,147.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, April 11.

The Agricultural Situation.

Since the War Roumania may be said to have had only one really good harvest, and that was in 1926. Its effect was immediately felt in 1927 in the great impetus given to exports, and the favourable trade balance which resulted was largely responsible for the rise in the value of the leu towards the end of the year. The 1927 harvest on the other hand was exceptionally poor, especially as regards maize, with the result that the prospects of the export trade this year are most unfavourable. The grain market at the Danube ports has been very dull up to the present time, and maize from the Argentine is actually being shipped up the Danube to Central European destinations at a price which is 12,000 lei per waggon below that of Roumanian maize. The stocks of grain at the ports are very small, and further loads have almost ceased to come in, as the peasants are now busy on their land preparing for the spring sowings, and have no time to spare for carting their surplus grain. There is very little wheat being exported, mainly because the Roumanian prices are too high, in spite of the fact that the export taxes have been very greatly reduced this year. This is no doubt due to high taxation and to the great rise in wages and in the cost of living generally, for Roumania, which a few years ago, was one of the cheapest countries in Europe to live in, is now one of the dearest.

This winter has again been very unfavourable to agriculture. In many districts there was not a great deal of snow, while everywhere the temperature fell at different times to 20 degrees and 30 degrees below zero Centigrade. In Moldavia and Bessarabia especially a large proportion of the area sown in the autumn will have to be ploughed again and re-sown in the spring, at a tremendous loss to the farmers. To make matters worse, there was a long spell of hard frost after the middle of March, which made work in the fields impossible, and thus greatly delayed the spring sowings. Towards the end of the month and the beginning of April, however, the long-looked-for rain came at last, and fine spring weather has prevailed ever since, so that it is hoped that some of the damage may be repaired, though official reports state that the area sown this year will in all probability be below the normal.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended March 10 amounted to £E7,071, making the total from April 1 £E290,074.

It is reported that representatives of the Sofia Agricultural Bank have succeeded in disposing of considerable quantities of tobacco in Poland on behalf of the Bulgarian tobacco co-operative societies.

The Corporation of the Royal Exchange Assurance announces that it has been decided to recommend the General Court to be held on April 25 to declare a further dividend of 17 per cent., less income-tax, making 27 per cent., less income-tax, for 1927, the same as for 1926.

The Executive of the Zionist Organisation announce that they accept no responsibility for various statements which recently appeared in the Press regarding an international loan being raised by the Zionist Organisation. These reports, which are only partially correct, are misleading and calculated to raise hopes that entirely overlook the difficulties of the situation.

Upon the suggestion of the Governor-General of Macedonia, the municipality of Salonika noted in its budget for the current fiscal year ending in September, 1928, a sum of 3,000,000 drachmæ for use in the construction and repair of schools in the city (says an American Consular report). The municipal commission supervising the expenditures on this item recently decided to construct a few one-story buildings in the important sections and to use only a small proportion of the money for repair of old schools. This work will begin immediately in order to have the buildings completed by the end of the present fiscal year.

British Consular Reports

I.—PERSIA.

(Concluded from page 478.)

We give below further extracts from the Report on the Finance and Commerce of Persia, 1925-1927, of Mr. E. R. Lingeman, Assistant Secretary in charge of commercial affairs, Teheran :—

Civil Aviation.

The negotiations initiated in 1924 between the Persian Government and the Junkers Company for the establishment in Persia of civil air services were concluded in February, 1926. In return for a subsidy the company agreed to maintain a weekly postal service between Teheran and Pahlevi (on the Caspian), Bushire (on the Gulf) and Quraitu (on the Iraq frontier). Following on an arrangement with the Russian authorities, Junkers arranged in June, 1927, to carry passengers from Teheran to London and Paris (via Moscow and Berlin) in five days for the sum of £50 per person. That passenger flying is steadily gaining in popularity in Persia is not surprising in view of the distances between towns and the state of the roads.

Development.

Persia's potentialities are still difficult to gauge. There are certainly possibilities of agricultural and industrial development if the reforms introduced in the one field and the initiative shown in the other are of a practical nature. Persians also rely on the mineral resources of the country as an eventual source of national and personal enrichment, but no adequate survey of them has as yet been carried out; although they are known to be varied and widespread it remains to be seen whether their exploitation would guarantee a reasonable return on capital investment.

Persia's economic development is dependent on three main factors, water for irrigation, transport, and capital, and, of course, security. As it is, attention has been focussed on the transport problem, almost to the exclusion of all others, and the solution is thought to have been found in the trunk railway project.

The financial aspect of the question has already been referred to above, but it may be mentioned here that it would be unduly optimistic to expect Persian capital to suffice for large scale enterprise in Persia. And even if enough capital were available locally the difficulty of ensuring co-operation among local investors would render foreign participation inevitable sooner or later. It is a point which is recognised by the more enlightened Persians. Little, however, has been done to attract either foreign capital or the foreign capitalist to Persia, although this is an end which the Persian Government is said to keep in view.

The mass of the population is made up of the peasantry, and crop failure must inevitably lead to a very appreciable fall in all-round purchasing power and, consequently, in the demand for foreign manufactured articles. The importance of this basic Persian industry can be gauged from the fact that—excluding oil products, bullion and such re-exports as tea—68 per cent. of last year's exports is found to consist of products derived from orchards, fields and flocks, while another 25 per cent. is represented by goods manufactured almost entirely from raw materials produced in Persia (carpets, cotton, woollen and natural silk tissues). Yet funds badly needed for agricultural development, irrigation especially, are apt to be diverted to less productive industrial purposes. Adequate credits are very urgently required to combat insect pests and animal diseases, both of which have been causing serious ravages.

Apart from questions of transport and irrigation, it is imperative that the peasant should be taught improved methods of cultivation. Model farms in every province—only one, outside Teheran, is in existence so far—will only touch the fringe of this problem. An agricultural bank has been mooted but difficulty is being experienced in finding the required capital. The insecurity of land titles offers another obstacle to the success of this banking venture.

The need for poppy (opium) substitution, in virtue of the international obligations assumed by the Persian Government, will doubtless lead to experiments in the acclimatisation of new crops and the extension and improvement of the existing ones. The substitutes under consideration include wheat, silk, tobacco, cotton, beetroot and sugar cane, tea, hemp, flax and fruits. It may be noted here that Persia, imported last year sugar and tea to the value of £2,550,000 and £1,436,000 respectively, while her production of natural silk only amounted to 150,000 kgs. Both cotton and sugar cane could be grown under ideal conditions in the southern province of Khuzistan. Persian sales abroad of agricultural produce could even now be increased were more attention paid to preparation, grading and packing.

Perhaps the two most essential points are that a land registration scheme must be put into effect and a new assessment of taxation made (the one in force being antiquated and unfair in incidence).

Persia must remain an agrarian state for a long time to come if only because of its geographical position and configuration and the degree of development of its people. Yet there are indications that powerful interests wish to bring about the rapid metamorphosis of this agrarian state into an industrial one, as if such a transformation necessarily implied progress. There is a danger that industries may be fostered under the shelter of a high tariff wall which, without such protection, would never thrive to the point of gaining independence.

There is a scheme on foot for the erection of smelting works in the north to enable rails to be manufactured locally. A German expert has been engaged and four and a half million tomans out of the railway fund (or £900,000 at 50) set aside for the purpose. Suitable iron ore has been found in the Semnan area, where the works will probably be situated if this scheme is to materialise. The cost of Persian made rails would, of course, be excessive.

The Majlis Printing Press hopes to manufacture its own

paper and 46,000 tomans have been provisionally set aside for the purpose. There is a talk of establishing a tannery in or near Teheran with Government support.

The last two years have seen no effective development of Persia's mineral riches, apart from the continued exploitation of the Southern Oilfields.

The services of a German geologist, who arrived in the spring of 1927 have been secured by the Government, primarily in connection with the proposed manufacture of rails in north Persia.

A Russo-Persian Company is about to drill for oil at Khourian in the Semnan province (October, 1927). An American oil expert has also been engaged by the Persian Government to prospect.

THE CINEMATOGRAPH IN ASIA MINOR.

Before the world War Smyrna and Constantinople were the centres of the film industry in the Near East, and supplied exhibitors in Egypt, Greece, and some of the Balkan States (says the American Consul at Smyrna in a recent report). After 1914, owing to the interruption of shipping and communication facilities between Turkey and the United States and European ports, the film industry in Egypt and Greece became established independently, and now some the leading producers of moving picture films have established general agencies at Alexadria to supply the Near East.

During the War films shown were principally of German origin, although a few French and Italian productions, which had been imported at great cost by way of Switzerland, were exhibited in Smyrna and Constantinople, but after the armistice (in November, 1918) the revival of the industry was rapid, and pretentious and expensive films from various countries were shown.

Even during the period of occupation by the Greek troops (1919-1922) the moving picture theatres of Smyrna were well patronised. From the two original theatres, constructed by the Pathe and Gaumont companies in 1908, the industry had spread in ten years until the city was dotted with motion picture houses.

Although the Smyrna fire in 1922 destroyed most of the theatres, that city and the surburban villages have now fourteen motion picture houses, and 28 other towns in this section of Asia Minor each have one or two theatres.

The Alhambra (Milli Kutubhaneh, or National Library) Theatre, completed in 1926, is the most substantial and attractive in Smyrna; in architectural design it rivals the motion picture theatres of many European capitals. The price of admission has advanced since the War from two gold piastres (9 cents) to 50 paper piastres (26 cents), and at the Alhambra charges on feature films range from 70 to 120 piastres (36 to 62 cents).

According to local exhibitors 40 per cent. of the cost of admission is absorbed by the national and local governments. The amusement tax is 10 to 15 piastres, the workhouse tax 10 piastres, city rates 5 piastres, and the price of a revenue stamp to be affixed to each ticket is 7 piastres. These rates are assessed on box office receipts in addition to taxes on the property, income tax, and the educational fund tax which must be paid by the exhibitor.

Delegations representing the exhibitors of Smyrna and of Constantinople were sent to Angora in January, 1928, to seek tax relief from the central Government

The rate charged exhibitors per metre for films in which well-known artists appear, and for films in the production of which lavish outlay is required is 15 to 17 piastres per metre. These rates are charged for the first projection in the city in a first-class motion picture house for the period of one week. In certain cases a flat rate ranging from 300 to 1,000 Turkish pounds is paid for each film without regard to length.

After a week's run in a first-class theatre a film is either returned to the agent or sublet to one of the smaller houses. Legends used in film productions are printed in Turkish and French, the Turkish version being prepared in the studios at Constantinople.

Advertising is practised to good advantage by local dealers. Announcements appear in the daily Press for a week or more before the showing of an unusual film.

Although Turkey has no board of film censorship, the Government interferes on occasions to prevent the showing of films which might savour of Communistic propaganda, or offend public sentiment.

The ordinary programme in a first-class motion picture house consists of a drama of 5 to 12 reels, a comic film, on rare occasions a short series of current events, and usually one or two motion picture advertisements. A performance usually lasts from one and one-half hour to two and one-quarter hours. Music usually accompanies the projection, as all the better class theatres have at least a pianist, and sometimes an orchestra of three to eight performers.

The value of Great Britain's exports to Turkey in 1927 was £3,180,672 as compared with £3,103,228 in 1926 and £4,600,192 in 1925, while that of the imports from Turkey was £3,003,947 as against £3,003,922 in 1926 and £2,524,459 in 1925. Great Britain's exports of cotton piece-goods to Turkey amounted to 61,542,100 square yards, as compared with 56,215,200 square yards during 1926, and 95,688,400 square yards in 1925, the values being £1,398,902 in 1927, £1,440,406 in 1926, and £2,555,313 in 1925. The exports of cotton yarns amounted to 693,400 lb., as compared with 1,083,000 lb. in 1926, and 937,100 lb. in 1925, the values being £53,077 in 1927, £94,750 in 1926, and £100,154 in 1925. The exports of woollen tissues amounted to 1,558,400 square yards in 1927, of the value of £271,656. Great Britain imported from Turkey 223,095 cwt. of raisins, compared with 277,647 in 1926, the respective values being £538,134 and £788,318.

The gross production of crude oil in March of the Phœnix Oil and Transport Company was 34,093 tons.

Mr. Douglas Hacking, M.P., Parliamentary Secretary, Department of Overseas Trade, will broadcast a statement from the B.B.C.'s London station on "The Development of Industry: The Government's Export Credit Insurance Scheme," on April 25.

Company Meetings.

AGRICULTURAL BANK OF EGYPT.

Another Satisfactory Year.

The report of the directors on the working of the bank for 1927-28, submitted to the shareholders at the twenty-fifth ordinary general meeting held at the offices of the bank in Cairo, on April 11, states:—

The directors have to report that the net profits of the bank for the financial year 1927-28, established in accordance with Article 40 of the Statutes, amount to £E621,095.834. From this amount there have to be deducted: (i) interest on debentures, £E142,471.876; (ii) provision for the reserve fund, £E10,476.488; (iii) provision for the special reserve fund, £E20,272.325—£E173,220.689; leaving £E447,875.145. And there have further to be deducted: (iv) dividend on £1,250,000 preferred shares, £E48,750; (v) commission to the National Bank of Egypt, £E14,853.128—£E63,603.128; leaving £E384,272.017, which is available for distribution as dividend on ordinary and deferred shares. The ordinary shares have to receive, in the first instance, dividend at the rate of 5 per cent., £E120,900; balance, £E263,372.017. This balance of £E263,372.017 is available for the ordinary shares to the extent of one-half, or £E131,686.009, and for the deferred shares to the extent of one-half, or £E131,686.008.

Ordinary Shares.

The amounts therefore available for dividend on these shares are as follows: balance from the year ending January 31, 1927, £E98,191.350; interest for the year, accrued on the above balance, £E4,909.567—£E103,100.917; dividend at the rate of 5 per cent. per annum, as stated, £E120,900; further amount available, £E131,686.009; total, £E355,686.926. The directors propose to pay a dividend at the rate of 10 per cent. per annum, requiring £E241,800, and to carry forward the balance of £E113,886.926.

Deferred Shares.

The amounts available for dividend on these shares are as follows: balance from the year ending January 31, 1927, £E35,356.491; interest for the year, accrued on the above balance, £E1,767.824; total, £E37,124.315; further amount available, £E131,686.008; total, £E168,810.323. The directors propose to pay a dividend of £55 per share, requiring £E107,250; and to carry forward the balance of £E61,560.323.

The increase in the profits available for distribution this year is due, in great part, to the large encashments made on account of the annual instalment and of the instalments in arrear from previous years. In addition to this, a profit of £E46,000 was realised by the conversion into 5 per cent. War Loan of our holding of National War Bonds due for repayment in April, 1928.

There is again this year a satisfactory decrease in the amount of our expenses. When considering the bank's expenses it must be remembered that they do not decrease in the same proportion as the capital outstanding. The latter decreases more rapidly than the number of loans in our books, and each loan involves the same amount of work whatever sum the borrower may owe.

The Board recommends the payment of the same dividend as last year; thanks to the exceptional profits mentioned above, this payment will not involve a draft on the balances standing to the credit of the ordinary and deferred shareholders; on the contrary, these balances will be increased.

Mortgage Company of Egypt, Ltd.

A dividend on the ordinary shares of 13 per cent., with a bonus of 2 per cent., making 15 per cent. in all, was again paid for the year ended March 13, 1927.

Owing to better prices for cotton at the beginning of the season, collections for the current year have been satisfactory. Demands for new loans continue to be made on a moderate scale.

The case regarding income tax was heard before the High Court of Justice in November last and the judgment was unfavourable to the Mortgage Company. The company appealed: the case has just been heard by the Court of Appeal and judgment has again been given against the company. It is still possible to take the case to the House of Lords, whose judgment is final, but there has not yet been time for the company to consider what action it will take.

Arrears.

Out of the instalments in arrear on January 31, 1927, amounting to £E205,880, a sum of £E187,642 has been either collected or written off during the year: the amounts collected are included as profit in the profit and loss account for £E126,287 as capital and £E61,223 as interest.

The instalments due in 1927-28 which have not been collected in the year amount to £E74,309, of which £E24,316 are for interest; no credit has been taken for this latter sum in the profit and loss account as, in accordance with the statutes, only interest actually encashed can be included in the profits. The balance, £E49,993, representing capital due and not recovered in the course of the year, has, as required by the statutes, been deducted from the receipts before arriving at the net profits for the year.

Any encashments on the total outstanding arrears—£E92,547—will be included in the profits of the year in which they are effected.

Output and Collections.

We have made during the year 145 A Loans for a total of £E5,394 and 87 B Loans for a total of £E28,670.

The total of loans exceeding £E1,000 each was £E82,525 on January 31, 1928. The arrears on these loans were £E6,596.

A sum of £E353,075 was collected out of the annual instalment of £E427,384 and a sum of £E187,510 was collected from the arrears, making a total collection of £E540,585 as compared with £E453,903 for last year.

The percentage of the annual instalment collected is 82.6 per cent., as compared with 61 per cent. in the previous year. There is also an improvement in the percentage of the collection of arrears, which has risen from 85.3 per cent. to 91.1 per cent. This satisfactory result may be ascribed to the fact that during the months of collection our clients were able to find ready purchasers of their cotton at remunerative prices.

Expropriations.

The number of expropriations made by the bank during the year are as follows: Number of cases in hand on 1/2/27, 463; number of cases begun during 1927-28, 1,708; total, 2,171; cases settled, 1,248; balance, 923; cases brought to expropriation, 43; balance pendjng, 880.

In 14 of these cases of expropriation 113 feddans were bought in by the bank, and in 29 remaining cases 163 feddans were bought in by third parties.

TRADE IN THE SUDAN.

The following extracts are taken from the current issue of the monthly report of the Central Economic Board of the Sudan Government.

Darfur Province.—Trade is undoubtedly improving, as is shown by an increase in the consumption of sugar, activity in the building of better shops and houses by merchants, and the briskness in the export of hides and tobacco.

Red Sea Province.—The condition of the people is now normal. Most of the cattle owners of Karrora went to the hills for grazing and Eritrean natives are still coming to Tokar in search of work.

Kordofan Province.—The general condition of the people is satisfactory, but there is still, however, no rise in the price of gum. The price of cereals, with the exception of dura, which has risen slightly, is at present lower than that of January.

It is expected that Greece will have a surplus on the past financial year of 150,000,000 drachmæ.

The report of the Champion Reef Gold Mines of India for 1927 states that the total return of fine gold was 62,498 ounces. Sales of gold and silver realised £266,702, from which £14,164 was deducted for royalty and refining charges, leaving £252,538 at credit of income and expenditure account. Sundry receipts brought the income up to £257,584. The profit for the year amounted to £40,934, which, with the balance brought forward and other profit items, total £47,118. The dividend of 9d. per share, payable April 21, absorbs £19,890, leaving £4,388 to be carried forward.

THE AGRICULTURAL BANK OF EGYPT.

NOTICE is hereby given that at a GENERAL MEETING of the above-named Company, held in Cairo on the 11th April, 1928, it was decided that a DIVIDEND of 10s. per Share on the ORDINARY SHARES of £5 each and £55 per Share on the DEFERRED SHARES of £5 each should be PAID on and after the 17th April, 1928, at the National Bank of Egypt in Cairo, Alexandria, and London (6/7, King William Street, E.C.4).

Payment will be made in London less Income Tax.

The said Dividends will be paid to the holders of Ordinary and Deferred Share Warrants to Bearer on presentation of the respective Dividend Coupons (Ordinary No. 25, Deferred No. 24) at the above Banks.

Forms for listing the above-mentioned Coupons will be supplied on application by the Bankers above mentioned.

Coupons must be left with the Bankers for previous examination.

By Order,
B. HORNSBY, President.

Cairo, 11th April, 1928.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended April 11:—

Egyptian Futures.—Sakel Contract.—Owing to the intervention of the Easter holidays trading this week has been restricted to three sessions. During these, apart from periodical bouts of profit-taking, there has been little pressure on this contract; to the contrary, owing to the sharp appreciation in both the New York and Alexandria markets, values here have again registered quite substantial gains, the level since we last wrote being 56 to 59 points higher for near and 64 to 66 points for new crop options.

Yesterday, we received cables from one or two sources regarding the water prospects; one of these was as follows:—"Water supply prospects improving owing good rains fallen Blue and White Nile. Rains coming rather late, but if continued might still substantially relieve situation." These reports, coupled with rather a poor New York last night, might have been expected to induce a certain amount of weakness in Alexandria this morning, but apart from a temporary downward movement at the opening, prices there advanced steadily throughout the session, with the result that our market has gradually improved from the earlier quotations, but not to the extent to keep us in parity with the overseas market. At the time of writing, Novembers locally are between 45 to 50 points below the corresponding position in the other market.

The trade situation remains pretty much as indicated in our last report and the demand for fine counts continues on a moderate scale. A further falling off has also to be reported in the offtake for "actual," business in both spot and forward cottons being on a much reduced scale; both spinners and manufacturers are evidently disinclined to trust present prices, and, judging from their inactivity, have evidently formulated a "hand-to-mouth" policy until they have more definite assurance that their customers are going to pay the enhanced prices which will have to be demanded as a result of the recent appreciation that has taken place in the cost of the raw material. In the meantime, it appears probable that the speculative element in Egypt will hold the market, especially in view of the fact that American values are now beginning to show an upward tendency; with this the case, we consider that any set-backs should be utilised to pick up cotton. The statistical position shows further signs of strengthening, and there appears little doubt that the "bullish" element will make the most of the periodical alarming crop reports that are sure to be circulated throughout the summer months.

Upper Contract.—Values in this contract have shown a gradual appreciation since we last wrote, both trade and speculative buying having been encouraged by firmer American advices and also by the strength recently displayed by the Alexandria market. Spinners' activities since we last wrote have only been moderate, due probably to the holiday season, and we anticipate a resumption of normal activity from this quarter during the course of the next few days. We can only repeat the recent views we have expressed about this contract, that later in the season purchases on any set-backs, or even at the present level, will ultimately be realisable at satisfactory profits.

Egyptian Spot.—Business has been on the quiet side during the three days under review. Immediately following our last week's report a fair amount of inquiry was in evidence, and it is our belief that if prices had remained steady an improvement in the offtake for spot cotton would probably have been seen. Unfortunately, another sharp spurt upwards has since occurred and for the time being has frightened traders out of the market. Reports from up-country have not been quite so satisfactory of late and there appears to be little inducement for spinners to purchase more than their bare needs at the moment. In the meantime, the Sakel position remains in the hands of Egyptian speculators, who are exploiting to the utmost the reports issued regarding the low level of the Nile. At 21.25d. Fully Good Fair spot Sakel looks grossly overvalued, but, under the conditions ruling to-day, the question of offtake as a factor of importance appears to be largely ignored. The inquiry for Sakel on our market is still concerned chiefly with cotton which is below Fair in grade, and prices for this class of cotton are hardening. Very scant attention has been paid to anything over F.G.F.

In Uppers, the usual steady business has continued. This market is very firm. In Sudan Sakel, a fair business has been maintained at steady rates, and there has been keen competition to secure the choice lots. Great interest has been displayed in Tokar Sakel, and the early arrivals have moved off rapidly. Forwardings to the trade for the week ending the 6th inst. were returned as 4,455 bales Egyptian and 1,382 bales Sudans; small figures, accounted for by the imminence of the holiday week-end.

Estimated spot sales for three business days, 600 bales Egyptian and 1,500 bales Sudan. Quotations of Sakel show an advance of 45 points, those of Upper and Pilion 35 points. F.G.F. Sakel to-day, 21.25d. F.G.F. Upper to-day, 15.20d. F.G.F. Pilion to-day, 15.50d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended April 4, state:—

The market during the past week has continued to fluctuate wildly but the tone at the close to-day was rather quieter; prices are round about those of a week ago. The week's summary of price movements is as follows:—Sakellaridis: May, 40.80 dollars; July, 41.10 dollars, 0.08 dollars up; November, 41.47 dollars, 0.32 dollars up; January, 41.12 dollars, 0.32 dollars up. Ashmouni: April, 27.45 dollars, 0.20 dollars up; June, 27.70 dollars, 0.11 dollars up; August, 28.10, 0.05 dollars up; October, 27.75 dollars, 0.12 dollars up.

Sakel.—The activity of the past few weeks has not abated and prices have fluctuated heavily up and down, this being especially so for the November option, which is the month in which most of the speculation is concentrated. To-day's market has been rather quieter than usual, but we doubt very much if this relative steadying-up can be maintained with the speculative open position as large as it is; we repeat our remark of last week, that little improvement in this direction can be hoped for until the speculators have liquidated or, at least, heavily reduced their present positions.

The commercial demand has been only very moderate this week. The falling off is reflected in the smaller turnover on the spot market at Minet el Bassal, where the daily sales have averaged only about 1,800 bales against about 3,000 bales last week. The statistical position shows considerable further improvement this week. The stock in Alexandria is now reduced to about 2,800,000 kantars, of which about 1,250,000 kantars Sakel. As regards the stock still up-country, reports are, as usual, contradictory; the quantity would appear to be from 700,000 to 800,000 kantars, of which from 250,000 to 300,000 kantars Sakel.

Questions have recently been asked in the Egyptian Parliament as to the intentions of the Government regarding its stock of cotton; no definite reply was given to questions. There is no doubt that the present is a most propitious moment for the liquidation of that stock, and it is to be hoped that the Government will seize the opportunity and release the cotton, the continued holding of which is against the interests of the growers in particular and the country in general.

The first arrivals in Liverpool of Sudan Gezira cotton have not been so freely absorbed as was expected; this relative apathy on

the part of spinnérs may be attributed to the apparently poorer quality of this year's crop coupled with the full prices asked by the Plantations Syndicate. The last reports from Liverpool indicate a rather better offtake, and we presume that this improvement in the demand may be put down to a reduction in the Syndicate's selling limits. Advices from the Sudan now indicate a Gezira crop of about 400,000 kantars against about 475,000 kantars last year.

Uppers.—This market has not followed the wild fluctuations of Sakel. There has been some good commercial buying and prices are fairly steady.

The week's receipts amount to 60,945 kantars, against exports 164,609 kantars; the stock in Alexandria stands at 2,811,917 kantars.

Spot: The market being closed to-morrow, Jewish Easter, we have only had five working days. The demand in general has fallen off, as is shown by the total of the sales put through, amounting to about 9,000 bales, of which we estimate 4,000 bales Sakellaridis, 3,900 bales Ashmouni and Zagora, 900 bales Pilion, and 200 bales other varieties.

Sakellaridis: The demand, which showed a marked decrease towards the end of the week, has been centred on the low and medium grades and, on account of the wide fluctuations in the contract, sellers have become nervous and have been slightly easier to deal with though it is difficult to find good style cotton in any quantity. The good grades have been almost entirely neglected.

Ashmouni and Zagora: All grades have been dealt in, and spot differences remain unchanged.

Pilion: There has been a very good business done in this variety in all grades, and short supplies have tempted sellers to be somewhat more difficult in their ideas of prices.

Other Varieties: A small business has been done in Nahda and Fouadi.

Up-country: Spot business is very quiet. The ginning factories are working only intermittently, but factory stocks are rapidly diminishing. It is not yet known whether the factories will be permitted to go on working after April 30, but the probability is that an extension of a few weeks will be granted, as is the case every year.

Crop, 1928.—The weather has been rather changeable but, on the whole, favourable. Sowing will not be completely finished before the end of the present month. The crop has, generally speaking, so far obtained an average start; some districts are earlier, whilst others are slightly later than normal. The question of water supply is causing considerable anxiety amongst growers. Below we give some figures of river levels and discharges. The Sudan gauges show as follows, as of the 4th inst.:—Malkal, 9.76 metres against 10.05 metres last year; Rosieres, 11.04 metres against 11.39; Wadi Halfa, 0.73 metres against 1.13. The discharge from the Assouan Reservoir on the same date was 624 cubic metres per second against 641 cubic metres at the same time last year and 636 cubic metres in 1926; the Reservoir levels compare as follows: 1928, 110.55 metres; 1927, 113.46 metres; 1926, 112.89 metres.

The net profits of the Banque Commerciale Roumaine for 1927 totalled 20,436,471 lei. The dividend is 2½ per cent.

Mr. J. Grant Forbes, Vice-President of Blair and Co. Inc., of 24, Broad Street, New York, has been appointed a member of the Autonomous Board of Administration of Monopolies of Yugoslavia to represent the holders of bonds of the National External Gold loans of 1922 and 1927. These loans have a charge upon the net receipts of the monopolies.

Notes of the Week.

Egypt and Britain.

It is an easy matter these days for any British writer to heap scorn and abuse on Egypt, for an error of judgment has been committed in Cairo. What is wanted is to point out the road that Egypt and Great Britain can tread together in friendship and alliance. The Egyptian Government at present has a point of view regarding Egyptian independence which is not Great Britain's. It takes little time for a Briton to decide that in the end the British point of view must prevail; an Egyptian must be allowed a longer period to arrive at that conclusion. For four or five years the British point of view lay dormant; Egypt availed herself of independence, and the Reserved Questions remained in the background. The Wafd persuaded itself that it would get round, over, through or under those Four Questions, or in some way eliminate them. When, therefore, Sarwat Pasha's draft Treaty brought two or three of those questions into crude prominence the Wafd roundly rejected the Treaty, but only to have its eyes opened to the fact that there were more things on earth (Sir Austen Chamberlain placed some of them in heaven) than were dreamt of in its philosophy. Before the Government of Nahas Pasha has been able to take its bearings afresh, it has clutched at what looked like a stick to defend itself against what it thought was a British attack. The stick turns out to be a rather deadly snake, and, in any case, Great Britain has no intention of attacking Egypt. On the contrary, she recommends the Egyptian Government to drop the would-be weapon before it does harm to Egypt. So far there have been a little shouting at a distance and some manœuvring for position. It is still possible to prevent an exchange of blows, which in the nature of things is likely to prove more uncomfortable for the smaller of the two combatants.

The Egyptian Dilemma.

It is an axiom of British policy in regard to any country with whose constitutional development Great Britain is in any way connected that, however gradual the process of evolution may have to be, it ought not to be marked, if it can possibly be avoided, by any retrograde step. In the case of Egypt it is clearly to Great Britain's interests that there should be no reversal to pre-Declaration or pre-War conditions. If this point could be fully appreciated in Egypt, many misunderstandings, we believe, would be avoided. The British Government, it cannot be too strongly emphasised, is not seeking to go back on any advance on Egypt's part that it has conceded or countenanced. Any fresh point, therefore, that arises between the two countries does not represent a sinister attempt on Great Britain's part to hail the Egyptians back into "bondage," but is merely a variation introduced—inevitably by Egypt herself—into the still unsettled theme of her independence. Until that basic problem is solved, there must necessarily be friction. The issue is relatively simple. In 1922 Great Britain announced that she was prepared to grant Egypt, which had been a Protectorate for seven years, independence, subject to certain technical restrictions. Protesting that they would take nothing less than complete independence, the Egyptians nevertheless availed themselves of the measure of independence actually granted, and by tacit consent both sides ignored the restrictions, the technical character of which was well exemplified by the fact that they could be ignored without effect on the ordinary administration of the country. Successive Egyptian Governments attempted to probe Great Britain's intentions that lay behind the suggested restrictions, but without reaching any definite conclusion until Sarwat Pasha succeeded in reducing those intentions to the terms of a draft treaty. That treaty, however, was rejected by the Wafdists because they had made no attempt to understand the British point of view and refused to believe that there could be any other point of view regarding Egyptian independence than their own.

Digitized by Google

A Way Out?

It was at the stage then reached that the British Government re-stated its case, not from any desire to go back on the conditions of the proposed treaty, but merely to remind the Wafd, which had accepted the responsibility of rejecting the treaty, that the British view of Egyptian independence did not coincide with the Wafd's. Even if it be admitted for the sake of argument that the Egyptian contention is wholly right and the British wholly wrong, Egypt, in view of the relative strength of the two disputants, is not likely to move the wall that bars her way merely by knocking her head against it. There must be a better method of reaching the goal in view, when Great Britain has expressed her desire to see Egypt reach that goal. It is in the hope that a better method may be evolved that the present Egyptian Government is urged to take careful stock of the situation instead of directing a fresh dash against the wall with its head, by means of the Public Assemblies Bill. The submission of that measure to the Senate is postponed until the last day of the month. *Amour propre,* as is pointed out on another page, is gravely involved on both sides, but that need not prevent the two parties, both of whom must be anxious to avoid a collision, from finding, in friendly discussion and reciprocity, a way out of the difficulty which will leave no sense of humiliation. If the Egyptian Prime Minister could persuade his colleagues and supporters to examine the rejected draft treaty in the light of the British Government's subsequent communications, he would find an eminently satisfactory way out of Egypt's dilemma, and the introduction of a time sliding-scale would mark an advance on the terms offered to Sarwat Pasha.

The Bulgarian Earthquakes.

The renewal after a few days' interval of the earthquake shocks in Bulgaria has been responsible for a disaster of far greater magnitude than had to be recorded a week ago. The loss of life, it is to be feared, amounts to a hundred, with many more injured, and the damage to property has been assessed at several millions of pounds. Philippopolis, the second largest town in Bulgaria, has suffered considerably, the railway station, the Military Club and a number of tobacco warehouses being among the buildings destroyed. The area that has incurred the worst damage extends from Philippopolis for some thirty miles eastwards; here whole villages have been destroyed, and the renewal of the earthquake shocks has caused panic in the district and added to the sufferings of the inhabitants. Bulgaria is being sorely tried by the disaster, which entails immediate relief for the unfortunate victims, of whom it is reported that eighty thousand may be homeless. All classes of the population, headed by King Boris in person, are engaged in the work of providing help; the Government has made a monetary grant and has postponed the collection of taxes, temporary accommodation is being erected, Kazanlik, outside the affected area, is supplying bread and money is being collected throughout the country for the relief of the sufferers. Bulgaria, however, is an impoverished State and will need help from abroad to enable her to cope with the effects of this sudden visitation. It is satisfactory to know that the Save the Children Fund have lost no time in lending the services of their organisation, and steps were taken last week to feed two thousand children in Philippopolis. Elsewhere in this issue is published the Fund's appeal for contributions, and we hope that there will be a wide response among our readers.

The Corinth Disaster.

Following upon the earthquakes that in turn during the last few weeks have damaged Smyrna and the central portions of Southern Bulgaria, a fresh shock destroyed the greater part of Corinth on the night of April 22. The new city lies near the coast, and the earthquake appears to have been confined to the immediate neighbourhood of the Canal, for, in addition to Corinth, Loutraki, a favourite watering-place on the other side of the indentation of the Gulf from which the Canal starts, and Kalamaki at the Ægean end have both suffered. Old Corinth, on the other hand, lying a few miles inland, is reported to have escaped, and the Canal itself, if affected at all, does not appear to have been badly damaged. As in Bulgaria, there has been some loss of life, and a large number of people have been rendered homeless. A further strain will thus be placed on Greek national finances, but fortunately for the victims of the earthquake the general well-being of the nation and its tradition liberality ensure that for them the effects of the disaster will be minimised as much as is humanly possible.

Balkan Peace Movements.

The example of the world at large, no less than a clearer understanding of their own interests, is helping to familiarise the countries of the Near East with the idea of an understanding among themselves that will rid each State of the old dread that its safety and territorial integrity are continually menaced from one quarter or another. A lead in the right direction has been given by the Greco-Roumanian pact of non-aggression and arbitration. It was, it is true, the easiest of all to conclude; but as a first step it is essentially a helpful one. Now comes the prospect of a Greco-Turkish understanding. As both parties claim to have been seized of the idea first, there is no need to inquire further into that aspect of the movement. Certainly M. Michalakopoulos, the Foreign Minister of Greece, is keeping himself by these methods in closer touch with world tendencies than he did three months ago when he poured cold water on the project of a Balkan Locarno, unless, indeed, he realised then that the quickest approach to a general peace pact in the Balkans would be by way of bilateral rather than multi-lateral agreements. If Greece and Turkey can bury the hatchet, there can be nothing improbable in a Balkan federation. The main factor in keeping the different countries apart is that each is confronted with a vicious circle of conditions that none has hitherto been able to break. Where Governments hold power precariously each must perforce beat loudly the nationalist drum; for their own safety they pander to the Army, the Army for its own interests is inclined to magnify the dangers with which it has to cope, and the Government to obtain revenue from the people—too much of which will be spent on the various branches of national defence—cannot view unfavourably any means of maintaining the national fervour at a high pitch. If Governments can be pledged to peace, the whole situation in the Balkans

will undergo a rapid change. National bitternesses will be found to be much less deep-seated than they are generally credited with being, and co-operation between the States will materially assist the economic development of the Peninsula. There remains, however, a considerable amount of spade-work to be done. Any peace movement to-day is apt to be regarded as emphasising the absence of Yugoslavia and Bulgaria from the picture. The remedy for this state of affairs can be found in the former country alone.

A Financial Adviser for Persia.

The appointment of the German banker, Dr. Lindenplatt, to succeed Dr. Millspaugh as Financial Adviser in Persia, may be regarded from two aspects, concerning, respectively, the interests of Germany and the interests of Persia. Upon the first it would be superfluous to remark the increase of influence which in the last year or two has accrued to Germany in the Near East. It is most noticeable, perhaps, in Turkey, where Germany appears to be pursuing much the same methods as she used in Morocco before the Great War, of giving without receiving, of advising without needing responsibility, and so forth. In Persia, of course, German influence must be considerable, if only on account of the Junkers air service. A German firm has been given the contract for building the first ninety miles of the Trans-Persian Railway from Bandar-i-Gaz southwards. Nor should it be overlooked that Germany has working agreements in this part of the world with Russia. It is in connexion with this last fact that the second aspect of this appointment, the purely Persian aspect, may be studied. For one cannot help thinking that what Persia needs above all things in her finanical policy is continuity; to make appointments of foreign advisers contingent upon the changing phases of foreign politics is, one thinks, a mistake. Much time is needed for a comprehensive study of the Persian financial problem, and it might have been better—other things being equal (which, unfortunately, they seldom are in Persia)—to appoint one of the Americans still serving in Persia to succeed Dr. Millspaugh. It is only too possible that just when Dr. Lindenplatt has mastered his intricate subject, someone else, of another nation temporarily in favour, may be chosen to succeed him. For no financial genius can compensate for the absence of experience in Persian ways, which can be learned only by sojourn in the country: there is no quick road to prosperity in Persia.

The Jidda Conference.

Soon after these lines are published Sir Gilbert Clayton, together with Mr. Cornwallis, of the Iraq Government service, will be conferring with King Ibn Saoud of the Hijaz and Najd at Jidda. It is to be anticipated that neither side in these negotiations will necessarily be at a loss for words upon the malpractices of the other. If first the Wahhabi ruler points out that the construction of the police post at Busaiyah—an erection of which he was not informed by the Baghdad Government—was a technical violation of the Uqair Protocol of the Treaty of Muhammarah of 1922, and that the pursuit, subsequent to the demolition of the post by Wahhabis, of the Akhwan by the Royal Air Force over the border into Najd was a violation of the Bahra Treaty of 1925, the British representatives will not be hard put to it to reply: (1) that Busaiyah, being seventy-five miles from the Iraq-Najd frontier, is not "within the vicinity of the frontier," nor, incidentally, is it the nearest watering-place to that frontier, there being two or three other wells nearer; and (2) that such armed invasions of Iraq as the Akhwan indulged in last November and in succeeding weeks were certainly not of the nature of the tribal raids which were contemplated when the Bahra Agreement was drawn up. There will, doubtless, be much talk around it and about, but we have every hope of a reasonable outcome of the negotiations. The continuance of Anglo-Wahhabi friendship is a vital thing, and everything possible should be done to preserve it. That King Ibn Saoud will be brought to understand that no State, whether ruled by a member of the Hashimite family or not, can indefinitely endure the violation of its borders, we have no doubt; nor will he less readily comprehend the absolute determination of the British Government to uphold its responsibilities in the Middle East. The Wahhabi ruler will realise, on the other hand, that in his own best interests, the ceaseless "drive," imposed by economic, geographical, and even religious considerations, which is at work in his domains, must not be permitted such an outlet as might result in the disintegration of his mighty achievement. But, as we have said, we have every hope that, after explanations have been given, foresight and prudence will govern both Wahhabi and British representatives in this Jidda Conference.

Persia and Iraq.

It is sometimes said that, as are the relations of Russia with England, so are the relations of Persia with Iraq. But it does not seem necessary to treat with international seriousness the last developments that are reported from the Persian Gulf. According to messages from Basrah the Persian authorities, as a result of a visit to Abadan by the Persian Minister of Finance, instructed the Iraqi port authorities to remove their officials from Abadan, and declared that warships had no right to lie at Abadan without the permission of the Teheran Government. In neither of these things, *per se*, is there much cause for surprise. The Persian Government seems to be well within its rights, and there should, therefore, be no reason at all why the matter should not be amicably disposed of. Caution is necessary in dealing with stories emanating from the Middle East which concern Perso-Iraqi relations, for on the dark background which is admitted to be the present canvas for Anglo-Persian relations, the temptation to splash with colour, and into over-relief, the most trivial incidents affecting the two countries, is considerable.

Palestine as a Crown Colony?

It is a danger which is sometimes overlooked by the most generous minds that, in treating of present-day Palestine, the future of the country as a self-governing Arab State is apt to be postponed and put aside in favour of a consideration of the country as a "Jewish National Home." This tendency is, moveover, precisely that which most drives the Palestinian Arabs into the fear that the promises made to them will not be fulfilled. One seldom meets it, however, in the intense form which is attributed to Colonel Josiah Wedgwood, who is reported to have said in Glasgow on April 21 that an Arab Assembly in Palestine would be premature, that Jews ought to press for at least another generation of Colonial Office rule, and that such a pledge was urgently necessary "owing to the intrigues typical of the Orient." It is to be feared that Colonel Wedgwood's heart is better than his head, for such *naïveté* is distressing. Why should it be supposed that intrigue is either necessary or culpable in the obtaining of promised rights? Has this Labour Member of Parliament, who at times is wont to out-Zionise the Zionists themselves, forgotten the very conception of the Mandatory system; has he forgotten also the Allied Declaration of November, 1918, made to the people of Arabia? Boldly to stifle any desires or expression of desires for representative government in Palestine is surely the last unwisdom in causing the Arabs to fear the Jewish immigrants. It may be argued that the Arabs of Palestine are unripe for self-government, but to imply that they are unripe because the Jewish experiment in Palestine might be endangered by such self-government, is manifestly to hinder that very Arab-Jewish *rapprochement* which is the hope of some many observers of and in Palestine. In other words, such deprecation of Arab feelings is foolish, if not mischievous.

THE PUBLIC ASSEMBLIES BILL OF EGYPT.

If there is to be an open breach between Egypt and Great Britain in the course of the next few days or weeks, it will be over the Public Assemblies Law, which has passed both the Legislative Assembly and the Senate, but, owing to a minor technicality, will have to be submitted again to the Upper House before it receives the King's signature. In view, therefore, of the gravity of the issue at stake it is necessary that both peoples should have a clear understanding of the measure itself and of the matters involved by its appearance on the Statute Book in the face of the British Government's warning that the proposed Law, by weakening the hands of the Egyptian administrative authorities, is liable to endanger the discharge of British responsibilities under the Declaraton of February 28, 1922. If it had to be accepted that a breach between the two countries is inevitable, and that for this reason the sooner the dispute is brought to a head, the sooner a permanent settlement will be reached, there would be no special point in evading the issue seemingly preferred by the Egyptian Government. There is, however, no ground for supposing that Egypt as a whole desires a serious trial of strength with Great Britain, and the latter is certainly not anxious to force an issue when British instinct is entirely in favour of, and believes in the possibility of, peaceful evolution. In these circumstances it is worth while to subject the problem to a close analysis, in the hope that the two parties can be prevented from drifting into a false position.

The Public Assemblies Bill, as was pointed out in these columns last week, represents in theory a legitimate aim on the part of the Egyptian Government to implement the Article in the Constitution which provides that the right of public assembly shall be regulated by law. Rightly or wrongly, the existing law on the subject is held to savour, at least in one particular, of martial law regulations, and for this reason there was a further impelling motive to modify it. The new Bill, however, suffered such material alteration in its passage through the Assembly that it may be doubted whether in its final form it responds to the requirements of the Egyptian executive authority. Of the twelve clauses comprising the measure the last three are of a more or less formal character. The first seven provide for the freedom of public meetings and demonstrations within the limits of the regulations set forth, which include forty-eight hours' previous notification by persons, forming a Committee, who will be held responsible for the maintenance of public order and the avoidance of speeches and acts subversive of public order or morals; and the attendance of representatives of the police or Ministry of the Interior, who must not sit on the platform (as at present), but are empowered to dissolve the meeting either at the request in writing of the Committee or in the event of grave disorders. If calm is restored, the meeting may continue or may be held again. Clause 8 provides for breaches of these regulations penalties not exceeding seven days' imprisonment and a fine of one hundred piastres. The crux of the whole matter lies in Clause 9, which renders liable to imprisonment not exceeding one month and to a fine ranging from two hundred to three thousand piastres those, whether officials, police or private persons, who dissolve, attempt to dissolve or threaten a public meeting in cases not provided for under the foregoing regulations. It should be obvious that in actual practice the effect of this latter clause will be to stultify all the precautions previously enjoined for the maintenance of order and the avoidance of action prejudicial to the cause of order. No one, whether policeman or a member of the Committee responsible for the meeting, will render himself liable to the penalties laid down by taking action which he would have to defend in a court of law against the unanimous evidence of all those whose conduct had been impugned, who, to save themselves from minor penalties, would emphatically maintain that there had been nothing approaching disorder when the attempt to dissolve the meeting had been made. Thus the law would effectually render Egyptian executive authority powerless to deal with a meeting or demonstration until it was completely out of hand and damage had been done. The Egyptian Government may be willing to incur the risk, but unfortunately in so doing it is requiring the British Government to stultify itself in respect of its undertaking to be responsible for the safety and property of all foreigners in Egypt, of whom there are many—Greeks, Italians and Syrians—scattered about the country, with property that is always the first to attract the attention of rioters.

It is, perhaps, not difficult to understand what happened to the draft measure in its passage through Parliament. The Egyptian delegates are particularly jealous of their newly-won democratic and constitutional rights and are apt to magnify the danger that they imagine they run of losing them. The right of public assembly is a cherished possession of democracy, and they were anxious to hedge it around with elaborate safeguards, but in so doing they undermined a fundamental requirement of every State—the maintenance of law and order. The measure was passed in its manifestly imperfect form, and the first notice to be taken of the matter was in the British warning of March 4. Inevitably the merits and demerits of the measure in question are lost sight of, and it is regarded only in the light of an object singled out for British "interference" with the internal affairs of Egypt. Thus "face" is heavily involved on both sides; for the Egyptian Prime Minister has laid much stress in public utterances on the unshakable determination of the Egyptian Government to enforce the Public Assemblies Law. Great Britain, on the other hand, has reserved her liberty to act as she thinks fit, if her warning in regard to the dangerous character of the law is flouted. If Nahas Pasha is the statesman that Egypt requires as her Prime Minister, he will withdraw, even at the eleventh hour, a measure not really helpful to Egypt, and provocative for Great Britain. If he does not do this, the British Government, we may hope, will make the necessary gesture. The Egyptian Government claims that the Public Assembly Law entails no risk of disorder arising from public meetings. If its view is correct, Great Britain has every reason to be well satisfied, as it will show that Egyptians have entirely changed such of their characteristics as made them liable to public excitement and disorder. On the other hand, the British Government can safeguard itself by pointing out that the first sign of disorder at a public meeting, whether foreign interests are involved or not, will have to be followed by such action on Great Britain's part as was evoked by the murder of Sir Lee Stack, as the law in question will have been proved to justify the British warning, and Egypt will have called down upon her own head the results of the flouting of that warning.

The Near and Middle East*

From Our Own Correspondents.

THE HIJAZ.

Jidda, April 10.

The Iraq Frontier.

The King is expected back from Iraq at a very early date, and the certainty that Sir Gilbert Clayton will arrive here shortly to discuss with him the situation arising out of recent untoward incidents on the Iraq frontier has resulted in a welcome slackening of a regrettable strain. The suggestion made in the editorial paragraphs of THE NEAR EAST AND INDIA that advantage should be taken of this lull to straighten out all outstanding problems as between Britain and Arabia is very timely in the circumstances. There is ample room for give-and-take on both sides and the leading article of the *Umm al Qura* this week makes an excellent attempt to review the situation dispassionately with reference to a recent interview with Sir Henry Dobbs, High Commissioner of Iraq, published by *The Times*. Whatever be the merits or demerits of the Arabian point of view regarding the Busaiya fort, there can be little doubt that there would have been no ruffling of the desert peace had it never been built; and King Ibn Saoud, of all people, can scarcely be expected to admit the contention that Busaiya was fortified for the protection of Najd against raids emanating from peaceful Iraq. King Ibn Saoud claims to have no desire to encroach on the agreed frontiers of British mandated territory; so there is ample room for the improvement of the existing frontier and commonsense must suggest that the desert is better left to itself. For a definite guarantee of peace on the desert frontiers of Iraq and Trans-Jordan—and King Ibn Saoud can both give and implement such a guarantee—Great Britain would find it well worth while to make certain obvious concessions. The Najd view may be taken to be that the frontier should be set back to the furthest limits to which custom immemorial has allowed the desert tribes to penetrate towards the sown—that limit is a matter of common knowledge and demands no special skill for its delimitation; and that the tribes of the sown, whose custom is to make seasonal migrations into the desert, do so under desert law and under the guarantee of the desert King in all peace and security; further that the Shammar refugees, an element of instability and danger in Iraq, should be sent back to their homes to make their peace with their rightful lord.

The King's Movements.

Mails received from Riyadh at Mecca on April 9 report that a formidable tribal concentration with the Iraq frontier as its objective has been disbanded and dispersed under the orders of the King by his cousin, Saoud ibn Abdul Aziz. This action secures peace pending negotiations, and the King has lost no time in taking advantage of the favourable development to make a tour of his country. On April 6 he left Riyadh with a large convoy of motor-cars for the Qasim, where, doubtless, he is at present interviewing tribal and other leaders. From there he goes to Haïl and thence to Madina, whence he is expected at Jidda about April 25 or a few days later. During that or the following week Sir Gilbert Clayton arrives here, and it is to be hoped that by the middle of May the settlement of the recent untoward incidents in Arabia will have been achieved.

The Pilgrimage.

The number of pilgrims in the country up to date is 55,969, which compares with 67,130 at the corresponding period of last year—a considerable decrease. There is talk of the possibility of the Egyptian Government's sending the Mahmal this year as an indication of the friendly relations subsisting between the two Governments of Mecca and Cairo, but the problem involved in the despatch of the Mahmal was settled once and for all last year, and the matter is of little practical importance except as a demonstration of the solidarity of the two Arabic-speaking peoples. The new Egyptian Consul, Said Bey Matar, accompanied by the new Vice-Consul, also named Said Bey, arrived here by the Khedivial Mail on April 5. Mazhan Bey Izz, the acting Consul, departs shortly for Genoa, amid the regrets of his many friends, who hope that he will before long return to a post which he has found both attractive and interesting. The number of Egyptian pilgrims does not seem likely to be very large this year—5,000 is apparently the number in view at present, although it may be increased at the last moment by recent satisfactory developments in the situation on the Iraq frontier. So far there is no definite indication of the numbers of pilgrims to be expected from British India.

The Weather.

A sudden and short-lived heat-wave swept over Jidda on April 5, when the maximum temperature rose to 99½ degrees—a higher reading than any recorded last year up to the end of July except on one occasion when the thermometer touched 100 degrees. The minimum temperature of the same day was 79 degrees. Two days later the maximum was down to 79 degrees and the minimum to 68 degrees. The rainlessness of the present season is to some extent being combated at high pressure by the erection of the new condenser, which is now complete and undergoing its trials. Within a short period it will be producing water to meet the shortage in the flood reservoirs.

TRANS-JORDAN.

Amman, April 13.

The Treaty with Great Britain.

The text of the new Treaty between Great Britain and Trans-Jordan has recently been published, although it has not yet been ratified. While some of the clauses have not proved entirely popular here, it is generally felt that the new status of Trans-Jordan will undoubtedly be beneficial. The difficulties of exact translation from English into Arabic are very great, and although, as in this case, experts may be employed, it is almost impossible to avoid occasional ambiguities.

The Wahhabis.

The Wahhabi scare hardly loomed as large here as it did in the English papers, and while a raid is, of course, a possibility, immediate danger of such a thing does not seem probable. On the other hand, should the Wahhabis choose to attack later in the summer, the chance of a surprise might be slightly increased, as the Trans-

Jordan tribes, who are now feeding their flocks towards the east, and could give notice of any approach, will then have withdrawn them further west in search of better pasturage.

General News.

The Crown Prince of Italy, who has been on a pilgrimage to Jerusalem, paid a visit to Amman on April 7, in order to inspect the Italian hospital there. He was met a few miles from Amman by Lieutenant-Colonel Cox, the British Resident, and he then proceeded to the hospital, after which he lunched with the Amir Abdullah. After lunch the Crown Prince visited the Royal Air Force Station, where a Guard of Honour awaited him. He remained a short time in the mess, and then inspected a contingent of the Trans-Jordan Frontier Froce at the Aerodrome, which, being situated on a high plateau, surrounded by low hills, forms a most picturesque background for ceremonies of this kind.

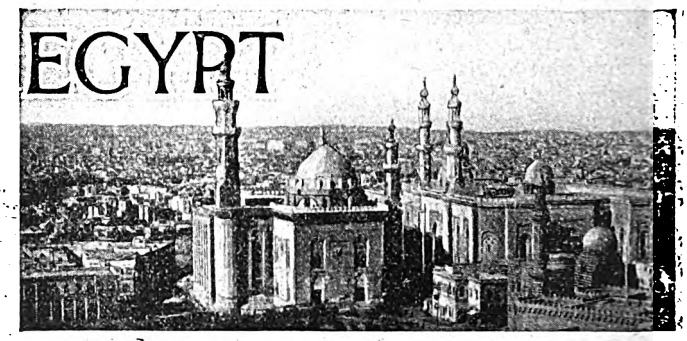
The locusts have not arrived in sufficient numbers to do much damage, but the crops are suffering from the depredations of a small beetle, which flourishes in such a dry season as we have had this year. It is hoped, however, that late rain may yet fall and save the crops.

On April 16 Old Paulines are giving a farewell dinner to Colonel Bewsher, who commands the Frontier Force, and is shortly returning to his own regiment, the Devons. He will be succeeded by Major Shute. A new regulation demands that the officer in command of the Frontier Force should belong to the Regular Army.

A Military Tournament, given by the F.F., is now touring Palestine and Trans-Jordan, and will visit Amman on May 7. To judge by a dress rehearsal, which took place at Zerka, and for which invitations were issued, it should be very popular.

The R.A.F. gave one of their most successful concerts on April 10. The new International Sports Club in Amman is proving very enterprising. The tennis court will soon be in full swing, periodical dances are arranged, and a 'cello recital, theatricals, and other entertainments are promised in the near future.

The tourist season has been very fair, though, no doubt, the number of visitors to Petra would have been larger had it not been for the Wahhabi scare.



Cairo, April 14.

Princess Mary.

The visit of the Princess Mary and Viscount Lascelles ended on the night of Tuesday, April 10, when they left Cairo by special train for Jerusalem in order to be present at the Greek Orthodox Easter festivities. Easter week was spent relatively quietly, the party visiting the points which had had to be left on their way to Upper Egypt and the Sudan, such as Sakkara, the Barrage, the Museum. On Easter Monday a dinner followed by a ball was given at the Residency. It was a great success. There were over seven hundred and fifty guests present, including Prince Mohamed Ali, Prince Haidar Fazil, the Ministers, the Diplomatic Corps, ex-Ministers, members of the Court household, leading British and foreign residents and a

large number of Egyptian notables, Alexandria being well represented. It was a warm night, and it was possible to take advantage of the gardens—which greatly added to the enjoyment and comfort of the guests. On the following evening the party were present at the first act of "Merrie England," for which Princess Mary and Viscount Lascelles specially put off for several hours the time for their departure for Palestine. King Fuad had lent his box and had sent Hassanein Bey to represent him, and the Princess and Viscount Lascelles received an ovation as they entered and left the theatre.

There can be no doubt of the success of this visit, private though it has been. The programme mapped out has been followed right through, with the solitary exception of the three days' visit to Khartoum, which had to be cancelled owing to the excessive heat at the time the Royal party reached Wadi Halfa.

An Address.

On Easter Sunday morning there was a pleasing little ceremony at the Residency when, in the presence of Lord Lloyd and Viscount Lascelles, Mr. C. B. Beasley, accompanied by Mr. George Robb, presented to Princess Mary, on behalf of the British Union, of which they are respectively President and Vice-President, an address of loyalty and welcome. The address was inscribed on illuminated vellum, which was decorated with Ancient Egyptian hieroglyphics. At the top appears a *cartouche* giving the name "Mary" in hieroglyphic form, with by its side the inscription "The King's chief Royal daughter, Mary, to her long life, prosperity and health." Down the right-hand side are figures of goddesses offering the symbols of life: the vulture Nekheibir, the goddess of Upper Egypt, with below the mythological figure of Isis, the goddess of Lower Egypt, with Lotus, next beneath the falcon Horus, god of Lower Egypt, and at the bottom the figure of Hathor, the goddess of Upper Egypt, with papyrus. It was altogether a most happy conception, and the Princess seemed delighted with it, particularly the *cartouche*.

The Post Office.

Once again I am constrained to tilt a lance at the Post Office in regard to the unsatisfactory method of delivery. Some time back I dealt with this question, and in a personal interview with the Minister of Communications and the Postmaster-General, as a result of what I wrote, I was assured that steps had been taken to adjust the matter. But nothing seems to have been done, for we are again suffering under the old delays which are a very serious inconvenience to the public.

The British Supreme Court.

Some little while ago the Judge of the Supreme British Consular Court suddenly went home on leave, leaving a great deal of work in suspense. For some reason best known to itself, the Foreign Office made no arrangements for his place to be taken either by a local barrister or someone from home, and the Supreme Court work has had to be done single-handed by the Consul-General in addition to his other heavy multifarious duties. This is not only unfair to him, but also most unsatisfactory for the community, for however able and excellent a Consular official may be—and everyone agrees that our Consul-General is exceptional in this respect—he is after all but a lay man and cannot bring to his work the wide knowledge and experience of law which the Judge of the Supreme Court could possess. It is high time, indeed, that the Foreign Office gave some attention to this question.

Helwan.

I spent Easter at Helwan and to my surprise found that health-giving and reposeful resort practically empty of visitors and the Grand Hotel on the eve of closing. Even though the hot weather is approaching, Helwan is still delightful and the exodus seemed so surprising that I inquired its reason. To my amazement I was informed, in several quarters that the reason visitors do not stay at Helwan after the middle of March, although in normal years it is perfectly suitable for them up to the middle of April, is that the tourist agencies warn visitors when they arrive that, unless they book to leave not later than the end of March, they will possibly be stranded owing to lack of passages home. Evidently they base their advice on the fact that steamers coming from the East are beginning in April to bring their full complement of passengers from India and beyond. But if visitors were only informed that they could always get passages, up to the time the leave season from Egypt starts, on the steamers of the various lines which ply between Egypt and European ports there is little doubt that Helwan would not be deserted so early in the year.

Sofia, April 18.

Shocks Political and Seismic.

The political and the meteorological seismographs in Bulgaria have, during the last few days, registered a series of shocks of the greatest importance, shocks which will not fail to make considerable impressions upon the life of the country.

The political shocks began in the Sobranye, on the discussion of the conditions preliminary to the stabilisation loan projected by the Bulgarian Government. As is known, these conditions were laid down in a protocol of the Financial Committee at Geneva, which provided for the radical transformation of the National Bank into a private institution, this change having to operate, for an indefinite period, in agreement with the Financial Committee and the Bulgarian Government. This reform prepared by Geneva, in conformity with the general plan of financial consolidation in Europe, being very unpopular in Bulgaria owing to political, social, and moral reasons, was seized upon by the Opposition as an argument for decisive action against the Government, which was accused of wishing to leave the central banking institution in the hands of capitalists of the old Populist Party, which is now a component part of the Democratic Entente, and which, it is said, would sooner or later gain possession of the shares and take control of the National Bank, and, therefore, of the country.

This argument contained obvious exaggerations, but they passed unnoticed in the excitement of the struggle, which was the more lively in that, this time, the group of M. Tzankoff, President of the Sobranye, came out into the open, and without mincing matters, attacked the economic and financial policy of the Government. And this it is which gives the situation a new aspect; the friends of M. Tzankoff—at the moment, thirty, but one is assured that they would become sixty as soon as the Government were overthrown—having

voted against the protocol, on which subject M. Liaptcheff had avoided putting a formal vote of confidence, but the rejection of which could not fail to bring about the fall of the Cabinet and the dissolution of the Sobranye, the Government could obtain the ratification of this document only with a greatly reduced majority, and, then, only with the help of the Macedonian group and of the small group of Stambolovists. As a result, the long-threatened rupture between the President of the Council and the President of the Sobranye has now come to a head.

What will be the consequences of this rupture? They can go further and influence the composition of the Cabinet and the composition of the Governmental group in Parliament. It is being asked whether M. Tzankoff, elected to the presidency of the Sobranye by a parliamentary fraction of the Democratic Entente on the proposal of the Government, will be able to remain in his place while voting against the Government and in determined opposition with his parliamentary following. In other words, the question is whether the Government, such as it is to-day, can for long withstand the attacks made on it by other parties and by the recalcitrants within its own party, and whether M. Liaptcheff will not be obliged to remodel his Cabinet, changing its complexion in order to free itself definitively from M. Tzankoff and to bring about a *rapprochement* with the Moderate groups in the Opposition. Lastly, it is being asked whether the present Sobranye could show sufficient suppleness to lend itself to the wished-for changes without compromising the position of the future Cabinet.

All this indubitably tends to make one believe that the political shocks have only begun and that they will continue until the logical *dénouement* of the crisis provoked by the attitude of M. Tzankoff and of his friends, at whom the *Préporetz*, the personal organ of M. Liaptcheff, has not hesitated to thunder, accusing them of separating themselves from the Democratic Entente, and, by a series of actions directed against the Government, of having violated the discipline, the moral, and the unity of the Party. One understands what that means between allies in power.

Earthquakes.

Happily, these political shocks are not dangerous; they can even be beneficial if they help to clear up a situation the confusion of which was only harmful. The seismic shocks, on the other hand, have been frankly tragic, plunging into devastation and desolation a whole region in the two small towns of Chirpan and Borisovgrad, and claiming more than 150 victims, of whom 40 or 50 are dead—every day, moreover, the number of the dead increases, wounded succumbing to their wounds. The destruction, on a rough estimate, is valued at 300 to 400 millions of leva, and one does not know where the figure will stop. The extent of the catastrophe has momentarily silenced the political rancours and rivalries, and one thinks only at this moment of organising for the work of feeding the homeless and of finding them shelter. This is a heavy and difficult task, in which everybody is helping in a spirit of national solidarity. Already a subscription list has been opened in the different communities in Bulgaria, at the head of which comes the municipality of Sofia, a second among the co-operatives, a third among the merchants, a fourth among the banks, and so forth. To centralise this service, the Government is about to draw up a law to institute a kind of Central Committee under the supreme direction of the Minister of the Interior, President of the Council. It is quite understood that the greater part of the material for repairing the disaster will be made by the State; the Government will immediately ask the Sobranye for the necessary credits. The magnitude of the disaster is attested by the following figures, representing houses destroyed in some of the localities which experienced the earthquake; Borisovgrad—the whole town; Chirpan, the whole town; Omourovo, the whole village; Michailovo, 270 houses; Arnaoutetu, 50, including the school; Jambazeto, 100, including the church and the school; Vodenicharovo, 70; Samouilovo, 120; Shivatchevo, 200, including the church, the school, and the co-operative store; Belovolozarovo, 42; Rouptzi, 220; Malko-Tirnovo, 180; Vinarovo, 200; and Yavorovo, 200.

THE BULGARIAN EARTHQUAKE.

An Appeal for Funds.

We are informed by the Save the Children Fund that immediately on receipt of news of the earthquake, the representative of the Fund in Sofia went to Philippopolis and made inquiries as to the incidence of distress among families with young children in the affected area. The suffering was found to be acute, many thousands of children of all ages being homeless and destitute in the general panic and amid the ruins of their homes. As soon as this news reached London, the Save the Children Fund made an immediate advance, and, as a result, relief was provided last Sunday for 2,000 children belonging to Philippopolis and the surrounding district. This relief will be continued as long as funds are available.

The Bulgarian Minister in London (M. Hadji Mischeff) has expressed his thanks to the Save the Children Fund for its prompt action. It is especially appropriate that the earliest practical expression of British sympathy with the Bulgarian people should have been undertaken by this Fund, which has already forged many links of good will between the two peoples. It carried out extensive relief work among the refugee populations and constructed the model village of Atolovo for refuge families, which, though in the earthquake area, has fortunately escaped injury. At the present time, the Save the Children Fund is engaged in organising workschools for the vocational training of Bulgarian children and it also maintains a home for waifs and strays in Sofia.

Among those who have already given their support to the present emergency relief effort are Sir Kay and Lady Muir, the Right Hon. Noel Buxton, M.P., Mr. and Mrs. C. Roden Buxton and Sir Walter Napier. Further donations are urgently needed in order to maintain and to extend the work of relief on behalf of both adults and children as long as the need persists, and should be sent to Mr. Hubert D. Watson, C.I.E., Hon. Treasurer, the Save the Children Fund, 26, Gordon Street, W.C.1.

[Reference to the series of disastrous earthquakes in Bulgaria will be found on page 514 and above. We hope that a generous and early response will be made to the Save the Children Fund, in practical support of the expression of sympathy which the British Government has already conveyed through His Majesty's Minister in Sofia to the Bulgarian Government.—Ed.]

The situation throughout Luristan is now reported to be satisfactory, according to a Reuter message from Teheran. Some rebel chiefs have submitted to the General Officer commanding at Khorammabad, and declared their allegiance to the Shah. After visiting Khorammabad the Shah proceeded to Kermanshah.

The Egyptian newspapers state that the Minister of Pious Foundations in Cairo has asked the American missionary, Dr. Zwemer, to return his permit for visiting mosques, it being alleged that he distributed tracts at Azhar University. Dr. Zwemer, it is stated, has refused to return the permit, and the Egyptian Government has asked the American Legation to intervene.

Angora was reported last week in the Turkish Press to have been suffering for four days from a shortage of bread. Owing to the lack of transport it had not been possible to keep the Turkish capital supplied with grain, but the Prefect was able to announce the discovery of a stock of corn in the neighbourhood which would enable the shortage to be relieved.

A pilgrimage to the Holy Land, organised by the Catholic Association, began on April 17, when a party of 40, under the leadership of the Bishop of Leeds, left London for Marseilles, where they embarked for Beyrout. Motor cars will convey the pilgrims, by way of Mount Carmel, to Nazareth, and they will spend a week in Jerusalem, paying visits to the Holy Sepulchre and a number of sanctuaries. The party will return to London on May 17.

QADIANIS IN KABUL.

To the Editor of The Near East and India.

Sir,—In connexion with an interesting review, in your issue of April 5, of a book on Afghanistan by Sirdar Ikbal Ali Shah, may I say that the book seems to me to suffer from something more than the mere "urgency imposed on the author to have it ready in time for the Royal Afghan visit," for in one respect at least the account given by the Sirdar is not only inadequate but also untrue? I refer to his story of the stoning of Afghan Ahmadis. The entire account is fantastic. No party of Ahmadis ever applied for permission to enter Afghanistan for purposes of proselytising. Only in the time of the Amir Habibullah Khan, Shahzada Abdul Latif, himself an eminent divine who had performed the coronation of the said Amir, and who had subsequently accepted the Ahmadiyya doctrine at the hands of the Founder in India, was allowed to return, but was arrested on his arrival in the Afghan territory, and later imprisoned. Further, no religious debate was held in the manner suggested in the book. Only, after months of torture, when he was threatened with death in case he did not recant, the Shahzada himself asked to be allowed to answer the charge of heresy against him. The Shahzada was the only one on the Ahmadiyya side against eight Mullahs, headed by Khan Mullah Khan, on the Afghan side. As only written papers were exchanged, nobody in the congregation ever knew what passed between the Shahzada and the Mullahs. There was nothing of a "unanimous verdict" by any "conference." The so-called debate lasted from about 7 in the morning till 3 in the afternoon, and a little later the Shahzada was declared a heretic. The Amir did not attend the debate, nor is it known whether he ever read the proceedings of it. Only the Fatwa was sent to him, which, having been ratified, led to the stoning of the Shahzada. This was in 1903. No question of a ban on Ahmadi missionary propaganda was raised, and as no mission had been sent, none could be returned, as suggested in the book!

As for the actual stonings, including, apparently, those which took place more recently under the present ruler of Afghanistan, Sirdar Ikbal Ali Shah suggests that they were due to "infidelity" on the part of the victims, and that they took place in spite of the warning that it would cost them their lives if they visited Afghanistan on a proselytising mission. This is a curious statement in face of the text of the judgment delivered in 1924 by the Afghan Court of Law, and ratified by the two Courts of Appeal. This judgment, in the case of the first stoning under the present ruler, was published in the Kabul paper named *Haqiqat*, dated Safar 6, 1343, A.H. (September 6, 1924). This is how it concluded:—

> "Consequently it is proved from the admissions of the Mullah Nimatullah that he is one of the followers of Mirza Ghulam Ahmad of Qadian. . . . The punishment of such a man is death."

And significantly adds:—

> "Before this also in the reign of the blessed martyred Amir (Habibullah Khan) a similar sentence was passed and carried out concerning a man named Abdul Latif, a follower of the said Qadiani . . ."

Similar judgments were passed in the two cases which followed the execution of Nimatullah, and the three taken together occurred after a declaration of religious liberty and after the Afghan Government, in reply to representations from Qadian, had sent a written assurance that Afghan Ahmadis would no longer be molested for their religious beliefs.

There is, however, good reason to believe that the Afghan rulers themselves have had little or nothing to do with these sad events, and that they were due to the fanaticism of Mullahs who could not be appeased except by innocent blood, and whose unwholesome influence on the religious policy of the country, the present ruler has regretted more than anybody else.—I am, etc.,

T. D. Ahmad.

34, Tavistock Square, W.C.1. April 14.

NEWS IN BRIEF.

Lord Meston was on April 21 unanimously elected Chancellor of Aberdeen University.

It is announced in Teheran that the Perso-Polish Commercial Treaty has been signed.

Lieutenant-Commander MacDonald, who is flying from London to Delhi, arrived at Heliopolis on April 18.

The Cairo to Cape motor expedition left Rejaf by steamer on April 18 for Kosti, it being impossible to attempt to traverse the Sudd region by car.

The appointments are announced of Comte de Chambrun as French Ambassador to Turkey, and M. Puaux to be French Minister in Bucharest.

The King of Yugoslavia returned last week to Belgrade from his country estate. The Yugoslav Minister for Foreign Affairs, M. Marinkovitch, returned to Belgrade on April 25.

Princess Mary, accompanied by Viscount Lascelles, arrived at Marseilles on April 20 on board the steamer Ranchi on their return from Palestine by way of Egypt.

Lord Eversley, who died last week at the age of 97, will be remembered by readers of The Near East and India as the author of "The Turkish Empire," a book published when he was 85.

The Prefect and Municipal Council of Constantinople have decided to invite the Ghazi to spend the summer season this year in the Palace of Dolma Bagtche, on the Bosphorus, where he stayed last summer.

Under the auspices of the Vatican, a Congress is shortly to be held in Rome for the purpose of reorganising the Armenian Catholic Church, whilch, like the Armenian Orthodox Church, has suffered heavily from the dispersal of the Armenian community a few years ago.

King Amanullah of Afghanistan is expected to arrive at Teheran for his Persian visit on June 10. This date is later than originally arranged, and indicates that King Amanullah's visit to Russit will be longer than anticipated, as he will arrive there direct from Moscow after his Russian visit.

HANDSOME McDONALD.

"MEMORIES OF AN EIGHTEENTH CENTURY FOOTMAN, JOHN McDONALD. Travels 1745-1779. (London: Routledge. 10s. 6d.)

Sir E. Denison Ross and Miss Eileen Power continue, in Messrs. Routledge's "Broadway Travellers' Series," to make available for us records of travel, full of interest, which have become overwhelmed in the moraine of the ever-advancing glacier of Time. This book, for instance, was published in 1790. It seems to have fallen almost still-born from the Press and has never, till now, been reprinted. The original edition has become so rare that its existence was almost unknown till, to our good fortune, Mr. John Beresford, that lover of the eighteenth century, "got a line on to it," fished it out and now presents it to us, well edited and annotated, in the beautiful guise of its companions in this series.

The only fault we have to find with Mr. Beresford is that he calls his hero a "footman." This he certainly never was, except perhaps in his earlier days. His profession was that of a body-servant, frequently of a confidential and intimate nature. When in India he was a good deal more. He had numerous masters, all of whom he appears to have served faithfully and well, so that, on leaving one situation, he never had any difficulty in quickly securing another to his taste. His popularity with the other sex, of which he is inordinately proud, soon taught him that service with bachelors suited him best. But as "handsome McDonald" he was known and clearly many feminine hearts fell to him.

His father, a big grazier near Inverness and well connected, died in the '45, leaving a young unprotected family on his remote farm. McDonald himself was only four and a half years old. The eldest, a sister aged 14, took charge and, after a two months' Odyssey, brought them safely to Edinburgh. The account of this journey, where their scanty funds, amounting in all to £1 3s. 4d., had to be eked out by begging is told quietly and without exaggeration (indeed, the stamp of truth is on his whole narrative). It is most touching, and we greatly regret that our space makes it impossible to quote it. His experiences, largely as a street urchin and then stable-boy, in Edinburgh are told in considerable detail and bring out the latent pride which enabled him to preserve his self-respect and ambition.

His service, first with families and later with gentlemen of good (usually Scottish) standing, is the occasion for much interesting matter and takes us all over Scotland, England, France, Spain, etc., and even to Bombay. It is the account of his years there (1770-1772) which will specially interest readers of The Near East and India. McDonald had no colour prejudice. He took a man as he found him, so that his remarks on life in those days in Western India have a special value. He was self-educated, but clearly his constant exertions to improve himself in this respect were well spent. His style is distinguished by perfect candour and by a crystalline clearness, his language is well chosen and free from flowers.

We leave him, at an inn in Toledo, the happy husband of a Spanish sweetheart whose acquaintance he had made on a previous visit to that town, to such purpose that the young couple started life together with a fine strapping lad whom he found, known as "John England."

McDonald, by the merest chance, was actually witness of the death of Lawrence Sterne. He was also remarkable as one of the first to use an umbrella in the streets of London.

The illustrations (mostly of contemporary prints illustrating Scottish places mentioned in the book) add to the enjoyment of the reader. C. S-W.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.

AN ACADEMIC VIEW OF GREEK ART.

"ART IN GREECE." By A. de Ridder and W. Deonna. (London: Kegan Paul, 21s. net.)

One would have thought that it was a mere platitude to assert that no man can be at his best when transferred to the skin of another. If any further proof of the truth of this proposition were required, it would be provided by the book under review. It was planned by M. de Ridder, the famous Curator of the Louvre. It was to be, not a history of Greek Art, but a study of Art in its relation to Greek society and life. He had composed the whole in his brain but all except the first pages died with him. That this was so must be lamented by all who have read the small portion which he put into writing. The clear fresh brain of the author working at a subject entirely congenial, is seen putting old things under a totally new light and promising a book of very special interest. But his death cut us off from what would certainly have been a real intellectual enjoyment. What he wrote, however, remained as well as the general *schema* which he had planned for the rest. These were handed to Professor Deonna, of Geneva, and he was asked to complete the work. Two more different men could hardly have been conceived. The learned Grecian, the brilliant artist, the keen man of intellect, the possessor of a peculiarly broad outlook had died. His successor is a mere learned Professor who, besides being hampered by the plan laid down by his predecessor, is able to give us nothing more than a very efficient, very learned, very academic and rather dry history of Greek Art. The very language used is the direct antithesis of what we should have had from M. de Ridder, who would never have told us that "in the 4th century architectural decoration had become of greater importance and the pediment is advanced, antæ limit it at the sides, and the stele takes on the appearance of a naiskos." There is far too much of this jargon through the book. Nor would he have wearied us with constant repetition of lists of works (unillustrated) till we almost cry out at the hundredth repetition of the words "Blond Ephebus." The only side of the history which we hear nothing of is the æsthetic. Perhaps this is fortunate, for we are inclined to fear that we should have had something far from edifying from a man who can write with satisfaction and not without a touch of pride:—"How many forms are there in our daily life which we inherit from Greece—architecture with Ionic and Doric columns and triangular pediments; masks of Phidian style, even on street lamps! Greek art, which educated antiquity and the modern world, lives yet."

The translator was presumably handicapped by the language of the original. He certainly has done de Ridder's part much better than the continuation. It must have been somewhat dreary work anyhow. Possibly the same inherent defect accounts for the bad proof-reading. We wish that we could say a good word for the illustrations. But they (at least the plates) are poorly produced and are far too few. C. S-W.

THE HINDU RITE OF WIDOW BURNING.

"SUTTEE." By Edward Thomson. (London: C. Allen and Unwin. 7s. 6d. net)

The sub-title of this interesting essay indicates that it is an historical and philosophical inquiry. To take the history first, it may be said that Mr. Thomson gives a fair, and, on the whole, accurate, account of the later period, covering the gradual move of the British Administration towards prohibition of the rite, so cherished by some

Digitized by Google

sections of Hindu society, and also the survivals of the practice up to the present time. For the earlier period his knowledge is apparently incomplete. Among the eye-witnesses' narratives collected in an appendix, there is nothing to represent the 17th century: it is a pity he has not included Francisco Pelsaert's vivid account, to take one out of several known to be in existence; and, if he had, he might have seen cause to modify the statement (p. 57) that Mogul attempts to suppress the practice "were substantially successful" in the regions directly controlled by Delhi. Pelsaert mentions two or three cases a week in Agra about the year 1625, and that can scarcely be described as "substantial success" in what was still the capital city of the Mogul Empire. Mr. Thomson speaks of an increase in the practice after 1680, but it is perhaps equally probable that the increase is in our knowledge of the facts, rather than in the facts themselves. On the philosophical side, the author gives a just view of the various religious and social ideas which operated to maintain a practice, ghastly and brutal in itself, but yet not devoid of a genuine catharsis in the determined heroism displayed by some of the sufferers. He has no sympathy with the sentimentalists of the moment, busy in idealising what they do not understand; and his attitude towards his subject is essentially reasonable, so that his essay can be confidently recommended to readers who wish to get near the facts.

"DIGGING" IN ASSYRIA, CHALDEA, EGYPT AND PALESTINE.

"THE GLAMOUR OF NEAR EAST EXCAVATIONS." By James Baikie. (London: Seeley Service. 10s. 6d.)

Mr. James Baikie has done such good service in the past by his popular writings in which he makes the dead live again that no one who, without being a specialist, desires to learn something of the revelations being daily made by students excavating into the remains of old times can afford to neglect any of his books.

This time he mingles his old theme with an account of some of the more remarkable field work and of some of the more remarkable field workers. The area treated of is indicated above. We are promised a further volume on the remaining parts of the Near East. If it is as good, as lively and as stimulating as this one is, it will be very welcome. We specially like the, at first sight, rather miscellaneous but excellent illustrations scattered through the work. Most of them are not even referred to in the text, but yet they "fit in" remarkably well. We presume that the author would tell us that it was want of space that prevented the inclusion of any accounts of the Tel-el-Amarna finds but we cannot help regretting the omission. Perhaps the only tragic note in the book is the admission that excavation necessarily means the demolition of much that has survived the centuries and that can never be replaced. C. S-W.

AN EARLY SCHOLAR IN BENGAL.

"JOHN MARSHALL IN INDIA." By S. A. Khan. (Oxford University Press. 21s. net.)

John Marshall was a Cambridge graduate, who, being debarred by technical reasons from a Fellowship of his college, entered the service of the East India Company and worked from 1668 to his death (in 1677) for a short time in Madras, but mainly in Bengal. He was an ardent student of the country and left a mass of notes on all sorts of topics, which ultimately found their way into the Harleian collection. Professor Khan now gives us these notes textually, but sorted under appropriate headings, and profusely annotated. The result is a book which can scarcely be described as readable, but which ordinary readers can dip into with the certainty of finding instruction or amusement, or both, while for students of the period it is definitely indispensable. The Professor claims too much, however, when he suggests that "the book will revolutionise our conceptions of seventeenth century India." It fits in precisely with what can be gathered from the extant literature of the period and contributes many details to the picture; but if anyone finds his conceptions revolutionised by it, he must have been very much in the dark.

The Editor has had valuable assistance in annotation from specialists like Miss Anstey, Sir Richard Temple and others, and the notes are frequently important and usually adequate. Some points are left unexplained, as, for instance, the "new pice" mentioned on p. 126. A few notes are misleading, such as the explanation of the Mirbahr (p. 97) as "custom or harbour master." The official description of that functionary's duties is too extensive to be brought under a single rubric; but when, as in this case, he was stationed on a river, he had nothing to do with either harbours or customs in the modern sense, and "Overseer of Inland Navigation" would give the reader a better idea of his actual position. The cryptic expression "Milkees or Almesman's house" is misinterpreted in the note on p. 106. A *milki* was not, as there stated, a proprietor or farmer, but a man who enjoyed a grant of revenue for his subsistence, and to describe him as an almsman is sufficiently precise. We have noticed a few other imperfections, but to detail them at length would give an erroneous idea of the value of the annotations; taken as a whole, it constitutes a remarkable achievement, on which the Professor and his collaborators can be cordially congratulated.

THE EGYPTIAN DIRECTORY.

The 1928 edition of the Egyptian Directory brings this useful publication, now in its forty-second year, up to date. It contains, in addition to the names and addresses of the chief inhabitants of the different towns of Egypt and a list of Sudan addresses, very full information regarding Egypt, which makes it a "Whitaker's Almanac" for the country. A separate section gives a general business list grouped under trades, professions, etc.; consequently it is invaluable to those with business connexions with Egypt. The price of the Directory is 25s. post free. Copies can be obtained from The African and Colonial Press Agency, 9, Quality Court, Chancery Lane, London, W.C.2.

PERSONAL AND GENERAL

TO-DAY

April 26, 1928 (New Style).
April 13, 1928 (Old Style).
Dulkaada 6, 1346 A.H., of the Muslim Calendar.
Iyar 6, 5689, of the Jewish Calendar.

Field-Marshal Sir Claude and Lady Jacob returned on April 22, from Switzerland, to 4, Culford Gardens, S.W.3.

Sir Stanley Reed, prospective candidate for the Stourbridge Division, and Lady Reed return to Wendover from India on April 22.

Mr. Charles S. Wilson, American Minister to Bulgaria, arrived in London last week from Sofia, and is staying at the Carlton Hotel.

Sir Edward Manville left London last week for Bucharest, and will return to 3, Whitehall Court during the first week in May.

Sir Kay and Lady Muir, who had been staying at the Ritz Hotel for a few days, left London last week for Blair Drummond, Perthshire.

Captain McCallum, who is driving by motor-car from Calcutta to London, arrived in Sofia on April 20. He left two days later for Roumania via Rustchuk.

Major and Lady Zia Wernher arrived in London on their return from Egypt on April 25. They will stay a few days and then go to Thorpe Lubenham.

Sir Bruce and Lady Bruce-Porter, Sir Kenelm Cayley, and Sir William and Lady Peat left Southampton on April 20 in the s.s. Arcadian on a cruise to Constantinople and other Mediterranean ports.

The Persian Minister held a reception at the Legation in Bramham Gardens for members of the Persian colony yesterday afternoon, on the occasion of the anniversary of the coronation of the Shah of Persia.

The Counsellor of the Bulgarian Legation and Mme. Lessinoff entertained a large party at dinner on April 20 at their home in The Boltons, in honour of the American Minister to Bulgaria, Mr. Charles S. Wilson, and of the Bulgarian Minister and Mlle. Hadji-Mischeff.

Sir Gilbert Clayton left London on April 19 for Jidda, where he will meet the King of the Hijaz and Najd, and will discuss with him, on behalf of his Majesty's Government, various outstanding questions affecting the relations of the kingdom of the Hijaz and Najd with the neighbouring States of Iraq and Trans-Jordan. He will have with him Mr. K. Cornwallis, Adviser to the Ministry of the Interior in the Iraq Government, Mr. G. Antonius of the Palestine Service, and Flight-Lieutenant G. M. Moore, of the Royal Air Force.

Sir George Clerk, British Ambassador to Turkey, returned to Constantinople last week from leave.

Prince Ramatullahjan and other members of the Afghan Royal Family, and the Afghan Foreign Minister, arrived last week at Peshawar from Europe on their way to Kabul.

Captain W. Attwood, one of the pilots of the Imperial Airways service between Cairo and Baghdad, has just made his 50th flight between those two cities.

An association for the study of International Law has been founded in Belgrade, under the presidency of Professor Mileta Novakovitch, of Belgrade University. The association will devote itself particularly to subjects affecting the Balkans and Central Europe.

On April 20 the sixteen-year-old son of General Laidoner, former Commander of the Estonian Army, who was chairman of the League's Mosul Commission, was found shot, with a revolver in his hand, in his father's flat at Tallinn

NEWS IN BRIEF.

The Greek Government gave a luncheon on April 17 at Athens in honour of Sir Herbert Samuel. Those present included the Greek Ministers for Foreign Affairs and Communications and the British Minister.

The Persian Government has appointed Dr. Lindenblatt, a German banker, as financial adviser in succession to Dr. Millspaugh, the American adviser. Dr. Lindenblatt will leave for Teheran at an early date.

Sir Ludovic Charles Porter, K.C.S.I., of Devonshire Place, W., Finance Minister to the United Provinces of India, 1921-1923, who died on March 9, aged 58, left estate of the gross value of £4,115, with net personalty £239.

Principal Joseph Morlais Davies, of the South Wales Baptist College, whose death occurred on April 19, had travelled extensively on the Continent and in the Near East, and found a knowledge of the Welsh language of great help in the acquisition of Modern Greek.

It is announced that following an election dispute between two groups of supporters of opposing political parties, a serious affray occurred in Baghdad at midnight on April 21. Two men were shot dead and three removed to hospital with stabbing injuries. Several arrests were made.

The Milan correspondent of *The Times* reports that Signor Mario Lago, the Italian Governor of Rhodes and the Dodecanese, on April 9 handed over for use in perpetuity the small Auberge, which before 1523 had been the property of the Tongue or Langue of Italy, to the Knights of the Sovereign Order of Saint John of Jerusalem.

Clouds of locusts appeared on April 16 over Jericho, flying towards Jerusalem, but were checked by the wind. The Palestine Department of Agriculture is attempting to exterminate the locusts with flame guns. Travellers coming from Trans-Jordan report having passed though five miles of locusts between Maan and Amman.

The national celebrations in Bulgaria of the Jubilee of the renaissance of the realm in 1878 and of the Millenary of what is regarded as the Golden Age of Tsar Simeon will begin on August 24 at Preslav, the capital of the mediaeval kingdom of Bulgaria. On August 25 and 26 the defence of the Pass against the Turks under Suleiman Pasha in 1877 will be commemorated at Shipka.

The King of Afghanistan has practically recovered from the effects of his recent operation for tonsilitis. The King has presented the Berlin nursing home with a modern lighting apparatus and has endowed his room in the home for the free use of patients approved by the directors and the Afghan Legation for the period of ten years, and has made gifts of money to each member of the staff.

The Board of Management of Oxford University proposes to proceed to the election of one Nubar Pasha Armenian Scholar in next Michaelmas Term. The scholarship is for the encouragement of the study of the Armenian history and literature, is of the value of £100 a year, and is tenable for three years. No person is eligible whose vernacular language is Armenian, but subject to this provision the scholarship is open to any member of the University.

THE WEEK AT HOME

London, Tuesday Morning.

Notes on War.

It may be assumed that everyone is familiar with the contents of the recent Notes, issued from America and from France, on the subject of War. The American plan is, in a word, boldly and unreservedly to denounce war as a means of argument; the French plan is, in a word, to distinguish between wars of aggression and wars of defence.

Unquestionably the geographical factor provides the main element of difference between the two Notes. It is not difficult for America, in her absolute security and unthreatened position, to lay down rules of guidance for the rest of the erring world; we can all solve our neighbours' difficulties. But upon the realistic basis, it is hard indeed to dissent from the analysis of France upon this question of war, on which theoretical unity is unquestionable.

Englishmen of this generation at any rate know that unscrupulous minds are a fact, probably a chronic fact, and that defence must be made against them. They know and understand the meaning of security, comprehension of which hardly occurs to the mind of the idealist. In short, their sympathies as practical men are with the French in this matter, however sincerely and longingly they may regard the American proposals. They are agreed that "private wars" or wars of aggression should be a thing of the past, but "police wars," or wars of defence, seem to them to come into another category.

Journalism and Ministers.

Mr. Baldwin is a delightful English gentleman, but his control of his Cabinet is not exactly Draconian. To me, at any rate, his defence when he was charged with the fact that two of his Ministers had broken his rule concerning writing for the Press when in office appeared quite ludicrously thin. The matter was, admittedly, unimportant, for Lord Birkenhead's effusions upon great social matters are not universally regarded, perhaps, as going to the root of things. But the Prime Minister has not, in this matter, increased a reputation for strength.

He first of all made out that Lord Birkenhead's attack on the modern position of women in the national life was made "in so general a form" as to be unobjectionable, although every newspaper reader is aware of the particular content of Lord Birkenhead's momentous contribution to *Good Housekeeping*. And secondly he said that there was a distinction between an article taken from a forthcoming book and an article *per se*. He confessed that this distinction was a fine one, and, indeed, it attained a degree of exiguity that may become egregious.

St. George's Day.

No foreigner in London would have known that yesterday was England's day, St. George's Day, unless he had noticed the red roses which were being sold for the benefit of St. George's Hospital, or had read in some paper that funds were being collected for Sadler's Wells, it being Shakespeare Day in addition to St. George's Day.

It is a curious thing, this complete lack of national ostentation among the English, and may be compared by the student with the relatively hectic rush by the Irish and Scots and Welsh to decorate themselves upon their respective national days.

Whether once upon a time St. George's Day was fitly observed I do not know, but its significance and impulse are better remembered nowadays when it is called Zeebrugge Day.

Election Expenses.

Some criterion of the contact with reality which the Rothermere papers may boast is to be gained from the fact that, last week, after an intensive campaign by the said papers against the extension of the franchise to women on equal terms with men, but sixteen Members of Parliament could be found willing to obstruct the Conservative Party's proposals for electoral reform.

More important than that fact, however, was the subsequent debate upon election expenses, expenses which must inevitably increase with an additional five and a-half million potential voters on the electoral roll. It is argued that if the present process were allowed unlimited sway, the inevitable result would be that only rich men would become candidates for Parliament—by which we should become a plutocracy in name as well as in fact. This, of course, would never do, and it is certainly to be regretted if an increase in the electorate implies an increase in the electioneering expenses.

Minority Movements.

The cynical observer, when he read last week of the resolve of certain Unions and Societies in Great Britain to purge themselves of the Communist element, may have been prompted to think that this was all part of the preparation of the Labour Party for the General Election in the early summer of 1929; but there is no need to take so long a view. It is true that the Labour Party have recognised that any connexion with unconstitutional methods does them harm at the polls, but there are innumerable Labour men whose hatred of Communism is sincere and patent.

The Executive of the Boilermakers' Society, for instance, has just warned its members that disruption and chaos may follow the continued harbouring of Communists; nor has the Miners' Federation been behind in complaining, through its Scottish Executive, of "the subversive action of the Communist and Minority Movements in their respective district organisations." Whether such declarations imply the beginning of a policy of purging the great industrial Unions of Communist elements, one cannot say; but that the Labour Party stand a much better chance of victory once that purging has been achieved is unquestionable.

The Cup Final.

One needed no leanings towards professional football to know that on Saturday the Cup Final at Wembley was being played, for through the roads of the South char-à-banc after char-à-banc from the North and the Midlands poured, to unload the favouring crowds. To the impartial observer it causes constant wonder how partisanship, or rather, local patriotism, can be indulged in on behalf of a team which is composed of men hailing from anywhere but the particular spot; but the phenomenon endures, and the proletariat and the bourgeoisie "follow" the team of their choice, no matter what "buying" and "selling" of players goes on.

Blackburn Rovers, who won by three goals to one, must have played a quite remarkable game to beat Huddersfield, who were a team on all sides adjudged to possess both individual and collective genius. For myself, however, I would sooner see a good amateur match any day than a Cup Final, in which the "pot" is surely more than the game. However, there are thousands and thousands against me.

Primrose Day.

Primrose Day is fading, but this years one saw hardly anyone bearing the once popular emblem, and observers have announced the virtual end of the commemoration. To the present generation, which is possibly less "Imperialistically minded" and certainly more circumspect than were the victorious Victorians, the memory of Lord Beaconsfield has become an academic affair. The War, too, has indubitably made a considerable hole in the capacity of any fresh mind to place such confidence in any politican, of whatever school, as seemed natural to the Victorian follower.

This loyalty has been transferred to the realm of the abstract, if consecrated memories can be called abstract. For to-day there is one Day of Flowers beside which all others are small: the Day of the Armistice, the Flanders Poppy Day.

Alter Ego.

THE LINLITHGOW REPORT.

Overshadowed by the more spectacular developments in the political sphere, the news that the Royal Commission on Agriculture in India has submitted its report has scarcely received the attention that its importance warrants. And here it is necessary to remind ourselves that almost every one of the vital economic problems of India must be approached from an entirely different angle from which we are accustomed to survey our own economic sphere. British experience does not apply, or, at any rate, only by inversion. Our difficulties are largely industrial; India's are agricultural, for its fundamental problem is how to increase the purchasing power of a predominantly agrarian population. Our unemployment questions affect primarily the working classes; India's concern the position of the intelligentsia. In this country we are closely concerned with the success of our export trade; India's first efforts are directed to a balancing of internal demands and supplies. We import raw materials and send abroad our manufactured goods; India's external trade proceeds on converse lines, by the import of the finished article and the export of the raw material. But the chief difference lies in the fact that India's population is agricultural; over 70 per cent. are engaged in the cultivation of the soil as against less than 11 per cent. occupied with other forms of productive enterprise. Or perhaps we can make the perspective clearer by putting the same thing in another way. In India the rural population is roughly 287,000,000 and the urban population 33,000,000; in the United Kingdom the corresponding totals are 8 millions and 30 millions, respectively. To say that India's prosperity in such circumstances rests in the main upon her agriculture is self-evident, but it is not always realised in this country that, formidable as are the figures relating to the export trade in raw products, the proportion of the total cultivated area of 222 million acres catering for the internal needs is infinitely greater. While India produces tea, coffee and rubber for export, her production of sugar is entirely devoted to meeting local demands. Local mills consume two bales of cotton for every three bales exported and, conversely, three bales of jute for every two bales exported. While linseed is grown chiefly for export, the other oilseeds are grown chiefly for local consumption, as also are the vast bulk of Indian rice, wheat, maize, grain, pulses, millets and other food grains. On a rough calculation, between 10 and 11 acres of land are devoted to the production of crops consumed locally to one acre producing raw materials for export. As Lord Linlithgow himself remarked, in the course of one of his few public utterances while the Commission was in session, "Raise the purchasing power of the ryot and in one stroke you will give to industry, to manufactures and to commerce in general an extended field for service and legitimate gain. The prosperity of the factory is linked indissolubly, and to their mutual advantage, with the productivity of the field. Industry requires raw materials and markets for finished products. The cultivator sees in a prosperous industrial population an ever-increasing market for the produce that he grows."

The task of a Commission appointed to examine the development of Indian agriculture in its widest possible aspects was no light one. The Linlithgow Commission had, it is true, no authority to make any recommendations regarding the effect of the prevailing systems of land tenure on agriculture, nor was it allowed to recommend anything which demanded modification of the relations between the Central and the Provincial Governments. But with those two notable exceptions, anything which had any bearing on the subject was to be included in the scope of the inquiry. However much the exclusion from the Commission's consideration of the foregoing matters is to be regretted on superficial grounds, it must be remembered that the Commission, from the nature of the problem, is an all-India body, painting on a large canvas, and must needs use a big brush. And while the field has been narrowed in one sense by an omission which it is easier to decry than to suggest where the line might have been more properly drawn, on the other hand, in the course of an investigation extending over a period of nearly twelve months, the Commissioners have had the advantage of reviewing each problem in every province, and of hearing on each point of importance the views of officials and non-officials, some admittedly experts, some merely representative of public opinion, and some themselves tillers of the soil, in every part of the Empire. In London they have heard the evidence of scientists, of agricultural and veterinary experts, of men who had long service in India when the district officer knew his villager probably better than the altered circumstances of to-day will permit, and they have listened to the considered views of commercial firms with world-wide experience of marketing and cognate problems. In addition, moreover, some of the members of the Commission have toured Holland, Germany, Italy and Egypt in the hope of discovering new ideas or methods capable of adaptation to the widely different Indian conditions.

It is impossible, nor is it desirable to try, to forecast the conclusions and recommendations of the Commission now receiving the earnest consideration of the Government of India. Nevertheless, a study of the most important evidence, and particularly of the cross-examination of the witnesses by the individual members, may help to indicate the general lines of the report which, we understand, is unanimous. A particularly interesting appreciation from a quarter exceptionally well qualified to attempt such an estimate appears elsewhere in this issue and will well repay careful perusal. That there will be nothing startling or revolutionary in the proposals may be taken for granted. As the Chairman has several times remarked, the Commissioners "are no magicians and no phylacteries are in our gift." And while he has rightly emphasised that "the full fruit of a sound policy can only come through years of faithful administration," the Commission will have done all that can be humanly expected of it if, as Lord Linlithgow hopes and believes, it "has been able to point the broad roads along which men must journey

Digitized by Google

if real and lasting progress is to be achieved." The most important chapters are likely to be those dealing with research, animal husbandry, village improvement, agricultural demonstration, the co-operative movement, and the consolidation of holdings. One of the most insistent demands made by all witnesses has been for the close co-ordination of the work of the Pusa Institute and the provincial organisations, and we may confidently look to the Report to see research in all branches of agriculture put on a more stable, more co-ordinated and more practical basis. Similarly there will, we hope, be constructive proposals outlining the best means by which the results may be placed at the disposal of the cultivators in the fields. The disposal of their produce in the most economic and advantageous manner raises issues of probably even greater moment and difficulty, but the provision of greatly improved marketing facilities is a subject in which the Chairman is keenly interested and the detailed scheme suggested by Mr. H. A. F. Lindsay, the Indian Trade Commissioner in London, which we reviewed last summer in these columns, shows that the obstacles in the way of the widespread adaptation of the Central Cotton Committee's policy and methods are by no means insuperable. Pre-eminently in this and other respects the problem resolves itself mainly into one of finance, and Lord Linlithgow, who early in the inquiry acquired a remarkable degree of contact with Indian conditions, is not likely to ignore undoubtedly the most important element in the success of any efforts to improve agricultural conditions in India.

CURRENT TOPICS.

Sir Leslie Wilson's Dilemma.

Both the Indian Members of the Bombay Executive Council are due to retire from their posts within the next two months, and interest is keen concerning their successors. Of the two retiring Members, it may fairly be said that Sir Chunilal Mehta has been an outstanding success. He has combined an earnest wish for increased Indianisation with a moderation of outlook that has not always marked the views of, let us say, his near relation Sir Purshottamdas. Sir Chunilal has, while working tactfully with the Government Departments, stamped his personality on a Government which has been, except for him, somewhat lifeless. The proposals that have gone to the Government of India have, in fact, been liable to be regarded by the latter august body as being "too much Chunilal." In comparison with his colleague, Sir Cowasji Jehangir, Junr., has been less successful, in spite of much earnest endeavour. He still preserves some of the effervescence of youth, which gave him the nickname of "Champagne Charlie" in the Bombay Corporation. Moreover, the Development Department muddle has been a millstone round his neck; and the policy of the Bombay Government in its regard has been extremely vacillating. It may fairly be prophesied that Sir Ghulam Hussein Hideyatullah, at present a Minister, will succeed to one of the vacancies. He has had two spells of service as a Minister, with much success. His easy-going common sense has conciliated all parties, and his appointment would satisfy alike the claims of the Sindhis and the Muhammadans, on whom the Government of Bombay largely depend for support in Council. The second place must, it would seem, be given to a Hindu. Doubtless it would be best if Sir Chunilal could be persuaded to accept a further term of office. If that be not possible, the Non-Brahmins who have recently supported the Government in certain crucial divisions, will be bitterly disappointed if one of their number is not selected. Their only possible candidate would, however, be their leader, Mr. B. V. Jadhav. He was hardly a success as Minister of Education and his marked hostility to the Brahmins would probably not render him acceptable to the Hindus in general.

If, as is expected, Sir Ghulam Hussein becomes a Member, the struggle for his place as Minister will be interesting. If the Membership does not go to a Non-Brahmin Hindu, then that party can clearly expect the place of Minister. Otherwise, the place must go to a Muhammadan. But here again arises the question whether it should be given to a Muhammadan from the Presidency or a Muhammadan from Sind. There are eleven councillors of the former, and thirteen of the latter, and the Sindhis might perhaps be expected to be satisfied with having a Member of Council in Sir Ghulam Hussein. Unfortunately, however, Government must look to the number of votes which a Minister can command and the Sindhi Councillors will all support a Sindhi Member or Minister, while the Presidency Muhammadans are so divided among themselves, and so much more closely allied with their Hindu brethren, that their votes cannot be relied upon. Unfortunately, also, the two cleverest candidates, Mr. Nur Mahomed of Sind, and Moolvi Rafiuddin Ahmad, of the Presidency, hardly command as much respect for their general character as they do for their undoubted ability. Altogether the position is full both of difficulty and humour, and we can sympathise with the Governor of Bombay in having to consider the number of heads quite as much the amount of brains.

Posts and Telegraphs in India.

The postal branch of the Indian Posts and Telegraphs Department works at a profit, but the telegraph branch works at a loss. This seems to be the outstanding feature of the results of the working of the Department for 1926-27 as set forth in the Director-General's recently issued report for that year. India is not, of course, the only country in the world with an unremunerative telegraph service. But in India the gap between expenditure and revenue is apparently widening with some rapidity. For in 1925-26 the deficit was rather less than Rs. 7 lakhs while in 1926-27 it was Rs. 12¾ lakhs. The causes are: a fall in revenue mostly from foreign telegrams; an increase of expenditure on repairs and maintenance of lines; and an increase in interest charges due to a re-assessment of the interest-bearing capital. The postal branch was much more successful although at first sight its surplus of Rs. 21½ lakhs does not compare favourably with the surplus—nearly Rs. 49 lakhs—of the preceding year. But in 1925-26 the revenue was swollen by certain abnormal factors; and it appears that in point of fact the financial results of that year were not really so good as in 1926-27.

The Indian Post Office transacts a large volume of business, but the totals must be, of course, considered in relation to the huge population of the country. The number of letters and other articles posted in 1926-27 was 1,293½ millions; and the number of telegrams transmitted was rather more than 19 millions. These are big totals, but, with a population of 300 millions, they are not extraordinary. A reasonably high standard of efficiency was maintained during the year the number of articles actually delivered being 99.96 per cent. of the total posted. This must be regarded as a wonderful result seeing that the ordinary Indian postman is by no means an educated man, and that in India letters are written in very many languages.

Hitherto Indian postage stamps have been printed in the United Kingdom, no Indian press being equipped for such work. But since the introduction of the Reforms scheme there has been a strong demand in the Central Legislature for the printing to be undertaken in India. This demand has now been met by the establishment of a State press at Nasik in the Bombay Presidency. Several issues of stamps have been already made from Nasik, and presumably all Indian stamps will be printed there in due course. Currency Notes are also to be printed there, a new press, fully equipped for this special work, having been opened by the Acting Finance Member, Sir Bhupendranath Mitra, during the current month. It is clear from the Director-General's report that the Indian Post Office, like the Post Office in this country, does a great deal more than merely collect and

Digitized by Google

deliver letters and parcels and transmit telegrams. It acts as the agent of the Government in the performance of all kinds of services. By its Savings Bank it becomes the people's banker; and by its C.O.D. system it enables them to do their shopping at any distance. It also collects customs duties; insures the lives of Government employees; pays the pensions of retired officials of the Indian Army; and does a host of other things among which the selling of quinine may not be the least useful.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, April 5.

The Statutory Commission.

The Statutory Commission has gone. Sir John Simon began its work in India with a letter to the Viceroy, and he was to end it with another. It read: "It is now seven weeks since the Indian Statutory Commission made public . . . the outline of the scheme for conducting the inquiry which the Commission will undertake next October by the method of a joint free conference, of which the Indian Committee would form one wing, while the Commissioners would form the other. In the interval the scheme proposed has been accepted as the basis for co-operation by the Council of State and by the Legislative Councils of Burma and the Punjab." After that counting up of the Commission's gains, the letter goes on to count up its losses, and then to deal with "two points of possible ambiguity." These were, "Whether a Provincial Committee, after the close of its sittings with us . . . would have an opportunity of summarising its own views in a report which we might consider before arriving at our own conclusions." That opportunity is to be given; further, such a report is to be included in the appendices which will be presented to Parliament. The other point of possible ambiguity was this—Might not the necessity of the Commission passing from one province to another in accordance with a pre-arranged time-table result in placing one province at a disadvantage as compared with another? To guard against that it has been arranged that the Commissioners, after they have been round the provinces, but before they leave India, should meet representatives from each of the Provincial Committees, if the latter desire it, in order to hear from them their final views, or confer with them on outstanding matters which seem to require treatment by this means. It cannot be maintained that Sir John Simon does not take pains to make everything as fair as possible.

British Indian Association.

Presiding on Saturday at the annual meeting of the British Indian Association, the Maharaja Tagore urged the formation of a Provincial Upper Chamber for Bengal, saying: "Under the guidance of shifty, self-seeking politicians, whose object is to revolutionise the very constitution of the land, there is this tendency to display such pernicious doctrines as non-co-operation with a settled government. The zemindars should rise to the occasion, and should cope with the situation by joining hands only with those who have the real interests of our country at heart, and who at the same time possess recognised qualities of leadership." The greater part of the Maharaja's speech was devoted to criticism of the Bengal Tenancy Amendment Bill, which, he maintained, was an infringement of the rights conferred on the zemindars under the Permanent Settlement. It may be, but, if half of what one is told by well-informed Indians is true, there have been such infringement by certain zemindars of the rights of their tenants, as to make legislation just and right, if not inevitable.

Calcutta Mayoralty.

Who should be the new Mayor of Calcutta may seem a matter of only local interest, but, as the voting is on political lines, the result of the vote of the Corporation on that question may be an indication of how the voting will go in the Legislative Council on a much more important question; as, for instance, whether Bengal should or should not co-operate with the Statutory Commission. "Nothing succeeds like success," men say. The reverse is as true; a defeat here or there may spell ruin along the whole line. Accordingly, the news on Tuesday that Mr. B. K. Basu, an Independent, had been elected Mayor in succession to Mr. J. M. Sen Gupta, Mr. Subhas Chandra Bose, the Swarajist leader, being defeated by seven votes, was received with general satisfaction. Not, it is true, at the moment, in the building, which was full of Swarajists. Wild scenes, they say, attended the election. The new Mayor was refused a hearing. He strove to speak, but jeers were hurled from the galleries and corridors, and the uproar was deafening. Suddenly the light failed all over the city. It was a well-chosen moment. I was sitting myself on a terrace in Ballygunge, looking out upon a large garden, removed in space and farther removed in spirit from the wranglings of mankind, while the new Mayor was being howled down by the folk who pretend to think the appointment of the Simon Commission an insult to the manhood of India.

The Bengal National Chamber.

Raja Reshee Case Law, presiding at the annual meeting of the Bengal National Chamber of Commerce, made a speech that deserved much better reporting than it got. The mere putting off of the provincial contributions, the Raja said, could not save the nation-building departments from remaining in a moribund condition. He had accordingly been heartily glad that practically the last act of the retiring Finance Member had been to abolish them. The proceeds of the export duty on jute should go to the Bengal Government. Pending the establishment of a Reserve Bank, the Government should make some arrangement with the Imperial Bank, delegating to it the power of note issue and the control of the Paper Currency Reserve, so that it might function as a full-fledged bank of banks. Referring to the Bengal National Bank and the Bengal Luxmi Cotton Mills, the Raja said that the sudden collapse of the Bank had not only given a rude shock to joint stock enterprise in Bengal, but had put back the hand of progress and had brought about dismay and despondency. It is for Bengal to draw the moral.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, April 7.

The Bombay Corporation.

The presidential election of the Bombay Corporation, as in the case of Calcutta, has resulted in the defeat of the Swarajist candidate; but as is characteristic of this city the election was not accompanied by any disturbances. The reason for this is not far to seek. In Bombay the tradition has been maintained of emphasising the points of agreement between the various political and communal sections and the points of difference have never gone beyond the scope of negotiation, unless in the direction of a settlement. Hence no party is considered irreconcilable by the rest. That the Corporation reflects the city's attitude in this regard is revealed by the fact that in this election it has set aside all party differences and elected a non-party man. The newly-elected President was aware of this, for in his speech he said that his success was due entirely to the fact that he did not belong to any party. An eminent surgeon, Dr. Deshmukh has taken very great interest in politics during the last few years. He contested the University seat in the last election and, although he was defeated, the number of votes he secured showed that it was not because of want of confidence in his ability. It is to be hoped that the Corporation, under the régime of its new President, will set itself to the task of organising its sanitation, health

Digitized by Google

and education departments so as to serve as a model to the lesser municipalities in the province and outside.

Sir Basil Blackett.

No better indication can be had of the fact that Bombay knows when to set aside its political views than the cordial farewell it accorded Sir Basil Blackett on the eve of his departure from the land of his birth. Commenting on the debates in the Assembly special correspondents of newspapers laid very great emphasis on the bitter opposition of the Bombay group to every measure introduced by Sir Basil Blackett, almost suggesting that the opposition was directed against the man rather than the measures he introduced. Bombay is well aware that Sir Basil's régime has been responsible for some of the most important changes in the financial policy of India. The repeal of the cotton excise duty, the fixing of the exchange ratio at 1s. 6d., and the remission of the provincial contributions are the outstanding features. It is true that the exchange ratio has not been very favourable to trade and that Bombay has suffered as a consequence; that the repeal of the cotton excise duty came at a time when the industry was far too feeble to benefit from it; and the remission of the provincial contributions has been only a negative blessing as Bombay was financially overwhelmed by the losses incurred in the various development schemes. Nevertheless the repeal of the cotton excise duty, and the remission of the provincial contributions are of very great importance, which Bombay realises as well as any other province, although it may not have benefitted as much from them.

Insurance Companies' Conference.

For the first time a conference of Indian Insurance Companies was held in Bombay to take stock of the movement and to frame measures for increasing its scope in the country. Such a conference is generally the outcome of the realisation of the fact that a movement has an important place in the country's development and that organisation and propaganda must be undertaken if it is to be effective. The Chairman of the Reception Committee and the President of the Conference laid emphasis on the vast scope for commercial insurance in India. The greater portion of buildings, industrial plant and other property is insured with foreign firms with the result that the country, besides being deprived of a source of employment for its people, is drained of a portion of its capital which could be retained for investment. The insurance idea has not, it is true, reached the people whose poverty, for which it is an excellent remedy, has not permitted them to avail themselves of it. Increased facilities for insurance such as are prevalent in agricultural countries, and education in the usefulness of insurance can alone help to solve the problem.

Aligarh University Scandal.

The most scathing condemnation of the administration of a University ever recorded in the history of education in this country is the report of the Rahimtullah Inquiry Committee on the working of the Aligarh University. The lack of discipline and utter disorganisation that have prevailed in the University have been ruthlessly exposed. "We do not think that a department should be started unless the University is able to afford to appoint at least a reader to act as its head. . ." The Committee regard as objectionable the prevailing system of attendance and discipline of the teaching staff. Members of the staff seem to appear to claim leave as a matter of right and to take it in anticipation of the sanction." Mismanagement seems to have spread even to the boarding section of the college and the Committee recommend an inquiry into the matter. While commenting on the financial position of the University, the Committee state that expenditure needs more checking in detail than is exercised at the present moment and that the Finance Committee has been far too lightly worked. In short, there is no department of the University that does not require complete overhauling.

INDIAN AGRICULTURE.

[The following interesting forecast of the probable trend of the report of the Royal Commission on Agriculture in India appeared in a recent issue of *India To-day*, the bulletin of the Indian Information Centre. No reader of The Near East and India who served in the Bombay Presidency, we imagine, will have any difficulty in recognising the identity of its distinguished author.]

The question of the advancement of agriculture in a country like India may be approached from three points of view. Either (1) stress will be laid on the technical improvement of cultivation, so that the land can be made to yield more per acre than it has hitherto done, or (2) emphasis will be laid on the organisation of the land itself, of the supply of necessities, including finance, to the farmers, and of the disposal of produce so as to bring the greatest return to the producers of the crops, or (3) the greatest importance will be laid on the general well-being, comfort, and independence of the rural population, even though this results in less exchangeable produce being grown. All these points of view will inevitably present themselves to any member of such a Royal Commission as that now under consideration; it is only a question of the relative stress which is laid on each of them. On the whole the Commission as constituted will probably be more concerned with the first two aspects than with the third.

The first point of view will lead to a recommendation that the technical activities of Government in research and experiment should be very largely increased. It seems certain that the Commission will recommend a very large increase in Government expenditure in this direction. How far this should be done by the central government and how far by the provincial governments has been a subject of much controversy before the Commission, and it seems likely that a recommendation will be made for a great increase in the direct research work done by the central government. It seems likely, too, that the creation of a Development Fund will be recommended, in the hands of special commissioners, independent of the annual grants of the legislature.

As the application of such improvements as may be discovered depends much on the presence not only of an educated rural population, but also of a population educated in a manner specially devised to suit rural needs, it seems probable that a recommendation will be made that the whole scheme of rural schools should be recast so as to meet the needs and to create an interest in the work of the land.

In the matter of the organisation of agriculture, it seems likely that the necessity of action in the direction of preventing the extreme subdivision and fragmentation of holdings which is so common all over the country, and arranging for consolidation where subdivision has already taken place will be emphasised. Great stress is sure to be laid either on voluntary consolidation by co-operative or other means, or on compulsory consolidation on the lines of Sir C. V. Mehta's Bill now before the Bombay Legislative Council.

As regards other aspects of agricultural organisation, it would appear certain that stress will be laid on the development of co-operation in other directions than that of mere finance, and where legal difficulties are in the way, on the removal of these by legislation. It is well known that the progress in such forms of co-operation have been small, and some have stated that this is due to defects in the legal machinery to enforce contracts made between a co-operative society and its members; this matter, too, the report will deal with.

The question of marketing, more particularly as applied to products of international commerce and to those required in the great towns, is sure to be dealt with. It is hoped that the difficulties due to the occurrence of varying weights and measures, even in adjacent markets, will cause a recommendation for the general and compulsory adoption of uniform weights and measures. It seems likely that the general establishment of local markets under definite control, with recognised rules, with definite fees and official weighing, and with open sale, will be recommended.

In the matter of the general well-being of the rural population, considered apart from the effect of the above measures, it is probable that little will be said. In fact, it seems likely, from the tendency of the evidence so far published, that the general consideration of rural reconstruction, as apart from what will probably result from the increase of production and better organisation of finance and disposal of produce already mentioned, will hardly be touched upon. It will be interesting to see whether the Commission will attempt to deal with the problem of the precarious tracts, apart from a wide recommendation for increase of irrigation wherever possible. It is hardly thought that much will be said, though a recommendation that considerable sums of money should be devote to land conservation, prevention of soil erosion and the like is very probable.

Mr. Courtney Terrell has been appointed Chief Justice of the High Court of Judicature at Patna in the place of Sir Thomas Frederic Dawson Miller, who has resigned.

Sir Cowasji Jehangir, a well-known Parsee philanthropist of Bombay, has given 15 lakhs of rupees (£112,500) to found a public school for Parsee boys, which will be the first institution of its kind in India. A committee has already been appointed for the purpose of settling the details of the foundation, including the location of the school. As the amount of Sir Cowasji Jehangir's contribution may not cover the whole cost of the school, a general appeal for funds is contemplated.

THE INDIAN STATES COMMITTEE.

After a tour of nearly three months' duration, during which they covered some 8,000 miles, and visited the most important of the Indian States, the members of the Butler Committee left Bombay on Saturday for England. Sir Harcourt Butler and his colleagues were accompanied by Sir Leslie Scott, K.C., M.P., who is assisting the Standing Committee of the Indian Princes in the preparation of the States' case for presentation to the Committee on its arrival in this country. A number of ruling Princes sailed by the same boat, including the Maharaja Jam Saheb of Nawanagar. The Gaekwar of Baroda, the Maharaja of Kaparthala and the Maharaja of Rajpipla have already proceeded to Europe in connexion with the inquiry and they will be joined, THE NEAR EAST AND INDIA understands, during the summer by the Maharajas of Kashmir, Palanpur, Bhopal, Patiala and Bikanir.

THE ROYAL INDIAN MARINE.

(From a Special Correspondent.)

The rejection the other day, by the Legislative Assembly, of the Naval Discipline Bill attracted a good deal of attention to the proposals for the establishment of an Indian Navy. Very little was, however, said of the service—the Royal Indian Marine—which this new naval force was designed to replace. But the Marine has been in existence, under various titles, for upwards of three hundred years; and it has a record second to none. The East India Company was constituted in London on September 22, 1599, and the charter which was granted to it by Queen Elizabeth was dated December 31, 1600. During the next ten years or so the Company made for itself a definite position as a trading corporation. It was recognised by the Great Mogul, with whose permission it established factories at Surat, Ahmedabad, Cambay and Goa. To protect these factories from the Portuguese, and from the pirates who infested the coasts, a naval force of some kind soon became a necessity. And there thus came into being in 1613 the nucleus of a Service which, although it has undergone many changes and has been called by various names, still exists. It is worthy of note, in passing, that in 1613 the East India Company did not employ a single European or Indian soldier; and that the British Army, as a standing army, had not been formed.

When first established, the Marine consisted of a number of small vessels known as "grabs" and "galivats." Grabs were shallow boats ranging from 150 to 300 tons, with two or three masts, and with a few nine or twelve-pounders. Galivats were row boats, built like the grabs, but rarely exceeding seventy tons; and they carried six, or eight, two to four-pounders. All these vessels were officered by volunteers from the Company's ships that had come out from England. And the force which was at first so constituted became known as the Bombay Marine, a designation which it retained until 1830, when it was named the Indian Navy. It appears to have been established on a permanent footing by about 1615, when it is said to have consisted of ten grabs and galivats. It saw much active service in the struggle between the British and the Portuguese, taking a prominent part in the reduction of Ormuz in 1622. It also greatly distinguished itself at the siege of Surat by Sivajee, the Mahratta chieftain, in 1664. In fact in those early days it must have been almost constantly employed in fighting one or other of the Company's numerous enemies. And in the eighteenth century likewise it was engaged in many important naval operations. For instance, it took part under Commodore (afterwards Sir William) James in the long struggle with the Mahratta pirate chief, Angria, whose stronghold of Gheria was captured in 1756. Three years later one of its officers, Commodore Watson, successfully commanded the expedition that captured the town and castle of Surat. In 1774 Watson was killed when commanding the Marine at the capture of Tannah. And towards the end of the century the Marine served with credit at various places—Pondicherry, Trincomalee, Colombo, and elsewhere—in the wars against the French and the Dutch.

It was at about this period also that the Marine officers began to earn distinction in a more peaceful sphere: they became known as marine surveyors. Their first surveying expedition was undertaken in 1772, when the Fox, a schooner of about 100 tons with six guns, and the Dolphin, a ketch with similar armament, explored the coasts of Mekran, Sind, and Kathiawar, and part of the coast of Persia. This was the beginning of a long series of surveying expeditions; and ultimately maritime surveying became an important part of the work of the Marine. In 1798 an extensive reorganisation of the force was undertaken. Its officers were prohibited from trading, a privilege which had been allowed up to that time; and their pay was fixed on a scale at which it continued for the next thirty years. The Marine was also constituted a Naval Service for war purposes, its duties being defined as: (1) the protection of the trade; (2) the suppression of piracy and general duties as vessels of war; (3) the convoying of transports and the carrying of troops if necessary; and (4) the prosecution of maritime surveys in the East. In 1802 the fleet consisted of two frigates, three sloops of war, and eleven smaller vessels—brigs, snows and ketches—besides prizes and other vessels used for special and temporary purposes. During these years of war the Marine did much useful naval work. It played an important part in the extensive and long-continued operations (1797-1820) which resulted in the suppression of the Arab pirates in the Persian Gulf. In 1811 it assisted at the conquest of Java. And in the first Burmese War (1824-1826) it earned considerable distinction, Lord Amherst, the Governor-General, stating officially that "the conduct of that portion of the Naval Branch of the expedition which belongs to the East India Company has been exemplary and conspicuous for gallantry and indefatigable exertion, and it has fully shared in all the honourable toils and well-earned triumphs of the land forces." At the capture of Aden in 1838 the Indian Navy—as it was at that times styled—did good service; it was engaged also in the war with China in 1840; in New Zealand, 1846; in the Punjab, 1849; in the second Burma War, 1852-1855; in the war with Persia, 1856-57; and, of course, in the Indian Mutiny. In the second half of the nineteenth century it served in China, Abyssinia, Egypt, Burma, East Africa, and elsewhere; and in the present century in the

South African War, the Boxer Rebellion, the Somaliland expedition, and in the Great War.

In 1830, when the Marine became the Indian Navy, Lord William Bentinck was Governor-General of India. He does not seem to have greatly favoured it, and he instructed a body known as the Finance Committee to inquire into the whole question of its utility. The Committee made an investigation, and thereafter recommended that the Navy should be abolished, and that a squadron of Royal Navy ships should be employed to undertake its duties. This recommendation was not acted upon, but in 1834 Lord William Bentinck, recurring to the report of the Committee, strongly urged the Court of Directors to abolish the Indian Navy, as he was of the opinion that its duties should be performed at less cost by a squadron of Royal Navy ships. His arguments were answered by Lord Clare, the then Governor of Bombay, whose view prevailed. The Governor-General's proposal was not accepted, and the Indian Navy continued to exist until 1862. In that year Sir Charles Wood, the Secretary of State, notified the Government of India that the Navy was to be abolished. The manner in which naval and maritime services could be undertaken on the Indian coast, and in the neighbouring seas, had been previously discussed in great detail by the Government of India, the Government of Bombay, and the Secretary of State. And it was agreed that the defence of India against a serious attack by sea, as well as the naval services required in the Red Sea and upon the eastern coast of Africa, should be undertaken by the Royal Navy. The Government held that it would not be for the public advantage to maintain the Indian Navy merely for protecting Indian ports, and suppressing piracy and the slave trade in the Persian Gulf, and for transporting troops and stores. They consequently abolished it, and established in its place a local service to which they gave the old name—the Bombay Marine. To this force they assigned those duties which the Royal Navy could not undertake. On the eastern side of India there had been for a long time in existence a local service called the Bengal Marine; and the Bombay Marine was put upon the same footing as this was on. The officers of the Indian Navy were invited to serve in it, and preference was given to them in the filling up of vacancies in maritime appointments, such as port officers, emigration officers, and so on.

Thus the Indian Navy disappeared. In 1877 the Bombay and the Bengal Marine establishments were amalgamated into the Indian Marine; and in 1892 the name was changed to the Royal Indian Marine. The duties of the Service nowadays are too well known to all acquainted with India to need recapitulation here. But it remains to add that after the War the question of converting the Marine back again into the Indian Navy was considered by the Government. A Committee, of which that distinguished soldier the late Lord Rawlinson, Commander-in-Chief in India, was President, was appointed to prepare a scheme for the reorganisation of the Marine so as to form the nucleus of an Indian Navy. The Committee accordingly formulated a scheme whereby the existing Royal Indian Marine would be reconstructed, by its present personnel, as the Indian Navy. This scheme—a feature of which was that Naval commissions were to be given to Indians—was accepted by the Government in 1926. To bring it into existence legislation by Parliament and by the Indian Legislature was necessary. Parliament passed the required Act last year; but, as has been already stated in a previous issue of The Near East and India, the Assembly rejected the Indian Bill by one vote. What the next step will be the writer does not pretend to know, but it may be presumed that the time is not far distant—notwithstanding the Assembly—when the Indian Navy will be once more in being.

NEWS IN BRIEF.

The Maharaja of Jind, following the example of the Maharaja of Kashmir, has issued orders for the constitution of the High Court as the final Court of Appeal in his State, reserving to himself only the usual prerogatives of a Sovereign.

The Bishops of the Church in India have accepted a canon which recognises that congregations shall have the deciding voice in any proposed change in the regular Prayer Book services. The canon will go before the General Council in 1930 for final acceptance.

At the request of the Government of India, Mr. V. Srinivasa Sastri has agreed to continue to hold his present post as Agent of the Government of India to South Africa for another year, in view of the importance of consolidating good relations between India and South Africa.

It is announced by the India Office that the King has approved the appointment of Diwan Bahadur Mannath Krishnan Nayar Avargal as member of the Executive Council of the Governor of Madras, in place of Mr. T. R. S. Venkatarama Sastri, C.I.E., resigned.

An India Office *Communiqué* states that the King has been pleased to approve the appointment of the Reverend Charles John Godfrey Saunders, M.A., Indian Ecclesiastical Establishment, to the Bishopric of Lucknow, vacant by the death of the Right Reverend George Herbert Westcott, M.A., D.D.

An official statement in the following terms is issued by the P. and O. Steam Navigation Co.:—"Some Indian friends of the company have expressed dislike that the name Taj Mahal should be borne by the P. and O. steamer now under construction. The company has therefore decided that she shall be called Viceroy of India."

According to the Bombay correspondent of *The Times*, it is announced that a company called Eastern Airways, Limited, with a capital of 50 lakhs of rupees (£375,000) has been formed in Bombay, with the object of connecting the city by air with the large cities of India. Negotiations for the purchase of machines and for the engagement of the requisite technical staff from Europe are stated to be complete.

Toc H announces that Lord Goschen, Governor of Madras, who is a member of Toc H, has presented the Madras Lamp of Maintenance to be dedicated to the memory of his son, George J. Goschen, of Eton and Christ Church, who died of his wounds at Amara on January 19 in 1916. This will make the second Lamp of Remembrance to be presented to Madras, and the Toc H group it will form will be the ninth in India.

Sir Frank Nelson will resume his weekly commentary on "India in Parliament" in next week's issue.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

Motors *v.* Railways.

As in other countries, the railways in India are now beginning to experience the effects of the competition of motor services. Conditions in India are somewhat more in favour of the railways than they are elsewhere, and the competition is felt at present mainly in the vicinity of the large towns, but it has developed sufficiently to have become quite a serious factor. In the end, to meet it one assumes that the railways will have to provide their own motor services. The importance of the development of this competition in India and elsewhere is that it is obviously going to be much more difficult in the future to raise capital for railways in undeveloped countries than it has been in the past. It has always been a matter of patience to make a new line pay. In the future it looks as if it will be almost an impossibility, given the certainty of the rivalry of motor services. For this reason one cannot help viewing with a certain amount of scepticism plans such as that for a great trunk railway across Persia. Admittedly road conditions there preclude motor competition, but the railway will take a long time to build, and can anyone forecast what will be the position with regard to the roads in ten or twenty years' time? The possibility of this particular line paying its way in any circumstances is open to very considerable doubt, but with the competition of motor services at the outset it would be out of the question. The fact is that the rise of the motor has revolutionised the traffic question in the last few years, and has introduced quite a new factor in the development of regions at present lacking communications.

The Late Lord Dalziel.

Lord Dalziel of Wooler, whose death occurred last week at the age of 75, was chiefly before the public eye of late years in connection with Continental travel, though his interests in the Compagnie Internationale des Wagons-Lits and the Pullman Car Company only represented one phase of a comprehensive business career. He took a keen interest in journalism, and on the retirement of Sir Arthur Pearson took over the control of the *Standard* and the *Evening Standard*, and for a number of years was chairman of the board of directors, while he will be remembered also as one of the founders of Dalziel's News Agency. The political arena also had its part in his career, and from 1910 to his elevation to the peerage in 1927, with the exception of an interval in 1923-24, he represented Brixton in the Conservative interest. He was president of the Compagnie Internationale des Wagons-Lits and also chairman of the Pullman Car Company, and the last outstanding transaction with which he was identified was the amalgamation with the former company of the famous tourist business of Messrs. Thomas Cook and Son. The public in this country has had increasing evidence of his useful activities in the last few years in the more extensive provision of Pullman car services; those whose business or pleasure took them further afield can testify that Lord Dalziel did a very great deal to simplify the complications of Continental travel. It speaks volumes for his ability that an Englishman should have a sphere of action in a field which necessitated difficult and delicate negotiations with many foreign authorities.

British Trade Methods.

A very interesting review of the trade position was given at the annual meeting of the London Chamber of Commerce by Sir James Martin, the retiring president. As justly pointed out, in the past this country had what practically amounted to a monopoly of manufacturing, and we thus obtained all the trade desired simply by supplying the demand as it arose. The result of this easy method of doing business was that our traders neglected markets where business could only be obtained in the face of strenuous competition, such as those of the Near East, and concentrated on those where there was, relatively speaking, no competition. I have often emphasised the point that this policy will not do to-day, and that we cannot afford now to neglect any markets. This aspect was strongly emphasised by Sir James Martin, who said that British manufacturers must be prepared to do much more missionary work than they have done in the past, and that, he added, "means spending money in overseas markets without expecting to see an immediate return." He laid stress on two further important points. One is that agents of British firms do not receive the support that the representatives of their competitors receive either in allocations for advertising or in the way of the consignment of stocks. The other is that there is great scope for improvement in British selling methods. He might have added a third which has special reference to the Near East markets, and that is that it is useless to rely on agents to cover markets far distant from headquarters. It is not infrequent for British firms to employ agents in Egypt, for instance, to cover the Sudan. Needless to say a policy of this kind cannot lead to the best results.

Sir Eric Geddes and Rubber.

As was to be expected, Sir Eric Geddes dealt in some detail, at the meeting of the Dunlop Rubber Company, with the question of the rubber restriction scheme, which is to come to an end in November. The abolition of the scheme is welcomed by him, as it means that the company will be able to use the full production of rubber from its estates instead of buying from external sources. In his view, however, the Government has erred in bringing the scheme to such an early termination, and he would have favoured, it seems, a gradual conclusion, a view which is held by a large section of rubber producers. However, the decision has been taken, and it now behoves the industry as a whole to use the intervening period to re-

organise itself so that it will be able to meet the difficult situation which will arise after November and is bound to continue at any rate for some months.

Palestine's Ports.

Elsewhere in this issue will be found a comprehensive survey of Palestine's trade in 1927, which, as I pointed out last week, shows a very marked improvement on the returns for the previous year. An interesting feature of the trade was the way in which Jaffa maintained its usual predominance over Haifa as the main trade route of Palestine. Of the imports Jaffa's total was £P3,127,413, representing a percentage of 50.57, the figures for Haifa being £P1,963,970, or 31.76 per cent. The value of the trade through Jaffa was £P1,131,995, or 59.59 per cent., while the figures for Haifa were £P496,581, or 26.15 per cent. It will be interesting to see the change that is effected in the relative positions of these two ports in the first full year following the construction of the harbour at Haifa.

Suez Canal Traffic.

The promise of the Suez Canal figures for January is borne out by the returns for the second month of the year. There were 454 transits in February, the net tonnage being 2,385,040, as compared with 440 transits and 2,281,310 tons for the corresponding month of 1927, while the revenue was 17,672,000 francs as against 16,979,000 francs. The transits for the first two months totalled 964 as against 887, the net tonnage being 5,045,597 as against 4,680,167. It is noteworthy that the traffic in merchandise, totalling 2,439,000 tons, represented the best total yet recorded for the second month of a year. The total was 232,000 tons in excess of the figures for February last year, and while the increase was mainly in the homeward traffic the figures go some way to show that world trade is slowly but steadily reviving.

COMMENTATOR.

Exports and Imports

For the guidance of its customers the Westminster Bank issues a booklet dealing with the many ways the man of commerce may utilize the Bank's services in the development of his business; how he may avail himself of documentary credits, whether he is interested in exports or imports; and how he may take the fullest advantage of rates of exchange, rebate, or discount, and may best collect his bills with a maximum of safety and a minimum of delay

The Secretary will be pleased to send a copy on application to him at the Head Office

THE SUDAN GUM ARABIC TRADE.

The current issue of the Monthly Journal of the Sudan Chamber of Commerce contains a detailed survey of the present condition of the gum arabic trade, from which we take the following extracts :—

It is no secret that gum arabic business for years past has not been reasonably remunerative either to exporters in the Sudan or importers. We agree that much of the trouble is accentuated by exporters themselves cutting prices below reasonable margins for profit, expenses, and risks involved, but there is the underlying fact of increased production beating down prices. Further, whereas the Sudan has nature's own laboratory for the making of gum arabic of the best quality at the lowest possible cost, the advantage is curtailed by excessive Government charges which make it always possible for gum exported from Senegal to cut Sudan prices by at least £1 per ton.

If Senegal is quoted £1 per ton less than Sudan Hashab it is not because Senegal is really worth less, but because the Senegal gum costs less, and part of that difference in cost can always be used to undersell Sudan gum arabic. Up to the present, Senegal has been consumed mostly in France, but at times large quantities have been sold in the United Kingdom, and there is now quite a regular sale in Italy, though such gum is re-shipped at Marseilles.

A French gum arabic importer who has recently travelled extensively in French West Africa reports that there are vast tracts of gum forests which would not need excessively costly transport facilities to exploit.

The world's demand might well be almost as unlimited as the Sudan supply if only a natural product had a price more in relation to its natural cost. A gradual return must be made to pre-War charges. These were high and due entirely to the necessities of a Government requiring money in an extremely poor and undeveloped country.

It might well be argued that whatever is taken off in Government royalty and freight charges will simply mean better prices to the native. This might well be, because he is certainly being paid prices to-day which are low even for pre-War, whilst his cotton piece-goods, tea, and sugar cost him twice as much. Higher prices, while giving a better return for the gum within the nearer areas served by the railways, would at least serve to allow the collection in far more distant areas and so assure an increasing output if demand warrants it.

Half of the misunderstanding about gum is that it is a wonderful Aladdin Lamp that nobody else has got. It is the purpose of this paper to show that it is an utter mistake to think that gum is an article which has a strangle hold on any particular trade, as the purposes for which it cannot be substituted are few in number. Only if the world's supply were two to three thousand tons, could a price of say 5s. a pound be asked for it. That is the reason why all attempts to corner gum must ultimately break down. The higher the prices paid in competing for arrivals, the more restricted the use becomes and consequently the smaller become the sales and the larger the stocks which cannot be sold off without loss.

During the past five years the world's demand for gum has been about 21,000 tons, and, whilst no doubt there is a natural growth, it cannot bound to some phenomenal figure, unless new or extended uses take place, and these are usually connected with lower costs.

Let the Government take the vital step first of at least giving the gum trade a fair chance of development and profit to all concerned, remembering the greatest value of a country's natural wealth lies in the greatest development to the benefit of all concerned, whether Government, native, or European merchant.

The production of the Anglo-Egyptian Oilfields for the week ended April 13 amounted to 4,266 tons.

Yugoslavia's coal output in 1927 amounted to 4,746,000 tons, as compared with 4,141,000 tons for 1926. More than half the output came from the mines in Slovenia.

PALESTINE'S TRADE IN 1927.

Increased Exports.

It would seem possible that 1927 from an economic point of view may prove a landmark in the history of the development of Palestine. Improved commerce returns for a single year do not by any means imply the certainty of a prosperous future for the region, and it would be foolish in the extreme to attempt to draw any such far-reaching deductions from them, but they do show that the pessimism which had come to obtain as to the outlook for the Jewish National Home had been overdone, and they show further—which is all important—that the land has unsuspected qualities of recuperative power. To appreciate the position it is necessary to glance back a little. There have been so far two post-War periods of colonisation, each in turn ending, or being ended by, an outbreak of acute trade depression. The former was not so important; the latter was most pronounced, and its effects were such that the stream of colonisation not only slackened appreciably, but there also set in a movement to leave the country, with the result that for a considerable time the emigrants outnumbered the immigrants. The trade depression was at its height in the early part of last year, and it persisted throughout the greater part of 1927. Towards the end of the year, however, a great improvement took place with the result that the trade figures make a most favourable comparison with those for the previous twelve months.

The fact is, and herein lies the importance of the returns for the year, that the improvement in Palestine trade followed closely on the recovery of adjacent regions from the world trade depression, thus indicating that the ill-fortune of Palestine was not due to some special shortcomings of that country, but was simply part and parcel of a much wider movement over which it could in the circumstances have no measure of control. Thus in 1926 Egypt was affected by the existing cotton situation, and the consequence was that the Egyptian market for Palestinian produce was greatly restricted. As Egypt is at present one of the two great trade outlets of Palestine, the effect of this development on the internal situation can readily be realised. With the return of prosperity to Egypt the market there has again been able to absorb Palestinian produce with the result that conditions in Palestine are once again on the up grade. It is true that the movement from Palestine still continues, though to a decreasing extent, but this feature will doubtless soon disappear given the continuance of the world trade recovery. If, however, the returns for 1927 are gratifying as evidence of the prospects for a satisfactory development of the country's export trade, they at the same time for the reasons given above carry a note of warning, for it is clear that Palestine's prosperity is dependent to a much greater extent than most other countries on the conditions in neighbouring regions. On this account the price of cotton is of as much importance to the Palestinian as it is to the Egyptian.

A summary of the trade figures of Palestine for 1927 has already been given in these columns, but it is worth while giving here in somewhat fuller detail particulars of the returns. The following table shows the figures for the last two years:—

	1926.	1927.
Imports	6,594,098	6,184,454
Transit Trade	75,129	131,029
Specie	11,113	262,659
Total Imports	6,680,340	6,588,142
Exports	1,308,333	1,899,759
Transit Trade	34,678	131,029
Specie	13,698	3,430
Re-exports	179,620	246,592
Total Exports	1,536,329	2,280,810

From this table two facts will be at once apparent, the fall in imports for consumption in the country, and the very substantial rise in the exports of Palestinian produce. The former development is, of course, the repercussion of the economic depression, which naturally exercised a very restrictive influence on the purchasing power of the country; the latter, as already indicated is largely the result of the recovery in neighbouring countries. It is, however, more than that, as it is also the reflection to a very considerable degree of the steady progress made in the industrial expansion of Palestine. By 1927 some of the many industries that have been established during the past few years were in a position, given satisfactory conditions abroad, to add their quota to the country's progress, and in various cases very notable progress was made in the development of an export trade, notably in regard to cement and cigarettes. It is further noteworthy that the year witnessed the establishment of many new industries, covering a wide range, and appreciably broadening the field of the country's endeavour.

The import trade calls for but little comment. The year was marked as was to be expected by a long series of decreases in the value of the imports of manufactures. The only increases of importance were in livestock, £P37,609; olive oil unrefined, £P14,878; confectionery, £P12,683; sugar, £P9,619, wood for orange cases, £P6,795; petroleum, £P5,757; and tombac leaves, £P1,757. Among the lengthy list of decreases may be noted motor cars, £P26,939; cement, £P23,274, which of course, reflects the development of the cement industry in Palestine; industrial machinery, £P39,023; and wheat flour, £P55,372. As regards countries from which imports were obtained Egypt occupies the first place with £P1,755,538 or 28.39 per cent. Syria is second with £P882,132 or 14.26 per cent., while the United Kingdom is third with £P847,697 or 13.71 per cent. It has to be borne in mind, however, that these are only direct imports, and it is probable that a certain proportion of the imports from Egypt originated in the United Kingdom.

The export trade shows a most encouraging list of increases, the principal rises being in respect of oranges, £P232,658; laundry soap, £P58,087; olive oil, £P58,240; sesame, £P61,730; dura, £P55,151; barley, £P34,420; cement, £P17,697; wool, £P16,710; water melons, £P10,663; stockings, £P10,130; raisins, £P7,627; and cigarettes, £P7,550. As regards importing countries the list is headed by the United Kingdom with £P660,086 or 34.75 per cent., while Egypt is second with £P552,669 or 29.10 per cent., and Syria is third with £P260,727 or 13.72 per cent.

Obviously there is a long row to hoe before Palestine can look forward to a favourable balance of trade, but it is inevitable in the case of countries in the process of

development that imports should for a long term of years be in excess of exports, and it must be remembered that Palestine has her growing tourist trade and other invisible items to set against the adverse balance. The main conclusion from the year's results is that progress is at last being made, and as the main factors on which hopes for the country's future are based have still for the most part to be brought into play, it would seem clear that an orientation of view on Palestine in the direction of a modified optimism is amply justified.

Shipping Intelligence.

ELLERMAN LINES' NEW MOTOR SHIP.

Messrs. Barclay, Curle and Co., Ltd., launched last week from their Clydeholm Shipyard the single screw motor ship City of Lille, which they are constructing for the Ellerman Lines, Ltd., the launching ceremony being performed by Mrs. F. T. L. Prinsep, wife of one of the directors of the Ellerman Lines, Ltd.

The City of Lille completes the series of three extremely interesting high speed cargo ships, which the Ellerman Lines, Ltd., have had built. Two of these ships are already in commission and are propelled respectively by quadruple expansion reciprocating machinery and single reduction geared turbines, and as the City of Lille will have Diesel machinery the owners will thus have a unique opportunity of obtaining reliable comparisons of the three types of propulsion.

The leading particulars of the City of Lille are as follows:—Length, B.P., 445 ft.; breadth moulded, 57 ft. 9 in.; depth moulded, 33 ft. 11 in.; deadweight, 10,600 tons.
